# The Independent

Founded 1848

WITH WHICH IS INCORPORATED

## HARPER'S WEEKLY

119 WEST FORTIETH STREET, NEW YORK

PUBLISHED EVERY SATURDAY BY

## INDEPENDENT CORPORATION

Karl V. S. Howland, President  
Frederic E. Dickinson, Secretary Wesley W. Ferrin, Treasurer

### NATIONAL EFFICIENCY

A monthly section devoted to business, personal and national efficiency. Official organ of the National Efficiency Society. Published in the third issue of The Independent each month

### THE COUNTRYSIDE

Incorporating The Countryside Magazine and Suburban Life. A monthly section devoted to sensible and efficient countryside living: better houses, better rooms, better gardens, better roads and better towns. Published in the first issue of The Independent each month

## POETS OF TODAY

In an *Anthology of Magazine Verse for 1918*, published by Small, Maynard & Co., William Braithwaite has done a notable service in selecting several hundred of the best poems of the year published in American magazines and in compiling a careful index of American poetry in 1918. First poems as well as the work of poets already recognized are included in the book. Of the latter, Sara Teasdale leads in the number of poems published; "The Cup" is one of her best:

### THE CUP

I cannot die who drink delight  
From the cup of the crescent moon,  
And hungrily, as men eat bread,  
Love the scented nights of June.

The rest may die—but is there not  
Some shining, strange escape for me,  
Who found in Beauty the bright wine  
Of immortality?

"The Prayer of a Soldier in France," by Sergeant Joyce Kilmer, who was killed in the battle of the Marne, is notable among the anthology's war poems:

### PRAYER OF A SOLDIER IN FRANCE

My shoulders ache beneath my pack,  
(Lie easier, Cross, upon His back).

I march with feet that burn and smart,  
(Tread, Holy Feet, upon my heart).

Men shout at me who may not speak,  
(They scourged Thy back and smote Thy cheek).

I may not lift a hand to clear  
My eyes of salty drops that sear.

(Then shall my fickle soul forget  
Thy Agony of Bloody Sweat.)

My rifle hand is stiff and numb,  
(From Thy pierced palm, red rivers come).

Lord, Thou didst suffer more for me  
Than all the hosts of land and sea.

So let me render back again  
Thy millionth of thy gift, Amen.

It may be a revelation to those who know Max Eastman as a radical leader of unrest to know him as a poet, too. In *Colors of Life*, published by Alfred A. Knopf, are collected his love lyrics and sonnets, prefaced by an essay on "American Ideals of Poetry."

### TO AN ACTRESS

You walk as vivid as a sunny storm  
Across the drinking taverns, then the eyes  
Of stricken men, with light and busy man  
Goed,

Making passionate and musing young  
You drive the mist, and lift the drooping  
Heads,

And in the sultry place of custom raise  
The naked colors of abounding life,  
And sound the crimson windy call of  
Liberty.

## WHAT THE SOLDIERS WANT

The three thousand wounded soldiers in Debarkation Hospital No. 3, in New York City, bring a message that the rest of us civilians will do well to learn. Thru months of bitter fighting and "some pretty hard spells in bed," as one man puts it, they have thought out a sane, workable philosophy of after-war reconstruction, not only for themselves, but for their relatives and friends. "What We Want and Will Get," the leading editorial of *Right About*, the weekly paper published by the soldiers, states their plan definitely:

We want our friends and our fellow Americans to treat us like men, not heroes. We are going to work harder than we ever did before, when we get into the tug-of-peace again, for we've learned quite a few tricks since the bugles blew assembly in 1917, and we started on that hike for Hunland. Those tricks are the simple rules of army life and routine. They won the war, and they "work" in peace time, too. We have learned the value of the "steady plugging," which nearly brought the Heinies thru to Paris, and which, on the part of the French, British, Italians and our doughboys chased out the Dachshund, whining like the whipped cur he was with his head down and his tail between his legs.

That's what we want to do. We sincerely believe that the new spirit which was born in us in the screaming, crashing Babel of the battlefield can send us ahead of those who never heard it on our merits!

When we get "back on the job"—whatever that job may be—we will demand a square deal—not toadying and flattery. We are men and we are not too modest to doubt our friends when they tell us we proved it over there.

We want to be treated as men, not as sick children or family pets.

Just remember that, friends and kins-folks!

## CAPITAL COPY

During July, August, September, October and November, last year, the American people saved 775,000 tons of sugar over their normal consumption, including the amount saved by the restrictions on confectionery and soft-drink products.

The sale of waste accumulation and miscellaneous materials at camps and cantonments thruout the United States brought a revenue of \$426,811.84 to the army for the month of October.

Plans are under way by the United States Shipping Board and the Navy to enlist men discharged from the Navy in the Merchant Marine.

When our armies return from the war there will be 50,000 new American citizens among the soldiers, for the Bureau of Naturalization has extended citizenship to all foreigners fighting under the Stars and Stripes.

**HARPER'S WEEKLY**

## PUT THE LEAGUE OF NATIONS FIRST

**S**ENATORS Lodge and Knox want to postpone the discussion of a League of Nations, until after the Peace Conference.

Says Senator Lodge, who will doubtless be chairman of the Senate Committee on Foreign Affairs after March 4:

I do not think that the League of Nations or any provision looking in that direction ought to be made a part of the peace with Germany. I feel very strongly it should be treated separately entirely.

Says Senator Knox, ex-Secretary of State:

After all why such hurry? If a League of Nations may not be a good thing, certainly the agitated days following a great war should not be seized upon to saddle the country with a policy it has not examined, and which is no necessary part of the making of peace.

Presidents Wilson and Taft, however, take a different view. Says President Wilson:

As I see it, the constitution of that League of Nations and the clear definitions of its objects must be a part, in a sense the most essential part, of the peace settlement itself.

Says ex-President Taft:

Such a League must be formed at the time of the definitive peace, or the opportunity may be lost forever.

Not only are the two Presidents right, and the two Senators wrong, but the Peace Conference well might put at the very top line of its Agenda the League of Nations.

For a League, after all, is not the end to be accomplished, but the means to the end. It is the machinery by which the affairs of the world are to be run hereafter. If the Peace Conference, therefore, proposes to put the horse before the cart it should first draw up the constitution of a League of Nations. Once this is done it is quite obvious that all specific peace terms that are likely to deadlock the Conference can be justly and automatically referred to the court, council or parliament of the League for ultimate settlement. On the other hand, if the attempt be made to solve all the perplexing and often unrelated problems that will be on the carpet at the Peace Conference prior to the setting of the proper machinery to do this, so many difficulties and differences are likely to arise, and so much ill feeling may be engendered in the process, that we may get little more than a patchwork peace and no League of Nations at all.

## THE RAILROADS

**I**F any one thinks that it is easy to say whether the railroads should go back to company operation or become national property and be operated by the Government, he either knows very little about the subject, or he knows so much about it that he ought to tell the rest of us.

A very good theoretical case can be made out for either side of the question. No other country in the world has ever had a railroad system as extensive, as complicated, and all in all as satisfactory as the American railroad system was fifteen years ago. Freight was carried with marvelous cheapness and promptness, and passenger trains were frequent, luxurious and fast. It had all been created by private enterprise and private capital, with Government assistance in a few instances only. There were great evils connected with it, as every one admits. Money was wasted in parallel lines for which business was inadequate. There was discrimination in rates and in privileges, and stocks, gambled in on a great scale, underwent violent fluctuations. Attempts to regulate thru legislation and by federal control thru the Interstate Commerce Commission were not well thought out, and when the war began the affairs of the roads were approaching a crisis. Confronted by the necessity of handling troops and munitions, private management complicated by governmental rules and restrictions broke down. Nevertheless, the argument stands, that private enterprise had built up our railroad system and that a stupid plan of governmental supervision had nearly wrecked it.

The argument for public ownership and governmental operation is based on broader considerations. It is certain that the chief means of travel and transportation in a nation

of a hundred million inhabitants doing the biggest business in the world cannot be left to the unrestricted greed and fantastical whims of individuals. The problem of justice alone, as presented in discriminatory rates and privileges, would call for governmental intervention, even tho economic law satisfactorily adjusted costs and charges. Also, in time of wars, if wars we must have, the Government will always exercise its lawful power to take over and operate the lines. Why, then, should so vast an interest be left to uncertainties of policy? Why should we not have done with contention between public and private interest, and make railroads, like the mails, a public concern, administered as justly as possible with equal regard for all sections, interests and classes?

Between these bales of hay the worried ass of public opinion stands unable to make up its mind. The first months of governmental operation make everybody who had occasion to travel or try to deliver freight mad thru and thru. Troops and munitions had to be moved, of course, but not all of the discomforts of slow and overcrowded trains (as for example when day after day passengers stood in the aisles of coaches from New York to Boston) seemed necessary, and the insolence of employees in the preposterous station at Washington certainly was not. These conditions, however, were rapidly remedied, and when the armistice was signed there was not much to be complained of. In fact, the indications were that within a few months railroad travel in the United States would in many respects be better managed than it had ever been. The consolidated ticket office was generally approved. The book ticket, good for anywhere

and for anybody was universally hailed as a long desired convenience. Terminal facilities, it was commonly admitted, were more sensibly utilized than they had been or could have been in the days of company operation. Most important of all, freight was routed over the more open lines and the congestion problem had practically been solved.

Now complaints are multiplying again. It is plain that things are not going well. This may be due to uncertainty. No one knows what is going to happen. Or, it may be that there is a measure of truth in the charge that private railroad interests hoping to discourage the public ownership plan, have discovered ways to discourage it.

All of these are operating problems. There are others. Government is a creature of politics, and the railroad employees of the United States could become a political factor of big importance. Would the Government then get as efficient service for money paid if railroad men were public servants as corporations have been able to get from private servants? Could as good discipline be maintained? If civil service rules were broken over the railroad jobs would become a prize in spoils politics compared to which the post offices and custom houses in President Grant's day would be baubles. Or, if civil service rules were adhered to now could the incompetent, the broken-down, the dead wood, ever be gotten rid of? No way has yet been devised for eliminating incompetent teachers from an American public school system protected by civil service rules and tenure of office.

Nevertheless, not even these considerations on top of the considerations of economy and public convenience are decisive. Many other things also must be thought of the moment we ask how the railroad properties are to be returned to company operation, if at all. What protection is the stockholder to have, and what protection is the public to have? Are we to go back to the clumsy device of rate making by Congress and the Interstate Commerce Commission? Are we to give up the common sense utilization of routing opportunities and terminal facilities? Are we to go back to the bunglings and boggings of a hundred different kinds of specialized passenger tickets?

It is our own belief that public ownership and government operation will prove in the long run to offer the larger possibilities of justice and economy in combination. But this we say without dogmatism, and fully aware that the American public may not share our opinion.

## THE LIMITS OF DEMOCRACY

DEMOCRACY and aristocracy are rival ideals but, like all other ideals, they are possible only under certain conditions. To say that a social system is always desirable is not to say that it is under all circumstances realizable. Democracy is subject to at least two permissive conditions: the people must be sufficiently enlightened to comprehend the meaning of self-government, and they must have sufficient mutual sympathy to work together for common ends. The first condition is lacking in Central Africa and other half-barbarous parts of the world. The second condition is lacking in India, Hungary and other countries of relatively high civilization which have the misfortune to be divided into mutually hostile castes, classes, parties, religions, races or nationalities. Democratic government was impossible in the England of Cromwell's time simply because the only alternative to the Cromwellian dictatorship was another civil war between Anglicans and dissenters; it was impossible in medieval Italy and in modern Mexico and Russia for a similar reason: that rival parties regarded each other not as opponents to be defeated but as enemies to be exterminated. Without a *Demos* no Democracy.

That this is true is admitted by all practical men, but the case is usually wrongly stated. We hear it said that

the Filipinos ought not to be given their independence because they might not govern themselves wisely. A far truer way to put the matter would be that we would gladly give the Filipinos independence but that it is impossible to do so because there is not yet a Philippine nationality. The alternative to American supervision is not an inefficient democracy but no democracy at all: perhaps a dictatorship, perhaps the rule of one tribe over the rest. It is wrong to say that democracy was tried in Hayti with disastrous results; the truth is that conditions there have prevented democracy from being introduced. It is wrong to say that the Russian republic has been a failure; it would be more correct to say that Russia has failed to become a republic.

We do not deny that even where democracy really does exist—as in western Europe and the United States—it may coexist with dishonest or inefficient government; that is simply to admit that majorities are human. But it is unjust to confuse democracy working badly with democracy not working at all.

## PROPOSED PURCHASE OF SURINAM

AN article on another page of this issue calls attention to a neighbor of ours about which we know little. Altho the Guianas lie on the nearest side of South America, neither their national resources nor their scenic features have so far attracted the notice of the American people. Yet they are of peculiar interest to us, as being the only extensive tropical territory which we could acquire without danger of irritating the susceptibilities of the Latin American republics. The purchase of any one or all three would not be a violation of the Monroe Doctrine, but the fulfillment of it, for it would remove the last remnants of European control from the continent of South America. Under ordinary circumstances the question might still lie upon the table as it has in the past. The natives were unambitious and the mother countries were in no hurry to part with them. But the war has precipitated matters. The two belligerent countries concerned, France and England, may postpone consideration of the question indefinitely, but Holland as a neutral in the war zone is differently situated. It may be that international complications such as impelled Denmark to sell her West Indian possessions to the United States will induce Holland to dispose of her West Indian possessions in the same way. It is rumored in Washington and Paris that the French Government may be willing to dispose of Guadeloupe and Martinique to the United States in the peace settlement. But the acquisition of Guiana would be better for us.

During the war the difficulty of keeping up the connection between the mother country and the colonies became serious. Dutch shipping had suffered from destruction by the Germans and from seizure by the Allies and America. The East Indies, on which the prosperity of the Netherlands is dependent, was almost inaccessible because of mines, U-boats and the shortage of ships. Naturally, the unprofitable West Indies were largely left to shift for themselves. We can see how dependent Dutch Guiana was upon the United States and how helpless Holland was to help her from what is said by the Surinam correspondent of the *India Rubber World*, of May, 1918:

We depend on the United States for all we consume and cannot exist on the few bunches of plantains and small amount of ground provisions that come in from the various districts. Besides the balata men in the bush there are great numbers of hands employed by the sugar, cocoa, coffee and plantain estates who must be fed, but there is nothing to feed them with. It will mean death to Dutch Guiana if Washington stops provisions.

The Surinam Government quarreled with the Netherlands Government over the question of the Dutch bank in Surinam. In July the colonial parliament resigned in a body because of the refusal of the Chambers in Holland to confirm a motion put forward by that parliament. This un-

precedented action was followed by public meetings in favor of annexation to the United States, and there was even talk of sending a telegram to President Wilson, asking him to take the country under American protection.

This solution of the difficulty has its advocates even in Holland. Heer van Kol and other members of Holland's Parliament have expressed a willingness to leave it to the Surinamers to decide which country they would prefer to belong to. If that were done now, there would be little doubt of the decision. When Heer Sibinga Mulder interpellated the Government in Parliament last February as to the report that a sale of the islands to the United States was being negotiated, the Minister of Foreign Affairs declared that there was nothing in it and that the Government would not think of such a thing. His position was obviously that of the milkmaid in the song: "Nobody axed me, sir, she said."

We do not question the truthfulness of this statement, for we have no reason to think that our Government has yet taken the slightest interest in the acquisition of the Dutch West Indies. But such official pronouncements are not to be taken seriously, for we remember that in 1916 the Danish Foreign Minister, Dr. Scavenius, and the Finance Minister, Dr. Brandes, flatly denied in Parliament and press that they were considering the question of selling the Danish West Indies to the United States, altho at that time negotiations were going on and the two Governments had practically come to an agreement. When the truth came out, the cabinet defended itself for its prevarication by saying that Washington had pledged it to secrecy.

A movement for the sale of the Dutch West Indies has been organized by B. Boekhout, of Soestdyk, Holland, former district commissioner of the West Indies. In a pamphlet on *De Verkoop van Ned. West-Indië* he cites the editorial "Let Us Buy the Dutch West Indies" published in *The Independent* of July 21, 1917, and supports our proposal by strong arguments drawn from his personal knowledge of conditions in the Caribbean.

Dr. C. F. Schoch in *Ons Land* says that *The Independent* is right in its estimate of the value and future possibilities of Surinam, but he argues from this that the Netherlands ought to keep them. He shows that the exports of the colony increased nearly threefold from 1904 to 1911, and even in 1916 were more than twice what they were in 1904. But the imports have fallen off considerably since the war began. The Dutch islands in the West Indies are, he admits, worthless from an economic standpoint, but are important from a strategic standpoint. If the Netherlands Government had put up a powerful wireless station on Curaçao, the Dutch trade, he says, would not now be dependent upon British arbitrariness. The harbor of Curaçao he expects to become a coaling and exchange station for the Panama Canal trade and a distributing point for petroleum. Even before the war seven steamship lines stopped at Curaçao. But Dr. Schoch confesses that he has lately met with persons of high social standing who agreed with Mr. Boekhout that it would be best to sell the West Indies to the United States, for the Americans can develop their resources better than the Netherlands, and he adds that when people begin to talk of how many millions they will ask, they are on their way to acceptance of the proposition.

Baron van Asbeck, former Governor of Surinam, delivered an address on the question of the sale of the Dutch American colonies on March 15, before a large audience at the University of Leiden, at the invitation of the Political Science Union. He said that the acquisition of St. Thomas by the United States had naturally brought up for consideration the question of a similar transfer of the more important part of Curaçao, lying on the other side of the Atlantic entrance to the Panama Canal. Curaçao, he said, needed good harbor works for its development into an industrial and shipping center, while on the contrary Surinam required

land legislation and capital for its development as an agricultural colony. He believed that the Netherlands as a great colonial power would be able eventually to develop the West Indies as it had the East, into self-supporting and profitable colonies; therefore he opposed their sale. The speakers who followed, Professor van Nollenhaven and Professor Krabbe, supported this conclusion, and a resolution to that effect was passed by the society.

It is frankly recognized in these press and platform discussions that Holland has no moral right to hold indefinitely such colonies as she cannot make prosperous. The Dutch are admirable administrators, but it is hard for them to handle and impossible for them to protect colonies five times as large as the mother country in area and population. There is, of course, no danger that America would annex the Dutch West Indies without the willing consent of the people of these possessions and of the mother country, but Germany, as we know, is not so scrupulous.

We cannot doubt that it was the intention of Germany to acquire the Dutch West Indies, for it is plainly provided for in the program of the Pan-Germans. For instance, Franz von Liszt in his pamphlet *Ein Mitteleuropäischer Staatenband*, says: "Included in the middle European union would be Holland and the wealthy Dutch colonies, which together have 43,000,000 inhabitants." Think what that means. On the Pacific side it means that Germany would be near neighbor to our Philippines, less than fifty miles away. On the Atlantic side it means that Germany would possess the land-locked harbor of Curaçao, where the Spanish cruisers under Cervera were concealed and coaled in 1898, while Sampson was searching for them. A nice time we would have had with such a submarine nest at the mouth of the Panama Canal!

As long ago as 1854 a German commission under Shunk and Voltz was sent to explore the interior of Dutch Guiana and see if it were suitable for German colonization, and as late as 1914 those who went up the river from Paramaribo took the motor boat "Hohenzollern." Ten Kate writing in *Gids*, 1888, expresses the opinion that the present régime cannot last and that the situation will not be improved until Holland releases her stepchild and entrusts it to Germany or America.

That a transfer of the Dutch West Indies to the United States would thwart Germany's ambitions is betrayed by the indignation expressed last March in such semi-official journals as the *North German Gazette* and *Cologne Gazette* on learning the question was being discussed in the United States and the colonies concerned. It was German influence and German money, as we now know, that thwarted the efforts of the United States to purchase the Danish West Indies in 1902, but when the question was submitted to the people of Denmark it was approved by a large majority. So now in the Netherlands the strongest opposition to the sale of the Dutch West Indies comes from those court and commercial circles where German influence is most dominant. But the pro-German party lost ground in Holland as in Denmark as the chances of German victory diminished, and it may not be long before a change of government will give the Dutch, like the Danes, an opportunity to vote on the question of retaining these burdensome possessions. In that case it is probable that the practical advantages of the bargain would overcome the natural reluctance to part with any of the colonies.

The press of Paramaribo is divided on the question. One of the leading journals, *Suriname*, favors the sale, while the conservative *De Surinamer* opposes it. Looking over the Dutch newspapers we see advertisements in English of American safety razors, fountain pens, tomato catsup, typewriters, and motion picture films. We cannot regard as foreign to us folks who eat with Rogers table knives, ride in Ford motor cars, wash their hands with Sunlight soap, and dose themselves with Lydia E. Pinkham's Vegetable Compound.

# THE STORY OF THE WEEK

## The President Abroad

Since his arrival in Paris the President has been busily engaged in conferences on the problems of the peace settlement with his staff of experts with French statesmen and with the representatives of various nationalities who had come to Paris to press their claims. But he could not ignore the invitations of the British and Italian Governments so he took occasion of the holiday season to pay certain ceremonial visits. On the night before Christmas he took train for Chaumont, a town which was never mentioned in the despatches because it was the General Headquarters of the American forces in France. After a reception by the Mayor at the Hotel de Ville President Wilson motored to Humes where he reviewed a detachment of the First Army. In his address to the soldiers he implied that his mission to Europe had been successful in securing the co-operation of the Allies:

It happened that it was the privilege of America to present the chart for peace, and now the process of settlement has been rendered comparatively simple by the fact that all the nations concerned have accepted that chart, and the application of these principles laid down there will be their application. The world will now know that the nations that fought this war, as well as the soldiers who represented them, are ready to make good; make good not only in the assertion of their own interests, but make good in the establishment of peace upon the permanent foundation of right and of justice.

In the evening of Christmas Day the President took the boat at Calais for England where elaborate preparations had been made to receive him. He landed at Dover, and his program from that time until he arrived at Buckingham Palace, escorted by King George, is said to have outvalled the triumphant home coming of famous British victors. The streets of London were crowded and the Stars and Stripes predominated among the Allied flags.

## The President at the Sorbonne

For the first time in its long history the University of Paris conferred an honorary degree when on December 21 it granted its doctorate to President Wilson for his works on jurisprudence and political science. The Vice-Rector Lucien Poincaré, brother to the French President, in his address praised the professors of American universities for their unfailing sympathy with France and the students for fighting in her cause. He closed with the words: "In the name of the University of Paris I have the honor to award the insignia and diploma of Doctor to one whom posterity will salute with the surname The Righteous."

The reply of Mr. Wilson was of peculiar interest because of the reference he made to his idea of the working of his proposed League of Nations:

My conception of the League of Nations is just this—that it shall operate as the organized moral force of men throughout the world, and that whenever or wherever wrong and aggression are planned or contemplated, this searching light of conscience will be turned upon them, and men everywhere will ask, "What are the purposes that you hold in your heart against the fortunes of the world?"

Just a little exposure will settle most questions. If the Central Powers had dared to discuss the purposes of this war for a single fortnight, it never would have happened; and if, as should be, they were forced to discuss it for a year, the war would have been inconceivable.

So I feel that war is, as has been said more than once today, intimately related with the university spirit. The university spirit is intolerant of all the things that put the human mind under restraint. It is intolerant of everything that seeks to retard the advancement of ideals, the acceptance of the truth, the purification of life; and every university man can ally himself with the forces of the present time with the feeling that now at last the spirit of truth, the spirit to which universities have devoted themselves, has prevailed and is triumphant.

If there is one point of pride that I venture to entertain, it is that it has been my private privilege in some measure to interpret the university spirit in the public life of a great nation, and I feel that in honoring me today in this unusual and conspicuous manner you have first of all honored the people whom I represent. The spirit that I try to express I know to be their spirit and in proportion as I serve them I believe that I advance the cause of freedom.

French Plan for League of Nations Premier Clemenceau has been thought skeptical

or at least indifferent in regard to the idea of a League of Nations, but lately, and possibly in consequence of his conversations with the President, he is said to be favorably considering it. An official commission of the French Government has been studying the subject for over a year. The leading French advocates of the measure are Baron d'Estournelles de Constant and ex-Premier Leon Bourgeois, the delegates of France to both the Hague conferences. The plan which they presented to the Premier, and which he is reported to have approved, is substantially:

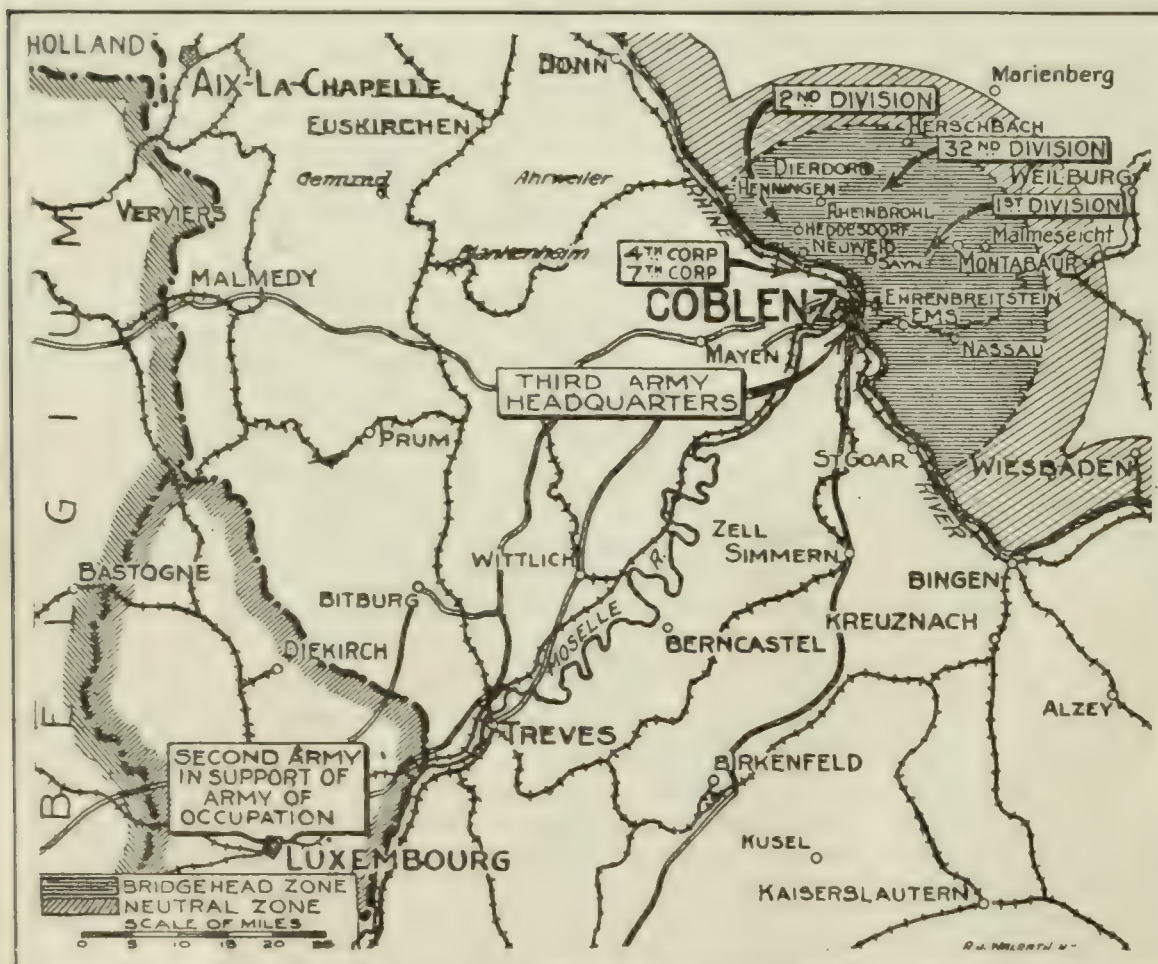

First, compulsory arbitration without limitation or exception. Second, limitation of armaments. Third, the establishment of a council of administration of the nations for the formulation of new international law. Fourth, the application of sanctions, that is means for enforcing the decisions of the society of nations. They are fourfold:

First, Diplomatic Sanction—The society of nations shall break diplomatic relations with any recalcitrant nation.

Second, juridical sanction whereby the courts of all countries will be closed to a recalcitrant nation.

Third, economic sanction. This weapon will be a great power in isolating any offending nation, cutting off its foodstuffs and raw materials when it acts in defiance of the society of nations.

Fourth, military sanction—The joint nations would undertake to compel observance of their decisions by force of arms. This is the most difficult and delicate of all the questions involved in creating the society of nations. One view is for a small

## THE WATCH ON THE RHINE

American troops occupy the famous city and fortress of Coblenz and a semicircle of thirty kilometers' radius about the bridgehead on the right bank of the Rhine. The neutral zone ten kilometers wide is shown in lighter shading

THE HOMECOMING  
OF THE HUN SOLDIER.

THE HOMECOMING OF THE FRENCH SOLDIER.

Derling in New York Tribune

KEEP THIS IN MIND WHEN READING THE GERMAN WHINES FOR MODERATION

international military force, or the nucleus of an international fleet. Others regard this as unnecessary and prefer to rely on the moral force of the united nations. Some may wish to give up compulsory military service but retain the navy.

An article in the *Paris Matin*, which attracted special attention because it was at first suppressed by the censor, states that there will be three stages in the procedure. First, the Allied Governments will settle among themselves the fundamental principles of the league, which will include compulsory arbitration, limitation of armaments, and the right of peoples to decide their own destinies. Second, the enemy powers will be required to adhere to these principles. Not until this is done will there be a discussion between the belligerents of indemnities, territorial readjustments and the like. After the peace treaty settling these has been signed, the third and final stage will begin by a general conference to put into effect the plan for a League of Nations.

#### Factional Fights in Germany

The ruling power in Germany since the overthrow of the

Imperial Government on November 9 has been the moderate or majority Socialists, led by Ebert and Scheidemann. Their rule has been endangered not so much by a counter-revolution of the conservatives and militarists though there have been signs of that, but rather by the extreme Socialists of Independent and Spartacus groups. They were determined that the revolution should take the same course as in Russia and that a socialistic or soviet regime should be put into effect by arbitrary exercise of the power which the chance of the revolution had placed in their hands. In Russia, as will be remembered, the republicans of the Kerensky party were willing to leave the decision of the form of government to a constituent assembly elected by the people but when that assembly met the real power had passed into the hands of the soviets and a "dictatorship of the proletariat" had been established which is still maintained. The Bolsheviks having the treasures of the Russian crown and church at their disposal have made liberal appropriations for propaganda in foreign land with the hope of con-

verting the whole world to their ideals. Joffé, the Bolshevik Ambassador to Germany, says that on the night before his expulsion from Berlin he turned over \$200,000 to Oscar Cohen of the Independent Socialist party and also placed at his disposition \$5,000,000 for promotion of the revolution in Germany. Cohen is now under secretary to the Minister of Justice. The Spartacus group of Karl Liebknecht is also supposed to be financed by the Russian Bolsheviks. Joffé's secretary, Radek, who has charge of the distribution of these funds is reported to have said the money sent to Berlin to finance the revolution was as nothing compared to the funds transmitted to New York for the purpose of spreading Bolshevism in the United States.

In Germany the Independent Social Democrats and the Spartacites correspond to the Bolsheviks of Russia and they have exercised their power through the same machinery, the Council of Workmen and Soldiers, known in Russia as Soviet and in Germany as the Arbeiter Soldatenrat. Therefore the first test of strength between the moderate and extreme Socialists came in the struggle for the control of the National Congress of Workmen's and Soldiers' Councils held in Berlin during the week. The Independents prepared to attack the Government on charges of inefficiency, corruption and lack of zeal for the revolution. The Spartacites determined to break it up by violent irruptions of organized mobs.

#### Moderate Socialists Sustained

The efforts of the extremists to overthrow or cripple the Socialist Government of Germany in the Congress of Soviets was defeated, and on test votes the moderates were able to command a four-fifths' majority. The congress on the start refused to admit the leaders of the Spartacus faction, Karl Liebknecht and Rosa Luxemburg, to the hall even as guests. But every day crowds of workmen, soldiers, students or women, representing this faction, collected in the street outside the Prussian Diet building, and several times their delegations invaded the hall where the congress was in session. On the second day thirty soldiers, purport-

ing to represent all the garrisons in Berlin, managed to gain entrance through private doors, and, lining up behind the chairman on the platform, displayed banners bearing the Spartacus demands which the congress had excluded from presentation. These demands were:

First, that Germany must be constituted as one single republic; second, that all power be vested in the Soldiers' and Workmen's Councils; third, that the highest executive power be exercised by the Executive Council; fourth, the abolishment of the Council of People's Commissioners; fifth, measures for the protection of the revolution; sixth, disarmament of the counter-revolutionists; seventh, arming of the proletariat; eighth, propaganda for the establishment of a socialistic world republic.

On the floor Herr Barth, an Independent and member of the Government, attacked Chancellor Ebert for allowing large bodies of troops to remain mobilized and accused him of

REACTION  
BOLSHEVISM  
THE ALLIES

THREE VIEWS ON BOLSHEVISM

THE PIED PIPER

conspiring with Hindenburg to provoke a conflict with the Allies in the hope that they would conquer Germany and restore the Imperial régime. Ebert and Scheidemann defended their administration and persisted in their intention of calling a constitutional convention to determine the form of government. They had hoped to have the elections held in February. Their opponents demanded its postponement to March. But finding the congress favorable Scheidemann proposed to advance the date to January 19, urging that unless a settled government were soon established Germany would inevitably drift into Bolshevism and be in a worse state than Russia because there was more to destroy. He admitted that by holding the election so soon some of the soldiers would lose their votes, but he thought they would be willing to make this sacrifice. He told the delegates from the country that they must not be influenced by what they saw in Berlin, for, "Thank Heaven, Berlin is not Germany," a remark that elicited loud applause. The proposal to set the election on January 19 was carried by a large majority after a tumultuous discussion.

#### German Government in Formation

The Workmen's and Soldiers' councils in congress at Berlin voted to retain the power to check the administration thru their permanent executive committee or central council, which will have authority to depose the People's Commissioners and cabinet officers of Prussia and the entire country. But the new central council was constituted entirely of moderate Socialists in harmony with the Ebert administration and the radical members, such as Georg Ledebour and August Müller, have been eliminated. The central council consists of twenty-seven workmen and soldiers.

Because of the interference with the Berlin congress by street demonstrations and because of the jealousy of other parts of the empire, it is probable that the constitutional convention to meet on January 29 will not be held

in Berlin but possibly at Frankfort, Weimar or Bayreuth. The bourgeois parties are organizing for a vigorous campaign to prevent the Socialists from having things all their own way in the coming convention.

But the Socialists, believing that their victory at the polls is sure, are already laying plans to bring all the industries of the country under state control. They propose to take over first the coal mines, as this is a key industry, essential to national life, and now in a state of serious demoralization. Next the steel and chemical industries will be socialized and then the potash fields. The railroads and the factories engaged in war work are already under state management.

It is proposed by some authorities on constitutional law who are studying the question to reorganize the German Empire as a loose federation of autonomous republics, from seven to fourteen in number. These will be represented in a *Statenhaus* corresponding to the American Senate. The cabinet will be responsible to parliament, but the President will be elected and have powers in between those of the President of the United States and the King of England. The German part of Aus-

tria will form one of the states, and with this addition the new Germany will be greater than before, even though she loses all the territory which the Allies have proposed to take away from her, namely, French Alsace-Lorraine, Danish Schleswig, and Polish Posen and Danzig. This territory has a population of about 4,300,000, while the addition of German Austria would bring in 8,000,000 to 10,000,000. The population of the new Germany would be more homogeneous and contented.

#### Danzig in Dispute

The question of the boundaries of the new states will be one of the most difficult and delicate of the problems to be settled by the Peace Conference for it involves the balancing racial, historic and commercial claims. It will be several months before the Conference can adjudicate these claims and meanwhile the various nationalities concerned are striving to forestall its action by taking possession of the disputed territory. The Italians and Slavonians are quarreling over Fiume, the Slovaks and Magyars over the Uhro-Rusins, the Poles and Ruthenians over Lemberg and the Poles and Germans over Posen and Danzig.

The Poles claim all the territory that was ever under Polish rule and they are exercising the privileges of sovereignty by levying taxes, conscripting recruits for the Polish Army, and holding elections for the Polish constituent assembly. The German population protest against this as a violation of international law and the German local authorities are in a dilemma, for if they attempt to perform the duties of their office they come into conflict with the Polish appointees and if they do not prevent the Polish elections they will be held guilty of high treason. In consequence of this disagreement the Polish representative at Berlin has been withdrawn and the German Minister to Poland, Count Kessler, has been run out of Warsaw by street mobs.

The city of Posen is nearly half German and one-tenth Jewish. In Danzig, however, the Poles number only about 5 per cent, though in the whole province

#### THE GREAT WAR

December 19—Poles occupy Danzig. Italian King in conference with President.

December 20—Reorganization of German Government eliminates extremists. Spain applies for admission to League of Nations.

December 21—Sorbonne confers doctorate on Wilson. Bolsheviki advancing into Baltic Provinces and Poland.

December 22—French fleet goes to Baltic. United States permits food to be sent to Finland.

December 23—Senate passes \$6,000,000,000 tax bill. Lithuanians seize East Prussian cities.

December 24—Strikes in German mines and industries. Milyukov expelled from France.

December 25—American fleet returns to New York harbor. President visits Chaumont, general headquarters of American forces in France.

of West Prussia, of which Danzig is the capital, the Poles form about 35 per cent of the population. Herr von Jagow, president of the municipal council, has at the petition of the German part of the population sent a wireless to President Wilson protesting against the forcible annexation of Danzig by the Poles. President Wilson declared himself in favor of a "free, independent and united Poland with access to the sea" early in the war while the Allies were insisting that Poland must remain under the Czar. But the demand for "access to the sea" does not necessarily mean the possession of the port of Danzig.

The Polish legion formerly in France has been shipped to the Baltic on Allied vessels and landed at Danzig. It is said to number 50,000 and is chiefly composed of American Poles. There was a difference of opinion between the two Polish parties in the United States over the propriety of the organization of a separate Polish Army. The conservatives wanted it but the liberals preferred to fight under the American flag. The American Poles of this army of occupation are expected to act as a barrier against the westward-moving tide of Bolshevism as well as to cultivate American ideals and institutions in the new Poland. The Berlin Government has protested against the Polish annexation of Danzig.

**Confusion in Ukraine** The unreliability of the news about Russia is shown by the despatch emanating from Washington last November and stating that General Denikin had overthrown the Bolshevik Government at Kiev and that the American State Department was rejoiced at it. But it appears from what we can learn since that there was no Bolshevik government in Kiev and Denikin did not capture that city, and we suspect that the rest of the statement is equally false, for there seems no reason why Americans should rejoice in an advance of the Cossack armies, since their object seems to be to conquer the Ukraine and restore the monarchy.

The newspapers further informed us in December that General Skoropadsky, dictator of the Ukraine, had been defeated in a great battle at Kiev in which 10,000 men, including 500 officers, were killed and wounded, and that Skoropadsky was tried by a counter-revolutionary tribunal and put to death. It now appears that there was no battle and Skoropadsky was not executed. He simply abdicated on December 15 and his soldiers went over to the Ukrainian National Union, which now rules the country. According to the information of the headquarters of the Ukrainian National Association at Jersey City the situation is as follows:

Last spring, when the Germans overthrew the Ukrainian Central Rada (parliament), the leading Ukrainian parties, namely, the Socialist-Revolutionaries, the Social-Democrats, the Socialist Federalists, the Peasants' Union, Independents and a few other groups, excluding only Bolsheviks and

Monarchists, formed a confederation named the Ukrainian National Union (hence, the "Unionists," or, in the original, *Ukrainsky Narodny Soyuz*). The object of that union was: to fight and to overthrow the pro-German Hetman Skoropadsky; to expel the Germans; to fight the Bolsheviks and the Monarchists; to establish a free Ukrainian republic; and to enter into friendly relations with United States and the Allies.

Their fight was very hard, for Skoropadsky had the German army and the prisons at his disposal; still, he could not overpower them, as they were supported by the whole village population, by the workingmen, and the intelligentsia. Their day arrived with the revolution in Germany and the collapse of the dual monarchy. From the start the German military forces in Ukraine would not abandon Skoropadsky, yet later on the revolutionary spirit came to them and they wanted to return home, so Skoropadsky began bargaining with the Pan-

Russian imperialists, who fled from Bolshevik Russia to Kiev and Odessa; and to the Don Cossacks or to the Cossacks of the Northern Caucasus.

General Denikin is still in the Ekaterinodar in the Kuban province of the Northern Caucasus. He did not occupy Kiev, tho he sent his Cossack officers to Kiev to help Skoropadsky to organize the Russian army, and to proclaim Ukraine as part of Russia. But the rule of Skoropadsky with the help of the Cossack officers could not last long. The Ukrainian National Union under Vinnichenko easily took possession of Kiev, Odessa and of the whole of Ukraine.

Vladimir Vinnichenko, the leader of the Ukrainian National Union, and Semen Petliura, its military leader, are both Social Democrats of the moderate faction advocating tactics based on co-operation. Besides, they are, as is the whole Ukrainian Social-Democratic Labor Party, federalists. They would support the federal Russia composed of five republics, Russia proper, or Muscovy; Ukraine; White Ruthenia, to which Lithuania, Lettonia, and Esthonia may be attached; Caucasus; and Siberia. But the conditions must change. They do not propose to unite with the Bolshevik Russia, which does not recognize peoples in the sense of nationality. The Bolsheviks would federate with a proletarian Ukraine and would grant it "self-determination" if it might agree to determine to be ruled by the proletarian aristocracy, or privileged class of city workingmen. Such federation is not acceptable to the Ukrainian democracy, which does want "to overthrow the people" in favor of the proletariat. It likewise would not agree with the Russian imperialists and centralists, who would grant Ukraine "cultural autonomy."

THE CROWN PRINCE IN EXILE

Interned on the island of Wieringer, Holland, former Crown Prince Friedrich Wilhelm is going in for penicillin sports with unimpaired cheerfulness.

### The Fleet's Victory Parade

On the day after Christmas the United States dreadnaughts returning from their work overseas, and an escort of destroyers, seaplanes and balloons paraded thru New York harbor past the statue of Liberty and came to anchor in the Hudson River opposite New York City. The battleship "Arizona" led the line, preceded by the gunboat "Gloucester" towing a gigantic kite balloon. At the end of the line came another big towed balloon, and over the fleet hovered twenty-one seaplanes. All the ships kept their grim state of battle preparedness, even to carrying a full quota of ammunition.

Secretary Daniels, Secretary Baker, Secretary Houston, Chief of Staff March and several officials reviewed the parade from the President's yacht "Mayflower."

Secretary Daniels emphasized again in his speech of welcome the value of our fleet's co-operation with the British throught the war.

Eight thousand sailors came ashore after the review of the fleet and marched down Fifth avenue in a parade that demonstrated the adaptability of "sea legs" to land uses. It was New York's first formal parade of

OUR BIGGEST GUN OVERSEAS

Now that hostilities have ceased we can publish this photograph of one of the 14-inch United States Navy guns being transported by rail to a strategic position up front. These guns were originally planned for battleships, but some one suggested the possibility of making them useful on land and the experiment proved thoroughly successful.

home coming fighters and the whole city turned out in spite of a snowstorm to "cheer the boys."

**Senatorial Reactions** Opposition in the Senate to President Wilson's position on the coming problems of peace has been summed up by Senator Lodge, of Massachusetts, and Senator Knox, of Pennsylvania. Senator Knox, in a speech on December 18, urged chiefly that the project for a League of Nations ought to be subordinated to the specific consideration of peace terms, "best expressed now in reparation, restitution and guarantees."

Restitution becomes an accomplished fact with the evacuation of invaded territories and the definitive return to France of Alsace-Lorraine.

Reparation is a matter of arithmetic, of law and of equitable justice.

As to guarantees, the condition of relative impotence in the face of the preponderant power of the Allies to which Germany has been reduced by the terms of the armistice is, of course, the first of our real guarantees. The maintenance of that condition during the long period of repentance, probation, and expiation for the years of horror into which the Teutonic peoples plunged the world is the first of real guarantees against the recrudescence of any similar German menace.

As part of this guarantee for the future, as well as for the sake of humanity and the interest of the peoples affected, it seems entirely clear that her colonies should not be returned to Germany, but should either be divided among the chief belligerents or else jointly held by them, with their respective authority somewhat proportioned to their respective local interests and to their position as factors in victory. In either case the Allies could determine and apportion such share of raw materials from their tropical and other territories as they found convenient after supplying their own requirements—and having in view to give Germany the means of subsistence but not the means of aggrandizement.

Senator Lodge went on to argue that the spirit of the Monroe Doctrine should be preserved as a fundamental principle of American diplomacy, making the United States "the potential ally of the defenders of liberty whenever a great menace shall arise." "The corollary of that doctrine," he said,

would be that if new states were menaced as part of the general European danger the United States would be concerned, but that what need be done to maintain safe conditions within or as between them, would be primarily a European concern and a European obligation in the discharge of which we need take no part.

That five of President Wilson's four-

teen points on peace should be put aside from the present discussion was the leading point in a speech on December 21 by Senator Lodge, who will probably be chairman of the Foreign Relations Committee of the next Senate. The five points to which he called particular attention as endangering the peace negotiations were those relating to secret diplomacy, the freedom of the seas, economic barriers, the reduction of armaments, and the establishment of a League of Nations.

Senator Lodge urged the necessity of physical guarantees as the only means of assuring a durable peace with Germany.

They include the restoration of Belgium, the return of Alsace-Lorraine to France, of the Italia Irredenta to Italy, the establishment of a Jugo-Slav state, and of an independent state formed by the Czechoslovaks. They include also the security of Greece, the settlement of Albania and Montenegro, the restoration of Rumania, the consolidation of all the Rumanian people under one government, as well as the neutralization of the straits, the putting of Constantinople under international protection, with Greece, perhaps, as the mandatory of the powers to administer the affairs of the city, the independence of Armenia, the return of those portions of Asia Minor where Greeks are predominant to Greece, the protection of Syria and Palestine from the Turks, a large, powerful, and independent Polish state, the independence of Russia's Baltic provinces, the return of Danish Schleswig to the Dane, and the neutralization of the Kiel Canal.

In addition to these guarantees Senator Lodge said that he would require heavy indemnities from Germany.

**The Six Billion Dollar Tax Bill** The War Revenue bill, as it finally was passed by the Senate on December 23, provided for a tax yield of \$5,978,000,000 for this year and for a maximum yield of \$4,000,000,000 for 1920. The 1920 clause was the chief center of opposition to the bill. A Republican minority report from the Finance Committee made specific objection to

the policy of haste and the anticipation of future needs at a time when radical changes in domestic and world conditions render today's conclusions perhaps worthless tomorrow.

The opposition, however, was overridden by the Senate's vote.

By the provisions of the bill the normal income tax is to be 12 per cent instead of the 4 per cent of the present laws; surtaxes start at 1 per cent

on incomes over \$5000 and reach 65 per cent on incomes in excess of \$1,000,000. Exemptions of \$1000 for single persons and \$2000 for married ones are allowed. In place of the tax imposed by the act of 1917 the new bill provides that in addition to the taxes imposed by it there shall be levied for the taxable year 1918 upon every corporation:

First Bracket—30 per cent of the amount of net income in excess of the excess profits credit and not in excess of 20 per cent of the invested capital.

Second Bracket—60 per cent of the amount of the net income in excess of 20 per cent of the invested capital.

Third Bracket—The sum, if any, by which 80 per cent of the amount of the net income in excess of the war profits credit exceeds the amount of the tax computed under the first and second brackets.

The semi-luxury taxes that were struck from the bill by the Senate Finance Committee after it passed the House of Representatives on September 20 were restored by the Senate after heated debate by a vote of 38 to 32. Radicals among both Democrats and Republicans aligned themselves to bring about the restoration of these taxes, which were, however, reduced from the 20 per cent of the original House bill to 10 per cent.

Two "riders" entirely foreign to the bill itself were tacked on to it. Senator Sheppard, of Texas, offered an amendment, passed by a vote of 42 to 18, making it illegal to bring liquor into the District of Columbia. The other "rider" was the amendment, offered by Senator Trammel, that all soldiers and sailors discharged after November 11 be allowed an extra month's pay.

The Senate adopted an amendment to the bill offered by Senator Johnson, of South Dakota, to eliminate the manufacturers' sale tax on motor tractors, trailers and trucks from the motor tax section, which includes now only automobiles, motorcycles and accessories.

The repeal of existing zone rates on second class mail was sustained and a rate of 1 cent a pound within 150 miles and 1½ cents beyond was substituted.

Life insurance policies payable to beneficiaries, regardless of their amount, are to be exempt from inheritance taxes.

A 100 per cent tax is placed on all political contributions over \$500.

One of the most important amend-

ments to the bill is that which imposes an additional 10 per cent tax on the net profits of any mine or factory that employs children under sixteen or between sixteen and fourteen if they are working more than eight hours a day or before six a. m. or after seven p. m.

**Our National Banks** Resources of the national banks of the United States on November 1, the date of the last call, aggregated \$19,821,204,000, thus establishing a new high record for this country. In announcing the total, Controller of Currency Williams stated that it showed an increase of nearly two billions over the figures of last August 31 and that in the last five years the growth of the resources of the national institutions had been greater than the increase in the preceding twenty-five years.

During the past year only one national bank in the United States has failed; that was a small institution in California. This is the best record that we have had since 1870.

The resources of the national banks of the United States exceed the combined aggregate resources of the national banks of issue of England, the Dominion of Canada, France, Italy, the Netherlands, Norway, Sweden, Denmark, Japan and Germany.

**News Is Property** The Supreme Court handed down a decision of far-reaching consequences on December 23 when it upheld the injunctions of the New York Circuit and District Courts restraining the International News Service from printing for commercial gain the news gathered by the Associated Press. The decision establishes the point, long under dispute, that in the gathering and communicating of news there is a property right which holds even after the publication of the news.

The specific complaint on which the case was based was that the International News Service bribed members of the Associated Press to furnish Associated Press news before its publication to clients of the International News Service and that the International News Service copied news from bulletin boards and early editions of newspapers to which it was sold by the Associated Press and sold it to International News Service customers.

The Supreme Court's decision upholding the complaint of the Associated Press was made by a majority of five votes, with a minority of three dissenting. Justice Pitney in reporting the majority opinion said that the view adopted by the court:

only postpones participation by complainant's competitor in the processes of distribution and reproduction of news that it has gathered and only to the extent necessary to prevent that competitor from reaping the fruits of complainant's efforts and expenditure, to the partial exclusion of complainant.

The minority also condemned the unfairness of pirating news, tho it offered two differing opinions. Justices Holmes and McKenna maintained that further legislation was necessary to uphold the case for the complainant. Justice Brandeis contended that there is no property right in news.

**The Case for the "Y"** In reply to the various accusations and rumors of accusations made by returning soldiers against the work of the Y. M. C. A. with the American army in France, John R. Mott, chief executive of the National War Council of the Y. M. C. A., has promised a thorough investigation and a public report based on the findings of a "Y" committee appointed for the purpose, consisting of George W. Perkins, Mortimer L. Schiff and F. S. Brockman.

Some of the specific complaints that are being circulated Mr. Mott answers directly from his own knowledge:

It has been charged by wounded and ill men that they saw no Y. M. C. A. workers from the time they entered the hospital. In order to prevent any duplication of effort overseas, an agreement was reached between the American Red Cross and the Y. M. C. A. This provided that the American Red Cross should concern itself with the care of the wounded and ill; the Y. M. C. A. and kindred organizations with the well.

The charge that the "Y" made the soldiers pay for tobacco sent overseas as a gift has been especially persistent. Mr. Mott admit that "in a few cases gift tobacco was sold at Y. M. C. A. canteens" and goes on to explain:

The New York Sun, the Chicago Tribune, and possibly other parties shipped tobacco to France in care of the Quartermaster, with the intention of having it distributed free to soldiers. Some portions of this tobacco, because cases were not sufficiently marked, were sold to the Y. M. C. A. by the Quartermaster and retailed in certain Y. M. C. A. canteens to soldiers at the price paid the Quartermaster. Later, when soldiers came to open these parcels, they found in them evidence that they had been intended for free distribution. In every case where these were returned to the Y. M. C. A. it furnished free an equivalent amount of tobacco from its own supplies. The New York Sun states that they have investigated several stories of this kind and found the facts to be as

stated above. The Quartermaster concerned has also investigated the matter and fully exonerates the Y. M. C. A.

Another rumor is that it is said the soldiers say that the "Y" worked always in the comparative safety of the rear lines. Mr. Mott answers:

Since the Y. M. C. A. went overseas nine of its workers have been killed by shell fire while on duty, twenty-nine were seriously gassed or wounded, and in addition to this thirty-one have died in the service chiefly as a result of exposure and overwork. Ten have been cited for bravery or decorated.

In the matter of prices for goods sold at the canteens the "Y" has been accused of profiteering. The War Department investigated the discrepancy between the quartermaster prices and the Y. M. C. A. prices and sent the following report:

Young Men's Christian Association originally asked by General Pershing to run canteen for army on cost basis. To do this had to reckon in price fixing such overhead charges as transportation charges and marine insurance, so that prices were much higher than in this country. Young Men's Christian Association made no profit, but lost thousands of dollars.

**Purging Mexico of German Propaganda** The German Government, acting, it is said, on an indirect warning from the United States, has recalled from Mexico City the notorious Minister von Eckhardt, who has been consistently active in disseminating anti-American propaganda thruout Mexico. His continued anti-Ally and anti-American propaganda, it was pointed out, could not easily be reconciled with the new German Government's protestations of regard for the United States and repeated appeals for food supplies.

Minister von Eckhardt orders of recall were transmitted from Berlin thru the Mexican Ambassador at Washington. For more than five weeks he failed to transmit them to the Mexican Foreign Office.

*Photo Distribution*  
**CHAIRMAN OF THE WAR LABOR BOARD** Basil M. Manley succeeds Frank P. Walsh as head of board, with William Howard Taft of the National War Labor Board. Mr. Manley was special agent for the Bureau of Labor Statistics from 1906 to 1913, during which time he made a complete survey of the iron and steel industry.

*G. Christensen, from Underwood*  
**TO PROVIDE BOOKS FOR SOLDIERS** Dr. Herbert Putnam, Librarian of Congress, sailed for France recently to supervise the distribution to American soldiers of books needed in their after-war studies. Pending demobilization the soldiers in France are being given courses along vocational lines.

# BETWEEN TWO STOOLS

BY A LEFT-OVER LIEUTENANT

**I**N this man's army there are only two classes: those who went over and those who were left over. There is going to be just one kind of insignia that matters, when they come home—the little chevron of gold or even blue on the sleeve. Without that, khaki is a sad color.

There are about a million of us men who find themselves at the back door of the war, just about to step out into civilian life. I have a brand new uniform, and the Belgians have my winter clothes, but that does not begin to express how completely we have fallen between two stools.

I know a man who was associated with a national agency that was promoting war-time industrial efficiency. He was doing good work, responsible work. He gave up the connection, enlisted (in a fighting corps), went to training camp, was commissioned—and found himself assigned to teach sergeants-major army administration. That sort of thing is discouraging. It is not very satisfying to be reminded that by being under arms we contributed to the huge American threat that helped to defeat Germany. Man does not live by generalizations alone. The men who enlisted or took commissions in staff corps chose not to fight, tho they chose mightily useful work. But we who went into fighting corps, on the strength of assurances that we were thus putting ourselves on the road to early service in France, can not help feeling a bit cheated. So far as actual service goes, we have been neither civilians nor fighters, neither at work nor at war. We seem to be a net loss to the taxpayers who have bought us beans and bread during all these months.

We thought we were going to fight. We did not make heroics about it, but we were ready. We knew something of the cost, and something of the rewards. Every man, as a lieutenant just returning from the front said to me, likes to pit himself against real war and find out for good and all whether there is any yellow in him. But we did not fight.

So when they go marching up the avenue or main street, we shall stand in the rear rank of the watchers and let generous enthusiasm and splenetic envy fight it out inside us. But I rather think we shall do our bit of cheering.

We have buried our overseas socks,

knit by kind, troubled hands, in the bottom of our locker trunks. We try not to look embarrassed when the chaps with crutches and slings and Croix de Guerre salute us. We climb regular beanstalks of promotion (some of us), but we wear our insignia as consolation prizes. For we are left over. And presently people will be saying, "Oh, yes. I believe he *was* in the Army. But he never got across, you know."

It is not my business here, however, to display peevishness, but to take account of stock. We have been thru interesting experiences, tho they fell so far short of those we thought we were choosing. We do not come out by that same door as we went in. Men are not made over by the war—most men, at least. One does hear of apparently good-for-nothing boys who become men overnight. But if that is rare, there are many men who, after soldiering, come to feel that they can make themselves over. For boys just out of school, the war merely postpones the choice of a lifework, and gives them a self-reliance to start with that they might not otherwise have had. For matured men, who had begun to establish themselves, and yet had not worked into the rigid channels of middle age, the war has provided a fortunate diversion. It has given them a new deal. They view themselves in a new light. That dearest possession of extreme youth, the sense of unlimited freedom of choice, comes partly back to them.

C. Underwood & Underwood

A training camp service flag made of several thousand "left over" soldiers

Quartered with me is a language teacher, a victim of the abominable research system that devitalizes college teaching. He is seriously thinking of escape, and reads the employment advertisements aloud, half jocularly, but assiduously. A newspaper reporter who messes with me plans to go into sheep ranching. A surveyor expects to break into manufacturing. The football coach who bunked next to me in training camp finds the time ripe for a long deferred law course.

Even when a man turns to the old work, he has a new perspective. I overheard a major whose antebellum business was excavating ruins talking of his return to spade and laboratory.

"I picked up my notes the other day," he said. "I found a problem that seemed, as I worked on it before the war, to be stretching out interminably. But now I

see that it is all but finished. I can clean it up very nicely."

It is not merely the lapse of time, and the removal from a familiar and perhaps deadening environment, that affects our new outlook on life. There are fresh, alien experiences that form a new background for our plans and judgments.

We have been serving under unfamiliar conditions of organization. It is the genius of American business to build a system around men. The army way, necessarily, is to fit men into a system. Till you have experienced both, you do not appreciate the ways of peace. Those only slightly acquainted with the army sometimes ridicule its red tape. But they fail to recognize how necessary it is to build up an impersonal, inflexible system of property accounting and personnel records that will work at all times and places and in the hands of shifting and miscellaneous agents. So one does not rebel at the requirements of the army machine, after thinking it over. But it is pleasanter to be part of an organism than a wheel in a machine.

There are advantages in some of the army ways. The other night I borrowed a hammer from a nearby supply sergeant. He made me sign a memorandum receipt for it. In civil life the return of that hammer would have been a matter of compound probability depending on the lender's memory and the borrower's conscience, both variables. In the army, that hammer goes

back, or I pay. That is good business in dealing with hammers, and company funds, and public property of all sorts.

But similar principles of strict personal accountability, coupled with limited individual authority and great reverence for precedent, do not always work out well in cases where experiment and initiative are desirable. Playing safe with a borrowed hammer is the only right thing to do. Playing safe with a new situation may be positively dangerous. The British Army—to say nothing of our own—furnishes abundant examples of the conservatism that naturally results from such a system, sometimes with disastrous results.

How long the effects of drill and discipline will remain I do not know. Physically we are better off for the army life, tho for nearly every story of a drafted scarecrow made plump and rosy by army mess and army drill, I can quote you a story of a healthy officer-candidate going into an early decline under the strain of the training camps. At least we carry ourselves better than we used to.

I like the army's meticulous emphasis on care in personal appearance. It should bear fruit in civil life. The lesson that care in dressing is worth vastly more than eccentricity in dress would make a salutary difference in the aspect of Broadway and some less famous thoroughfares. Uniformity may become an abomination—but it is a great revealer of those essential qualities

that make one presentable. The boy who has slicked up his issued khaki and scrubbed his leggings and polished his own russet shoes, and has thoughtfully observed the effect on his girl, *ought* not put his trust in purple neckties when he gets out. But I fear he will!

My experience may not be typical, but I did not find in civil life that exaggerated attention to rank and its evidences, that absorption in competitive yearnings for both the rank and the evidences, that I find in the army. I shall be glad to go back where rank is not quite so explicit. I do not object so much to the perquisites of position in business and political life. The magnate may sit behind a ridiculous expanse of mahogany, and surround himself with much pomp and ceremony of push-buttons and secretaries and doorkeepers, but he leaves them behind when he turns his back on the office. The colonel's eagle and the general's stars, and even the lieutenant's bars, are always in evidence. I am quite willing to say "sir" to my superiors—if they are the kind who make it natural—but I prefer to choose my superiors.

These are small matters. It is the fundamental misfortune of the leftovers that they experience military life without the saving grace of danger. When one fights, war is a masterful influence. The meaning of it all grips one. When one simply waits, the little things loom large.

We are in the backwash of the war. We know neither what the front line feels nor what the civilians think. While the country went mad with delight at peace, we shrugged our shoulders and went about our routine business. We were not oblivious to victory or peace, but we knew then that we were finally shut out from the biggest experience of our generation. Being human, we were not elated.

Many of us will seek the faintly military status, after the war, of the Reserve Corps. Some of us really enjoy the life of the army, some of us intend to be nearer the heart of things if there ever is a next time, many of us, I fancy, simply won't let go. We will have warmed-over soldiering if we cannot be real soldiers.

For we do like the army. We like the outdoor life, the knockabout companionship, the sense of the corps, the satisfaction of a life reduced to essentials, the challenge to our adaptability and to the stuff that underlies command. We have learned how comfortable one can be without comforts. We have done new things, and gotten away with them. We are ready for more. On the whole we have had a good time.

But we are left over. When we come back, don't pretend we have been at war, on the one hand, and don't suspect us ever so politely of slacking, on the other. We know our luck, and we shall go about our business and try to forget that with a happier fate we, too, might have been among those who went over.

## TO MALKIN: TURNED TWO

BY HELEN PARRY EDEN

Malkin—for that's the name we give  
To Mary in diminutive  
And never did church portal see a  
More lovely miniature *Maria*  
Than you, my bud of heaven new-blown,  
With knots of ribbon on your gown  
And holy water on your head  
And "ego te baptizo" said,  
Two years ago today—O you,  
So tall and talented, turned two,  
How can I better waste my leisure  
Than paint you, as you take your pleasure  
Busied about your bricks, the floor  
From hearth to threshold littered o'er  
With fanes your fantasy erects,  
My most baroque of architects.  
Or draw you in your sturdy walks  
Stooping to pick with proper stalks  
The fellow flowers whose hapless heads  
You plucked and strew'd about the beds  
This time last year, O Malkin, you  
So tall and talented, turned two,  
Are not the child I learnt to woo  
And win with my infallible face  
And irresistible embrace.  
Your head, where curls succeed to down,  
Holds counter-projects of its own,  
The lure of lap and lullaby  
Has lost its certain spell and I,  
Save for the fragrance of your hawl  
Folded away, could scarce recall  
The baby girl who cut last spring  
One tooth against my great gold ring.

Malkin turned two, what novel guiles  
Arrest your gaze and snare your smiles?  
For you my ancient piano-strings  
Take up their Georgian quaverings  
And sing interminably thru  
Old ditties on demand, while you,  
Perching ecstatic on my knees,  
Pounce here and there upon the keys;  
Old books come out and you refer  
Your critic frown and forefinger  
To each gay quarto of the lot  
From Walter Crane to Caldecott.

Yet all shall pass as the last phase—  
Basilicas of bricks, bouquets  
Of candytuft, go by the board,  
The adorer change with the adored;  
And you shall frame new wants to fit  
Your years and I shall spend my wit  
Compassing, over and above  
The stable service of mere love,  
Such shifts devoted as might please  
The most exact of deities,

This, Malkin, is a mother's part  
Which whoso in despicable heart  
Accuses of facility  
Knows not herself, yourself, nor me:  
Not Isaac's son more straitly sued  
With seven-years-doubled servitude  
The pastoral bride whom at first sight  
He kissed with tears, than my delight  
Serves you, by a device divine  
Of kisses and of tears made mine.

# FITTING SOLDIERS INTO "CITS"

Correspondence from Washington

**R**EPORTS in Washington among business men have it that there is unemployment trouble brewing, almost certain to come, during the winter months when outdoor jobs will not number many.

Recently a large locomotive works near Pittsburgh closed its door. It was busy on Government orders. It completed some of the orders, and the railroads refused to pay the bill, which may have something to do with Mr. McAdoo's urging a settlement of Government control of the railroads.

The other day the War Department urgently asked Congress to legalize verbal orders. What this means can be illustrated in terms of a company which, months back, was told verbally by representatives of the War Department that if it perfected a certain machine method of making brass objects for war use, it would have plenty to do. The company staked its credit on the prospect. It signed notes, it invested money, it built a plant. Then the War Department said that it need not go ahead! On January 1 its notes come due, and the plant, as a result, faces bankruptcy and, of course, the breaking up of its organization. What has happened here has happened to better or worse degree, in many, it is said, and the results in terms of unemployment are considerable.

These illustrations indicate that America is, to a large extent, deluded by the appearance of prosperity. "And," said Nathan A. Smyth, Assistant Director General of the United States Employment Service, "demobilization is upon us with a rush. Plants having no peace time value are being closed gradually; notwithstanding, during the next three months, millions of soldiers and sailors and war workers will have to find new jobs. Soldiers are being discharged by the thousands daily on the basis of military units, with no reference to whether or not they are needed in industry. The soldiers let go are being mustered out on a few days' notice, with no advance of pay—being given in money the cost of transportation to their homes, free to buy tickets wherever they please. Already they are turning up in cities, improvident, 'broke,' away from home, without work, applicants for civilian relief. Many of them do not yet want work. Many others are unwilling to undertake 'day labor jobs,' which alone they can find. There is every prospect, thus, that unless remedial measures are promptly taken, the sight of stranded, workless, moneyless soldiers thruout the land will be common."

He added that the great danger in the coming four months is that there won't be jobs enough to go around; that unemployment will come with attendant misery, and social unrest, when anarchistic tendencies are contagious.

"The remedy of building public works is not available on a large scale,

BY DONALD WILHELM

until spring," Mr. Smyth went on. "The farms will not call urgently for men until frost thaws out. Building cannot, for a season, be resumed to any great extent. Chiefly must we look to our manufacturers to carry the burden, but they are hesitant. For taxes are not yet determined, the cost of money is high, and credit will be timid for a while. The prices of raw material

*Press Illustrating*

*Nathan A. Smyth, of the U. S. Employment Service*

and labor are high, and the producer hopes that they will fall, and manifests a tendency to wait until they do."

Fortunately, to meet this emergency in a fairly effective way, but not at all in the thoro way that England and France are meeting it, the Employment Service of the Government, with its eight hundred and fifty officers scattered thruout the country, and its many other agencies; the State Council of National Defense, with their one hundred and eighty-four thousand agencies; the Red Cross, with its contacts established thru its Home Service Section in nearly every community in America; the Army; the Navy; the Department of Agriculture; the Women's Section of the Council of National Defense; the War Labor Policy Board; War Industries Board; Federal Board of Vocational Education; Y. M. C. A., Salvation Army, and a dozen other peace and war-time organizations, have consolidated forces in this program just announced, the first thorogoin plan for taking care of the returning Yank.

The plan projected is a good one, because it calls upon the utmost coöperation between the Nation and State—united coöperation. The Yank—or his brother, or sister without service stripes, the war worker—will soon find that his interests are being looked to in every State and in every community. To illustrate, forty-eight hours after the plan for consolidation of social forces was accepted by the Council of National Defense, the State of Arkansas, the first to report, had com-

pleted the organization of units for returning soldiers and sailors and war workers, and had bureaus established and functioning in each of its counties.

Each unit of the Employment Service is a clearing house which reports weekly, so that every Wednesday night the Department of Labor has before it the labor conditions of the entire country and just what surplus or need of skilled and unskilled workers there are in its own province. The functioning of these agencies is now improved by the clear-cut understanding among all local organization agencies, such as the Red Cross and the many other organizations concerned in one way or another with the welfare of the Yank and of his family that they are to clear thru the Employment Service agencies all applicants for work. This means such an understanding among all these agencies as has not existed heretofore. It means that where the Home Service Section of the Red Cross, for instance, is concerned with the family welfare of the Yank, all questions about his employment will be routed thru the Employment Service. Conversely, it also means that if there is any question arising in the agencies of the Employment Service about the home welfare of the Yank, that question automatically will be turned over to the Red Cross, the Salvation Army, the Federal Board of Vocational Guidance, the General Wartime Commission of Churches, the Y. M. C. A., the Knights of Columbus, or any of the national, state, or community agencies that is qualified to cope successfully with the problem in hand.

This clear-cut understanding between the various agencies, the establishment of local boards of management, made up of individuals from the various agencies under a bureau manager, who has the aid of workers of the Employment Service, offices, the use of telephones and volunteers, means that order is being brought out of such chaos as comes with great enterprise and enthusiasm that works without an established and basic organization. It means that the Yank will find at each camp representatives of the Employment Service ready to furnish information as to employment. It means that wherever the Yank goes—and he usually makes for home—there will be Employment Service clearing houses or other clearing houses being directed by the local Counsel of National Defense, or by other agencies, consolidated, or working by themselves in coöperation with the whole plan. "It means," said Mr. Smyth, "the end of the great danger of unrelated effort by national and local organizations, which would cause duplication and confusion and probable conflict," with the result that many Yanks would either fail to find employment or be otherwise unable to utilize the lifetime of growth which most have got in one year of war.

## NEW JOBS FOR OLD

Wounded soldiers are acquiring new careers at General Hospital No. 9, formerly the big hotel of Lakewood, New Jersey. It has now nearly a thousand patients unfitted by the war for their previous occupations, who are being taught new work in which they can get good civilian jobs

### BEGINNING EASY

The moment you can get a wounded man's mind off his amputated leg or jumpy heart or splintered humerus and on the making of something worth while with his hands, that moment begins his rapid return to usefulness. Such occupational work as leather tooling, toy and novelty making, basketry and canning, hand and frame knitting and weaving is taught by women reconstruction aids well up in therapeutics

### PRINTERS. FARMERS. ENGINEERS

The educational facilities for wounded men include nearly every trade or profession in which they may be interested. These men were all photographed at No. 9, where they were sent for convalescence. The man above is learning to operate a linotype machine; the group at the left are being taught "farm engineering" — not only how to run the farm machinery, but how to plant and harvest

## THE BRITISH MYSTERY SHIP

At last the secret can be told of the mysterious British ship "Suffolk Coast" that decoyed the U-boats to destruction. It looked like an ordinary harmless merchantman, a n easy victim of a German submarine. But the tramp concealed beneath deceptive exterior the material of successful warfare

© International Film

### CONCEALED WEAPONS

Whenever a U-boat was sighted the "mystery ship" gave every appearance of being panic-stricken. The photograph at the left shows the crew going thru its "stunt." But while this was being staged to decoy the U-boat nearer a gun crew got ready the twelve-pounder hidden under the fake deck and at the psychological moment the gun, already aimed by a periscope concealed inside a funnel, surprised the U-boat

NO ONE WOULD SUSPECT A GUN HERE

UNTIL IT DISCLOSED ITSELF AND FIRED

## WHERE THE WAR STILL GOES ON

The signing of the armistice did not put a stop to hostilities in Siberia, where Allied and American troops are fighting even now against the Bolsheviks. These photographs received from Vladivostok show chiefly the work of our troops and of the Czecho-Slovaks, of whom about 80,000 are being kept in Siberia fighting

Underwood & Underwood

### A U. S. PATROL IN VLADIVOSTOK

These motorcyclists are part of the American force operating with the Allies to save Russia from self-destruction. A wounded American, just returned from Russia, tells the story of one battle. "I assisted in taking the German officers and gunners prisoners at the battle of Bakeratzu, about 197 miles from Archangel. We had about 1000 men and the British and French combined another 1000, while the Bolsheviks outnumbered us at least ten to one"

### AMERICAN TROOPS LANDING IN SIBERIA TO FIGHT THE BOLSHEVIKI

Gallatin, Secord

### CZECHO-SLOVAKS AND AMERICANS

The doughboys above are guarding some Bolshevik prisoners captured in the recent fighting. At the left is a group of Czecho-Slovak soldiers, wounded in Siberia, who are being taken care of in the Red Cross hospital in Tokio, Japan. The men at the right are Czecho-Slovak soldiers, American sailors and one United States marine watching the debarkation of more troops at Vladivostok

THESE are many friends of temperance who view with regret the prospect that by next March the prohibition amendment to the national Constitution will have been adopted. Some of them are refusing to take any part in the movement for ratification, and some, like Mr. Taft, have definitely opposed ratification. Were it not for the doubts of these conservatives the belief in prohibition would now be almost unanimous. The doubt still lingering is chiefly as to the enforceability of prohibition.

Mr. Taft's position is typical of the conservative. He explicitly states that he is no friend of alcohol; that he is personally a total abstainer; that he is not in the least staggered by the impending losses to those who have financial interests in the liquor traffic (for the reason that, for half a century, these people have had ample warning, including one from the Supreme Court of the United States, that their investments in this predatory business are at their own risk, and that they can expect no compensation); that he would be glad to see the saloon in politics deposed; that he is in favor of local and state-wide prohibition wherever enforceable; and, above all, that he is not deluded by the "individual liberty" argument.

As to "individual liberty" he says, "I think that in the interest of the community and of the man who cannot resist the temptation to drink in excess, if he has the opportunity to drink at all, other citizens in the community may properly be asked and compelled to give up drinking, altho that drinking may do them no injury."

This strong statement will remove the last objection to prohibition in the minds of thousands of people, especially as modern science demonstrates that there is no drinking "which does no injury." The only real issue therefore is as to whether prohibition really prohibits.

The whole argument of Mr. Taft and of the other few remaining opponents of prohibition (outside of those commercially interested in the liquor traffic) revolves around this question of enforceability. Assuming the unenforceability of prohibition, other objections follow. If prohibition is enforceable only according to local sentiment and if it is enforceable in some places and unenforceable in others, it is a local rather than a national question, and its introduction into national legislation is an undue disturbance of the relations between the national and the local governing bodies. Again, if prohibition is unenforceable in one locality, any attempt by the national Government to enforce it will result in corruption, a lowering of the respect for law, a perversion of our national politics, and an undue and dangerous power in the hands of the executive.

To show that prohibition is really enforceable we should consider two things, namely, past experience and the forces out of which our future experience must come.

We have three important facts in past experience which ought to be more generally appreciated:

(1) Modern prohibition is already fairly well enforced, far more completely so than the public outside of prohibition territory have been led, by the misleading publicity of the liquor interests, to realize. The long and favorable experience of Kansas is especially noteworthy. Even in Maine prohibition prohibits and has long prohibited in the country districts, and has some restraining influence even in the cities, where its partial failure has been so widely advertised.

(2) Evasion of liquor laws is more common where liquor is licensed than where it is prohibited. Investigation shows that "speak-easies" are actually more numerous in "wet" than in "dry" territory. In short, if prohibition is not completely enforceable, the other alternative, regulation, is less so. I will add, parenthetically, that the recent congressional committee on narcotics finds that morphine and other drug addiction is more common in "wet" than in "dry" territory.

(3) The public sentiment for prohibition, on which enforcement must always rest, has grown prodigiously in the last twenty years. Already about two-thirds of our population and three-fourths of our territory is under local or state prohibition.

With these facts behind us we can readily forecast what is before us if we will stop to analyze the forces at work. Most of the few remaining *disinterested* opponents of prohibition would, I think, change their minds if they would make the analysis for themselves. It will show that prohibition will be more enforceable in the future than it is at present and that national prohibition will be far more easily enforceable than local prohibition.

Let us first list the various primary forces which are arrayed against each other. By examining them we can best decide which side must win permanently. We find six chief forces working for prohibition, namely: (1) Modern Science; (2) Modern Industry; (3) The War; (4) Modern Ideals of Health and Efficiency; (5) Moral Sentiment; (6) The Organization of these Anti-Alcohol Forces.

Against prohibition we find: (1) Commercial Interests; (2) Conservatism; (3) Alcohol Drug Addiction; (4) The Organization of these Pro-Alcohol Forces.

First as to modern science. Physiology has found that alcohol is out of place in human insides. However we may smack our lips over "fine wines," we always dull our nerves thereby, just

The prohibition status in this country December 1, 1918: the wh

## CAN PROHIBITION I

BY IRVING

PROFESSOR OF POLITICAL ECONOMY AT YALE UNIVERSITY  
ON NATIONAL

as Alice in Wonderland did no good to her watch by introducing butter into its insides altho it was the "very best butter"! Most careful and delicate tests prove that, even in small quantities, alcohol "slows down" our nerves. Again, statistical and actuarial science has demonstrated that even steady drinking, not more than what is ordinarily called moderate, raises the death rate over 80 per cent.

The importance of this new scientific factor cannot be overestimated. It is only a question of informing the public generally of what almost every physiologist, physician, actuary, statistician and economist already knows. Such a solid basis for prohibition will then exist that not one per cent of the community will want its repeal any more than we now want the repeal of anti-opium laws.

The hoary ideas that alcohol is useful for the manual worker or the brain worker will disappear with the same mathematical certainty that the hoary ideas that the earth was flat and that the sun revolved about it disappeared with the progress of scientific knowledge.

Secondly, modern industry has "no use for alcohol." Scientific management is applying the sciences of physiology, psychology and statistics to increase output just as it is applying the sciences of mechanics and chemistry. A Connecticut manufacturer says that

represent territory that has adopted prohibition

## VE OUT DRINK?

HER

PRESIDENT OF THE COMMITTEE OF SIXTY  
TION

careful estimates indicate that prohibition would increase his output 25 per cent. A number of estimates of other producers in this and other countries range between 9 per cent and 50 per cent.

Thirdly, as to the war. Before this war the Kaiser said that next war would be won by the armies and navies using the least alcohol. The American Army and Navy are using the least alcohol, and they seem to have proved the Kaiser right for once!

Fourthly, as to modern ideals. Unlike the ideas of the past, these are ideals of work, not leisure. There was a time when the English "gentleman" had to prove his gentility, i. e., the fact that he had nothing to do but enjoy himself, by a weekly carouse. Today these aristocratic ideas of leisure give place to democratic ideas of universal work.

After the war these ideas of increasing our power to work in industrial and professional life will grow stronger. The war will spread the soldier's ideal of personal fitness in which alcohol has no part. The war will, by its very destruction of life, make a new and stronger movement for life conservation, in which alcohol can have no part. The war will have destroyed wealth and made a keener industrial competition, in which alcohol can be allowed to have no part.

Thus we already see that the first

of our six allies now fighting for prohibition will only wax stronger with time.

We turn for a moment to compare the forces on the opposite side of the fight.

As to the first and most powerful pro-liquor force, that of the commercial interests involved, it is obvious that this will be entirely destroyed thru national prohibition.

Here at present lies the real strength of liquor. Pro-liquor sentiment exists chiefly because it is bought and paid for. There is a vast pro-liquor propaganda, purchased and fostered by skilful advertising and the allurements of the saloon. Behind the resistance to prohibition, behind even that resistance of the many who have no personal sympathies with the saloon but are merely misled by false arguments, are the liquor interests and their lying or misleading statements. It is their campaign funds, corruption funds, able paid attorneys and agents, lobbyists, editors and newspapers which influence elections, legislation and law enforcement contrary to natural public sentiment. As soon as the liquor interests can no longer supply the sinews of war and can no longer use "wet" states as a base of op-

erations for attacking the "dry" states, the mainspring of the resistance to prohibition will be broken at last. Prohibition in Maine is successful in the country districts. The chief cause for the frequent partial failure of prohibition in certain city districts in Maine lies not in Maine but in the money power of the liquor interests outside of Maine.

As to the second factor opposing prohibition, conservatism, this also is extremely powerful, but it has no resilience. Its tendency is to keep matters as they are, whatever they are. After a generation of prohibition, as in Kansas, drinking becomes "bad form," so that the force of custom, or tradition, so far from threatening a return of liquor, changes sides and becomes, instead, one of the strongest safeguards against such return. We are all influenced by the customs about us. Contrast the Kansas social atmosphere where any use of alcoholic beverages seems to decent people disgraceful, with the social atmosphere in Europe! A student in a certain European university was expelled by the faculty a few years ago because he refused to drink the toast of the king in wine!

As to the third factor on the side of liquor, namely, the alcohol drug habit, it also will tend to disappear after prohibition. It is true that drug addicts have little scruple about breaking anti-drug laws. It is old toppers who

will have illicit stills in their cellars, and this species of law evasion will not completely disappear until the generation of toppers has died out—an event which will be accelerated by the "topping" itself! But, under prohibition, the recruiting of alcohol drug addicts will almost wholly cease; for new recruits are now chiefly brought in by the blandishments of hospitality, the "free lunch," advertising, etc., which will automatically disappear almost wholly the instant prohibition is adopted.

Of the forces thus far mentioned, all the forces for prohibition will grow stronger after prohibition; and all those against it, weaker.

There remain two forces for prohibition and one against it still to be noticed.

As to the "moral sentiment," it also will grow stronger with prohibition. This is the experience in Kansas and other prohibition states, and the reason is that, as Sumner has shown, morals rest largely on the "mores" or customs of society. The rarer and more secretive drinking becomes, the more repugnant it becomes to the moral sense of the community. If nearly "everybody is doing it" the rest have to condone it. I once attended a church conference in Berlin and found beer being served. It never even occurred to the German mind that this was unbecoming to the church. On the other hand a Yale instructor coming from Kansas had his moral sense greatly shocked by seeing saloons in New Haven actually daring to show their signs on the public streets! We think nothing of what is common. It is the exceptional which excites us. When tuberculosis becomes as rare as smallpox, we shall guard against it as much; and when drinking becomes as rare as opium-eating, we shall be as morally indignant.

There still remain two forces, namely, the forces of organization on each side. These are chiefly represented by the Anti-Saloon League on one side and the United States Brewers' Association on the other. It is true that reformers, after securing legislation, often promptly go to sleep while the forces of evil, against which they have been fighting, are said never to sleep. Many a town and sometimes a state has gone dry and its good citizens failed to keep it dry. But this has been because the organization of the liquor forces has been kept alive by financial support from outside.

Just here lies the peculiar merit of national prohibition as distinct from local or even state-wide prohibition. The United States Brewers' Association is a national body. This fact, of itself, makes prohibition a national and not a local question; for it is only thru national prohibition that the great nerve center of this octopus can be destroyed. What has thus far been done is simply to amputate some of its tentacles.

The more one studies the activities of this monster the more one is impressed with its terrible and insidious power. Public office, the press, capital, labor, banks and [Continued on page 32]

# THE WONDERS OF SURINAM

## A Wasted Land of Unlimited Resources

BY J. BARKLEY PERCIVAL

**S**URINAM, or Dutch Guiana, South America, is a vast and practically unknown country where eternal summer, like its many rivers, runs on forever. It is a land of gigantic transixed waves of mountains, hills and valleys, extensive plateaux, boundless, treeless and perfectly level plains, and fertile basins, where the luxuriant grasses are eternally green and water is ever abundant—the pleasure ground of the lover of nature. It is a country of vast, majestic and impenetrable tropical forests, swamps and inundated lands—the Eden of animate nature; of mighty rivers and innumerable smaller streams teeming with countless varieties of fish, mammals and reptiles; of great waterfalls; dangerous rapids; beautiful cascades; sparkling brooks and bubbling springs; of violent electrical storms and torrential rains; resplendent sunshine and enchanting moonlight, but unfortunately it is a land where mankind is entombed in the abyss of ignorance and superstition.

Speaking roughly, Dutch Guiana is a country going to waste. Its natural resources are abundant, embracing the products of both the temperate and torrid zones, such as sugar, cocoa, coffee, rice, tobacco, medicinal plants, rubber, balata, nuts and fruits, precious metals and other minerals in inconceivable quantities, and an inexhaustible supply of all sorts of timber. Finally, no country in the world is so rich, varied and interesting as regards animal and plant life. But the soil, which has been gathering fertility from the repose of ages, supports only a useless vegetation, except at miniature spots, comparatively, like a few oases in the Sahara, for agriculture is still in the nursery stage. The mineral resources of the country have been touched only as regards gold, but at the time of writing there has been made a big discovery of bauxite which promises a grand future for the mining industry. Manufacturing is yet to be, and as to stock raising, the country cannot supply even the home demand. An observer says of the Maroni district, that no country in the world, perhaps, is so capable of yielding immense returns from agriculture, yet none is so little cultivated; none where the soil will yield such an enormous variety of valuable products, where the facilities for internal communication are so vast, and that possesses in such marvelous completeness all the natural requisites for a stupendous trade, and yet none more neglected. Dutch Guiana is four times as large as Holland, yet it has less than one six-hundredth part of its population, tho capable of sustaining twice the population of Holland and Belgium together.

Owing to the love of travel and exploration, the writer journeyed hundreds of miles thru the boundless hinterlands of Dutch Guiana inhabited by the chil-

*This glowing description of the hinterland of Surinam, or Dutch Guiana, reveals to us the possibilities of a region that has been hitherto ignored by American tourists and investors. Lying at the entrance of the Panama Canal and one of our nearest neighbors in South America, it might have been anticipated that its scenery would have attracted the sightseer and its resources would have been developed by American enterprise and capital. Such development and improvement would naturally result from the transfer of the Dutch West Indian possessions to the United States, but cannot be expected so long as they remain under European rule. The Dutch Government is not oppressive, but it has done and can do little for this country. Its interests are concentrated upon the East Indies, which are very valuable, while the West Indies are only an expense. We have good reason to believe that a proposition to purchase the Dutch colonies in America would be favorably considered by the Netherlands and that such a transfer would be as welcome to the inhabitants as was the recent acquisition of the Danish West Indies.*

A native Indian woman of Dutch Guiana  
dren of the forest, besides going up and down extensively among the more advanced people. The journeys thru the bush were made first by means of the Colonial Railway from Paramaribo, the capital of the colony, and then by water in small flat-bottomed boats and dug-out canoes; on foot thru the forests by means of narrow paths opened up by the machete.

During these travels, we navigated many rivers, encountering numerous dangerous rapids and escaping narrowly many perils. We saw frequently the margins of a river peopled by alligators and innumerable birds of gigantic size, while the air was gay with the flight of gorgeous plumage and musical with their songs and chatterings, and the water teemed, even seethed and rumbled sullenly at times, with fish and monsters—the paradise of the sportsman. Occasionally, when voyaging at night, moving silently onward in the embrace of a mighty current thru the

heart of unmeasured solitudes, remote from civilization, and listening to the snorting, blowing and splashing of big, hungry creatures in the water, we could easily imagine that we had been placed upon the earth long prior to the age of man—in the Devonian Age when a universal ocean, marvelously animate with fish and other creatures, enveloped the globe.

On land we traveled on foot, carrying with us a complete camping outfit. Our journey led us over great hills and mountains, down rugged declivities and along serpentine trails that were fearfully furrowed by the daily torrential rains. We traversed vast areas of an unsubdued world of scragged jungles and dense tropical forests enveloped in eternal gloom; awful in their midday silence, terrible in their midnight noises and blackness, and dripping with water from the frequent thunder storms; and often we found ourselves entombed in masses of thorny vegetation, making progress like passing thru interminable barbed wire entanglements. At times we were permitted to view from altitudes, in the wonderful and enchantingly transparent atmosphere, great expanses of the unknown world. Once we saw twenty or more independent rain storms at the same moment. We crost swift streams by means of catamarans and rude floats, or by walking suspended trees, like aerial rope-dancers, or by fording and swimming. We wallowed and waded thru broad and dangerous morasses and submerged lands, encountered thundering cataracts and numerous charming cascades, journeyed mysterious, unmeasured solitudes, beholding with deep feelings the marvelous works of creation and awed by endless sublimities. We camped at times in wonderful natural botanical gardens of vast extent, or rested for refreshments at some charming sylvan bower traversed by a laughing brook, regaling ourselves with delicious wild fruits, or dining upon wild vegetables and the flesh of wild beasts. The memory of these experiences will ever remain as a strange, enchanting dream.

Results of the great forces of nature were all about us. We crost the basins of primeval lakes that had been drained, perhaps, by mighty cataclysms, some of which are today the sites of majestic forests, while the ancient islands are now perpendicular walled table-mountains or giant castles. All seemed to us mute, solemn, gigantic sentinels of the past ages. We visited wild rubber forests, and penetrated into unexplored regions.

We slept in hammocks or on the ground in arboreal tabernacles, or canopied only by the stars, or dwelt in houses of canvas, and were often aroused in alarm by the collapse of our canvas shelter, or by the ceaseless flash and roar of a tempest. We were entertained, at

# THE OLD-TIME NEW YEAR

*Edward Payson Powell, who died in May, 1915, was for nearly half a century one of the best-loved contributors to The Independent. From a successful career as Congregational pastor in St. Louis and Chicago he turned to farming in northern New York and later in Sorrento, Florida, but thruout his life he continued to write lessons of beauty, wisdom and goodness in simple things*

BY E. P. POWELL

Yes, let everybody come, and they shall all be welcome. Are we not, after all, one family, and shall we not find it out at least once a year? And how did we ever get so divided? Let us come together for one day, and forget all differences. "Yes, indeed," said my father, "this is God's world, and all people are of his family. New Year's is the great family day."

It must be remembered we had no steam cars as yet, no telephone, and no telegraph. We had only a steamboat on the big waters. No one could talk with London in the morning and Cape Town at night. We had never heard of ocean cables, and we had not capacity as yet to believe in such things. The world had not been bound together in all its aches and joys. We did not know, five minutes after it broke out, that a fire was raging in Seoul or Yokohama. As for all the "Great West," it did not exist for us. John Adams and Thomas Jefferson, dying the same hour, were seven days apart. Washington was a village, hard to get at, except on horseback; and once a week we heard what the legislators were doing. Yes, indeed! the world was then a very big one, and its people were not near together. When we would get closer we went by stage coaches, or else by ox teams. Alas! there is nothing more sad remaining than an old coach. Nobody uses it. Few know even its former glory, and it was built so well that it cannot die. 'Tis a sorry thing to be stowed away under a shed, when one cannot any longer go on with the world's evolutions.

But our little world—that was another thing. It was at least as big as the county, and we knew everything that went on in the town. There were those whose business it was to gather and disseminate the news. They developed a gossiping instinct. They knew when a bit of tender scandal occurred

a mile away. Was it scent? or was it?—well, I cannot tell what it was. At least, it is now a lost power. But we had no newspaper reporters; no, they had not been invented. Bless the Lord, one could be let alone in those days; and when a blunder was made by a good man it was not told from Dan to Beersheba—not, at least, beyond the town limits.

There were in our town those who watched the old year out. But clocks did so vary I am sure they knew little of the crossing. "It is poor business," said my father, "wasting moral strength on such things. Let them feed the hungry and visit the poor." The little mother was up betimes. That, indeed, she always was, for she would not lose the cream of the day. But on New Year's she had us all up before five o'clock. "It is a new year," she said. "We must begin quick—and then keep it up." And then it was, that one must be awake to keep ahead of the tall aunt, who was sure to come on New Year's Day. And as for callers, they were not laggards in those days.

By nine o'clock they began to come. You should, indeed, have heard how merry were the bells. There are none such these days. These are more like music boxes, and they do not encourage conversation; but in those days the bells were keyed exactly to our merry voices, and they seemed to say, "Now! now! now! let us be happy!" And there were no drivers that had to sit on the seat out-of-doors, to hold the horses; but all tumbled out together, not ashamed to be simple and rejoice with each other. In they came, shaking off the snow, and as noisy as their welcome was hearty. Before these were gone, others came; and they all ate cake, great slices of it, and drank coffee together, or cider, as they liked; and they bubbled all over with good will. And the little mother fed them for all the world as the good Lord feeds everybody. "Yes, eat! yes, another cup

of coffee! yes, another doughnut! For is it not good? Are we not neighbors? And there is nothing like it, this coming together to be one—that is it. Why should we ever be divided? Quarrels are of the devil—and I know not what other things." Then did the little mother make us forget that some of us were Methodists, and some were Baptists, and some were Presbyterians, and some were Congregationalists, and some were nothing at all; for the cake was all patriotic and Christian cake; and there was neither Presbyterian nor Methodist. [Continued on page 31]

"LET us turn over new leaves," said my Uncle Platt, "every one of us this year." "No," said our little mother, "but I will do nothing of the kind. Are not the years all one? There is no break at all between them." She was carrying a great cake, baked the year previous (that is, the day before), and placing it on the table to be eaten. "New leaves, to be sure! Let them turn them that are ashamed of their old ones." "'Tis true," said my father, "but we shall never be ashamed of your record, little mother." "No, indeed," said we all. And my Uncle George, who was growing older and more gouty, grumbled, "There are too many new leaves turned! What will the fools be at next?"

But my Jim had his arm around me, as we stood by the great kitchen window, and he whispered, "It is love that joins the years, Ned!" And we agreed that a loving life made one long year of it all, in which the lilacs and the roses and the lilies took turns offering us their sweet odors. And the little mother said, half aloud, "Yes, it is all right that a woman should not tell her age. Why, indeed! let her keep her soul true and sweet, and wholesome, and she has nothing to do with growing old."

But it was not so bad after all; for how else could the little mother have got days enough to celebrate! New Year's cakes were otherwise impossible (and at that time we had only begun to have Christmas). That should have the pie; but we still needed New Year's for the cake. So it was we should then have one day for roast turkey, one for chicken pie, and a day for Washington cake, Lafayette cake and Jefferson cake; and I do not know for certain but Andrew Jackson cake. Then there was Fourth of July for gingerbread. And there were all the rest of the days, or evenings, rather, for apples and cider, and all the other good things that the Lord, helped by honest labor, could devise for us. It was a beautiful sight—not like Thanksgiving, when the guests were only those who were invited, and we expected no others. Now we spread the table for all the world.

"All tumbled out together, not ashamed to be simple and rejoice with each other. In they came, as noisy as their welcome was hearty"

## WHAT SHALL YOUR GARDEN GROW?

BY F. F. ROCKWELL

**M**OST persons select flowers only from the point of view of their likes and dislikes. That is the first consideration when they begin to know flowers well enough to have some preference in the matter. Their flower friendships are usually based on chance—not on going over the whole field and selecting what seems most attractive, but on an accidental meeting resulting in a speaking acquaintance.

From the practical point of view, however, there is another big factor to consider.

What flowers can be counted upon to give satisfactory results under ordinary care? Which will thrive with very little or no care? And which are uncertain or "miffy," making it necessary to give them considerable time and attention, if not expert skill and care, to make them grow satisfactorily?

With a person of limited time or experience, it may be a question not only of the particular flowers which may be one's favorites, but of having those which may be grown easily or none at all, and in this matter, as in most others, a "half a loaf is better than no bread."

Flowers generally are discussed according to their botanical groupings, the first distinction made being whether they are perennials, biennials, or annuals. My purpose in this article, however, is to recommend to the beginner, or to the gardener with limited time, those things which are most likely to prove sure winners, in any of these groups: the things which can be counted on if one wants to be sure of flowers, and which even the novice, if he or she will follow directions, and will use average care and common sense, can be pretty sure of succeeding with.

Perennials, as a class, are easier to care for, and more likely to give sure results than either biennials or annuals. They should be used in an abundance around every permanent home; but they are more expensive than annuals and biennials, unless grown from seed. In that case, they take, of course, a good deal more time in giving the gardener his expected reward. They have a comparatively short flowering time, and are not, as a rule, attractive or showy flowers, nor are they generally as good for cutting. While it takes more neglect actually to *kill* them outright—nevertheless, the blooms very quickly show the effect of want of care.

The biennials are, for the most part, quite

A garden of hardy perennials that will be equally pleasing in a less formal setting

sure to bloom, but have many of the disadvantages of both perennials and annuals. They take practically as long as the perennials to give results, and then are gone at the end of one season like the annuals. For that reason, they have, with a very few exceptions, never been as popular as either of the other classes. A number of the perennials grow so easily, and are so hardy, that they perpetuate themselves by "self seeding," blooming without any care on the part of the gardener in starting the plants. Altho better results can usually be had by taking up the volunteer seedlings and transplanting them to desirable positions in the spring.

The annuals have, of course, by far the biggest scope for immediate results. They remain in flower upon the average considerably longer than the perennials, and are more brilliant and varied in their coloring, size, and form of bloom. They are, however, not permanent and may be put out of business by attacks of insects or disease; they are, also, more subject to the vagaries of the Simon-pure amateur, whose neglect or overcare would destroy a bed of annuals where it would not seriously affect well established perennials.

I always feel that any list of plants is invidious and more or less presumptuous, but, in this case, it is not so much telling the other fellow what he *should* grow, as it is letting him know what he *can* grow with the least trouble. Therefore, for the sake of definiteness, I have suggested twelve each of annuals and perennials, and six each of biennials and spring planted bulbs, that will all come under the classification of "Sure bloom even with little care," in so far as it is possible to claim infallibility for any flowers.

### THE ANNUALS

*Sweet Alyssum.* Not only one of the prettiest in itself, but always lends an air of grace and charm to the whole bed or border in which it may be grown with other things. Attractive also in vases

or window boxes, where it can hang down. Flowers May till frost, white and lilac.

*Celosia.* Plants grow almost like weeds. There are several types of flowers, from the stiff formal "cocks-combs" to the graceful plumed varieties, of which the new Castle Gould is the most striking. Colors range thru reds and yellows, some of them very brilliant. The dwarf sorts are especially good for edging garden paths or long walks, where

their bright colors will not jar with other things. The new "Chinese Woolflower" is particularly effective as a decorative border, and the big plumelike heads will remain in good condition some two weeks as a cut flower. It bids fair to become very quickly one of the most popular of all annuals.

*Clarkia.* An old favorite in Europe, but hardly "discovered" yet here. Makes a small shrublike growth, but flowers early and freely from seed sown in the open. The graceful sprays make one of the most attractive of all flowers for cutting, and last a long time. Flowers are either single or double, rose, salmon, white and mixt.

*Kochia* or "summer cyprus," while it may be considered too plebeian by some, is nevertheless the most effective of all quick-growing annuals for semi-landscape effects, lending itself to decorative uses of all kinds. Grows without trouble from open sown seed, and may be thinned to two to three feet, or transplanted, as it is equally striking in rows or as single specimens. Turns to a bright crimson "burning bush" in the fall. Frequently self-seeds, even in northern states.

*Lobelia.* While the seed is fine, and the little plants when they first come up are rather frail and tender, they will hold their own if they are protected from being smothered by weeds. Lobelia and Sweet Alyssum together make an attractive combination for a low trailing border, or in vases or boxes. A new variety, *Tenuior*, is a very much stronger grower than the old sorts, and has flowers twice as large.

*Marigolds,* of course, are very old-fashioned—but even a child can grow them. Many gardeners who do not consider them worth bothering with would be not a little surprised with the effects attainable with the new named varieties, in various colors. "Legion of Honor" is one of these, dwarf growing, bright yellow with contrasting crimson cross at center. Don't scorn the modest marigold just because every one can grow it; try some of the named varieties and surprise yourself.

*Nasturtiums.* Much of the paragraph above would apply word for word to nasturtiums. Nasturtiums are so easily grown that many persons fail with them just by

giving them too much care. In rich soil they will make a tremendous growth of leaves with but very few and poorly colored flowers. Plant in rather poor soil—soaking the seed in warm water several hours first—and avoid using manure or fertilizer rich in nitrogen.

**Petunias.** Another flower that has undeservedly "lost caste" because people plant mostly the old mixtures with magentas predominating. Of almost weed-like persistence of growth, long season of bloom, and almost unbelievably free-flowering, the petunia has much to recommend it for masses of color in situations where other flowers might fail. One variety with the not prepossessing name of "white bedding" is a literal snow bank when in full bloom.

**Portulaca.** Another good old-fashioned favorite that should not be lost sight of. Its leading characteristic perhaps is that it will grow and flourish where most other flowers would curl up and die in the sun. For very sunny spots, windows and roof gardens, or over rocks, it is right at home. The brilliant flowers show many shades of orange, red and white.

A new variety, Parana, has flowers very much larger than the old singles or doubles. The color is a peculiar reddish purple but quite brilliant. It will probably break into other colors in time. If you plant a packet this spring, watch for any sign of orange or white among the flowers, and save the seed.

**Nigella**—"love-in-a-mist." Why isn't this grown as much as it used to be? Possibly we're getting too eugenic to tolerate the name any more. Certainly it has many points in its favor, besides easiness of growth. Not only the flowers, but the foliage—and for that matter even the seed pods—are most decorative, growing or cut. Try "Miss Jekyll," with deep blue flowers, if the ordinary "mixt" is too old-fashioned for you. It is more dwarf in growth, scarcely over a foot high.

**Snapdragon.** The antirrhinums or snapdragons have at last come into their own; one sees them even in the best shops at almost any season of the year. They take longer to reach the flowering stage than most of the plants mentioned above. It's an easy matter to start them early; they transplant readily. Plants sown in the open will bloom gloriously in the fall, up until hard freezing weather.

**Zinnias.** I have never had a very tender spot for the zinnia, because its form is too stiff and its colors too aggressive to suit my taste, but it certainly is easy to grow and sure to bloom! There is a new strain, the "curled and crested," which is worth a trial. The "curled" flowers might be described as a "cactus" zinnia; the "crested" are quite distinct. And there are some dwarf named sorts, such as "Fireball," that are excellent for bedding or edging.

Gladioli are among the most easily grown and bloom from August to November

#### THE PERENNIALS

While almost all of these may be started from seed as easily as can the annuals, they require transplanting, and a season's growth, before they bloom freely. (Tho if started early, many of them will give a few flowers, by way of encouragement to the gardener, the first season!) Of course the best way is to buy growing plants; but the cost is more. There are so many varieties of most of these things that there is not space here to comment on them; but they will be found described in the best catalogs. The recommendations made here are for sure results, with suggestions for using.

**Acquilegia**, or Columbine, most airy and graceful of all. The newer hybrids have a wide range of shades, thru orange and blue, white and red lilac, and so forth. Especially good in informal surroundings. Bloom second season.

**Hardy Chrysanthemums.** In these splendid flowers both range and vividness of colors have been greatly improved during the last several years. Best way to make selections is at a nursery in the fall if possible. Exquisite for cutting, after most other flowers are gone.

**Paeonies.** One of the few perennials of this type which do not require separation and replanting every few years to do its best. Too well known to need description. Will survive even absolute neglect, if disease does not appear.

**Anemone.** One of the most unappreciated of all perennials. The beautiful, gracefully born "wind-flowers" not only keep the garden cheerful until snow flies, but are unsurpassed for cutting for late summer and fall.

**Dianthus.** The hardy "pinks" are not as universally grown as they used to be, possibly because the greenhouse varieties have superseded them for cut flowers. But after all that's no good reason for not growing them. If you want something that can be counted on, and that is deliciously scented as well as pretty, don't omit dianthus.

**Helianthus.** The perennial sunflowers have always had a good deal to recommend them. Within recent years the range of colorings in the flowers has been greatly increased.

**Lily of the Valley.** A flower that will grow with no care and in positions too shady for most other plants. While it is very seldom that any attention is given lily of the valley, a little dressing of fine rotted manure or bone meal, raked into the soil in the spring, will greatly increase the size of the flower clusters.

**Rudbeckia.** When you want something that can't be killed, try "Golden Glow." The foliage is attractive from the time the plants begin to grow in the spring. Chrysanthemum shaped flowers of various colors are borne in great profusion during summer and early fall. Excellent for cutting and for use in the background in a mixed border planting.

**Lychnis.** Its bright, scarlet flowers borne particularly early in the spring have given it the popular name of "Burning Star." It reaches a height of about 1½ feet. It is very hardy and not at all particular as to soil.

**Dicentra.** The "Gas Plant" once established will stay put for years and years. It is slower in getting established than most things. The name is misleading, as it has a rather pleasant fragrance similar to lemon verbena; it is always satisfactory and should be much more widely known.

**Oriental Poppy.** Probably the most vivid and effective of all hardy perennials. Where you need a "high light" in your garden picture there is nothing better to use. The flowers are borne on stiff stems two feet or more high.

**Phlox.** I have put this last on the list not because it is least attractive, but because, while perfectly hardy, it is sometimes troubled by disease, and more often attacked than the things mentioned above. Recent years have seen the introduction of wonderful new colors in this flower.

#### BIENNIALS

These are usually started in the summer, June to early August, to make good

strong plants for transplanting, or to bloom the following spring. The six most popular perennials are pansies, forget-me-nots (*Myosotis*), *Bellis perennis*, wall flowers, Canterbury Bells, and digitalis. The first four, if planted early in a sheltered place in the open in the spring, will bloom the same season. The other two give best results if started the summer before, but may be started in heat in the spring and be set out to bloom the first season. Pansies are usually planted in mixtures, but more striking effects may be had by planting named varieties of one color. New strains of the daisies (*Bellis*) are at least twice the size of the old. Of our old favorite, forget-me-not, there are two wonderful new varieties, Ruth Fischer and Eliza Fonrobert.

#### SPRING PLANTED BULBS

Nothing gives such quick and absolutely sure returns as the spring planted bulbs. The following half dozen will give you flowers for cutting, flowers for bedding in sunny and shady places, flowers for borders and hanging baskets and quick growing vines for porches, summer houses and so forth. All ideal for the temporary garden.

**Gladiolus.** Make several plantings for a continuous supply of flowers. In selecting bulbs, do not go by size alone, as small thick bulbs will usually produce better flowers than very large flat ones. Select only bulbs that are clean, bright and healthy.

**Tigridias.** Similar in culture to the gladiolus with wide open lily-like flowers, five to six inches wide across; very effective with other plants or against the house.

**Tuberous Begonias.** Bloom freely all the season. Handsome foliage as well as flowers, thriving in partial shade as well as in sun. Unexcelled for bedding near the base of the house, where there is usually more or less shade.

**Oxalis.** Quick growing, quick and continuous flowering. Spreading and trailing habit of growth for borders in front of other things, and especially effective in hanging baskets.

**Cannas.** The new orchid flowering varieties are not only very showy for bedding, but also bloom from midsummer until frost. Those who are not familiar with the newer varieties, such as "Wintzers," "Colossal Fiery Cross," the "President," etc., will be absolutely astonished at the progress that has been made with these flowers.

**Cinnamon Vine.** It not only makes agreeable shade very quickly, but is covered with white flowers.

All of these things may easily be taken up and kept over winter—a great advantage where there is any probability that one may want to have one's garden in a different place next year.

The columbine needs little or no care being one of the hardiest of the perennials

# AN ALL-THE- YEAR- ROUND HOUSE

*For summer and winter, and for spring and autumn, too, this house meets all requirements. It has an ideal suburban location, easily accessible from New York City and yet far enough away to keep the charm of countryside atmosphere. The house itself has all the advantages of an up-to-date city apartment and the grounds have the outdoor charm of spaciousness and rural setting.*

## NOTICE THESE FEATURES

*This house deserves an award of merit on many points too numerous to mention. The material, for one thing, is excellent for an all-the-year-round home. Brick is a non-conductor of heat, keeping it out in summer and in in winter. The architects have done well in joining the garage to the service part of the house and in making the formal entrance at the front of the residence quite apart from the broad, livable veranda at the side. Evergreens and shrubs have been used with especial skill in bringing the buildings into harmony with the grounds. Indoors the keynote of the furnishings is comfort: big chairs, wisely planned lighting arrangements, fireplaces, and thruout the rooms a sense of space.*

RESIDENCE OF H. R. SWARTLEY, JR., AT GREAT NECK, LONG ISLAND. BATES & HOWE, ARCHITECTS

# THE INNER SIDE OF THE WINDOW

BY WINNIFRED FALES  
AND MARY NORTHEED

but all too many fall into the pathetic double error of confounding these attributes with what is "fashionable," and of believing that any intrinsically beautiful object must necessarily produce an effect of beauty, wherever placed.

In reality, beauty and distinction in window treatment have nothing whatever to do with so-called "styles," but rest upon principles as immutably fixed as the smile of a *premiere danseuse*. First, there must be harmonious relations of tone and color between

IN dressing windows, as in dressing people, individual size, type and proportions must be considered. The short, dumpy woman, and the low, broad window, alike must shun the fascinating frills and bouffant draperies which so becomingly veil the shortcomings of their opposites in type, and affect simple raiment with long, unbroken folds that give an illusion of height and stateliness.

But it is not enough for the dress either of a window or of woman to emphasize admirable features, or disguise faulty ones. It also must be in harmony with the environment. A bathing suit is irreproachable garb at the seashore, and in the seclusion of the boudoir a diaphanous *robe intime* has undeniable charm; but neither would be considered appropriate for the afternoon parade on Fifth Avenue. Similarly, the window of a sleeping room may look quite ravishing in a ruffled Swiss "negligee," and a bungalow casement appear extremely smart in a sporty outfit of brilliant awning stripes; but to clothe in like fashion a formal, dignified window in an Italian Renaissance drawing room would be incongruous to the point of absurdity.

Unhappily, this need of individual treatment for windows is one of many facts accepted in theory but ignored in practice. Let a popular periodical but print an item to the effect that "Sill length curtains are in vogue," or that "The newest cretonnes show a pronounced Chinese influence," and straightway hundreds of windows—large or small, single or in groups, in mansion or cottage—have their draperies shorn off "up to their knees" like the petticoats of the Little Old Woman in the nursery jingle, or are newly dressed in near Oriental fashion covered with toy pagodas, writhing dragons and still legged cranes which bear no conceivable relation to anything else in the room.

Every woman has an instinctive longing for beautiful and harmonious surroundings,

Matching only wall paper borders and hangings prevents monotony

Lace window curtains and rich side draperies for the reception room

Group windows are often treated as one window with a valance across the top

In the banquet cretonnes may be used lavishly for hangings and on furniture

the window hangings and the walls and furnishings of the room. Next, the hangings must harmonize with the architectural lines and proportions of the room. Again, their texture and arrangement must be such as will best fulfil their specific function, which may be to afford an unobstructed view of a fine landscape, or hide an ugly one; to admit abundant light, or temper a glare; to harmonize large, staring windows with a low toned color scheme, or merely to supply a cheery note in a room too subdued and therefore monotonous and depressing. And, finally, the character of the fabrics employed must be appropriate to their setting. One does not drape kitchen windows with velvet, nor those of a parlor with checked gingham.

In the treatment of windows, the first elements to be considered are tone and color, since a room may be irretrievably ruined if

these are wrong, whereas if happily chosen, minor faults of line and texture may pass unnoticed. Every one is familiar with the chilly, staring effect produced by white lace curtains without overdraperies, in a room otherwise developed in deep, rich tones, and with the discord which results from the use of plain draperies and plain wall coverings of strong, contrasting color. Of course it must not be inferred that the color scheme of a room should be toned down to a dead level of neutral tones, any more than it should be keyed up to the irritating dissonance of crude primaries affected by some ultra-modern decorators. No, the value of contrast is too important to be discarded, but always there must be a consistent relating of color to color, of tone to tone, and of the bright to the dull, in order to preserve an effect of unity. In the case of window hangings, this is most readily accomplished by an intelligent use of pattern. Given a plain wall, a figured curtain fabric in which the wall color appears either as the groundwork, or some element of the design, is

practically certain to prove harmonious; and the same is true of a plain fabric which matches one of the colors in a figured wall paper. As an example, consider the inharmonious combination of plain or two-toned bluish green wall paper and plain, vivid rose draperies, which, alas! is not uncommon. The discord may easily be overcome by exchanging the plain paper for a blended one of gray, rose, and soft gray green—the last predominating and choosing a less aggressive tone for the hangings. Or the scheme may be reversed, and cretonne hangings in faded rose and dull green touched with black, on a gray or ivory ground, may accompany plain gray-green walls and the effect be wholly delightful.

Of course a skilled decorator may juggle half a dozen seemingly irreconcilable colors into a deftly [Continued on page 3]

# What to Do in January

A GARDEN GUIDE BY HUGH FINDLAY

GARDEN INSPECTOR FOR THE GARDEN BRANCH OF THE WAR DEPARTMENT

## SOUTH

**Upper South** Virginia, Northern Georgia, Northern Carolina, Northern Alabama, Tennessee.

**Middle South** Lower South Carolina, Southern Georgia, Middle and Southern Alabama, Mississippi.

**Far South** Southern Louisiana and Florida.

## UPPER SOUTH

**Vegetables** Sow the seed of Early Snowball or Eclat cauliflower  $\frac{1}{4}$  inch deep. Also Early Charleston Wakefield cabbage and Hansen lettuce  $\frac{1}{4}$  inch deep in the hotbed. Sow the following seed in the cold frames: Southport White Globe, Danvers or Prize Taker onion seed for early spring transplanting,  $\frac{1}{4}$  inch deep. Early Egyptian or Eclipse beets,  $\frac{1}{4}$  inch deep. Long Scarlet or Scarlet Globe radish,  $\frac{1}{4}$  inch deep. Prepare the land for early potatoes by plowing in a coating of well rotted manure, 5 to 8 inches deep. Leave the land in the rough. Dice the surface soil before planting.

## MIDDLE SOUTH

**Vegetables** If the soil is a sandy type plow in a heavy coating of well decayed manure mixt with a little coarse bone meal. In the spring before planting apply about 200 pounds of 16 per cent available acid phosphate, before planting the smooth varieties of English peas and white potatoes. Plant in the open, Alaska or First and Best peas 3 inches deep the last of the month. Also Scarlet Globe radish, 1 inch deep. Bloomsdale or Curley Savoy spinach,  $\frac{3}{4}$  inch deep. Giant Sou mustard,  $\frac{1}{4}$  inch deep.

## FAR SOUTH

**Vegetables** After the soil is made fertile and plowed or spaded from 5 to 8 inches deep, sow the seed of Early Egyptian or Detroit Dark Red beets, 1 inch deep. Danvers Half Long Scarlet carrots, 1 inch deep. Curled or Chinese mustard,  $\frac{1}{4}$  inch deep. English Breakfast radish, 1 inch deep. Purple Top Globe turnips, 1 inch deep. Start in the hotbed or greenhouse Ruby Giant or Large Bell peppers and plant the seed  $\frac{1}{2}$  inch deep, June Pink, Acme or Stone tomatoes,  $\frac{1}{2}$  inch deep. Black Beauty eggplants,  $\frac{1}{2}$  inch deep. Start the seed of Klondike Davis' Perfect, or White Spine cucumbers in strawberry baskets, pots or long drinking cups. Be sure that proper drainage is provided for in the baskets and cups. Transplant onions and cabbage to the open.

## NORTH

### Orchard

**Prune** On mild days prune apple, plum or pear trees. Paint all wounds over  $1\frac{1}{2}$  inches in diameter. Burn all prunings.

**Snow** Shake the heavy wet snow from the limbs. If there is danger of breakage support the limbs before the storm. Pack the snow tight about the trunks of young trees to prevent the mice from working under the snow and to prevent the rabbits from reaching the young twigs and eating them.

**Spray** It is good business to order a material supply of lime sulfur for your apple trees, arsenate of lead to destroy the chewing insects and Bordeaux Mixture to spray peach trees with. The only advantage in scraping the bark from trees is that it exposes the insects

such as San Jose and Oyster Shell Scales. Do not spray when the temperature is down to freezing.

**Stored** Pick over the apples and fruit. Use or sell all fruit that is ripe. Ventilate the fruit cellar on bright days. Keep a pan of water in the store house if on extremely cold nights an oil lamp or stove is used to keep out the frost.

**Clons** Select only cions from trees that bear well. Always cut from bearing wood, not watersprouts. Pack them in slightly moist sand in the cellar.

### The Greenhouse

**Seedage** For early spring bloom sow the seed of lobelia, verbena, pansy, Marguerite, carnation, snap dragon, petunia, daisy, forget-me-not, impatiens, silk oak, salvia. Sow the seed of tomatoes, melons and cucumbers for spring and summer greenhouse crop.

**Top Dressing** Top dress the roses, carnations and antirrhinums with decayed cow manure chopped up fine and mixt with fine bone meal. Remove all dead leaves, moss, etc., before top dressing. Stir the surface soil lightly before watering.

**Vegetables** Hand fertilize cucumbers, tomatoes and melons, by the use of a camel's hair brush dipped in the flower and carried from one

to another. Where the plant is trained to wires, tap the wires while the air is dry and before watering so as to scatter the pollen and fertilize the fruit.

**Pests** Continue to fumigate to keep in check aphides. Paint the heating pipes with a paste of sulfur to keep in check mildews. If snails or slugs are in the fernhouse bait them with a mash of bran, molasses and paris green. Scatter a little air slacked lime over the surface soil of the ferns to prevent the growth of moss.

**Hardwooded Plants** Bring into a cool house and spray daily, such plants, lilac, deutzia, rhododendron and forsythia. Do not try to force these too rapidly.

**Bedding Plants** Increase the supply of bedding plants, such as geraniums, coleus, etc. Shade the cuttings for a few days. Great care should be exercised in watering and in ventilating in the propagating house.

### The Flower Garden

**Roses** Examine the protected roses and see that the covering is secure. Support the tall plants in such a way that the wind will not sway them. If thus neglected serious injury occurs on the stem near the surface of the soil.

**Top Dressing** It is not too late to top dress lawns with fine manure mulch, if you have not already done so, all flowering shrubs.

**Spring Shipment** Order early all flowers and shrubs for your garden and get the best stock. Always state the date you wish plants delivered.

**Birds** Prepare more feeding stations for the birds. January, February and March are the hard months on these feathered friends of orchard and garden. See that all feeding stations are well supplied with suet, meat, seeds, nuts and drinking water. Protect these stations from the cats. Plant bird baths for next year.

### Vegetables

**Catalogs** This is the month in which to make out your seed order. It is well to keep in mind the following points:

1. Buy your seeds from reliable firms.
2. Select only a few of the best and standard varieties.
3. Select varieties that are suited to your climate and soil.
4. Select varieties that mature at different periods so that there will be a supply of fresh vegetables for the table thruout the season.
5. Do not order more seed than you need. It is scarce and expensive.
6. Do not try novelties; they are usually poor producers and have a poor flavor.
7. Don't buy cheap seed.

**Garden Plans** In making out your plans for next year resolve to have a better garden, but never plan to plant more than you can fertilize and care for. Make a careful study of fertilizers necessary to your type of soil, sprays necessary to keep in check insects and disease common in your section, and the best varieties, the proper distance between rows and the distance of plants in the rows in order that plants may mature. Look over your diagram of last year and improve on it.

**Storage Pits** As the weather grows colder add more straw and soil to the vegetable pits in order to keep out the frost. On severe nights cover the ventilator shafts, but always open them on light days.

## POINTS TO REMEMBER THRUOUT THE YEAR

*I. Have the soil rich. Apply liberally well rotted horse or cow manure. Use chicken manure sparingly. Use high grade commercial fertilizer judiciously when stable manure is not available.*

*II. Thoro preparation of soil. Plow or spade a little deeper each year. Pulverize the soil thoroly.*

*III. Plant seed bought from a reliable firm. Give plants plenty of room to develop fully. Plant seed the proper depth.*

*IV. Keep the soil well cultivated. Cultivate after a rain providing the soil does not bake or stick to the implements. During dry weather keep the surface soil in the form of a fine dust mulch.*

*V. Keep the garden free from weeds and grass. These pests rob the plant of necessary food and moisture. Tall weeds shade the plants, weaken them and encourage disease and insects.*

*VI. See that the soil is well drained. Vegetables and flowers will not grow if the soil is wet and sour.*

*VII. Irrigate where it is necessary. Water the plants in the evening. Never water the garden when the sun is high. This practise causes a scalding of the plants and cakes the soil.*

*VIII. Keep a supply on hand and use at the right time proper sprays or insecticide powders to eradicate diseases and kill injurious insects.*

*IX. Waste no vegetables or flowers. Sell, can, or give away all surplus products.*

*X. Keep the garden busy. As soon as one crop is harvested, plant another. It is good practise with some crops that require little room, to plant a second crop between the rows when the first crop nears maturity.*

*Cut this out and paste this where it may be read often.*

# NURSING THE HOUSE PLANTS

BY  
WILLIAM C. McCOLLOM

*If the surface soil is stirred occasionally the roots are able to breathe more easily*

**T**HE old saying "A duck out of water" surely applies to plants in the home. Plants that were taken from their native habitat in tropical Mexico or frigid Canada are expected to thrive side by side. It is really surprising how well a variety of plants will endure under the same conditions, with reasonable care. Of course they do not grow luxuriously, but they do exist, showing that plants are by no means as exacting as many think.

Thousands of greenhouses are closed throughout the country and the favorite plants from the greenhouse are being domiciled in the home. These, in addition to the usual Christmas plants that are annually distributed, make universal the problem of keeping plants healthy in the dwelling.

Plants growing in a greenhouse can be supplied with their natural requirements, heat, air and moisture. It might also be well to bear in mind that growing plants extract more nourishment from the atmosphere than from the soil. Therefore, the

change from the moisture-laden atmosphere of the greenhouse to the dry intense heat of the dwelling is a big obstacle for the plant to overcome, and it is only with much attention, particularly when first coming into the house, that the plant will endure. Of course it is quite impractical to keep the atmosphere of the home moist, but all types of foliage plants should be sponged occasionally. Or the plant may be stood in the bathtub and the leaves sprayed with a small hand sprinkler.

Many persons suppose that plants in the greenhouses are grown under a very high temperature. Generally the night temperature rarely exceeds 60 degrees. In the home the plants become soft and spindly, especially when they are placed in some hot window with a radiator directly beneath them. All types of plants are "hardened up" by the growers for this ordeal. If this were not done, the plants would live only a few days. The hardening process is accomplished by a gradual reduction of water at the roots, a general but consistent lowering of the temperature and the elimination of spraying, which of course decreases the moisture. This condition causes the foliage to become hard and leathery and better adapted to house culture.

The most destructive agent with house plants is too much watering. Most people make a habit of watering their plants at regular intervals. This is absolutely wrong, as the requirements of the plants vary with the condition of growth. How often should I water my palm? There is only one answer: When it is dry. How can I tell when it is dry? Certainly not by the alarm clock, neither by the surface appearance of the soil. There is only one safe method to employ; tap the pot with the knuckle and the true condition of the soil can be determined by the difference in the sound between a moist and a dry plant. Test this by placing a wet soggy flower pot alongside a dry one. When you will become proficient, you will have acquired the only method to employ in the watering of potted plants.

Gas is accused by every one generally for the destruction of house plants. It is admitted that gas does work havoc among plant life, but it is in many cases carrying the burden of others. Gas does not destroy slowly, but causes the leaves to turn brown rather suddenly and the ends of the foliage often to wither. But when the entire plant begins to turn a sickly yellow, you can usually charge it to overwatering. The great danger with overwatering is that the bad effects are not noticeable until the damage has been inflicted, whereas with under-watering the wilting of the foliage is a distress signal readily apparent to the novice. Standing plants in saucers of water is not recommended as the roots that are submerged are certain to turn black, and consequently decay. The best method to employ with the watering of plants is to remove the pot from the jardiniere and stand it on the drain board in the pantry, or kitchen, filling the pot several times with water so that the soil is thoroly sat-

*When repotting plants, the new soil should be put in the pot layer upon layer*

urated. Plants that have raised somewhat in the pots leaving little recess can be stood for a few minutes in a pail of water level with the top of the pot. After the surplus water has drained off the pot can be replaced in the jardiniere.

During the winter it is not advisable to encourage growth in foliage plants, as under the conditions of the home the growth made is certain to be soft and of little value. But toward spring you will notice palms, draceneas, and other plants of this character pushing up their leafing sheathes. They can then be watered more generously, and it is also advisable to furnish the roots with some fertilizing material. Concentrated plant foods are on the market to be dissolved in water or scattered sparingly on the surface of the soil and scratched in with a pointed stick.

Flowering plants such as azaleas, climbing roses, etc., that have finished flowering should have a gradual reduction in the water supplied the [Continued on page 33]

*It is always beneficial to scratch a little fertilizing material into the surface soil*

*Every two weeks the foliage should be sponged in order to kill attacking insects*

# WHY WE NEED BETTER ROADS

BY JOHN R. EUSTIS

DIRECTOR OF THE INDEPENDENT MOTOR SERVICE

THE roads are all good up there," was the first exclamation of a veteran motorist as he alighted from his initial ride in an airplane. He voiced the appreciation common to all motor travelers of a trip or tour over a continuous system of good roadways. It was the same statement, no doubt, that he made on returning from his first automobile tour thru Europe many years before. And if good roads are essential to enjoyable motor travel they are doubly so in the case of efficient motor transportation.

The United States is noted for many things, not the least of which is its comparative few miles of improved highways. Of 2,500,000 miles of rural roads only 12 per cent are classed as improved, and less than 1 per cent are suitable for heavy motor traffic. However, prospects are now brighter than ever for the inauguration of a real movement for good roads in this country, a movement largely financed and directed by the Federal Government; in other words, the realization of the plan for which the American Automobile Association, the national organization of motorists with over two hundred thousand members, has so long and so faithfully worked. Had the war continued thru this winter and with it the need for increased transportation facilities, a Federal Government highway improvement program would have been an actuality before next spring.

It is the remarkable growth in the past eighteen months of freight transportation by motor vehicles over the highways that brings the bright prospect of better roads, which will be of equal benefit to motor travel. The excellent record of the motor truck in bridging the gap between the transportation facilities of the railroads and the needs of the nation in the war emergency, has won over the law makers thruout the country, from town council to Federal Senate, and made them advocates of good roads. It is no longer a question of whether we shall have nation wide systems of improved highways, but rather how shall we proceed to get them? There are powerful influences already bringing pressure to bear. Among these is the United States Department of Agriculture, which at last appreciates the benefits that will accrue to farmers from good roads, and the United States Post Office Department which needs

these roads to operate efficiently the great fleets of motor trucks which it plans to utilize in a nation wide motorized parcel post service. Then, too, the various agencies, governmental and otherwise, which are planning for the employment of soldiers released from the army and the greater number of men no longer needed in munition manufacture, see in widespread highway improvement an opportunity to employ men by the tens of thousands.

About two years ago Congress took the initial step toward Federal aid for highway improvement, the result of years of effort on the part of automobile interests represented in the American Automobile Association. It set aside the sum of \$85-

000,000 to be expended during a period of five years, according to a prearranged apportionment among the forty-eight states, provided each state added a sum equal to its allotment of Federal money. Less than ten million was apportioned for the first two years and not all of this amount was taken by the various states. There are no official figures available, but if there were the results would be disappointing.

In sharp contrast is the attitude of other great nations concerning their roads. Up to 1913 the Government of France had expended \$311,000,000 in the construction of 23,756 miles of national highways, and allowed eight million more per annum for their maintenance. In addition it had contributed \$116,000,000 toward the improvement of 127,141 miles of roads maintained by the various departments of France. In the five years between 1909 and 1914 the British Government appropriated for road improvement within the comparatively small area of the British Isles \$30,000,000. As the road mileage in England, Scotland, Wales and Ireland is, roughly, one-tenth that of the United States, a similar liberality here would provide annually \$60,000,000 of Federal funds for road improvement.

The prevailing poor roads of the United States represent incalculable wastefulness, which is another of our national traits. The proof of this in actual figures is found in the results of tests recently made in California by the Good Roads Bureau of the California State Automobile Association.

*This single curve and hardly noticeable grade has replaced the old double curve road at the left, on which there could never be heavy travel*

These tests, made under the supervision of Prof. J. B. Davidson, of the Agricultural Engineering Department of the University of California, were conducted on different types of roads to ascertain the amount of pulling power required to haul a given load. It was found that 218 pounds of power were needed to pull a one ton load on an earth road; on a macadam road 64.3; on a gravel road in good condition 81.3; and on a concrete road 27.6 pounds of pulling power moved the one ton load. The report of these tests states that the difference in power required between earth and concrete roads represents a monetary saving in any community fully warranting the cost of the latter type of roads.

Another series of tests with different kinds of roads was made a short time ago by a manufacturer of motor trucks, and it provides figures which are as interesting to motorists as to the operator of commercial vehicles. A two ton motor truck was driven 238.25 miles thru five counties in Michigan, fitted with various recording devices. The average speeds maintained were as follows: on concrete roads, 16.4 miles an hour; on gravel roads, 9.5; and on dirt roads, 4.6 miles an hour. The speed on concrete roads was therefore 257 per cent better than the speed on dirt roads, and the latter at the time of the test were in good condition. Still another test similar to the one just mentioned showed that the gasoline required to operate a two ton truck ten miles on a concrete road was one and a quarter gallons, while on a country dirt road it was two gallons, one gill. The time required to cover the ten miles on the concrete surface was forty-two minutes and for the ten miles of dirt surface one hour and twenty-four minutes. The saving in gasoline alone between the two types of road surface was \$1.85 with gasoline at 23 7/10 cents per gallon. There are roughly five million motor vehicles in the United States and a thousand miles of travel each per year is a most conservative average. On this basis the fuel saving annually if concrete roads were universal would approximate a half billion dollars.

The present status of highway improvement in the United States is indicated by the following statement taken from a bulletin just issued by the National Automobile Chamber of Commerce:

Resumption of highway construction under the Federal Aid Act in full measure and as quickly as possible was urged by the Secretary of Agriculture at a recent conference with editors of agricultural journals. About \$75,000,000 of unexpended balances of federal and state appropriations for several years past and amounts allotted for the current fiscal year are available for road work during the calendar year. Next year there will be \$20,000,000 additional from federal appropriations and probably more from state sources, for cooperative highway improvement. Good roads are not only important, said Secretary Houston, but furnish worthy projects on which unemployed labor may be engaged during the period of readjustment, and it would be in the public interest to make available larger appropriations from the federal treasury to be used separately or in conjunction with state and local support.

Both the President and the Secretary of War have written to the Secretary of Agriculture favoring the

earliest possible resumption of highway work. Senators Bankhead and Smoot have introduced good roads bills within the past few days. The American Association of State Highway Officials and the American Automobile Association have agreed to support a bill authorizing an increased federal appropriation for another five year period to follow the present Federal Aid Act. The measure will provide for the creation of a plan giving two main highways in each state, one from east to west and the other from north to south, both connecting with corresponding roads in adjoining states. Canada and Mexico both desire to make trunk highway connections with the United States.

One of the interesting features of the plan of the United States Post Office Department for giving the nation a motorized parcel post service is that the net revenues from this service shall be applied to highway improvement.

## THE POULTRY YARD IN JANUARY

BY E. I. FARRINGTON

EVERY indication points to a rapid expansion of the poultry industry in this country now that conditions are becoming normal once more. Fanciers report many orders for breeding stock, and hundreds of amateurs are planning to grow more chickens this season than for several years past. It is probable that American poultry keepers will have to help restock the poultry industry of France and Belgium.

Taking all these things into consideration, it seems probable that there will be an unusual demand for hatching eggs, day-old chicks, incubators and poultry supplies in all parts of the United States this spring. The wise poultryman will place his order early. It will be expensive to start poultry keeping by the purchase of breeding stock, because cockerels and pullets are selling for high prices. Undoubtedly day-old chicks will cost more than in former years, but there is no more economical way to make a start in poultry keeping than by buying newly hatched chickens and raising them in a brooder, provided that the chicks can be obtained near home and that they come from a strain of robust, prolific fowls. As a matter of fact, the eggs used for setting this year will probably average much higher in quality than ever before, because poultry keepers everywhere have made a point of weeding out their poor stock.

It is likely that many amateurs will prefer to hatch their own chickens this year, using eggs from their own stock. To a large extent broody hens will be depended upon, no doubt. It is well enough to use hens if the season is mild so that the birds will become broody early in the spring. It is being learned, tho, that early matching is very important, especially with the larger breeds, which require at least six months for development. It is only by using an incubator that one can be certain of getting out his chickens by the last of March, unless he has a large number of hens.

If you are going to order an incubator, give the matter considerable study before you make a choice. You can usually get some accurate information as to the best makes by writing to your State College. You are advised not to buy a machine holding less than a hundred eggs, unless you are a fancier and raising poultry for exhibition. Don't buy an incubator at all unless you have a suitable place for operating it—a cellar or a room where a uniform temperature can be obtained, and where the ventilation will be good. If the machine is to be in the cellar, get permission from your insurance company.

It is a common thing to find fowls afflicted with scaly legs at this season. The Ohio Experiment Station has been trying out several remedies, and has obtained good results from two, which are given below:

(1) Oil of caraway, one part; lard or vaseline, four parts

(2) Flour of sulfur, one dram; carbonate of potash, twenty grains; lard of vaseline, one half ounce

First the crusts formed by the mites on the legs of the fowls should be softened by soaking the feet and legs in warm water for several minutes. Then a portion of the scales may be removed, and the mite killer applied. Care should be taken not to introduce birds having scaly legs into a flock, as the trouble is easily transmitted from one bird to another. Be careful that the poultry house is not closed too tightly even at night. Fresh air in abundance is of the utmost importance.

Razor blade magnified  
1000 times

## DON'T LET YOUR RAZOR ABUSE YOUR FACE

THE cutting edge of every razor—"ordinary" or "safety"—consists of microscopic teeth. Magnified 1000 times these teeth look like the teeth of a cross-cut saw. See illustration above.

Now, rust forms on these teeth. This makes the blade dull—makes it "pull" and hurt your face.

You don't wipe any "safety" or "ordinary" razor blade dry enough to prevent this "surface rusting." Apply 3-in-One shaving oil before and after shaving. 3-in-One positively prevents rust on any metal.

This is the way to have a perfect shave: Moisten your thumb and forefinger with a few drops of 3-in-One. Draw razor blade between them. Then, if an "ordinary" razor, strop in the usual way, first putting a few drops on the strop. You'll be surprised and delighted at the keen edge that comes so quickly and shaves so perfectly.

After shaving, be sure to repeat the oiling. That will absolutely prevent any rust forming between shaves. 3-in-One makes the razor slip over the face "slick and smooth." Also prevents the soap from burning or smarting after even a close shave. 3-in-One shaving oil has a delicate, agreeable odor.

You can get 3-in-One at any good drug, hardware or general store. East of the Rocky Mountain States, 15c, 25c and 50c in bottles; also in 25c Handy Oil Cans.

### FREE 3-IN-ONE FOR YOU

A postal will bring you a generous free sample. Also the scientific "Razor Saver" circular. Write this very day and prove these things for your own self.

# THE NEW BOOKS

## The East in the War

"*Es ist ausserordentlich!*" (It is ex-  
traordinary) said Von der Goltz,  
referring to England's public acknowl-  
edgment of defeat.

"*Es ist unheimlich!*" (It is unheimlich of  
declared the equally astonished Wangen-  
heim.)

This extract from *Ambassador Morgenthau's Story* is typical of the German official mind as disclosed in Mr. Morgenthau's exceptionally interesting narrative of his diplomatic activities in Constantinople during the fateful years 1913-1916. The British Government's frank admission of the truth of the Gallipoli defeat was so contrary to the principles of German statecraft that Von der Goltz and Wangenheim could only conclude it was a clever bit of "higher strategy" to mask some other design. Of the dark, underground channels of Turkish diplomacy, shot thru with German intrigue, the author presents a story which simply must be read, as he also draws strong characteristic portraits of Talaat, Enver and Djemal; Wangenheim, Von der Goltz and Liman Sanders's principals in the German-Turkish Alliance.

Excellent character studies of Alexander III, William II, Nicholas II and the Czarina are contained in *Recollections of a Russian Diplomat*, by Eugene de Schelking, together with anecdotes and sketches of many Russian, Austrian and German notables whose names have figured prominently in European diplomacy. There is also an illuminating "inside" view of the disastrous condition of the Russian Government under Nicholas II, the author giving fourteen causes which precipitated the revolution. William II would not appear to have been at all sure of German-American devotion to him, as the following quotation shows:

You do not know my Germans. When they are in America they drink beer as usual and sing "Die Wacht am Rhein." They have on the walls of their houses pictures of my grandfather, of Bismarck and Moltke. But you will not often find my portrait, and in political matters they have become thoro Yankees.

Quite a long way back in the war we noted in these columns the benevolent plan of certain European authors to attach Palestine to the United States. It was then thought Washington statesmen would feel greatly flattered by being custodians of the Holy Places, tho warned of considerable trouble likely to go with the honor. Now Abraham Mitrie Rihbany is back with the same suggestion in his *America Save the Near East*. Mr. Rihbany, however, puts forward the argument that by shouldering the burden of Palestine, America would "sanctify herself" to the end of lifting national burdens everywhere, a kind of penance, we take it, for some few sins we may possess. He further opinions that in smoothing out trouble in Palestine we shall learn how to settle our racial problems at home. At any rate, one is impressed with the novel idea of piling one trouble on another to get quit of both.

The royal dedication of Mrs. Will Gordon's *Rumania* seems, as is often the case, to lay the author under an embargo to present her cause all aglow with every virtue. No doubt the Rumanians fought valiantly against the Austro-Germans and heroically suffered privation, but that the Rumanians

are more angelic than other nations is open to question. Neither does their Latin origin run in so pure a strain as Mrs. Gordon would have us believe, other authors having asserted it rests on intermarriage with but a few Roman soldiers. Still, historically and from a picturesque point of view, Mrs. Gordon adds considerably to current information regarding Rumania.

*Asia Minor*, by Walter A. Hawley, falls into the historical and archaeological class of travel literature, tho here and there the reader will find charming bits of description. To the student of the past of Asia Minor, therefore, more than its involved political present, the author has produced a valuable library work. Many illustrations, some of remote places, add to its worth.

*Ambassador Morgenthau's Story*, by Henry Morgenthau. Doubleday, Page & Co. \$2. *Recollections of a Russian Diplomat*, by Eugene de Schelking. Macmillan Co. \$2.50. *America Save the Near East*, by Abraham Mitrie Rihbany. Beacon Press. \$1. *Rumania*, by Mrs. Will Gordon. John Lane Co. \$3. *Asia Minor*, by Walter A. Hawley. John Lane Co. \$3.50.

## Another Book of Hate

THERE have been several studies in the psychology of hate during the past year, notably that unpleasant novel by a customarily pleasant author, "Foe-Farrell," by Quiller Couch. *The Spinners*, by Eden Phillpotts, has the morbid theme of an illegitimate son's savage hatred for his repentant father. The background of the tragedy is a mill town where spinning is the community occupation, and no one can describe the processes of an industry with such accuracy and artistry as Mr. Phillpotts. The machines spin their webs before our very eyes, and the human servants of the hurrying spindles live and speak, love and hate, as real personages. Like them or not, the workers who people his pages are no abstractions, but vital flesh and blood. They are less humorous in speech than is usual with the author's creations; the story begins with the funeral of the mill master, and ends under the grim shadow of a crime, and there are few alleviating spots of light from the wit and wisdom of the genial rustics who delighted us in previous novels.

*The Spinners*, by Eden Phillpotts. Macmillan Co. \$1.

## Tales of Our Navy

ON every hand one hears tributes to the American Navy and its accomplishments in the Great War. These praises come from our own statesmen and from those of the Allies, especially the English. But when the public asks for details of this great achievement it gets little or no reply. "The Great Silent Service," as Admiral Eberle has called the United States fleet, seemed destined, among all the publicity of our military prowess, to remain a silent service.

Lawrence Perry, however, in *Our Navy in the War*, shows the work of the American Navy that started with the entrance of this country into the war—the work over here of sending from our harbors the continuous line of ships on their silent, dark way across the Atlantic, the work of the American fleet in European waters, the work of convoying, fighting, shipbuilding

and recruiting. Mr. Perry begins with the condition of the navy before the war, and traces its achievement in all these branches. Nor does he forget to tell about the Marines, the Naval Aviators, and the Camouflage Corps. The volume is not only intensely interesting, but also of a decided informative value.

In *Clear the Decks!* by "Commander," emphasis is laid on the part of the service assigned to each individual. The book might be classified as half narrative and half "navy catalogue," for it describes the work and life on board of the seaman from his first enlistment, thru his academy days at Annapolis, to his retirement after having fulfilled the duties of admiral. It is full of information for those who would follow the sea, and for others it is enjoyable on account of its enthusiasm and good style.

Another valuable book, dealing with sea power and naval strategy, is *Mahan on Naval Warfare*, containing selections from the writings of Rear-Admiral Alfred T. Mahan, with an introduction by Allan Westcott, instructor at the United States Naval Academy.

*Our Navy in the War*, by Lawrence Perry. Charles Scribner's Sons. \$1.50. *Clear the Decks!* by "Commander." J. B. Lippincott & Co. \$1.50. *Mahan on Naval Warfare*, edited by Allan Westcott. Little, Brown & Co. \$2.

## A Shadow Picture

THE events of a single night, from 6 p. m. until the next morning, in a sordid house, framed by a dingy suburb of darkest London, are the substance of a perfect work of art. *Nocturne* is so complete, so much the stuff that life is made of, that Pa, Jenny, Emmy and Alf become our acquaintances in the short space we meet them. Alf, the inimitable, is the essence of Cockneydom, yet he is a real man, with his own need for love and happiness altho too clumsy to express it acceptably

to the vivid Jenny. The sordid squabbles of the sisters; their genuine, underlying affection for each other; the "fatigued grayness" of their lives in millinery-shops and kitchen; the care of Pa with his paralyzed body and vacant mind; their love affairs, so far from their ideal, yet containing a haunting happiness, not perfect, but the best life offered them; all blend in a nocturne unforgettably strange and sad.

*Nocturne*, by Frank Swinnerton. George H. Doran Co. \$1.40.

## Industrial Democracy Next

WE fought the war for ideals of political democracy. Once these ideals are realized, even tho inadequately, we must go on to democratize other phases of our national life, and, chiefly, industry which, more and more, is becoming the decisive factor in our state policies.

Coöperation is the next step in the world-sweep of democracy. We cannot long continue to be satisfied to exalt democracy in the political realm and ignore it in the industrial world. Capitalism means autocracy prevails in industry. . . . Coöperation means business and industry, trade and commerce, of the people and for the people. It is the most democratic thing in the world, thoroly and truly democratic—and one hundred thousand coöperative societies have proved democracy possible in the economic field.

Mr. Harris's book is divided into four parts. He first indicts the present system of economic distribution, then shows that all the evils of this system may be traced to the one fundamental cause of competition for profit. The Rochdale plan of coöperative buying which is, tho three-quarters of a century old, the best coöperative scheme, is then considered, and finally there is given a comprehensive tho concentrated account of the rise and spread of coöperation in Europe, with suggestions as to how it may be worked out in this country.

*Coöperation: the Hope of the Consumer*, by Emerson P. Harris. Macmillan Co. \$2.

## THE OLD-TIME NEW YEAR

(Continued from page 21)

in it. Which will be the way, I think, when we come to our senses permanently.

As my two uncles were bachelors they were still among the gallants, and must go out, like the young folk, to make their share of the calls. "To be sure," said the little mother, "you owe it to the world; and indeed, the world will get its dues from you." Yet you need not go till after dinner. Now, my Uncle George had once fought in the glorious Revolution, and he was as brave as if he had afterward had a wife; for who knew then what might be? For he then was young. Ah, but I will not now lift the veil, and tell you the whys and the wherefores. There is much history that ought to be hid. Indeed, there is too much of it that should never be told. 'Tis but gossip; it is not history at all. Truly we were proud of him in those days, with his grand uniform, taking him back to his youth. Then he forgot all his crotchets, and his aches, and became a full man and a good one. He was stalwart, and a hero, every inch of him. While the little mother dusted him well, my Uncle Platt put on his stout satin stock, and collar that came up before the ears, and a coat that came well down over his stout calves, and then a tall silk hat. Ah, but you should have seen him! It was plain that they were proud of each other. But this, Colonel George would not confess. "Indeed," said he to my Uncle Platt, "come on. What jackanapes prancing!" Then the two marched off.

When! but my Uncle George's sword had forgotten its place, by his side, and

just then suddenly went in between his legs. Yes, it had taken advantage of his stiffness, and sent him ten feet into the snow bank. My Uncle Platt had him by one leg, pulling him out, and at the same time crossing himself. For during the last forty-two, or it might be forty-three hours, he had been a Catholic. But say what you will of it, my Uncle George came out of the mistake with great dignity. His military bearing was immediately resumed, with an added touch of the George Washington; and he marched off, every inch a Revolutionary soldier. "Truly," said my little mother, as she looked admiringly out of the door, "truly, those were soldiers! We have none such in these days. Your last war was no war at all; and its generals were—were—" and she made a gesture.

I must leave my Uncles George and Platt to go on making their calls alone, for, indeed, who of us saw them? But at night I will not deny that we both saw and heard them. In those days there were sideboards; and the temperance reform did not have it all its own way. But it was coming, and the sideboards were going; and the little mother and our glorious father, they were total abstainers.

"Fish!" said the little mother, "can you never be trusted with yourselves? 'Tis a shame that a man shall turn himself into a fool!" And she bundled the hilarious couple off to bed. "New leaf, indeed!" she said to herself; "'tis a wretched old, dried up leaf. I would rather see some of the old leaves destroyed."

## CON-SER-TEX

THE IDEAL  
COVERING 1919

SLEEPING BALCONIES  
PORCH FLOORS  
AND ROOFS

There is no better covering than

## CON-SER-TEX Canvas Roofing

Above all things you are interested in your home. You are always willing to add to its comfort and coziness—its security and charm.

Here's an opportunity to make your porch floors and roofs as up to date as the interior of your home. Your opportunity lies in the use of CON-SER-TEX, a scientifically treated canvas roofing.

When properly laid it lasts longer than tin or shingles. It is much easier and cheaper to lay. It is mildew proof. It deadens the noise of the rain and stops the rattle of the wind. It lessens work and the cost of repairs. The cold of the blizzards and the heat of midsummer do not affect it.

It adds charm and neatness to your home because it lies flat, clings tight and does the work. Generous sample, price list and descriptive matter upon request. Write today.

On the market 10 years.

## CAN PROHIBITION DRIVE OUT DRINK

(Continued from page 19)

even the pulpit feel its influence. One of its children is the so-called National Association of Commerce and Labor, consisting of those business interests more or less dependent on the liquor interests, and one of its allied and more or less controlled organizations has been the German-American Alliance. It was, for instance, the brewers' money which financed the German-American Alliance thru the camouflage of the National Association of Commerce and Labor and one of the chief activities of the German-American Alliance was the fighting of prohibition.

It was by a tax of so many cents per barrel of beer, amounting to upward of a million dollars a year, that the brewers supported the German-American Alliance which fought prohibition for them concentrating the national resources of the liquor interests on any vulnerable locality they choose to attack. These facts and others equally startling, while they have received little attention, can be verified in detail by an examination of the report on the German-American Alliance of the recent Senate Investigating Committee and by the two volumes, "The Breweries in Texas Politics," by the recent published statements of A. Mitchell Palmer, Alien Enemy Property Custodian, and other evidence. Many who know that there is a strong local influence of the saloon in politics, such as in local political bodies like Tammany Hall, do not realize how this corrupt influence has been organized with typical German brains and cunning thruout the nation, just as few people realize that one of the chief obstacles to prohibition in England lies in the fact that the Church of England had been induced years ago by liquor interests to invest in brewery stock. Thus the New York Mail, recently found to be German controlled, fought prohibition altho the personal convictions of its editors were in favor of prohibition. All sorts of business relations are used as a basis for propaganda or terrorizing. A Michigan manufacturer, who sent me a telegram favoring national prohibition, afterward informed me that he was immediately boycotted by those customers who were in the liquor interest or under their control. Again, the fact that union made cigars are sold chiefly in saloons has created an alliance between the tobacco interests and the liquor interests, so that tobacco workers and those labor leaders who have come from their ranks, like Mr. Gompers, are usually to be found against prohibition altho labor as a whole is largely, if not mostly, in favor of prohibition.

Only national prohibition can and will prevent this national mobilization of the liquor forces in local battles where the anti-liquor forces cannot be so well mobilized; and national prohibition alone can and will destroy the United States Brewers' Association and its ramifications, by cutting off its nutriment. As soon as national prohibition is effected, especially if constitutional, the most gigantic and insidious influence in our political and social life, our chief "invisible government" will be as dead as the Spanish Armada and with it will wither much organized political corruption. So far from introducing corruption and disrespect for law national prohibition will reduce these evils greatly by killing their organization. Resurrection can never occur because it would cost too much money and nobody would have a financial interest in furnishing the money. The constitutional amendment, once passed, can never be repealed. Thirty-six states can never be induced to vote for repeal. The

irrevocability of the step will show the brewers the hopelessness of further fighting. The liquor question will then be settled because the liquor men will be put out of business. It will never be settled before. The same principle applies to this warfare as applies to military warfare, namely, that permanent peace comes after the surrender of the enemy forces and not before.

Many reason that if local prohibition fails in some localities national prohibition would certainly fail in at least those localities and also in others. But they should reason that if local prohibition succeeds in some places national prohibition would succeed in those places and also in others.

It is unsafe to reason by analogy. Many people speak of the difficulties of enforceability as tho they would be the same under national prohibition as under local prohibition. But they will be immensely lessened. National prohibition will have introduced an unprecedented condition; for it will have given the *coup de grace* to organized liquor. The liquor forces will collapse like a house of cards. The teachings of modern science will be accepted without further contest, the needs of industry and labor will be regarded. The ideals of work, efficiency and health as well as of moral sentiment will flourish while conservatism will help prohibition as much as it now resists it.

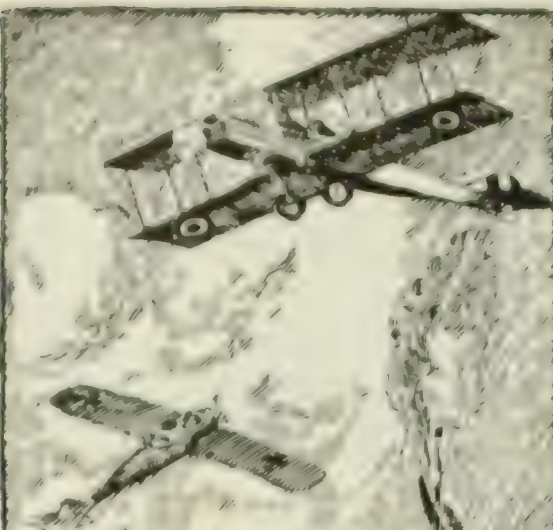

Evasion also will be far more difficult. A brewery is like a city on a hill. It cannot be hid. It is too large. In prohibition states there are no breweries tho there are small hidden saloons dispensing the products of the breweries of wet states. Prohibition will eliminate these breweries instantly. Without great breweries anywhere in the United States there can scarcely be many successful saloons, however small.

It will, therefore, be seen that prohibition is really a national, not a local, question because the liquor interest is nationally organized and because national prohibition, for several reasons, can succeed where local prohibition would fail.

The prohibition movement rests on a solid basis. It is not a mushroom growth due to the war and most of the successes of prohibition were achieved before the war. Nor is the movement for prohibition today primarily an emotional movement. It rests rather on the cold-blooded calculations of the scientist, the statistician, the economist, the public health officer, the industrial manager and the military expert.

To the conservative, who has not followed or understood the prohibition movement and who cannot decipher the handwriting, which he begins, in a dazed way, to see on the wall, the movement seems an enigma. To actually wipe liquor off the map seems to his unimaginative mind as impracticable as the destruction of the Chinese opium traffic seemed a generation ago or as the abolition of slavery seemed before the Civil War.

But these same conservatives will see it all clearly after it has all unfolded. They, being by nature law-abiding citizens, will then, themselves, help make law enforcement easy. When, therefore, the doom of liquor is finally and formally sealed by the ratification of the thirty-sixth state, the last obstacle to prohibition and its enforcement will have vanished. The sentiment for making prohibition prohibit will be universal (except among drug addicts), the manufacture of artificial sentiment against it will have ceased, and the sound teachings of scientific, industrial and military experts will be generally accepted and applied.

## Heroes of Aviation

By  
**Laurence La Tourette Driggs**

American Foremost Authoritative  
Writer on Aviation

In his new book Mr. Driggs gives the authentic story of all the most famous Allied Aces.

For the first time the complete story of the American Lafayette Escadrille, which included Rockwell, Prince, McConnell, Chapman, Drew, Hall and Lafayette is given in detail.

There is a graphic account of the Storks, N. 3, the most famous Escadrille in France, of which Guynemer was the head.

Included in the book is a chapter giving a list of the Aces of all nations and their victories.

## NURSING THE HOUSE PLANTS

(Continued from page 27)

root so as properly to harden the new growth. Other flowering plants of the poinsettia or heather type are of little value to the home after they have finished flowering.

Most of the foliage plants such as kentias, rubbers, draceneas, pandanus and other types usually referred to as palms, are moisture lovers. Their native habitat is the tropics, and under the dry atmosphere of the dwelling they are subject to the attacks of various insect pests, but more particularly red spider. Sponging of the foliage at weekly intervals is advisable. With tepid water make a soapy solution, using a good white or castile soap and a mild insecticide of oil or tobacco.

One of the greatest assets of a good house plant is being in a small pot. Frequent feeding will reduce the necessity of repotting, but there is a point where the plant must be repotted. It must be done properly to insure the health of the plant. Select a pot about two inches greater in diameter than the one it occupies. Get some coarse cinders, clam shells or broken pots for the bottom and have some good soil mixt of equal parts top soil and leaf mold. Add a little sharp sand to assure drainage. Place one inch of the drainage material in the bottom of the pot, and over this a little moss. Scatter a little soil over this. Remove the old pot by inverting, holding the left hand on the surface. Tap the pot gently on the edge of a table and it will come off. With a sharpened stick remove the drainage pieces that will be found enveloped with roots. It matters little if a few roots are broken when doing this, but they should be severed cleanly with a sharp knife as broken roots decay. Place the ball in the center of the pot, so the surface is the proper distance below the top of the pot to allow for watering. Then fill the pot with the compost, filling in layers and firming it thoroly with a sharpened stick.

## THE WONDERS OF SURINAM

(Continued from page 20)

night, by nature's grand orchestra the myriad voices of the wilderness. We were endangered by wild beasts and reptiles, harassed by the armies of the insect world, scorched by a vertical sun by day and chilled by the winds of night. We subsisted at times, like the natives, upon tapirs, wild pigs, deer, ant-eaters, armadillos, ground hogs, monkeys, huge lizards, turtles and turtle eggs, fish, great divers, macaws, rheas and various other wild birds, and also upon wild fruits and vegetables.

During these extensive excursions we passed, seemingly, thru ages of experience in single years. Entirely unexpected events occurred, at times, almost hourly. One moment we floated in seemingly perfect security and freedom from care down a quiet, peaceful river, exulting in the wonders and beauty of nature about us, and the next instant we were thrown into wild excitement and were in mortal danger because of surging rapids in which our craft could not live, into which we were being sucked almost irresistibly. Sometimes we lived in a state of war, having to post sentinels every night. We were completely isolated from civilization. In the dark, spectral hours of night, especially, we would feel ourselves mere helpless, unintelligent atoms in the midst of Infinity and in the presence of Omniscience.

# HOW TO STUDY THIS NUMBER

## The Independent Lesson Plans

### ENGLISH LITERATURE AND COMPOSITION

BY FREDERICK HOUR LAU, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

#### I. The Old-Time New Year. By E. P. Powell.

1. The article is an example of the "Essay." What are the characteristics of the "Essay" that make it different from the following forms: (a) The Short Story, (b) The Novel, (c) The Scientific Treatise.
2. In what respects is the "Essay" somewhat like the "Lyric"?
3. Is this essay more like Addison's essays in "The Spectator" or like the essays in "The Spectator" or Irving's essays in "The Sketch Book"? Explain. Which type of essay do you prefer? Give a reason for your preference.
4. What characteristics of the author does this essay reveal? How does the essay make us feel toward the author?
5. Prove that the essay is informal, instead of formal. What advantages have been gained by the lack of formality?
6. What attitude toward life does the essay reveal?
7. Why did the author turn the emphasis of the essay in the direction of serious thought?
8. Make a list of epigrammatic, or proverb-like sayings that appear in the essay.
9. Point out differences between life in the early days of the United States, and life at present.
10. Write the "autobiography" of an old stage coach.
11. Give an oral account of old-time New Year's customs.
12. What advantages does the essay gain by giving a few definitely drawn character sketches?
13. Show in what ways this essay is like, or not like, any one of Lamb's essays.

#### II. To Malkin: Turned Two. By Helen Parry Eden.

1. Explain the derivation, and the meaning, of every one of the following words: diminutive, portal, miniature, talented, threshold, fanes, fantasy, baroque, hapless, infallible, counter-projects, lure, fragrance, guiles, Georgian, quaverings, interminably, ditties, perching, ecstatic, pounce, quarto, basilicas.
2. For every one of the above words make an original sentence that will show that you fully understand the word.
3. Explain how the various words named above are related to the central thought of the poem.

#### III. The Wonders of Surinam. By J. Barkley Percival.

1. Draw on the blackboard a map to show the relation of Surinam to the United States. Give an original talk showing what advantages the United States may gain from Surinam.
2. Present a summary of the opportunities for development found in Surinam.
3. Write an original short story, leading toward a climax, based on the adventures of the author in Surinam.

#### IV. The Story of the Week.

1. Give a talk beginning with an explanation of the present situation in Germany, and ending with your prophecy concerning the future of Germany.
2. Explain what is meant by "A League of Nations."
3. What does President Wilson mean by speaking of a League of Nations as the organized "moral force" of men throughout the world?
4. Explain what President Wilson means by saying "A little exposure will settle most questions."
5. Give a talk explaining what is meant by the "university" or "school" spirit.
6. Give a talk explaining the present situation in Russia. Tell how you account for the existence of this situation.
7. Summarize the most important recent events in the United States.

#### V. Can Prohibition Drive Out Drink? By Irving Fisher.

1. Make a brief of the entire article, making your brief in such a way that a person who has not read the article will be able to grasp its principal thoughts quickly.
2. Present your own reasons for agreeing, or disagreeing, with the principal thought of the article.

### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

#### I. European Politics—"Put the League of Nations First," The Story of the Week.

1. "The Peace Conference well might put at the top line of its 'Agenda' the League of Nations." Why is this the logical course?
2. Write a brief summary of political events in Germany during the past two or three weeks. Which party seems most likely to come into permanent control?
3. Which of the demands of the soldiers and students seem to you reasonable? Which unreasonable?
4. How far does the French plan for a League of Nations fit into the scheme as outlined originally in this country? In what respects does it differ?
5. Do you see any signs that order is being introduced into the affairs of eastern Europe?

#### II. The War Revenue Bill—"The Six Billion Dollar Tax Bill."

1. What are the chief sources of revenue provided in the bill passed by the Senate? Compare this bill with the ordinary revenue bills of ten or fifteen years ago.
2. What is a "rider"? Is not the amendment which imposes a tax on products of children's labor a "rider"? Why was this provision included in the bill?

#### III. Dutch Guiana—"Proposed Purchase of Surinam," "The Wonders of Surinam."

1. Draw a map of the regions surrounding the Caribbean Sea. Indicate carefully (a) the lands over which the United States has complete dominion, (b) those which the United States controls by special treaty or other diplomatic arrangement.
2. What reasons, political and economic, can you give for the acquisition of Dutch Guiana by the United States? Could we hold this region without agitating for the purchase of French and British Guiana as well?

#### IV. Demobilization of Our Army—"Between Two Stools," "Fitting Soldiers into 'Cits.'"

1. Why does the Left-over Lieutenant speak of himself as having fallen between two stools? Do you sympathize with him?
2. Do you feel after reading this article that the virtues of army discipline outweigh its shortcomings? Set down the advantages and disadvantages in parallel columns.
3. What are the labor problems which are growing out of demobilization? How are they being solved?
4. "America is, to a large extent, deluded by the appearance of prosperity." What proofs does Mr. Wilhelm give?

#### V. Prohibition—"Can Prohibition Drive Out Drink?"

1. What is the status of the prohibition movement in your community? What is your own attitude toward prohibition?
2. "Mr. Taft's position is typical of the conservative." In what sense is this true?
3. What are the forces which are working for federal prohibition? Those which are working against it?
4. "... all the forces for prohibition will grow stronger after prohibition; and all those against it, weaker." What are the grounds for this assertion?
5. "It will, therefore, be seen that prohibition is really a national, not a local question," etc. Does Mr. Fisher prove his case?

#### VI. Transportation Problems—"The Railroads," "Why We Need Better Roads."

1. What were the strong points and the weak points of railroad operation under private ownership? What would be the advantages of government ownership? the disadvantages?
2. Why are French and English roads so much better than ours?
3. Prove that good roads are a paying proposition.
4. What national and state agencies are actively engaged in the agitation for good roads? Why is the present an especially good time for engaging in this agitation?

#### VII. Early American Society—"The Old-Time New Year."

1. In what way may this article be regarded as an historical document?
2. In what period of our history did the scenes described probably take place? In what part of the United States?

## THE INNER SIDE OF THE WINDOW

(Continued from page 25)

lovely combination which transcends every known rule; but the layman will be wise to follow the beaten path to achievements less startling but more satisfactory to live with.

One method of achieving harmony, but one which must be practised with extreme caution, is to apply the same pattern to walls and draperies, either using a fabric for both, or a cretonne and wall paper made to match. The danger, of course, is that so much pattern will prove monotonous, and this is certain to be the case if the room contains large, unbroken wall spaces, and if in addition the design is bold and brilliantly colored—as in cretonnes it is apt to be—the effect is overpowering. A more successful treatment is to match the hangings to a wall paper band or border as in the case of the bedroom window illustrated, whose cretonne draperies show a floral pattern on a black-striped ground that matches the flowered black bands on the walls.

In the stately house and formal room, only the most sumptuous fabrics may with propriety be used to dress the windows: delicate silks and laces, filmy gauze, or the finest marquisette embellished with lace and embroidery for casement curtains, with overdraperies of rich damask, satin, velours, or taffeta. In the parlors or reception rooms of less pretentious dwellings, poplin, rep, armure, cotton damasks and medium grades of silk may be draped over simple curtains of net, scrim, or voile; and in the living room, whose life mission is to be hospitable and cheery without pretense of formality, all these may find a place, but better are the printed linens, the colored madras that shatters the white light of day into all the gorgeous hues of the spectrum, and terry cloth. And best of all are the cretonnes, infinitely adaptable. At the extremity of the scale, the very last word in informality is the increasingly popular bungalow where we may scatter chintzes and cretonnes with a lavish hand, not to mention coarse lattice nets and awning stripes, Japanese cotton crepe and figured toweling.

To achieve success, it is necessary to banish considerations of "style," and to study the size, shape, and placing of each window in relation to the room as a whole. Is it too high and narrow? If so, it is a simple matter to lower the top and extend the sides by the use of sill length draperies and a deep valance so arranged as to hide the window casing, except across the bottom. If necessary, they may extend beyond the casing several inches at either side. On the other hand, if the window is too low and broad, draperies in straight folds to within an inch of the floor will correct the fault.

Sometimes it happens particularly in old houses—that the window openings have been cut too low in the wall. In such cases the defect can be concealed by fastening to the wall a foot more or less above the window a valance just deep enough to hide the window casing, thus giving the impression that the top of the window is level with that of the valance.

Group windows, if their number does not exceed four, usually may be treated as a single window in respect to overdraperies, with a valance carried across the top of the entire group.

Examples, good and bad, might be multiplied indefinitely but enough have been cited to prove the contention that windows demand individual treatment for the best results and cannot arbitrarily be dressed in whatever mode or fabric may chance to be the fad of the hour.

# "Why is the price of meat so high?"

THE head of a Philadelphia family writes to ask us for an explanation of the present high prices of meat.

He inquires especially about the increase during the past four years.

*Clerk hire, delivery, rent--in fact, all items entering into the operation of the retail meat shop--have advanced tremendously in cost*

One item to consider is the increased cost of running a retail meat shop.

The retailer today must pay higher wages to his clerks and more for delivery service—in fact, everything entering into the operation of his store has advanced tremendously.

The principal reason retail prices are higher, however, is the fact that wholesale prices have increased. The retailer is obliged to charge more for meat because he has to pay the packers more for it.

The packers, in turn, are in exactly the same position as the retailer.

It costs them more to do business. Labor, transportation, machinery, materials—all items in the packing business—have mounted rapidly. Wages of packing house laborers, for example, have increased over 100 per cent in the past three years.

But this, as with the retailer, accounts for only a relatively small part of the increase. *The packers are compelled to charge higher wholesale prices for meat mainly because they are paying more for cattle.*

During the past four years, cattle prices to Swift & Company advanced 74 per cent.

*The packer's costs also have mounted rapidly. Wages of packing house laborers, for example, have increased over 100 per cent in the past three years*

Wholesale beef prices have not gone beyond this. In fact the price received by Swift & Company has gone up only 61 per cent during the same period.

Cattle have advanced in price because it costs the producer more to raise them.

The prices he pays for grain have reached unprecedented heights. Corn, for example, has doubled in the past four years.

*Every item entering into the production of cattle has gone up. Corn, for example, an essential cattle food, has doubled in the past four years*

Farm labor is scarce, and he has to pay record wages to get it. Freight rates have also gone up.

The increase in the price of meat, in short, is due to the higher cost of everything that goes into its production and distribution.

But the price of meat has gone up no more than the prices of other foodstuffs—and this in face of the enormous quantities sent overseas to supply our Army and the Allies.

Evidence of this is seen in the fact that, during the past five years, flour has increased 100 per cent, corn meal 133 per cent, sugar 65 per cent. During the past year alone, fruits have advanced 30 per cent.

If the packers were to eliminate their profits entirely, there would be practically no change in the price of meat. Swift & Company's profits average only a fraction of a cent per pound of meat.

*The cost of all foods has increased during the past four years, and the advance in most cases has been greater than that on meat*

## REMARKABLE REMARKS

**SAM MESAITHIM**—Can editors blush?  
**PREMIER KURT EISNER**—We confess our guilt.

**MARION DREW**—Never wear rubbers indoors.

**JUDGE ELBERT H. GARY**—I welcome new ideas.

**MARSHAL VON HINDENBURG**—I am ready to retire.

**DOUGLAS MALLOCK**—If figures don't lie, why corsetieres.

**THE EX-CROWN PRINCE**—Father and I are down and out.

**CHARLIE CHAPLIN**—One or two custard pies are funny perhaps.

**THEODORE ROOSEVELT**—Mr. Wilson practises only secret diplomacy.

**TY COBB**—I want to quit baseball while I am still at the height of my form.

**SIR DOUGLAS HAIG**—Do not let us get swelled heads over our victory.

**GELETTE BURGESS**—They were like boiled onions with cream sauce—his eyes.

**EX-KAISER WILLIAM**—Let all the enemies of the German nation perish.

**PREMIER LLOYD GEORGE**—Parliamentary opposition is organized faultfinding.

**FRANK A. VANDERLIP**—We are going to make a thundering try at foreign trade.

**WOODROW WILSON**—I think one would go crazy if he did not believe in Providence.

**S. WILBUR CORMAN**—Most of us say we dislike flattery—all of us fib in saying it.

**LUKE MCLUKE**—How a woman loves to wash a baby and how she hates to wash the clothes.

**JOHN MASEFIELD**—The only things which matter in war are courage and the love of your comrades.

**SECRETARY DANIELS**—I look to see the Peace Conference put an end to competitive big navy building.

**GRAND DUCHESS ANASTASIE OF MECKLENBURG-SCHWERIN**—Germany should admit that she is wrong.

**EDNA K. WOOLEY**—No club or society woman has the right to tell the working woman what she shall or shall not wear.

**J. OGDEN ARMOUR**—There is a premium in the business world on the man who does things well—with completeness and finality.

**CHARLES M. SCHWAB**—In the years gone by, I seriously doubt if labor has received its fair share of the prosperity of this great country.

**PREMIER VENIZELOS**—My success has been due to the fact that I have consistently told the truth both to those above me and those below.

**MARTIAL JOFFRE**—In a brotherly embrace France and America have given one another their faith, a pledge for the present and the future.

**DR. HARRY EMERSON FORDICK**—I am a pretty good friend of the President, and I venture to say he does not know what the phrase (freedom of the press) means.

**MARIA BOLCHAKOVA, COMMANDER OF THE BATTALION OF DEATH**—I rushed at

## THE NEW PLAYS

Barrie mingles sense and humor in a delightfully sentimental fashion in *Dear Brutus*, a play that gives all its characters a second chance. William Gillette and Helen Hayes, as father and daughter, play the best scene of all. (Empire Theater.)

*The Betrothal*, by Maurice Maeterlinck. Fitting sequel of "The Blue Bird." Most human and beautiful play of the season. See article by Montrose J. Moses in The Independent of November 16. (Shubert Theater.)

Fairly well written, very well acted, and thoroly English, *Betty at Bay* carries one out of the everyday world into one in which everything turns out perfectly, from the discovery of fortunes to the return of the hero reported lost in battle. (Thirti-ninth Street Theater.)

*La Jalousie du Barbouillé*, by Molière, and *Les Romantiques*, by the late Edmond Rostand, the first plays of these authors, and almost unknown even to readers, were given on the same evenings last week by the Theatre du Vieux Colombier.

*Back to Earth* on a two weeks' furlough, an angel falls in love—and William Le Baron writes up the situation in a pun-bestrewn farce. Wallace Eddinger acts the part of angelic unsophistication to perfection. (Henry Miller's Playhouse.)

## P E B B L E S

Returned Soldier—Bill, when I told her I killed a German with one hand she grabbed it and kissed it all over.

His Friend—Why didn't y' tell her you bit the blighter to death?—*Sydney Bulletin*.

"It looks as if Jones is better satisfied with his wife."

"Yes, he is. You see, he went back home on a visit and saw the girl he has been dreaming of for the past twenty years."—*Life*.

"Say, that lot you sold me is three feet under the water."

"Is it?"

"Yes, it is, and you know it is."

"Well, it's a good thing you told me. I can let you have a bargain in a canoe."—*Kansas City Journal*.

Tommy (just off train, with considerable luggage)—Cabby, how much is it for me to Latchford?

Cabby—Two shillings, sir.

Tommy—How much for my luggage?

Cabby—Free, sir.

Tommy—Take the luggage, I'll walk.—*Boston Transcript*.

This has been given to the London correspondent of the *Manchester Guardian* as the truth of what M. Clemenceau said when the draft of President Wilson's original note with the fourteen points was handed to him.

He said: "Quatorze points! Mais cela c'est un peu fort—le bon Dieu n'en avait que dix."

# How executives are meeting the shortage of correspondents—

Men over 45 and younger men in deferred draft classifications, also ambitious women, are successfully replacing thousands of correspondents called into government service.

**W**HEN we were first affected by an acute shortage of help in our correspondence department," said the office manager of a concern in the Middle West, "things looked pretty discouraging. We didn't know where to turn for trained correspondents.

"The type of young men we had always hired previous to this time were either in military service or in positions where they did not care to make a change. Consequently, we looked around for older men and for women to fill our vacancies.

"Although we interviewed many applicants, few of them seemed to possess anything but a superficial knowledge of business letter writing. Even applicants who had had considerable experience in correspondence work seemed to think that the only requirement was to dictate grammatically, to master routine quickly, and to learn the various prices, terms, adjustments, and other facts and information requested by customers. They didn't seem to comprehend the finer points of business-building letters.

"If we had been able to find a dozen top-notch correspondents with an appre-

ciation of the true possibilities of business letters, they could practically have named their own salaries.

## Lack of training holds back many promising men

"Competent correspondents seemed so scarce that we finally decided to establish a systematic course of training for all new correspondents, in order to give them a clearer understanding of the broad principles of letter writing, and to teach them not to use unnecessary words, stilted expressions and rambling phrases, but to give their letters personality and a touch of human interest which would drive them straight to the mark, creating friendly feeling and good will wherever they are read.

"We had to show these people that their job was not simply to 'handle correspondence' and to clean up their desks at the end of the day, but that their task was to develop new markets, to bring back old customers who had drifted away, to collect money from accounts long past due, to keep up the fighting spirit of our salesmen on the road, and to turn complaints into orders.

"So we organized a class and studied the Course in Business Correspondence published by SYSTEM, which to my mind is the most remarkable Course of its kind ever produced. We found it intensely interesting, easy to understand, and simple to apply in our work.

"The results we have accomplished are astonishing. Our correspondence department is now turning out more letters, and better ones than ever before, with only 70% of the force we previously hired. The older men, some of whom are well along in years, are as full of enthusiasm as the younger ones, and the women are doing splendidly. All our correspondents are earning high salaries, and are establishing themselves in permanent positions.

## Former correspondents now successful executives

"One of our correspondents who joined this Course when it was first started is now manager of our collection department; another is one of the best copy writers in our advertising department, and several have been promoted to responsible positions in our organization. The Course brings out latent ability, and develops one's powers of personal expression to a very high degree.

"I believe that any man or woman who will spend a few spare minutes a day in mastering the principles explained in the Shaw Course can increase his or her earning capacity very greatly.

"SYSTEM'S Course in Business Correspondence is the most remarkable, most comprehensive, most profitable thing of its kind I have ever seen. Every man or woman interested in correspondence work or advertising should study it."

# SYSTEM'S Course in Business Correspondence

This Course, prepared by Herbert Watson, contains the essence of SYSTEM'S 18 years' experience in mail work. It comes in 14 interesting lectures which can be studied at home, under the guidance of recognized mail experts. In this way any man or woman can secure the same valuable training which it has taken others years of experience to acquire.

The Course is not an experiment; its success has been thoroughly demonstrated. During the past year it has been put to actual test right here in our own organization and by more than 1,500 executives throughout the country. In a short time with the help of this Course you can put yourself far ahead in your work, and open up new and undreamed of opportunities for success and advancement. There are greater opportunities for letters today than ever before. Letters are replacing salesmen, developing new markets, and performing every imaginable business service. Are you preparing yourself to take advantage of these conditions?

## Big men studying it

Among the subscribers to this Course are represented such firms as Marshall Field & Company, the Goodyear Tire and Rubber Company, The Bankers Trust Company, The Chicago and Northwestern Railway Company, and other well-known concerns, large and small, throughout the entire country. High executives are studying it to make their businesses more profitable. Employees are studying it to make their services more valuable. Everywhere, this Course is opening up new opportunities.

## Examine—free

You may examine the First Lecture of this Course at our expense, without obligation. Then if you decide to avail yourself of its wonderful opportunities for added income and greater personal success, the enrollment charge is only \$5 a month for seven months, or \$33.25 cash. Mail the attached coupon today.

## THE MAN ON WHOM ENGLAND RELIES

Premier David Lloyd George had the greatest triumph of his career in the recent elections which returned him to power by an unprecedented majority. It was only four and a half years ago that he became Minister of Munitions. Later he succeeded Mr. Asquith as Prime Minister. This photograph of the Premier shows him out for a country walk with his son, an officer in the British army.

## THE ELIMINATION OF THE LIBERALS

THE British elections show most strikingly the influence of the wartime psychology. The great Liberal party, to which England has owed most of her stability and all of her progress, has been swept away as by a cyclone. The reactionary forces are in complete control and the radicals are reduced to desperation. The Government of Great Britain that entered the war with an unprecedented Liberal majority has come out of it overwhelmingly Conservative. The Parliament just dissolved was elected in 1910 and altho its legal term expired five years later it continued in power by the simple process of voting to retain its seats. Doubtless our present Congress would be glad to adopt this delightfully informal fashion of overruling the law.

In the four years before the war the Liberals under the leadership of Asquith carried thru Parliament a remarkable series of reforms. The veto power of the House of Lords was curtailed. The Church in Wales was disestablished. A comprehensive scheme for the protection, betterment and security of labor was inaugurated. Home Rule for Ireland was voted. And lastly—and most courageous of all—Lloyd George had laid his ax at the foot of the tree of landlordism under which British agriculture had declined and British aristocracy flourished. This brought down upon his head a storm of scurrilous vituperation from the Conservatives, who are now supporting him.

The outbreak of the war put an end to this promising program of legislation. Some of it was suspended. Part of it was undone. Most of it has been abandoned. Lloyd George in his campaign speeches claimed that the Conservatives had reformed and he promised to carry out with their aid certain moderate measures of agricultural, educational and labor improvement. Many of his former followers believe that he has gone over to the enemy. He seems to us sincere and we expect him to attempt the solution of some of the problems he had tackled before the war, but we do not think that he can go far in this direction without losing Conservative support. A comparison of the pre-war and post-war Parliaments will show the amazing revolution:

### HOUSE OF COMMONS

	1914	1919
Unionists .....	282	380
Liberals .....	260	164
Labor .....	38	76
Nationalist .....	78	7
Sinn Fein .....	..	73
Various .....	..	7
	670	707

In the old Parliament the Liberals were in a minority, but if the Irish Nationalists supported them as they did on the Home Rule question the Liberals would have a majority of 16, while if the Laborites supported them as they did on labor questions the Liberals would have a majority of 56. Their actual working majority was usually about 80.

In the new Parliament there is a shift of about a hundred from the Liberal to the Unionist, that is to say the Conservative, camp. Labor has doubled its representation but lost its power. The Nationalists have been cut down to a tenth of their former number and are without honor in their own country. In their place has arisen the Sinn Feiners, who will not enter the House to which they are elected but will set up a government of their own in Ireland and claim admission to the Peace Conference as an independent republic. Since the Home Rule that was voted them has been snatched away they are determined to seize it. It seems likely that the civil war in Ireland which was interrupted by the Great War will now be renewed.

Even the revered Liberal leader, Mr. Asquith, was beaten in his own district of East Fife by an insignificant and former opponent. Arthur Henderson, the Labor leader, who

has tried to keep in touch with his party while remaining in the Government, has lost his seat. The coalition of which Lloyd George and Bonar Law are the leaders will have an over-all majority of about 250. Of the Coalition forces the Unionists compose three-fourths, so Premier Lloyd George for all his unparalleled majority will be entirely dependent upon those who formerly opposed every reform for which he stood before the war.

It was emphatically a khaki election. Every candidate suspected of a taint of pacificism, defeatism, internationalism, Bolshevism, or anything else of the kind was snowed under. The electorate reasoned simply; under Premier Asquith the British armies were unsuccessful; under Premier Lloyd George they were triumphant; the man who gained the victory is the man to make the peace. The eight million women voting for the first time concurred with the men in the army.

The effect of war sentiment is to intensify tendencies. It throws the moderate middle man toward one extreme or the other. In a victorious nation they are thrown toward the conservative side, in a defeated nation toward the radical side. What has taken place in England and Ireland is equally apparent in Russia and Germany. The bourgeoisie is beaten. The Bolsheviks of Russia, who are so extreme as to throw the old fashioned Socialist and Nihilist in the shade, have no effective opposition except Cossack generals leading a monarchistic reaction. The Liberal party of Germany has been wiped out. There seems to be nobody between the Socialists who are in power and the militarists who are scheming to get back again. Judging from history we may expect that in the belligerent countries the pendulum will vibrate for some years between autocracy and anarchy.

### THE CASE OF THE KAISER

WE are alarmed to see that the European despatches continue to devote columns daily to one Wilhelm von Hohenzollern, living now in retirement at the house of a friend in Holland. The American public is supposed to be interested in the condition of his ear, the state of his brain, the way he spends his time, the possibilities of his extradition and the form of his punishment. This is alarming because it indicates that in the European mind the gentleman in question is of more importance than he appears to us. No doubt he deserves death, but since we have seen over seven million men, good, bad and indifferent, put to death during the last four years we cannot get excited over the fate of one individual, however guilty.

What makes him dangerous, alive or dead, and perhaps more dangerous dead than alive, is that some people believe that he is, was or ought to be king. Now kingship is as much of a delusion as witchcraft. It is what the psychologists call a collective hallucination, as when a whole roomful of people claim to see a ghost. In the Bible we read how kings originated in Israel. Saul went forth to find asses and he found a kingdom. The asses crowned him.

The modern American knows that there never has been and never can be any such thing as a witch, that is, a woman possess of supernatural power for mischief. But so long as people tried to stamp out witchcraft by killing those who claimed the power or were believed to have it, the number of pretenders increased and multiplied. The levitical injunction "Thou shalt not suffer a witch to live" was the chief instrument in the propagation of the superstition.

The modern American knows that there never has been and never can be any such thing as a king, that is, a man possess of supernatural authority as a ruler. But no people has got rid of kingcraft by merely killing kings. It is necessary to eradicate the superstition from the minds of the

people. A dead king is often more dangerous than a live one. A deposed king is a good object lesson. The revolutionist is like Macbeth; he need fear no living man but he has reason to be afraid of ghosts. Napoleon the Great was harmless enough while living on the island of St. Helena quarreling with his keeper and writing his memoirs, but when he died and his ashes were enshrined in Paris his tomb was made the foundation for the throne of Napoleon the Little.

If the Bolsheviks killed Nicholas Romanov they did not commit a crime, for he deserved death on many counts, but they did commit a blunder, for the deed aroused sympathy for one who merited none. It would have been much wiser to have kept him on exhibition in the park of Czarskoe Selo, where he could be watched.

Charles II of England was tried by a court of 150 of his peers and unanimously convicted of high crimes and misdemeanors, the highest of crimes and the worst of misdemeanors, for he had denied that he held power from the people and had suppress public rights and religious freedom. But because Charles's head was cut off the king lived and the ground gained by the revolution was lost. Not until December, 1918, was a parliament elected that was as representative and unrestricted as that of 1654. The memory of the royal criminal is still honored by certain classes, and even in the calendar of the Protestant Episcopal Church of America a holy day is set apart for Charles I, "King and Martyr," along with all the saints.

So from the reading of history we cannot see anything to be gained by the hanging of the ex-Kaiser. We cannot imagine—not being a Dante—any punishment adequate to his crimes, and anything less would be to condone them. Besides, we have been told for the last four years and longer that he is insane. We have never believed it, but we fear that one man out of twelve does, so there would be the prospect of a hung jury and an unhung criminal. We are glad to see that the German soviets have offered a reward of \$20,000 for the escaped King, dead or alive, but we are inclined to think that they will be better off if no one claims the reward under either condition. We advise them to read the story that Lincoln told, when Jeff Davis was caught, about the boy and the coon which he wanted to escape but was too conscientious to let go.

The important thing is to save the German republic from a relapse into its former state or worse. If the trial and execution of the ex-Kaiser by the Allies or by his own people will conduce to the stability of the new regime it should be done. But if it should seem likely to have the opposite effect of strengthening the monarchical movement, then he had better be let alone. We hope it is true that he is writing a book. We shall be glad to review it. We know how Job felt when he said, "Oh, that mine enemy had written a book." He might also be allowed to continue his former vocation of posing for the movies. He was more of a success at that than anything else and it pays so well that he would not need his estates and crown jewels, which could be sold for the benefit of the poor. In these hard times we cannot afford to let even one of the thirty-five monarchs now out of a job remain in the ranks of the unemployed.

## A SERIOUS ACCUSATION

THE War Department cannot afford to ignore the charges made by Senator Chamberlain of Oregon, chairman of the Military Affairs Committee, in his recent speech before the Senate. He accuses the War Department of failure to provide adequate hospital facilities for the returning wounded men. He blames the War Department for being months behind with the pay of returning soldiers, most of whom are out of money. Senator Chamberlain might have added that the soldiers' allotments to dependent families are not being promptly paid, that insur-

ance payments, often badly needed, are delayed for months, that the whole pay system of the army is inexcusably hampered by red tape.

These are serious charges. And it is important that the people know the facts.

Secretary Baker says:

I have been giving the matter of treatment of soldiers in hospitals, including the prompt payment of all wages due them, my personal attention, and corrective measures have been ordered immediately made.

But that is not enough. Ordering corrective measures at this late date seems to be in itself a confession of failure. The least the War Department can do now is to cut red tape so as to make the remedy immediately effective.

And to tell the people frankly exactly how things stand.

## OUR DEBT TO THE BRITISH NAVY

WE must not allow any possible disagreement over the question of disarmament and the freedom of the seas to obscure our obligation to Great Britain for her immense and indispensable aid in transporting our army overseas so swiftly and securely. No other country could have done it. No other country would have done it. No such feat has ever been performed in the history of the world before. Of all the American troops despatched to Europe about 51 per cent were carried in British vessels, about 46 per cent in American, and about 3 per cent in French. Of course nothing could be said about this during the war, but now that the veil of secrecy is lifted the history of this great achievement can be told and should be known.

For ten months after our entrance into the war only such space as could be made available in the regular British passenger liners, without interfering with the huge shipments of supplies for the British army, was used for troops. Up to February 28, 1918, a total of 282,900 United States army personnel had left for France, 105,000 of these, or about 37 per cent, being transported in British vessels.

On March 21 the terrific and, what turned out to be, the final German offensive on the western front, was launched. The Allied Council immediately recognized the urgent need for men, especially infantry and machine gun units. The United States then stated that they were ready to furnish the men, if the British Government would help transport them. Thus before the end of March passenger vessels converted into troopships which had never been seen in any United States port before, began to arrive at New York. During April, May, June, July and August practically every British vessel that had the required speed and could possibly be fitted for troops was ordered to New York or some other American port by the quickest route. The vessels already in the Atlantic service were fitted to carry the maximum numbers consistent with safety and comfort and the important cargo shipments were worked into the ships only so far as they did not, in any way, cut down the troop capacities, even tho this drastic step seriously jeopardized the food situation in England, and necessitated the strict rationing of the civilian population of Great Britain.

By delivering to Italy a considerable amount of much needed British cargo tonnage, the British Government succeeded in augmenting their troopship service with six fine Italian passenger vessels, which have made a total of thirty voyages with United States troops to France direct.

It is interesting to note that between April 1 and October 31, 1918, 180 different British troopships carried United States troops and made, collectively, 483 voyages with a total of 950,000 troops, or an average of sixteen British troopships sailing from this side every week for a period of seven months, and approximately 4500 troops left the United States on British vessels every day during the same period. Even these figures would have been considerably higher if the United States War Department had been able

to send more than 6000 troops a month to Montreal and Quebec for embarkation there on troopships which were diverted to these ports for naval and convoy reasons.

Owing to the submarine menace and risk of disaster every ship had to be supplied with a special type of life jacket for each individual man and life boats or rafts to accommodate all on board. All of this equipment was purchased by the British Government. Numerous alterations were necessary in every troopship and many cargo vessels were completely fitted with first class accommodation for officers in addition to galleys, washrooms and troop sections under the supervision of British inspectors and entirely at the expense of the British Government. The insurance on the entire fleet while crossing a danger zone extending from coast to coast was carried by the British Government. Owing to special circuitous routes and other naval precautions the troops were on board the transports for an average of at least twelve days and during the voyages they were fed entirely by the British Government. The actual cost to the United States Government for the transportation of over a million men a distance of over three thousand miles has not yet been settled, but up to the present time an average of not more than \$20 per head has been paid on account.

Immediately after the armistice was signed the British were faced with the enormous problem of returning to their native land hundreds of thousands of war-worn Canadian, Indian, African, New Zealand and Australian troops, who have been fighting on many different fronts for four years. In spite of this the British Government has voluntarily offered many of their best troopships to bring back the American troops in England, and the first vessel to land returning United States troops was the British transport "Mauretania," which arrived at New York on November 30. Since this date no less than 40,000 have disembarked from British vessels at United States ports. England will gradually withdraw her ships as they are required for the colonial troop movement, but she confidently expects to render as much assistance as possible.

It is evident that the United States owes a deep debt of gratitude to England for coming so handsomely to our assistance in the last six months.

## THE WORLD MOVES ON

**G**REAT ideas, like great bodies, often move slowly; but every now and again their velocity is breathless, as witness:

Germany must be put on probation until she has made restitution to the peoples that she has desolated, and has reconstructed and democratized her own political life.

Let there be no vengeance. Let there be no closing of the door of repentance and return. Let her not be excluded for all time from the family of nations. But let her be told in terms that cannot be mistaken: "You must first make good. You must not only prove your sincerity, you must actually pay the bill of damages that the world holds against you. You cannot enter the league of nations now. When you have discharged your obligations and the score is wiped off the slate, and you have established a people's government in which the world can have confidence, you will be welcomed and admitted, but not before."—*From The Independent of November 9.*

The outstanding features of the latest Lodge program, as contrasted with the President's, are assessment of the cost of the war against Germany and insistence upon the exclusion of Germany from the league of nations until all obligations are met in full.—*From Lawrence Hills's Paris cable to the New York Sun of December 17.*

Mr. Wilson will strongly insist upon the creation of a League of Nations as the fundamental thing, with the admission of Germany probationary for the time dependent upon her ability to establish a stable government and discharge her international obligations, which is merely another way of saying all the powers will wait to see what kind of government arises before according the usual diplomatic recognition.—*From David Lawrence's Paris cable to the Evening Post of December 17.*

With Mr. Lodge and Mr. Wilson both accepting The Independent's program, why worry?

## THE WAY THEY FOUGHT

**W**HILE the boys are telling their homely, splendid stories to round-eyed listeners at every fireside in America, a few of the most brilliant fragments of narrative from the untold history of our part in the war attain the quasi-immortality of the official reports. Buried in General Orders, the most forbidding to the civilian of all the products of the press, or briefly repeated in the crowded daily press, one reads citations that would take one's breath away in any generation less jaded and dulled by incomprehensible experiences.

The old hero-stories have their counterparts. The boys who play the new roles use strange properties, and the scenes are set in fearful and wonderful fashion, but the action and sometimes even the lines have an oddly familiar ring.

There was the ballad hero who "fought upon his stumps." There is something as naive, and superbly American, in this citation:

*Elsworth O. Terrill, corporal, Company H, 113th Infantry. During the action in the vicinity of Hagenbach, Alsace, east of Bellort, France, August 21, 1918, when his right hand and arm were badly mangled by the explosion of a grenade during an enemy raid into our lines, he placed his injured hand in his trousers pocket to support it, went over the top with his comrades and joined in the pursuit of the defeated and retreating Germans, throwing hand grenades with his left hand as he followed them back to their own lines.*

One is tempted to italicize, but the finest element in these citations, as it was in the acts which won them, is the matter-of-fact directness of the thing, which forbids rhetoric and almost bars comment.

*Robert J. Maxey, lieutenant colonel, 18th Infantry. On May 28, 1918, at Cantigny, France, he advanced with first wave and, in the face of heavy shell and machine-gun fire, located the objective of his battalion. He was a cool, dependable and heroic leader. Altho fatally wounded, he gave detailed instructions to his second in command and caused himself to be carried to his regimental commander and delivered important information before he died.*

"Caused himself to be carried to his regimental commander and delivered important information before he died." One thinks somehow of the messenger in Browning's "Incident of the French Camp" who brings the news of the capture of Ratisbon to Napoleon.

For those who find spuds and slum and K. P. endlessly humorous—as they undoubtedly are—there is a new dignity about the army cook after one reads this:

*Harry C. Ricket, cook, Infantry. He maintained his kitchen at Chateau de la Foret, near Villers-sur-Fere, France, on July 28-29, 1918, during a bombardment so intense as to drive all other kitchens out of the village. When his stove had to be taken to the rear, he improvised a fire in the ground and continued his work until ordered to leave. He carried water from a spring, which was repeatedly shelled, when others would not approach it. Unaided, of his own volition, he conducted a first-aid station for wounded and exhausted men at his kitchen. Constantly in extreme personal danger, from machine-gun fire from low-flying aeroplanes and bombardment by high-explosive shells, he devoted himself entirely to the needs of others and made possible the care of several hundred wounded, exhausted and hungry men.*

But it is the "Don't give up the ship men" who stamp their names most deeply on the memory of their kind. To them it is given, in the last supreme moment, to dramatize their own deed by some half-conscious expression of their dominating will. Is there anything finer in all the stories of message-bearers than this?

*Roy H. Simpson, private, Forty-seventh Company, Fifth Regiment, United States Marine Corps. In the attack on the Bois de Belleau, France, June 12, 1918, he carried a message from battalion to company headquarters directly across the face of enemy fire. Shot thru the chest he continued running and called out, "I must deliver this message," struggling forward for fifty feet more in his heroic effort to carry out his mission before falling dead.*

What is there for an editor to say—or for a poet, or an orator—after that?

# THE STORY OF THE WEEK

## The President in England

Having spent Christmas with the American army, the President on Thursday visited England. Landing at Dover, he proceeded at once to London, where he was welcomed by the King in person and rode with him to Buckingham Palace, where he was entertained during his stay. King and President rode together in the royal coach thru streets profusely decorated with British and American flags and thronged with hundreds of thousands of cheering spectators. Mrs. Wilson was of course present and was similarly received and escorted by the Queen. Friday was largely spent in conference with British statesmen, and in the evening the President and Mrs. Wilson, with members of their company, were entertained at a state banquet of imposing splendor at Buckingham Palace.

On Saturday the President made a number of addresses, at the London Guildhall, at the Lord Mayor's luncheon at the Mansion House, and to the League of Nations Union, to a delegation from the Council of Evangelical Free Churches, and to some other bodies, at the American Embassy. Sunday was spent at Carlisle, the birthplace of his mother and the home of his maternal ancestors, where he made a brief address in a Congregational church. In the evening he went to Manchester and spent the night there as the guest of the Lord Mayor. He addressed a gathering of several thousand

## TO BRING POLAND FOOD

Colonel William Grove heads the mission sent by our Food Administration to relieve the danger of famine in Poland and to arrange for food distribution there thru the winter

workingmen in Free Trade Hall on Monday, returning that evening to London. A farewell dinner was given by the King and Queen at Buckingham Palace on Tuesday; the President, Mrs. Wilson and their party returned to Paris, and on Wednesday they went to Rome. It is intimated that the President would return to America about February 10.

## The Freedom of London

President Wilson is the third American Chief Magistrate to receive the "Freedom" of the City of London, his predecessors in that honor having been General Grant and Colonel Roosevelt. They were thus invested, however, after their retirement from office, so that Mr. Wilson is the first to be made a Freeman of London while still President of the United States. Unlike the nominal "freedom" so often bestowed by various American municipalities, the Freedom of the City of London actually confers important civic and political privileges, of which Mr. Wilson will probably have no occasion to take advantage. Neither is anybody likely to dispute the President's legal right to accept the honor; tho the Constitution does forbid any officer of the United States to accept, without the consent of Congress, "any present, emolument, office or title of any kind whatever from any king, prince or foreign state."

## The President's English Speeches

The President's first address in England was made in response to the welcome of the Mayor of Dover, and in it he declared that

in spite of all the terrible suffering and sacrifice of this war, we shall some day, in looking back upon them, realize that they were worth while, not only because of the security they gave the world against unjust aggression, but also because of the understanding they established between the great nations.

His speech at the state banquet was de-

THE TRIUMPHAL ENTRY INTO BRUSSELS

ated largely to the theme of friendship, fraternity and cooperation between the two great Anglo-Saxon nations. At the Guildhall he touched more explicitly upon the issues of peace making and the purposes of his visit to Europe. Referring to his intercourse with the soldiers of the Allied armies and their expressions of sentiment, he said:

It is very interesting to observe how from every quarter, from every sort of mind, from every corner of counsel, there comes the suggestion that there must now be, not a balance of power, not one powerful group of nations set up against another, but a single, overwhelming, powerful group of nations who shall be the trustees of the peace of the world.

This sentiment was repeated, still more emphatically, in the address at the Manchester Free Trade Hall, in which he said:

If the future had nothing for us but a new attempt to keep the world at the right peace by a balance of power, the United States would take no interest in it, because she will join no combination of powers which is not a combination of us all. She is not interested merely in the peace of Europe, but in the peace of the world.

We are not obeying the mandate of parties, or of politics. We are obeying the mandate of humanity.

Again, at a luncheon given in his honor at Manchester, the President spoke as follows of the future relations of America and the Allied Powers:

With our unity of command there arose a unity of spirit. The minute we consented to cooperate our hearts were drawn closer together into cooperation, and so from the military side we had given ourselves an example for the years to come. Not that in the years to come we must submit to a unity of command, but it does seem to me that in the years to come we must plan a unity of purpose, and in that unity of purpose we shall find a great recompense, a strengthening of our spirit in everything that we do.

This disclaimer of a future "unity of command" was recognized as bearing significantly upon the proposed League of Nations.

**Attitude Toward the President** There can be no question that the President was favorably received in England, and that he personally and in his addresses made a favorable impression upon both statesmen and people. Mr. Lloyd George declared that the official conferences with the President had effected an agreement on general principles,

and that America and Great Britain would be found at the Peace Conference working in perfect harmony. Mr. Arthur Balfour added that the President's visit had not only been a spectacular success, but also had gone to the hearts of the British people, and would have international results of the largest importance to the whole world. There were many similar expressions, from individuals and in the newspaper press, throughout England.

In France, also, a favorable attitude was manifested toward the President on most points. The Prime Minister, Dr. Clemenceau, assured the Chamber of Deputies on Sunday that he would support Great Britain on the question of the "freedom of the seas," and that in this he was entirely in agreement with President Wilson. His own conferences with the President, he said, had been profitable, tho he would not be telling the truth if he said that he had agreed with him on all points. Apparently the point of chief disagreement was that concerning a League of Nations. Dr. Clemenceau expressed himself to the Chamber as being inclined to maintain the old alliances which had proved so immensely beneficial in this war, tho he was not opposed to the principle of a general league of nations, and indeed thought that one might be organized when the treaty of peace was completed. Another possible point of difference was that of "secret diplomacy," the French Government being resolutely committed to maintenance of the confidential agreement which was made with Italy upon that power's entrance into the war.

**The British Elections** The general elections in Great Britain and Ireland for a new House of Commons resulted in an unexpectedly overwhelming victory for the Government, and for Mr. Lloyd George personally. Of the 709 seats the Coalition—Unionists, Liberals and Laborites—secured 471, and the non-Coalition Unionists, who will support the Government, 46; making a total of 517. Of the various parties the Coalition Unionists were by far the strongest, winning 334 seats to the Coalition Liberals' 127 and the Coalition Laborites' 10. These 334 with the 46 other Unionists make a total of 380, a strong majority of the whole House in favor of maintaining the unity of the kingdom. The Liberals who follow Mr. Asquith won only 37 seats, the Laborites 65, the National party 2, Independents 5, and Socialists 1. Even more impressive was the popular vote, the Coalition candidates being generally elected by enormous majorities. Obviously it was a great popular mandate approving the war policy of the Government and also in general its policy of political and social reforms.

There were some interesting personal results. Mr. Lloyd George was re-elected by a tremendous majority, and his chief colleagues were also handsomely returned. On the other hand, Mr. Asquith was defeated, as were also Mr. Henderson, the Labor leader, and

## THE GREAT WAR

**December 26**—President Wilson arrives in London. American warships sent to the Baltic.

**December 27**—President conferred with British Ministers, and entertained at State banquet. French troops and "Reds" fight at Odessa.

**December 28**—President made several important addresses in London. Overwhelming Government victory in British elections.

**December 29**—President visited Carlisle and Manchester. Fighting between Poles and Germans at Posen.

**December 30**—President made important addresses at Manchester. French Prime Minister spoke for maintenance of alliance of France, Great Britain, Italy and America, and was sustained by Chamber by vote of 380 to 134.

**December 31**—President returned to Paris. Bolshevik outbreaks reported in Rumania, Silesia and Poland.

**January 1**—President left Paris for Rome. American troops advancing in Northern Russia.

various others whose attitude toward the war policy of the Government was not satisfactory. Every woman candidate was defeated save one, a Sinn Feiner in Dublin, the Countess Markiewicz.

A surprising feature of the result was the sweeping victory of Sinn Fein in Ireland, that militant faction winning 73 seats against only 7 for the Irish Nationalists. It is intimated that the Sinn Feiners will refuse to take their seats, and instead will attempt to organize an Irish republic. With their winning nine-tenths of the Irish seats, and the Unionists winning a clear majority of the whole House, a recrudescence of troublous times over the "Irish question" is threatened.

### The Disorders in Germany

Factional conflicts in Germany continue with unabated fury, suggesting a sad commentary upon the habitual German boasts of discipline, loyalty and patriotism. Rioting occurred in the streets of Berlin, with pitched battles between loyal soldiers and mutinous sailors, resulting in heavy loss of life. The sailors and Spartacides were under the direction of Dr. Karl Liebknecht, and they noisily demanded that the Prime Minister, Herr Ebert, and the Foreign Secretary, Herr Haase, should resign in favor of Herr Lebedour and Dr. Liebknecht. But on Sunday it was announced that Herren Haase, Foreign Minister; Barth, Minister of Social Policy, and Dittman, Minister of Demobilization, had resigned, leaving Herr Ebert and his friends in full control of the government. The vacancies were immediately filled respectively by Herren Scheidemann, Noske and Wisel. This action was approved by the Central Council of Soldiers and Workmen, and was followed by subsidence of the disturbances in Berlin. At Frankfurt and other places, however, rioting and pillage continued, with the soldiers refusing to take action against the mobs.

### Another Witness Against the Hun

Prince Albert of Monaco, who despite his leasing of part of his little realm for a gambling den is one of the personally most respectable figures among the monarchs of the world, adds his by no means light testimony against William Hohenzollern as the responsible author of the war. He has just made public some letters and reports of conversations between himself and the former Kaiser, with whom he was on most confidential terms, which almost rival the revelations of Prince Lichnowsky in interest. The gist of them is to fix upon William "responsibility for a deliberate war." The war itself he characterizes as the result of "a plot of force to annihilate law and honor, all the beauties of civilization, and all the conquests of man over the brute."

### The Death Roll of the War

It is now possible to compute with approximate accuracy the cost of the Great War in human life, at least so far as casualties in battle are concerned. The numbers killed are reported and estimated as follows:

Russian .....	1,700,000
French .....	1,071,300
British .....	706,726
Italian .....	460,000
American .....	58,478

Total Allies .....	3,996,504
German .....	1,600,000
Austrian .....	800,000

Total Teutonic .....	2,400,000
Grand total .....	6,396,504

To these must be added perhaps half a million more, of Belgians, Serbs and some others on the Allied side, and of Bulgars and Turks on the side of the Central Powers. A death roll of approximately seven million men, with two or three times as many more wounded, is appalling, beyond the power of the human mind to appreciate. Yet even this is not all, perhaps not even the worst. We must take into account the million or two of non-combatants wantonly massacred, starved to death, or killed by privations and disease; in Belgium, Serbia, northern France, Russia, and above all, Armenia.

### Poland and Germany

Friction between Poland and Germany increases ominously. The Polish Government on December 27 demanded the right to send troops over German railways to Vilna, the Lithuanian capital, which was threatened by the Bolsheviks. This was refused by Germany, and it was announced that German troops would continue to occupy the city. Still more serious were the complications in Posen, the great Polish province long held by Prussia. The Polish Government moved for occupation of it, including the cities of Posen and Danzig, and called for popular election of delegates to the Polish National Assembly. The German Government responded by threatening with prosecution all persons participating in such election. On December 28, Mr. Ignace J. Paderewski, who is much talked of for the first President of

Poland, arrived in Posen on his way to Warsaw. The American and other Allied flags were raised on the city hall, and Mr. Paderewski drove thru the city in an automobile similarly decorated. German soldiers thereupon fired upon the American flag and attempted to pull it down. The Poles resisted, and fierce street fighting prevailed all the afternoon, resulting in about 138 deaths. The Germans were finally beaten, and Mr. Paderewski proceeded on his way. The chief animus in this controversy is over the question of the status of Posen before the Peace Conference, each side wishing to be in possession of it when that body meets. It will be recalled that one of President Wilson's conditions of peace indicated that Posen should be restored to Poland with access to the sea. Whether the Poles should seize it now or await the award of the Peace Conference, is an open question. The example of France in taking Alsace-Lorraine seems to justify the course which the Poles are pursuing.

**Bolshevik Outbreaks** On the last day of the year serious Bolshevik and "Red" outbreaks were reported from various countries. At Odessa a considerable force of French troops checked such a revolt, and another French force set out from Rumania for Kiev, intent upon wresting control of the Kiev-Odessa railway from Ukrainian revolutionists. At Bucharest there was serious street fighting between Rumanian troops and Bolsheviks, the latter being led by Russian anarchists. At Warsaw a Bolshevik mob strove to release some "Red" prisoners, and was dispersed by Polish troops with considerable loss of

#### STRAINING LONDON HOSPITALITY

So crowded is London with men on leave and returning home that the Lord Chancellor has turned over to the American Red Cross the Great Hall of the Royal Courts of Justice, reserved hitherto for formal ceremony. Under wartime emergency conditions a thousand American sailors bunked there every night.

life. A general Bolshevik uprising occurred thruout Silesia, and a Bolshevik republic was there proclaimed. These occurrences commanded the grave attention of the American delegates to the Peace Conference, as indicating danger of similar disturbances thruout the world. Much expert opinion was, however, to the effect that these outbreaks, which were all in the potential or actual border states between Germany and Russia, were the result of German propaganda and were intended to prevent, if possible, the creation of strong barrier states which would bar German exploitation of Russia and the East.

**Rumania Irredenta** A step toward the redemption of "Rumania Irredenta" was taken on December 30, when commissioners from the Transylvanian National Assembly at Karlsburg visited Bucharest and handed to King Ferdinand the Act of Union between Transylvania and Rumania which that assembly had adopted. The King accepted it and declared that he was obeying the will of the people in extending his reign over the region between the Dneister and the Theiss. This act nearly doubles the area of Rumania and adds several millions to its population. Like the Polish occupation of Posen and Danzig, it is performed in anticipation of the award of the coming Peace Conference, but it is confidently assumed that it will be approved and confirmed by that body.

**The Murderers of Armenia** The Turkish Government, in an unwonted spasm of virtue, has ordered the creation of a special court martial for the prosecution of those responsible for the Armenian massacres. Whether this is done in good faith, or merely as a bit of camouflage, its results are not likely to satisfy the moral sense of the world, for the reason that the chief culprits are beyond the jurisdiction or reach of the court.

The infamous Enver, Talaat and Djemal have decamped to foreign lands, laden with booty; the German marshal, Liman von Sanders, is in Berlin; and William Hohenzollern is in sanctuary in the Netherlands.

**Senator Chamberlain Speaks Out** That America is unprepared for reconstruction as she was unprepared for war was the import of a long and severely critical speech against the War Department, made on December 30 by Senator Chamberlain, of Oregon, chairman of the Military Affairs Committee. The chief offenses charged against the War Department by Senator Chamberlain are:

1. That the country and army are kept in the dark on demobilization plans, while England made this information public more than a month ago.
2. That returning wounded soldiers are denied proper care immediately after they reach the United States.
3. That the pay of returning soldiers is months behind.
4. That sufficient hospital facilities have not been provided to take care of the permanently disabled.

He urged that the War Department investigate immediately and take steps to remove the causes of this criticism, which he said was substantiated by complaints from all over the country. As an illustration of the powerlessness of Congress to remedy the situation, he told an instance of a soldier suffering from tuberculosis who had written to a Senator asking outside aid to effect his discharge:

That poor boy, suffering from tuberculosis, was brought up before a board of inquiry and his pay was forfeited for fifteen days. He was punished for having had the temerity to write to a Senator asking for aid.

The chairman of the Military Affairs Committee also reminded the Senate of his speech a year before scoring the War Department for inefficiency, and showed that, altho his charges were rebuked and discredited by the Admin-

istration at the time, they were later substantiated by General Pershing's report.

About 250,000 German men and women were affected by President Wilson's cabled instructions to the Department of Justice abolishing the general wartime restrictions imposed on German enemy aliens in this country. The prohibited zones, residence and employment restrictions, registration and permit systems forthwith go out of existence. Restrictions which apply to entry into and departure from the country and those affecting the power of internment are however still in force and the President's action does not affect in any way the status of men already interned or obligations already imposed on alien enemies now on parole. Any violation of parole will be punished as heretofore.

Authority to deport enemy aliens now interned in the United States is asked by the Department of Justice. Most of these aliens were found to have served actively as German agents here or to have transmitted information during the war valuable to Germany. There are presumably 3000 or 4000 aliens in our internment camps, most of them men.

**Demobilizing and Recruiting** While 30,000 men a day are being discharged from the army, Secretary of War Baker is appealing to Congress for legislation to permit the resumption of voluntary enlistment. The reason is that the men now serving must, in accordance with the Selective Service act, be discharged as soon after the proclamation of peace as the existing emergency will allow. As Secretary Baker reminds Congress:

The only men who would remain in the

Western Newspaper Union

**ORGANIZER OF OUR CONVOY SYSTEM** Commodore Lionel Wells of the British Navy deserves especial credit for his service in this country as head of the "Convoy and Route-giving Department" by which Great Britain's part in getting our troops safely overseas was organized and coordinated with the work of the United States Navy Department. Over half our troops were carried over in British ships, and the British furnished, it is said, three-fourths of the convoy.

#### THE FLEET AT HOME

New York had another victory celebration when the battleships and destroyers came back from service overseas and paraded thru the harbor to take up positions alongside the city in the Hudson River. Then the sailors went ashore to celebrate and the city folks went out to look all over the ships

service are those men enlisted in the regular army on or prior to April 1, 1917, and whose enlistment has not yet expired. This small number has been cut down by casualties and other vicissitudes until the entire military force of the United States that can be retained in the service will be absolutely inadequate and insufficient to perform such essential military duties as policing the Mexican border, garrisoning our insular possessions, guarding the seacoast possessions of the United States, occupying permanent posts and garrisons, guarding and protecting the large amount of recently acquired Government property, and maintaining and operating the camps and cantonments in this country, to which troops returned from overseas may be sent for prompt demobilization.

More than eleven hundred thousand men were designated for demobilization in the seven weeks following the signing of the armistice, and approximately one hundred thousand were actually discharged.

It has been decided by the War Department that the national guardsmen who were taken into the Federal army will not revert to their former status upon their discharge, but will be completely freed from military service. There were last June 434,409 national guardsmen in the United States army.

Under the War Department's ruling the various states will have to organize their National Guard again, either creating new forces by voluntary enlistment or by exchanging the force recruited after the old guard was taken for Federal service overseas. Their policy will depend on what action Congress takes in framing plans for permanent national military organization.

Our Fifty-five billions is War Expenses the estimated total cost of the United States' participation in the war; in other words, approximately \$550 for every man, woman and child in this country. This estimate includes ten billions loaned to the Allies, and is based on the appropriations made by the first and second sessions of the Sixty-fifth Congress, with deductions for ordinary civil appropriations, and including appropriations authorized altho not expected to be expended before the end of the fiscal year of 1919.

The following tables show the division of expenditures:

#### FOR 1918

Total .....	\$19,384,215,695.03
Military establishment and War Department .....	\$6,525,924,661.99
Loans to our allies by the first and second Liberty bond acts .....	7,000,000,000.00
Naval establishment and Navy Department .....	1,262,973,683.37
Emergency shipping fund in deficiency acts .....	1,939,000,000.00
Interest on public debt.....	218,341,323.00
War Risk Insurance:	
Insurance of personnel, cargoes and vessels in the merchant marine .....	45,150,900.00
Family allowances, compensation, and insurance of soldiers and sailors.....	176,250,000.00
Food products and fuel.....	173,846,400.00
Preparation and issuance of loans, expenses of.....	22,316,000.00
Other services, including regular and extraordinary expenses of the civil establishment not otherwise segregated .....	20,413,621.17
Total.....	\$19,384,215,695.03

#### FOR 1919

Military establishment and War Department .....	\$24,936,325,964.70
Loans to our allies by the third and fourth Liberty bond acts .....	3,000,000,000.00
Naval establishment and Navy Department .....	1,822,158,709.30
Emergency shipping fund.....	2,572,250,000.00
Interest on public debt.....	655,107,269.00
Sinking fund .....	288,830,865.00
National defense fund at disposal of the President.....	50,000,000.00

Postal service .....	385,712,929.58
Pensions .....	243,050,000.00
Other services, including regular and extraordinary expenses of the civil establishment of the Government and appropriations not otherwise segregated .....	396,082,105.50
Increased compensation, certain Government employees .....	51,946,030.30
Total.....	\$36,119,536,982.75

**Ships for Trade** Owners of the three or four million tons of shipping requisitioned during the war and put under Government control are asking with increasing urgency when they are to have their ships again. The American Steamship

Association held a meeting on December 26 to ask the United States Shipping Board for definite information on its plans for releasing requisitioned ships and on its policy with respect to this country's mercantile marine.

In order to compete successfully with the commerce of other nations the ship owners need not only the immediate release of their ships, but some knowledge of how the Government is going to use the fifteen or seventeen million tons of merchant shipping that it now owns. There are three possible courses: The Government may continue to own and operate them; the Government may retain the ownership and lease them to private operators; the Government may sell the whole fleet. There are also numerous possible modifications of any one of these courses, such as the retention of a part of the fleet to be used in opening up new trades. Altogether the situation is a particularly puzzling one for the ship owners. Great Britain is releasing her requisitioned ships very rapidly and her old trade routes are being reestablished, while American business men, in South American ports, for instance, are forced to see trade slipping away from them.

Congress, no less than the ship owners, is anxious to get our shipping on a peacetime basis as soon as possible, but finds the situation full of perplexing difficulties. Senator Ransdell, of Louisiana, has called a national conference on the subject, to be held in Washington on January 13 and 14, and the Senate Commerce Committee will give the results its early attention.

In the meantime the Shipping Board is going ahead with its construction program, but is not making any new commitments. It has spent so far the enormous sum of \$2,635,000,000, which is calculated to give the United States 3116 ships of a total deadweight tonnage of 16,913,045. Senator Fletcher, chairman of the Commerce Committee, argued in a Senate discussion last week that the necessity for ships now is almost as acute for commercial purposes as it

was for military purposes. He added that England is planning to build 2,000,000 tons annually and France 2,000,000, while the United States has the yards to build 6,000,000 tons annually.

From Paris, Chairman Hurley of the United States Shipping Board, cabled on December 27 the announcement that the Shipping Board had decided to create a permanent world organization to coordinate the work of the Government's trade fleet. Mr. Hurley went on to explain:

We will open at once offices in London, Paris and Rome. From these centers will be directed ten or twelve other offices, such as in Shanghai, Yokohama and Bombay, in the East, Genoa in Italy, Buenos Aires, Valparaiso and Rio Janeiro in South America, and Rotterdam and Antwerp.

The London, Paris or Antwerp office would have precise information and be able to consign a ship without delay for its most efficient use. The subordinate centers are essential properly to direct our national fleet. They will be managed by practical shipping men, who will be assigned to their posts from the United States.

There will be no interference with the War Department's handling of ships. Our business will be with the trade fleet.

Ship owners were so much concerned over the move, which they interpreted as indicating the Government's purpose to go into a general world-wide shipping business, that Bainbridge Colby, of the Shipping Board, gave out a reassuring explanation:

We certainly do not wish the American owners of requisitioned ships to get the impression that the Shipping Board is embarking on a permanent program of world-wide employment for trade purposes of shipping which we have temporarily requisitioned from its owners for war service.

The period of such service is drawing to a close, and the board is very desirous of restoring requisitioned tonnage to its rightful owners at the earliest possible moment. The extent of our overseas forces and the problems of transport and maintenance which are peculiar to this country by reason of the great distance from home at which our forces are operating make it difficult for us to keep pace with the releases of requisitioned ships already made by our European allies.

Under Whose Flag? There is a curious tangle of international relations in the purchase by the United States of eighty-five British registered ships of the International Mercantile Marine. The negotiations have been made without undue publicity, in view of the anomalies of the situation, but it is now announced that the purchase is practically consummated and that the price for the eighty-five vessels, including many ocean liners, among them the "Olympic" and the "Adriatic," is to be less than \$70,000,000.

The International Mercantile Marine Company is founded on American capital and is in reality an American concern, but its ships have been registered under the British flag because of our law forbidding the American registry of foreign-built ships. That law is no longer in force and the United States Government in buying the fleet therefore transfers it simply from one American owner to another.

Great Britain, however, has a war-time regulation forbidding the transfer of shipping from her flag to any

Waiting in Chicago Kitchen

WAITING AT THE K-K-KITCHEN DOOR

Handing in Brooklyn Eagle

THE GERMAN FIST (TODAY)

other, and so for the present the ships will continue to be under British registry, tho owned by the Government of the United States.

The reason for our purchase of the ships now goes back to the financial difficulties of the International Mercantile Marine during the war, when the earnings of its subsidiary companies were held up to the extent of \$65,000,000 by the British Government because of its foreign status. The directors and shareholders therefore welcomed an offer from the British syndicate to buy the subsidiary companies. But President Wilson instructed the United States Shipping Board to forbid the sale to the British syndicate and then suggested that the United States take over the proposed deal.

No More Food Restrictions

The Federal Food Administration ordered all restrictions on food to be abandoned December 23, but asked that continued care be used in saving food in order to enable the United States to meet its pledge of 20,000,000 tons of food to the starving nations abroad.

For some months at least the Food

Administration will continue its control and hold itself in readiness to assist in putting into effect any specific measure which public eating places, thru developments in world relief, may in the future be called upon to carry out. It will keep particular watch against profiteering and speculation in licensed food products.

Canada Looks Ahead Whether Canada should have a navy of her own or not has

been the subject of political controversy there for at least fifteen years. Premier Laurier followed the trend of public opinion when he urged in 1905 the establishment of a Canadian navy of modest proportions. His proposal was attacked by both party extremes so bitterly that nothing came of it. When Premier Borden assumed power after the disaster of 1911 he abandoned Laurier's plan altogether and proposed a contribution of three dreadnaughts to the British navy. But the Laurier majority in the Senate killed the measure, and so Canada, when the war broke out, was entirely dependent on the British navy.

The war brought home to Canada the advisability of having a local naval force for coast defense. It is now announced from London that Premier Borden has drawn up a memorandum outlining "a permanent overseas naval policy on the basis of navies to be built by and administered by the Dominions."

This Canadian navy will, of course, coöperate to the fullest extent with the British and will preserve with it uniformity in construction, equipment, armament, training and organization.

Another reconstruction problem to which Canada has given prompt attention is the need of an adequate housing program. For the last four and a half years practically no houses have been built and very few repaired. To meet the consequent deficit now the Government has created a fund of \$25,000,000 to be used by way of loans to the several provincial governments of Canada in connection with municipal or other programs for better housing.

To investigate the revolutionary and ultra-Socialist propaganda that is being increasingly disseminated in Canada now, the Government has established in Ottawa a Department of Public Safety under the direction of M. C. H. Cahan. Mr. Cahan has expressed his conviction that unless some action is taken, and taken quickly, to suppress the pernicious propaganda of the I. W. W. and their kind, such a situation will eventually be created as will require military intervention. In the course of a recent speech he said:

So grave and threatening are these elements in some of the industrial districts of Canada that managers of industry are even now forming vigilance committees of loyal and trusted employees and, as in days we have thought passed forever, arming them with revolvers, rifles and as I have been informed even contemplating the employment of machine guns in order to protect persons and property, and to preserve public order.

CAN a woman do as good work as a man? Can she earn an equal wage? Ought she to keep within the bounds, now that the war emergency is over, of what has been agreed upon as "women's work"? Is there any fundamental loss to the individual or to society when the woman transfers the site of her occupation from her home to the business world? These are only a few of the questions that confront one who attempts to consider after the war aspects of women's work. Most of us can remember when pat answers to such questions were ready on almost any one's tongue. They were summed up in that phrase which must be as old as the cave man, "Woman's place is in the home."

But the old answers are no longer satisfying. When the National Industrial Conference Board, after serious research, quotes employer after employer as saying that women have proved as good or better than men in such distinctively "men's jobs" as drill pressers in automobile factories, electric meter assemblers, foundry molders, tack machinists, and about 130 other metal trade occupations, ancient prejudices against woman's work are dwarfed by fact. When the Women in Industry Service of the Government announces, with the approval of the Secretary of Labor, that equal wage for equal work ought to be a recognized principle

## KEEPING WOMEN ON THE PAYROLL

BY MARGARETTA NEALE

ASSISTANT DIRECTOR GENERAL FOR WOMEN'S WORK OF THE UNITED STATES EMPLOYMENT SERVICE

in the law and practice of every state, the fact of a customary unequal wage seems likely to give way before policy founded on equity.

There is to be no wholesale withdrawal of women from the industries they have gone into during the war, if we may judge from conditions as they appear at this time in the records of the United States Employment Service.

So far as reports received to date show, there is not one instance of a large employer making an effort to "dump" his women employees in order to take on men immediately. It is possible that in the course of months as larger peace time production is assured, a movement may develop whose effect will be to replace by men women laid off with the cessation of war contracts. The present tendency is to absorb women in new work as fast as they are released from war work. By arrangement with the War Department and the War Industries Board, in consultation with the United States Employment Service, all textile, woolen, cotton and knitting mills which held large war contracts arranged to shift to a peace basis gradually and to hold all employees. This agreement assured continuous work to something like 600,000 women, mainly in eastern states.

One prominent employer in the Middle West who curtailed his manufacture of office equipment in order to make shrapnel, recently said frankly

that his firm would keep its women employees after the war, "If we can get them to stay. In efficiency they exceed our men. Their output is greater. We have found that they take to machine work readily. We are very enthusiastic about the progress women have made in this plant."

"Keep the women you have employed," the chairman of an Oregon labor board warned employers in his district, after a survey of labor conditions taken in November. "Indications point to a marked shortage of labor in all lines."

A different situation exists, of course, where war work has created a supply of labor that cannot be turned over, in its present organization, to peace time work. Much of the work which the Government undertook under special appropriations comes under this head.

The closing of the Government gas mask plant in Long Island City is a case in point. Here factories owned by various firms were

commandeered by the Government, with the agreement to restore them in their original condition shortly after the end of the war. Immediately upon the signing of the armistice arrangement was made to demobilize the force of 12,500 employees. Production was curtailed gradually. Representatives of employers in need of such types of labor as were engaged in the plant [Continued on page 67]

Part of Colonel Haywood's 15th New York (colored) Infantry that has been under fire. Two privates received the Croix de Guerre

## WITH THE BUFFALOES IN FRANCE

Lieutenant McKaine is one of the negro officers who commanded the 367th Infantry of the American army—The "Buffaloes"—at the battlefront. They were the nearest Allied troops to Metz when the armistice order came to cease fighting.

BY LIEUT. OSCEOLO E. MCKAINE

The French should have added another word to those on their national escutcheon—Service—for the French serve. The colored soldier has learnt that if he would be a full fledged citizen he must serve—serve until it hurts—or kills.

For the duration of the war he has put aside his grievances; but he is determined that the new physical liberation of Belgium, Rumania and Serbia will also mean complete economic, political and educational liberation for himself and his race. The process will be a little different, the results a little different, but the sum totals absolutely the same. He feels that any inhabitant of a country who willingly, nay eagerly, offers himself for the supreme sacrifice in defending that country's honor, liberty and peace has an inalienable right to share equally in that honor, liberty and the prosperities of peace. He keenly resents the double battle he has had to fight, the double burden he has had to carry. Not only has he had to fight the enemy in No Man's Land, but he has had to fight at the same time his traditional oppressors and enemies in the rear. He was weaponless in the battles with the latter, for they were his countrymen and the enemy was at our gates.

He feels that an unfair handicap has been placed upon the full expression of his desire to serve. He feels that any Americans who committed any act which would lessen our chances for an early victory should be interned with the rest of the enemy, for they were as guilty of disloyalty to the flag as the German who blew up munition factories. Because his first duty was to win the war he ceased fighting for the compensation for past services. He further inquires of himself his peculiar status. How is it possible for a people to eulogize a certain citizen for his bravery in battle and then deny him the right to use public accommodations equally with the uneulogized?

What manner of people be these who in time of national need select certain citizens to guard its capitol and then deny them the right of economic equality?

Can it be possible for people whose

motto is "A square deal" and who live under a government whose very foundation is the freest possible individualism, whose superstructure is a revolt against "taxation without representation," whose most beautiful embellishment is a "Government of the People, for the People, by the People," to include in the defenders of this noble edifice a certain class of citizens whose very lives are nearly hopelessly imperiled by their duties, and place them where the grim shadow of death may forever obscure the beautiful sunshine of life and deny them the right to vote?

Is the servant to remain without compensation for his services?

These self inquiries are recurrent and constant. His homecoming will give him the answer.

Perhaps the most significant and important phase of the war's reaction is the enthusiastic and unconditional acknowledgment by the colored soldier of intelligent, efficient and successful black leadership. He has acquired an inordinate and passionate love and respect for the colored officers. The black man in the ranks demands black superiors. This acknowledgment, this love and respect forever refutes the contention that black men could not successfully lead black men, for these black officers led their Buffaloes successfully and sometimes brilliantly in the carnage of Chateau Thierry, the bloody and bitter Argonne and in the eleventh hour drive on Metz. When the peace bells tolled their first stroke its echoes found the old 15th New York (colored) the nearest American troops to the Rhine, and the 367th Infantry (the Buffaloes) the nearest Allied troops to Metz.

The white and colored Americans in the ranks mixt nearly everywhere, indiscriminately. There were times when they ate out of the same mess outfits, drank out of the same canteen and bunked in the same hay pile at night. They—the white and colored soldiers—have been seen strolling and eating with French women without the least exhibition of embarrassment. Many times white soldiers have invited the Buffaloes over to their billets for a good time, and they have fairly lived among us. We [Continued on page 64]

THE Black Crusaders landed in France with the same emotions Elijah must have had when he landed in heaven. They had made a strange and perilous journey from the terra firma where they had played and toiled, which they hated and loved, to a strange semi-mythical region, where a grand reception and a cordial welcome, where a square deal and an absolute equality awaited them. France was a terrestrial heaven where they could forget that they were sinners simply because they were black. They were not disillusioned. France proved herself more free from those color caste distinctions which had, everywhere under the Stars and Stripes, made them feel a people apart, an abnormality in the body of its citizens, than their fondest dreams could have conceived. They found that the "Liberté, Egalité, Fraternité" inscribed on her national escutcheon were more than high sounding words, for they express a national idealism that guided them in all of their daily intercourse. They found that France was really free; that the Government of France was the father of all Frenchmen; that all Frenchmen enjoyed the same economic, political and educational equality without regard to color or section. They discovered, also, that France had no man made laws governing social equality; but, on the contrary, submitted obediently to the great natural law of individual selection. The absolute lack of color caste in this great republic dazzled and bewildered them for a moment even as the superb splendors of heaven must have dazzled and bewildered Elijah.

America suffered by the comparison.

If you can imagine how Elijah must have felt when he first penetrated the inner portals of the heavenly gates you can obtain a slight conception of how the Buffaloes felt when they were received by France in her cities, churches and homes.

## THREE STATUES THAT CELEBRATE VICTORY

Photographs © Underwood & Underwood

### THE RETURN OF ALSACE-LORRAINE

When news came that the armistice was signed Paris hung with flags and garlands the statue of Strassburg in the Place de la Concorde and crowds gathered round it to cheer Germany's defeat. Strassburg is the capital of Alsace-Lorraine and since 1871 the seat of the German Government of the provinces. The Strassburg statue in Paris has been a symbol to Frenchmen of their grief at the loss of Alsace-Lorraine and of their determination to regain it for France.

### OVERTHROWING THE KAISER

Citizens and French soldiers in the city of Metz pulled down this statue of Emperor Wilhelm I, erected in the esplanade to commemorate Germany's capture of Metz in 1870. In the cemetery of Metz are the graves of seven thousand French soldiers who died defending it then. American and French troops were approaching Metz in November when the armistice was signed.

### TO THE POILU

This statue by the famous French sculptor, F. Sicard, was erected in Paris during the last war loan to express the gratitude of France to her army. La France is offering the laurel to the soldier defender. Round the base of the statue are gathered several hundred guns and trophies which were captured from the Germans by the French armies on the western front.

# THE MYSTERY OF DIESEL

**S**HORTLY before the war broke out, but when a war was regarded as imminent if not inevitable, Germany's greatest inventor, the man who had inaugurated a revolution in the world's motive power likely to be as important as that achieved by Watt, left Germany for England. But he never arrived. Dr. Rudolf Diesel took passage at Antwerp on the Channel steamer "Dresden" on the night of September 29, 1913. When the vessel arrived at Harwich next morning he was missing and the annual meeting of the Consolidated Diesel Engine Manufacturers at London, which he was to attend on the following day, was held without him. So much the world knows. Everything else is speculation. Naturally speculation has been abundant. Diesel's disappearance has given rise to as many wild theories as Kitchener's. These theories, such of them as I have happened to hear of, may be classified in the following way:

1. Accidentally fell overboard and drowned.
2. Seized by heart disease and fell overboard.
3. Pushed overboard by German agents.
4. Kidnapped by German agents.
5. Alive and in the service of British Government.
6. Jumped overboard because of (a) mental breakdown due to insomnia, (b) financial worries, (c) domestic troubles, (d) lack of proper appreciation.

**T**HE reader may take his choice of these nine hypotheses, for there is no proof of any of them and there is evidence against all of them. One other point must be mentioned, tho it adds to the mystery instead of clarifying it. That is, that his family at Munich received a telegram announcing his safe arrival in London—but the telegram was sent from Geneva, Switzerland.

Against the hypothesis of hypochondria is that when last seen he appeared very cheerful. His family life is said to have been happy. He had broken down from overwork thirteen years before, but had apparently recovered. He had suffered from heart failure, but seemed to be all right again. He had not made as much money out of his inventions as he hoped, but he had accumulated a comfortable competence of \$2,500,000. He had not received all the credit that he deserved, but the original Diesel engine was installed in the place of honor in the handsome new buildings of the Munich Museum and he had just given to the museum all his drawings and models. Against the rumor that he is still alive in England is the fact that it is the Germans and not the British, who, during the war, as well as before, made greatest use of his inventions. As for the remaining hypotheses, that he was killed or kidnapped by order of the German Government, that rests upon no firmer foundation than our natural inclination to ascribe any devilry to the Germans and the fact that if Diesel's inventive genius had been transferred to the

BY EDWIN E. SLOSSON

other side it would have been worth more than an army corps to the Allies.

For it was due to Diesel that the Germans have had and still have the most powerful and economical engines for their cruisers, destroyers, submarines and airplanes. The *London Times* of January 28, 1914, stated that the largest Diesel marine engines so far made in England were of 2,000 horsepower, while the Germans were equipping their warships with 12,000 horsepower Diesels. The capture somewhere in France of a Gotha plane with Diesel engines a year or more ago shows that the Germans have overcome the difficulties of adapting this new motive power to aircraft. Whether they are using it on tanks and trucks I have not heard.

**W**HAT it would mean to have a motor that is "fool-proof," that requires no cooling or ignition apparatus, that is nearly noiseless and comparatively odorless, that needs no carburetor and cannot back-fire, that will burn anything from gasoline to tar and that uses no fuel when it is not working, will be appreciated by every automobilist. Since the Diesel engine is twice as efficient as the gas engine and since gasoline costs ten times as much as crude petroleum, an automobile could be run twenty times as far for the same money. But the application of the Diesel to the locomotive and automobile lies in the future.

In the navy or merchant marine the advantages are greater, for the Diesel is three or even four times as efficient as the steam engine and requires no boilers or bunkers, no stokers or shovelers. The oil for a voyage weighs only a third or quarter as much as the coal and the number of men necessary to handle the fuel is correspondingly reduced. The steam turbine is more efficient than the reciprocating steam engine, tho inferior to the gas engine or the Diesel, but it runs so fast that it has to be geared down and if the engineer attempts to reverse it suddenly he rips the blades off. The Diesel engine can be connected directly with the propeller shaft and it can be reversed from "full speed ahead" to "full speed astern" in five seconds.

The maritime and naval supremacy of England has been largely built up upon her possession of coaling stations in all parts of the world. But a ship equipt with Diesel engines is practically independent of coaling stations, for her tanks once filled with oil can carry her around the world without replenishing. Fresh fuel can be quickly pumped on from tankers or pipelines without entering a harbor. On a transatlantic liner the firing force could be reduced by one to two hundred men, and all the food and the room they need. The former chairman of the United States Shipping Board, William Denman, said that a 10,000 ton ship equipt with

Diesel engines could go 35,000 miles at a 12 knot speed without taking on fuel; that it would burn 11½ tons of oil, while one steamship would burn 60 tons of coal. This would save a third in space and labor.

The Diesel is like the gas engine and unlike the steam engine in that it is a combustion engine, that is, the piston is propelled by the combustion of a mixture of the fuel and air in the cylinder. But the Diesel, unlike the gas engine, is not an explosion engine, that is, the mixture is not set off all at once by a spark at the beginning of the stroke as in the ordinary gas engine, but the oil is fed into the cylinder while the piston moves outward, so as to keep the pressure as nearly constant as possible. Diesel never was able to attain the conditions which he laid down in 1893 for the perfect heat engine, that is, first combustion without increase of temperature and then expansion without decrease of pressure. But he got nearer than any previous inventor, for his engine has a thermal efficiency of 48 per cent and a practical efficiency of 35 to 42 per cent. The practical efficiency of the ordinary steam engine is only about 8 per cent. The triple expansion steam engine does not run above 15 per cent efficiency and the steam turbine not above 20 per cent, while the gas or gasoline engine, theoretically as near perfection as the Diesel, is not in practice more than 25 per cent efficient. That is to say the common steam engine wastes about nine-tenths of the fuel that is fed to it in converting the other tenth into useful work. With the coming exhaustion of our coal fields we may foresee the time when the steam engine—once esteemed the most useful of man's many inventions—will be prohibited by law as wasteful.

**T**HE Diesel engine, like the ordinary gas engine, works on a four-stroke cycle. The Diesel cycle is as follows:

First stroke—outward. Air is sucked in to fill the cylinder at atmospheric pressure.

Second stroke—inward. The air is compressed to 500 pounds to the square inch, thereby raising its temperature from 1000 to 1200 degrees Fahrenheit.

Third stroke—outward. Oil is injected by a pressure of 700 pounds during one-tenth of the stroke. It takes fire spontaneously and continues burning till near the end of the stroke. This is the only stroke producing power.

Fourth stroke—inward. The gaseous products of combustion are expelled from the cylinder.

Since the Diesel engine uses such high temperatures and pressures it requires high grade steel and careful workmanship. There has also been difficulty in getting a lubricating oil for the cylinder that would stand these conditions. So a semi-Diesel engine has come into use which works under a pressure of 350 pounds instead of 500 pounds. This is a two-stroke engine. By a blast from an extra air compressor the exhaust gases are swept out and the cylinder refilled with fresh air

*The big German Gotha, shot down in France in October, 1917, which was operated by Diesel engines*

at the end of the power stroke, so the first and fourth strokes of the cycle given above are eliminated. The semi-Diesel is not theoretically so efficient, but is more convenient for low powers.

An improved form of the Diesel engine has been invented by Professor Junkers of Aachen which does away with the cylinder head by substituting two pistons working in opposition. As the two piston heads approach each other the air is compressed between them. When they are nearest oil is sprayed into the space between them and taking fire forces them out in opposite directions. When they have reached the limit of their stroke a draft of scavenging air is driven thru the cylinder from one end to the other. The Junker engine is lighter, since the heavy cylinder cover is eliminated, and it is steadier, since the piston thrusts are balanced.

The Germans have been putting Junkers engines on their cruisers and aircraft as well as on the new Hamburg-American liners. The Diesel engine naturally found its first field on the submarine, since it is compact, efficient and the fuel oil it uses does not take fire or explode like gasoline and does not give off poisonous fumes. When the British came to try it in 1907 on the submarine "D-1" they found that it developed twice the power of their other submarines. As soon as these results were known all the other nations adopted it with the exception of the United States, which for some mysterious reason stuck to the old fashioned and dangerous gasoline engine in spite of the fatal accidents resulting from it. It is humiliating to remember that when the American Government started out in 1908 to build a submarine, "G-1" or the "Seal," which was to be the largest and fastest in the world, it was not completed until 1912, fifty-six months after it had been contracted for, and was by that time altogether out of date in comparison with the submarines which Europe was turning out in a few months.

It is curious that the United States, which has the advantage of every other country in its petroleum deposits, should have taken so insignificant a part in the invention of the motors using liquid fuels. France, Germany and England, which lack such oil fields, have done more to develop the combustion engine. And now while we are striving to extract every drop of gaso-

line out of our oil Germany is learning how to do without gasoline and even petroleum. Whether our oil fields will be exhausted in twenty-seven years, as the Navy Department calculates, or whether they will last fifty, as more optimistic estimators believe, they will give out some time and we shall lose the advantage they now give us.

The commercial supremacy of England from the dawn of the industrial revolution to the present has been based upon the exploitation of her coal fields by means of the steam engine. Now these coal fields are within measurable distance of exhaustion and her prosperity will tend to decline as her coal output lessens. This disaster can be postponed by greater economy in the use of coal and it may be averted by the use of some substitute fuel. To economize coal England must do away with the wasteful fire engine, the more wasteful stove and the most wasteful fireplace. Since power is wealth the adoption of a heat engine four times as efficient means multiplying the wealth of a country by four.

To Chalkley's volume on "Diesel Engines," published in 1912, Dr. Diesel contributed an introduction which in view of later events is of high significance. He pointed out to the English people that by burning coal in the open they were wasting heat and all the by-products. But, if instead, the coal were heated in retorts, coke and gas would be obtained and the tar and ammonia saved. Ammonia is valuable for fertilizers and explosives. The tar can be used directly in a Diesel engine or distilled to produce the benzene compounds employed in dyes, medicines and munitions. The gas could be used for gas engines, and the coke, if not wanted in metallurgy, could also be converted into gas. The British Government has now set commissions of experts at work upon this problem of economy in coal.

But Diesel went further. He looked to the day when the coal as well as the petroleum would be gone. Must the world then lose the population and prosperity that it has gained by the introduction of fuel powers? Not necessarily. The engine that Diesel set up at the Paris Exposition in 1900 ran as well on castor oil, peanut oil, cottonseed oil, palm oil, fish oil, any oil, as on petroleum. At present, of course, such oils as can be used for food or soap are out of the question for fuel, but we may come to them in time. If so, their cheap-

est place of production would be the tropics, and the power that possess the most colonial territory would be mistress of the seas in peace and war.

England was at first disposed to view the Diesel engine with indifference if not with apprehension. Her power was based on coal, and the new invention seemed likely to make the shale oil of Germany as good or better than prime Welsh coal. But it is possible to run a Diesel engine directly with coal. Finely divided coal projected into the red hot interior of the cylinder is burned almost as quickly as oil, tho there is the ash to bother. But the use of coal dust or sawdust in the Diesel engine is, like the use of animal and vegetable oils, a question of the future. Petroleum and the liquid distillates from lignite, peat and shale will supply enough fuel for the present. Thru the war Germany gained temporary control of the oil fields of Rumania and Russia, but England gained control of those of Mesopotamia and Persia, as well as of the regions raising palm and peanut oil in Africa and the Pacific which Germany formerly owned. These oils have now been made a government monopoly.

Modern civilization has hitherto been dependent upon fossil fuel. Unless these limited stores can be replaced from some inexhaustible supply the civilized nations of the temperate zone will soon cease to gain in wealth and numbers and ultimately relapse into primitive conditions prevailing before the industrial revolution. To avert this we must somehow switch over to the stream of energy flowing from the sun. We must hitch our wagon to a star, the nearest star, naturally. We must run our engines by the carbohydrates and hydrocarbons now being built up by the sun.

Rudolf Diesel was no partizan patriot, but a cosmopolitan. He was born in Paris in 1858 and lived there till 1870 when his parents, being Bavarians, were forced to leave. He lived in England for a time and after his education in Germany went back to Paris in charge of the Linde refrigerating machine interests. In Germany his inventions were developed but did not receive the recognition that he merited. So he turned to England and tried to convince her that by adopting the Diesel engine she might maintain her maritime supremacy indefinitely. It was on this errand that he embarked for England on the night of September 29, 1913.

But he never arrived.

# DENISE AND THE OLD CONTEMPTIBLES

IN the days before the Great War came with  
BY A BRITISH ARTILLERY OFFICER

its red horror to devastate the peaceful villages and hamlets of France one of the most substantial farm houses in the little town of Richebourg was that of the Duprez family, composed of Pere and Mere Duprez, their two sons and their pretty seventeen year old daughter Denise. When war came Pere Duprez and his two sons had been called to the colors to help defend the sacred soil of their beloved France, leaving La Mere and Denise to tend the farm.

The dawn of the 27th of January broke sullenly over the sinuous battle lines extending from the sea to the Swiss frontier, a day of sleet and rain and bitter winds, as tho the very sky wept because of man's inhumanity to man.

We in the British lines knew that once more our "contemptible" but indomitable little army was going to be called upon to do the impossible. All night long there had been much movement, cheering and singing in the German lines, so we awaited our fate with a stern determination to die if need be, but to give back before the enemy—never.

At seven o'clock the German batteries opened fire with a roar that shook the very ground and soon our trenches were half obliterated and wholly obscured by sheets of flame, clouds of smoke and flying fragments. Other enemy guns searched for our field batteries, for we had no heavy guns with which to reply. Still others concentrated on the village of Richebourg and more especially on its church. Hour after hour the storm of shell fire con-

tinued and then as the beautiful old church spire fell with a crash, as tho it had been a signal, the German guns lengthened their range and the German infantry, wave on wave, in close, compact masses, swarmed to the attack. All the long weary hours of hell suffered under the awful iron storm were to be as naught compared with the ordeal before us now. But in that little army there breathed a spirit no shell fire could subdue, no agony overbear. Steadily, as tho on parade on the barrack square of their far away Potsdam, the Kaiser's Guard, the very cream of the German Army, moved to the assault. Then came the British reply. A sheet of flame ran along the wrecked trenches in the very faces of the oncoming hosts. Field batteries firing as they had never fired before poured shrapnel into the dense masses of the enemy. Struggle as they would the Germans could advance just so far and no further. The field ran with blood and bodies lay in heaps. Human flesh and blood could stand no more—the Prussian Guard broke and fled.

Once more the German batteries were turned on to do what the German infantry had failed to do. Once more the agony of waiting and then, greatly reinforced, the Prussian Guard again attacked. The result was the same. Five separate times during that dreadful day five separate attacks were crushed. Evening was coming on. Weary, bleeding and spent, with set faces and burning eyes, eyes in which there was no fear, only a high resolve to do or die, our sorely beset little force awaited the enemy's last desperate attempt. It

came. Straight down the Richebourg road, surging over the pitifully small remnants of a battalion as the waves of the sea surge over a rock, the Prussian Guard came storming. Little knots of men went down fighting to the death. A thousand deeds of heroism and self abnegation passed unrecorded. Men gave up their lives for their officers, and officers died for their men.

The batteries were almost reached. Ammunition was running low and the last remaining rounds had been saved to fire at point blank range. Such of the gunners as had survived the storm of shell fire, many with bloody bandages around heads, arms or legs, crouched behind their gun shields and ammunition wagons. The Prussian hosts came on up to within a hundred yards of the guns. An order rang out sharply and every gun roared and vomited flame, tearing great rents thru the living wall before them. Again and again the guns did their work; but the odds were too great. Fighting with rifle butts, bayonets, picks and even shovels, the gunners, led by their officers, hurled themselves upon the enemy. With yellow fangs gleaming in the dusk like the fangs of wolves about to pull down their prey the Prussian Guard would not be denied. The situation was hopeless. Then came a change. Four hundred and fifty men, all that were left of a famous Highland battalion, arrived upon the scene as reinforcements. Almost exhausted, many with frost bitten feet done up in blood stained rags, these men threw themselves with the bayonet upon the Imperial Guard. After a short, desperate struggle the [Continued on page 65]

"Slowly the sun sank to rest shedding a watery light on the ruins of what had once been the homes and the church of the village"

# "Y" WORK SILHOUETTES

BY WILLIAM L. STIDGER

**W**HEN you get to live with the American soldier in France, sleep with him, go in swimming with him, see him in his rest billets playing with French children on his knees, maybe in a quiet hour when he thinks that nobody is looking see him with his Testament that his mother gave him, open to the place she marked for him, or see him standing on the shore of the ocean with that westbound look in his eyes—then suddenly it dawns on you that after all he is just "Our Home Town Boy."

He has exactly the same longings, the same loneliness, the same heart; capable of heroic deeds, or capable of ignominious failure; the same high hopes that he had at home, only higher over here; the same traits; the same underlying hunger for religious expression.

Indeed, if there is any difference at all it is that he is much more approachable on religious matters than he ever was at home.

I know of one Yale graduate Secretary in the Y. M. C. A. who has a crowd of Dirigible men on an island in the Atlantic off by themselves so far that no preacher or religious director ever gets to them.

"Uncle Joe" is that man's name. He never went to church when he was at home. In fact his life has been spent in just the opposite from what the church stands for, but France has made a difference in him. The need of his boys has called something out of him that he himself never knew was buried deep within his heart.

Uncle Joe soon discovered that his boys were missing a Sunday evening religious service. In fact they came to him after he had been with them a month or so and said, "Uncle Joe, can't we have some kind of preaching on Sunday evenings? We miss it so."

"Why, we haven't any preacher."

"Won't you preach?"

"Why, I'm no preacher, boys; I'm not even a church member at home. I believe in the church and I believe in the Christ; but I'm no preacher."

"Well, you preach anyhow. We won't mind how rotten it is and we'll keep still and listen no matter how long you talk. We'll know you're not a preacher."

So Uncle Joe, feeling that it was his duty to give these boys the religious service that they asked for, altho it made a martyr out of him, did arrange for a religious service and he did preach to them. He told me about it the next day.

"I've had a headache ever since I did it, but I got thru somehow, and I suppose I'll have to do it every Sunday night now, for the boys insist upon having their religious service. Say, couldn't you give me some books or something so that I can study a little about how to preach?"

It was put in the form of a plea and it touched my heart more than many things that I had come in contact with in all France. Here was an old man,

*Dr. Stidger is a Y. M. C. A. Secretary who shared in the work of the soldiers just behind the front line. When he left his pastorate in San José, California, to go overseas it was the idea of continuing in similar work with the soldiers. But as he himself expressed it, he "didn't have the nerve to preach to boys who were enduring dangers and suffering and death for me and mine." So he came to drive a truck instead, carrying supplies down to the front line trenches. He shared the same hardships and dangers as the fighting men and earned thereby an influence over them based on respect and comradeship.*

*Mr. Stidger as a truck driver in France*

dead in earnest about preaching to his boys because those boys thought they ought to have a religious service.

Yes, they're just our "Home Town Boys" after all, with the same instincts and the same faces and the same hearts.

You don't have to be in France long to discover that they are just sometimes the very individuals you knew back home.

One muddy day down the line when we were putting in a new hut for a company of Engineers who were marooned away off from everybody else in a lonely woods, the truck had stuck in the mud twice on the way in from the main road and we were both covered with mud from top to bottom.

As I stepped down from a truck a tall, angular boy came up to me and said, "Say, is there a Y. M. C. A. guy down at Toul named Stidger?"

"Yes, I know him myself quite well," I replied.

"Well, my sister goes to his church. She wrote me that he was comin' over and then later she wrote me that he was at Toul, she thought. I'd just like to see him, seein' he knows my sister."

Then I said to him, controlling my feelings as best I could for the loneliness in his eyes had gripped me and I felt a lump in my throat. "Boy, the last girl I saw, on the last morning I was in my church, was your sister. She waited until the rest of the people had passed out, for she wanted to speak to me alone. She said, 'If you see my brother in France, tell him that his sister loves him.' I told her that I would, but among eight hundred thousand men I never expected to find you about the first month I was here on this line."

A captain whom I knew was dying in an evacuation hospital. He had come to love his boys as American officers so frequently do. It is a wonderful friendship that grows up between them. He had had so much interest in them that, at one time, when they were segregated in a certain dangerous strip of woods for nearly a month he arranged a show for them, altho they were under constant shell fire.

One day they were marching thru a pouring rain. The boys were gloomy and not a word had been spoken for hours. Suddenly a boy yelled out: "Everybody this way! Join the American army and see France on foot!"

Smiles went up and down that line. Boys laughed. That simple, spontaneous remark had turned the tide of gloom and all day his boys were smiling about that ridiculous sentence.

"These lads need some fun," argued the captain. "They are hungry for it. We have no 'Y' here and I'm going to see to it that they have a concert of some kind."

So he got the talent of his company together and they had a concert. It was a howling success. Then he noticed something else thru reading the letters of the boys home. He noticed that they missed religious services.

That stumped him, but he loved his boys enough to tackle even that, as Uncle Joe had tackled it.

He got hold of a Testament, studied it all one evening and then announced a religious service for the next evening. His entire company turned out to hear their captain. In a straight-from-the-shoulder, manly fashion he preached to them and then they all had a moment of prayer. It was an impressive hour for the boys.

A week after that they went into action together, this captain leading. Several of his boys got in a tangle of wire and he was wounded in helping them out. He didn't need to expose himself, but he loved every boy in his company.

I happened to be at the hospital the afternoon that he died. He said to a nurse whom he called to his side, "If I die tell my boys that I thought of them, and that if we all 'Go West' I'll see them again."

# COLD COMFORT

BY FRANK A. WAUGH

sufficiently conspicuous on the street car. Campers are always modest and self-conscious, and they always suffer, I know, from the curiosity of the unsympathetic civilized world. But it is only four miles from the heart of the old college town till we are tumbled off in the edge of the woods. Then by the time we have packed all the equipment for a winter camp a mile into the woods and up the mountain we are as hungry as Elisha's bears, and that's the first certain experience of camp life.

We are good and tired, too, for we are not used to the snow shoes nor the heavy packs. But being tired is also a part of the game.

Of course the first thing we do is to start a camp-fire and fry some beef-steak and bacon. Dear, dear! How good it smells! The mingled fragrance of the camp-fire and the bacon couldn't be a greater rapture in farthest Canada.

But it is winter and the snow lies deep and if we are to stay out in the woods a night or two we have work to do. A camp site is cleared as well as possible and the tent is strung up. We are just in the transition zone of the forest, between the pine and the birches, so accurately placed that the tent rope is tied at one end in an old pine and in front to a large squaw birch. Behind us are the pines, sheltering us from the winds; in front are the birches in long, picturesque ranks.

The tent stove heats the little 7x9 tent so hot that we can hardly stay in it, yet it scarcely melts the snow a foot from the stove. So we finally have to spread our ground cloth on the snow and sleep on that for a mattress. Have

you ever tried it? If this appeals to you as an experiment you have only to step out into your own backyard to test it. I can guarantee that you will have all the typical sensations of a hunting trip in Maine.

Any one will understand that the night in the winter woods is the heart of this adventure. Everybody who has any blood at all goes to the woods in the daytime, even in the winter, but to spend the night there is the real novelty. When the sun goes down the thermometer goes with it, and even in our snug and cozy tent we feel the chill. The little 11-inch cylinder burns red-hot with two pine knots, and we are warm enough on one side, tho the other side turned down to the snow keeps cool enough.

Then the weird orchestra of the woods begins the first movement in the symphony of the winter night. The wind sighs deeply in the pine trees, the birches crackle gently and the brook tinkles along back of the tent. Toward midnight another movement ensues. A sleety snow begins to rattle on the roof. How jolly it sounds! Especially when we have answered it with the chuckle of another pine knot in the pot-stove. Later it settles down to snowing in earnest. Heavy cushions of snow fall from the pine boughs, plumping on the tent. Where the heat rises strongest against the roof the snow melts and trickles down in icy streams.

The boys sleep. Boys will sleep anywhere. Once or twice they awaken long enough to realize where they are and to get a taste of what is happening. Also Pater sleeps from time to time to get a taste of that experience in the snow. Almost before we know it the tent begins to brighten and morning breaks.

And to see the woods then! Of course everybody has seen the woods after a soft snow—has seen them from a distance. But here we are in the heart of it and a part of it. Behind us the dark pines and laurels; in front of us the ever-beautiful birches. Of course we have our cameras with us; and were it not for wanting a stronger light we couldn't wait for the smoking sausages and toast, hungry as we are. However, this morning there is time both for sausages and for photographs.

In this warm springtime snow the woods seem to burst into life. We hear a fox barking. We hear a quail calling.

OUR classic New England village of Amherst is bounded on the south by the Holyoke Range. This range may be spoken of either as mountains or hills; mountains if we want to be ambitious, hills if we care to emphasize their friendly and protecting character.

A typical New England forest of mixt second growth covers the slopes of these hills; and on our side where the escarpment breaks down to a steep slope of talus the whole aspect is rugged and wild enough to make a good background for every man, boy or woman who cultivates an outdoor imagination. One could almost get lost in those forests and mountains if he would go alone on a very dark night, and providing he was destitute of all sense of direction and nearly destitute of common sense as well. This, of course, is the same equipment commonly employed in getting lost anywhere.

This steep north slope facing us is naturally the shady and more wintry face of the mountain. The drifts lie late and deep among the hemlocks, pines and birches. If one were going out in search of the traditional New England winter that would be just the place to look for it.

Yet the territory is near by and distinctly accessible. A good electric trolley runs up to the slope—thru the range at Turkey Pass. The old Bay Road, on which the Boston-Albany Post stage ran before the days of railroads, skirts the foot of the mountain, winding in and out and among the broad stretches of woodland. Some of this land we own ourselves. It is our farm, and of course it seems like home to us.

Now the boys and I had been promising one another all winter that we would have a camping out. Our ambitions were high. We would go to Canada or "down to Maine." Other men camped there in the snows and hunted big game and told big stories, and we believed ourselves as good sports as they. Only we couldn't go so far to find our wilderness. Time and money were lacking and the permission of the Lady at home. Thus it was natural and necessary that we should grasp the fragmentary week-end and the fragmentary wilderness within our reach and trek away to the snowy slopes of the Holyoke Range on our own farm.

Our big packs, our duffle bags, our tent roll and our camp togs made us

we hear a downy woodpecker and a chickadee and a whole flock of crows. The boys go out and find a rabbit, and that in a country where rabbits are not one-half so common as dress suits. Somebody shot a wildcat on this mountain last year, but we didn't see one. Still we might, and the simple possibility puts zest into the woods.

So we gather again in the tent for a final eat. Once more the frying pan smokes with bacon fat, and appetites surge up again like the blood of a race-horse at the sound of the starting gong. How good the grub tastes!

"Huh!" say the boys, "I guess the girls wish they had anything as good as this for Sunday dinner!"

"Let's eat up the rest of the sausages so as not to carry it home again."

Yet eventually the fire had to be doused with snow, the stove has to be packed, the blankets rolled up in the ground cloth, the tent taken down, and the whole party has to trail back that little mile which separates us so greatly from the conventional civilization.

Tired and grimy, but full and happy, we load our packs onto the sophisticated trolley car, brave the scrutiny of the Sunday travelers, and the chapter is closed.

Closed, but never to be forgotten, for we have had all the fun of being snowed in under the pine trees out on the mountain-side.

## THE SECRETS OF THE WORKERS

BY NEIL M. CLARK

Ethel has frizzly hair, and a thin, pert face.  
She is my stenographer—I can boss her, because I pay her.

But she has a secret, and I do not know what it is.  
I know there is a secret, for I can surprize a look on her face, sometimes,

That is not caused by the notes she is transcribing.  
I wonder what it is that she thinks of?  
Perhaps it is a lover: some Harry, or Bill, or Robert,  
Who kissed her last night and told her that they could be married in a few months;

Perhaps she is thinking of a pretty little apartment  
they looked at Sunday, and that is why she smiles to herself.

I do not know.  
I pay her, and I can boss her;  
But I cannot make her tell me her secret.

Tommy is my office boy.  
He is red headed, and he jokes with the girls;  
And he knows something that he is hiding from me.  
He smiled as he sat at his table a little while ago.  
Perhaps I have written a letter that seems funny to him.  
Maybe he knows it will lose me an order.

But I have been too proud to ask Tommy if he likes my letter:  
I am boss, and I think he should like my letter because I am boss.

He goes to night school, and he may know something about my business that I do not know.  
But why should I ask Tommy's advice?

He is only my office boy, and I am his boss.  
Tommy's opinion means nothing to me—  
Even tho he may be boss himself some day!

Jim works in the factory.  
He sits all day at a big machine, where he gets very dirty.

And he looks at me sullenly when I pass his machine,  
because I am boss, and I tell him what to do.  
But Jim has a secret that he will not tell me.

I cannot find out what it is, because Jim does not like me:

He thinks I am trying to drive him too hard, and he is willing only to do so much;  
Or he is afraid that I shall cut his pay if he shows all that he can do.

I should like to know what his secret is:  
Perhaps it is a baby that is coming to his house; for Jim was married last year.

I like babies—I haven't any of my own.  
But Jim will never let me hold his baby, if he has one:  
For he does not like me;  
He only works for me.

Each of my workers has a secret.  
They work beside me eight hours every day—  
But I do not know their secrets.  
I pay them; but they will not tell me what is nearest to their hearts,  
For I am not near to their hearts:  
I am the boss.

# THE NEW BOOKS

## In the Heart of a Fool

WILLIAM ALLEN WHITE best became known to the outside world some thirty years ago as the author of a lasty editorial on "What's the Matter with Kansas?" Now he comes out with a novel, in which he has labored for seven years on "What's the Matter with the World?" For altho he confines himself to a Kansas town and keeps his characters for the fifty years of the narrative strictly within the municipal limits he is really dealing with the issues that concern every civilized country. We are too apt to think of the industrial revolution as something that happened away off in England a hundred and fifty years ago but actually it is an experience thru which every American town must pass as it develops into an industrial center. *In the Heart of a Fool* begins with the bare prairie on the arrival of the first camp wagons. The actors of the drama are brought out one by one and introduced after the manner of the movies. Then we grow up with them and with the town and get thoroly acquainted. If you are broad enough to be interested in community life—in all the people of it bar none—you will be interested in this book. If you care for only a select few—in life or fiction—then you will be bored by it. For it takes all sorts of people to make a world, and Mr. White has most of them in his municipal microcosm. The minor characters are drawn with the same conscientious care as the major, not merely tagged off with a phrase or mannerism *à la* Dickens. It is not a static but a kinetic romance. As we read we watch the townfolk change, developing or degenerating, falling and repenting. They are common people but the story is not commonplace. It has dramatic scenes, even melodramatic. It could be staged but would probably be spoiled by compressing its six hundred pages into four acts.

It is a novel of the modern type, the long leisurely kind, popularized on the other side of the water by Arnold Bennett and William De Morgan, the reaction from the snap-shot short-story that was all the rage in the last years of the last century. It appears almost simultaneously with "The Magnificent Ambersons," which also covers the growth of a Middle Western city and depicts the deterioration induced by wealth, but Booth Tarkington concentrates his attention upon a single personage and the rest are background. We are also reminded, and more appropriately, of another novel by a Kansas editor, "The Story of a Country Town," which now, thirty-five years after publication, requires a new edition. But this was cynical and pessimistic while *In the Heart of a Fool* is sympathetic and optimistic. Ed. Howe wrote as a tired man working after hours at night and in a close room. Will White writes as tho in the sunshine and open air, probably, to be accurate, in his summer cabin in Estes Park.

The most direct comparison is, of course, with his other parable, "A Certain Rich Man," which was as great a book and perhaps even more interesting. If so it was because John Barclay in the earlier book was a more likeable character, a man who struggled against the evil influences of his position, while Judge Van Dorn is from the start the fool who hath said in his heart there is no God, the ruthless amoral-

ist of Nietzsche type. But the two should be considered together as companion pieces, as portraits of two deplorable products of American civilization, the materialized capitalist and his tool, the corrupt judge.

This is not a novel of the Great War but a novel of the Greater War which, as we can plainly see, will follow unless we have the wisdom to prevent it as we did not prevent the war just closed. We will not call this "the Uncle Tom's Cabin of the labor movement," for that handy appellation has been used too often for volumes much inferior. Unlike the authors of these, Mr. White has no novel social machinery

William Allen White, newspaper editor and author of "In the Heart of a Fool"

or changes to propose as a solution to the problem. He will doubtless be called a Socialist but he is not. It would be more correct to say that he is a humanist, if we could rid that word of its narrow scholastic meaning. The class war which is the fundamental tenet of the socialistic creed is just what he wants to prevent, and he sees no way to avoid it except the old-fashioned remedy rejected of the socialists, the application of the law of love. This was suggested nineteen hundreds years ago, but has never yet been fairly tried. The labor leader, Grant Adams, who was murdered by a mob when he was trying to keep the strikers from violence, gives this expression to his feeling on his dying day:

It has come to me lately that the day of the democracy is a spiritual and not a material order. It must be a rising level of souls in the world, and the mere dawn of the day will last thru centuries. But it will be nonetheless beautiful because it shall come slowly. The great thing is to know that we are all—the wops and dagoes and the hombies and the guinnies—all gods! to know that in all of us burns that divine spark which environment can fan or stifle—that divine spark which makes us one with the infinite! And America—our America that they think is so sordid, so crass, so debauched with materialism—what fools they are to think of it! From all over the world for three hundred years men and women have been hurrying to this country who above everything else on earth were charged with aspiration. They were lowly people who came, but they had high visions; this whole land is a crucible of aspirations. We are the most sentimental people on earth. No other land is like it, and some day—oh, I know God is charging this battery full of His divine purpose for some great marvel. Some time America will rise and show her face and the world will know us as we are!

... I believe that in every human adult consciousness there is a spark of altruism, a divine fire, which marks the fatherhood of God and proves the brotherhood of man. Environment fans that spark or stifles it. Its growth is evidenced in human institutions, in scales and grades of civilization. Christ was a glowing

flame of this fire. . . . Humanity is God trying to express Himself in terms of justice—with the sad handicap of time and space ever holding the Eternal Spirit in check.

If we may take this as the author's confession of faith we shall find that he has worked out a theology of his own strikingly like that of H. G. Wells in "God the Invisible King." But Wells—so far as known—is a mere theorist while White has tried out his religion, as much as a man may, in his own community, and before anyone dare assert it impracticable as a cure for social ills let him also put it to the experimental test. There is in Emporia a sort of employment agency with a woodyard attachment in charge of a ministerial sociologist which is doing something in the way of dispensing with charity and of solving the vagrancy problem in a rural community. White, we surmise, had had a hand in this. Recently Walt Mason, the most read and best paid poet in the world, published an autobiography in which he said that White had picked him from the gutter and made a man of him. White repudiated the credit and said that Emporia did it. Now that is not mere modesty on White's part. He believes it. And this is where the religion of the twentieth century differs from that of the nineteenth. The old fashioned Christian was intent on saving his own soul and then if possible others by his personal efforts. The new fashioned Christian believes in community effort for the salvation of the community as a whole. It is the difference between the individualism of Bunyan's "Pilgrim's Progress" and the co-operation of his "Holy War."

On reading over this review we fear that we have conveyed the impression that the book in question is a treatise on economics or a tract on religion. It's not. It's a rattling good story.

*In the Heart of a Fool*, by William Allen White. Macmillan Co. \$1.60.

## A Story of Plain People

DESCRIPTIVE subtitles for Zona Gale's new book, *Birth*, suggest themselves frequently as one reads this subtle, revealing and intimate study of life as shaped for several souls in what we call the humbler walks. "The Far-flung Influence of the Casual" is perhaps the most fitting, as the tale carries many dramatic events in these lives which are traceable to the far back casual thought or act by one who never saw or knew the individuals so seriously affected by his random decision. The story carries thru two generations. It is unquestionably Miss Gale's best work.

*Birth*, by Zona Gale. Macmillan Co. \$1.50.

## German Secret Service

GERMANY was always precociously fond of international statistics. She wanted—the present tense is equally applicable—full information of America and her Allies so as to attack their vulnerable points. She got a ghastly amount of it, and she attacked.

This book sets forth how secret agents of the Teutonic governments, acting under orders, have attacked our national life, both before and after our declaration of war; how men and women in Germany's employ on American soil, planned and executed bribery, sedition, arson, the destruction of property and even murder, not to mention

lesser violations of American law; how they sought to subvert to the advantage of the Central Powers the aims of the Government of the United States; how, in short, they made enemies of the United States immediately the European war had broken out.

Mr. Jones modestly carries us behind the screen and amplifies the reports we may or may not have read in newspapers. He does more: he presents correspondence of the weightiest character from the arch conspirators, Albert, von Papen and Boy-Ed. He gives Bernstorff's and Dumba's activities and proves his statements.

*The German Secret Service in America*, by John Price Jones and Paul Merrick Hollister. Small, Maynard & Co. \$2.

### Tommy of the Voices

THE reader who bravely tackles the rather stodgy beginning of this novel will find his patience rewarded by a character study of uncommon interest and truth. Tommy is an interesting youth of marked and sensitive individuality and power, who earnestly sets out at a very early age to realize himself and to develop his full potentialities. The note of self-conscious individuality is constantly struck; and the dangers and penalties of this intense individualism are exemplified in the striking character of Mrs. Warren. How Tommy himself at last wins thru to a right coördination between himself and circumstances and other people is the real theme of the book, into which enter dramatic incidents of many kinds of life.

*Tommy of the Voices*, by Reynolds Knight. A. C. McClurg & Co., Chicago. \$1.40.

### The Title

THE most recent play from the pen of Arnold Bennett is a clever comedy that pokes good natured fun at the Culver family, collectively and individually. Mr. Culver is a prominent English war worker; Mrs. Culver is socially ambitious; the seventeen year old son takes himself and life in general with amusing seriousness; and the twenty-two year old daughter writes brilliant articles for the newspapers attacking the administration.

Mr. Culver is offered a title in the nobility. He refuses it. Mrs. Culver refuses to refuse it. Thruout the controversy Mr. Bennett develops delightfully humorous situations, and one suspects that in spite of his ridicule he is really fond of his characters, for they are exceedingly well drawn. With the odds against accepting the title standing at three to one, the interest in the outcome becomes more and more intense as the time of acceptance draws to a close, and the desire of Mrs. Culver to be called "my lady" constantly gains weight. Up to the final curtain one doesn't know that the title is going to be —; but it wouldn't be fair to tell.

*The Title*, by Arnold Bennett. George H. Doran Co. \$1.

### The War-Workers

WITH a few deft strokes Miss Delaheld outlines a character so as to produce a perfect vignette. *The War Worker* is an amusing satire on a certain well known type of woman war worker. Miss Clarendon Vivian, Director of the Midland Supply Depot, is distinctly a limelight lady. She goes in the war because in war work she finds a long sought outlet for her superfluous egoism. Miss Delaheld is quite merciless in exposing the absurd personal motives which underlie all Miss Vivian's multitudinous activities. She would lunch off a bun rather than leave unimportant letters to her subordinates, but she would not permit her self denial to pass unnoticed. Her mother and her secretary alone failed

Into these guns go grains like this—whole kernels of choice wheat

Out of the guns those kernels come like bubbles, eight times former size

## We Explode Whole Wheat

*To Make These Flavory, Flaky Bubbles Which So Easily Digest*

Puffed Grains seem to children like fairy foods—they are so light, so airy, so flaky, so thin.

But these grains in the making are sealed in huge guns. The moisture within them is changed to steam.

They are shot from these guns, and every food cell is suddenly exploded. Over 125 million explosions occur in every kernel.

### Prof. Anderson's Way

That is Prof. Anderson's way for fitting whole grains for digestion. He blasts every food cell, so digestion can act. So Puffed Grains form the ideal sort of grain food. They never tax the stomach. One can eat them any hour. And every atom feeds.

Then these grain bubbles—about as fragile as snowflakes—taste like food confections.

Millions of people now enjoy them, morning, noon and night. Let your folks get a-plenty.

# How One Evening's Reading Has Been Worth \$200 a Minute to Me

By a Man Who Was Started on the Road to  
Wealth by Applying a Few Simple Principles  
of Mind Training That Anyone Can Learn

A BLANKET of fog had descended on the North River that morning and as our ferry boat left her slip on the Jersey City side and started cautiously toward New York Stevens and I, standing on the fore-deck could see nothing ahead of us but grey mist. From all around came the whistles and bells of invisible river craft blindly feeling their way as we were.

"This reminds me of nothing so much as the confusing haze through which the average man's mind continually struggles in the transaction of his business," said Stevens, indicating the wall of heavy vapor through which we were creeping. "Most men sail through life like a ship through a fog, able to see but a short distance in either direction, and at the end of their life trip they wonder why they never arrived at the Port of Success. The great majority of them never become aware of the one essential element that plays the principal part in every success in the world and without which no big personal attainment is possible."

When Ed Stevens spoke, it was well to keep quiet and listen. He was one of those men who had been late in getting his start but whose name and position had finally been established almost over night. At 40 he had been a comparatively unknown employe. Now, still on the sunny side of 45, his holdings and interests had made him a tremendous business and financial power.

"That element necessary to success," he continued, "is nothing more or less than foresight, and contrary to what most people believe foresight is not a gift of the gods but something anyone of average intelligence can acquire. Any man, no matter what his duties are, can become foresighted by simply utilizing the things he learns from day to day.

"Foresight is nothing but hindsight put to work, or in other words, foresight is simply applying the value of experience. But the great trouble with most men is that when foresight is needed, which is constantly, they are unable to call up their hard-won experience and bring it to bear on the thing in hand. They have not retained the lessons, the facts, the figures, the conclusions, the precedents, the events, the results, the names and the faces that all go to make up experience.

"They look back on a dreamy period of time in which certain very impressive or more often very trifling events stand out boldly, but the daily, hourly education that unrolls before them as they work melts away as quickly as its moment passes. Of course they can have no foresight because they have nothing to base it on."

Before I left Stevens that day he had shattered some of my old theories about

the qualities that are necessary to a business or professional success, but he had given me a whole new set of ideas on the subject. I wondered as I thought of it how it had been possible for me in the past to overlook the overwhelming value of a mind that *looked ahead* because it *looked backward*, that *foretold* because it *recorded*, that *anticipated* because it *retained experience*—in fact the tremendous power of a mind that *remembered*.

I recalled the experiences of some of my workmates of present and former days. They were average men, young fellows mostly, and every one of them keenly ambitious. Yet what a little distance they had gone on the road we had all hoped to travel.

There was Miller who had expected to be made auditor and had a good chance of getting the job it seemed to me then. He was a good accountant and a faithful worker but they passed him up for a man from outside. I learned later that he had been absolutely dependent upon his books for every item of information.

We had all prophesied a big future for Stewart when the firm sent him on the road as a salesman. But his record never rose above average and he was finally recalled to a clerical position. He told me himself his trouble had been that he couldn't think of the right argument at the right time in talking to a customer.

Just recently there was the case of Reed who "guessed wrong," as he put it, in deciding a question of delivery and put the firm to an expense of several thousand dollars. He was released shortly afterward.

The same evidence of a poor memory standing between men and their greatest possibilities faced me everywhere. New facts burst upon me with irresistible force. Memory was mentality. Memory was judgment. Memory was foresight. Memory was knowledge. Memory was power. Memory was success.

"You're the fifth man this week, who has asked me how to improve his memory," said Ed Stevens after I had made a point of seeing him a few days later. "Get in touch with the Independent Corporation, publishers of the Roth Method of Memory Training."

The Independent Corporation, at my request, sent me the Roth Memory Course in seven lessons insisting that I examine it for five days before sending them a cent in payment. Then followed the most amazing thing that has ever happened to me. The Course was waiting for me one evening when I reached home and I decided to give it a few hours of good, hard study at once. Imagine my surprise when after less than five minutes reading I had the key to an efficient memory and within 30 minutes after I opened the book I possessed the secret I had been in need of all my life. The entire course did not require the study that I had supposed I would have to give to each lesson. And it was all most fascinating.

That was not so many months ago, yet it seems years in the change it had made in myself and my fortunes. I have a new business perspective. I am a keener observer of tendencies, and am possessed of a swifter, surer judgment. I am able to know an

opportunity when I see one, and decide to act while there is still time to take advantage of it. It has given me the power of visualization—foresight—the secret and the basis of all success.

My own progress since applying Mr. Roth's principles of memory training is not at all unusual. Through the Independent Corporation I have heard of several cases that are much more remarkable. Today my income is approaching the figure of \$15,000 a year. Based on the increase it has shown up to now I estimate that the time I gave to learning the secret of a good memory that first evening has been worth \$200 a minute to me for the time I spent on it, and its value will increase as time goes on. From believing a good memory to be merely a curious natural gift I know today that it is the one necessary element to effective progress of any kind.

## Send No Money

So confident is the Independent Corporation, the publishers of the Roth Memory Course, that you will see at once how easy it is to multiply the power of your memory, and how easily you can acquire the secret of a good memory in one evening that they are willing to send the course on free examination.

Don't send any money. Merely mail the coupon or write a letter and the complete course will be sent, all charges prepaid, at once. If you are not entirely satisfied send it back any time within five days after you receive it and you will owe nothing.

On the other hand, if you are as pleased as are the thousands of other men and women who have used the course, send only \$5 in full payment. You take no risk, and you have everything to gain so mail the coupon now before this remarkable offer is withdrawn.

Please send me the Roth Memory Course of seven lessons. I will either mail the course to you within five days after its receipt or send you \$5.

Name .....  
Address ..... Ind 1-11-19

David M. Roth

When Mr. Roth first determined to cultivate his memory, it was because he found it to be probably poorer than that of any man he knew. He could not remember a man's name twenty seconds. He forgot so many things that he was convinced he could never succeed until he learned to remember. Today there are over ten thousand people in the United States whom Mr. Roth has met at different times—most of them only once—whom he can instantly name on sight. Mr. Roth can and has hundreds of times at dinners and lectures asked fifty or sixty men he has met to tell him their names, businesses and telephone numbers and then after turning his back while they changed seats, has picked each one out by name, told him his telephone number and business connection. These are only a few of the scores of equally "impossible" things that Mr. Roth can do and yet a few years ago he couldn't remember a man's name twenty seconds.

to be properly impressed by her sacrifices.

By using her characters as mouthpieces for her keen observation and salty humor, the author sketches Miss Vivian as seen thru the dazzled eyes of her staff, who chorused, "Isn't Miss Vivian wonderful?" thru the discerning eyes of her secretary who gave vent to her suspicions of the lunching-on-a-bun affectation by remarking, "My idea is that perhaps Miss Vivian does partly work so very hard because there are so many people looking on. If she was on a desert isle she might find time for luncheon"; and thru the snappy, bright eyes of her mother, Lady Vivian, a clever, outspoken woman, whose one regret in life is "what a fool I was not to smack her well when she was a child."

*The War-Workers*, by E. M. Delafield. Alfred A. Knopf. \$1.50.

## Stories of Labrador

ON the lonely sweeps and reaches of the Labrador coast, where men fight a constant battle with the gray sea, the late Norman Duncan found material for two fascinating volumes of short stories. The average reader does not associate love with Labrador, nor think of the people in this out-of-the-way part of the world as being very much like themselves. Yet in this land of ice floes and leaden skies, the author found love idyls, tales of heroism, and folksy sketches of every day life. Perhaps the most memorable character in the books is the doctor of Afternoon Arm, who risks his life on an ice floe to reach a patient, and then cuts down the charge to \$1.75.

*Harbor Tales Down North* shows the Labrador fisherman in his home setting; *Battles Royal Down North* shows him at death grips with the ice and the stormy waters. Both books are prefaced with an appreciation by Dr. Wilfred T. Grenfell, under whose guidance Norman Duncan visited the Northland.

*Harbor Tales Down North* and *Battles Royal Down North*, by Norman Duncan. Fleming H. Revell Co. \$1.35 each.

## Such Nonsense!

CAROLYN WELLS has the best gift of the true anthologist—genuine delight in the wit she discovers in others, as well as having a pretty wit of her own. *Such Nonsense* is a boon—and a boon-companion. Here is a sample.

### OPTIMISM

Be brave, faint heart,  
The jelly means to jell;  
Be strong, weak heart,  
The hops are in the malt,  
The wrong side in will yet turn right side out,  
The long-time lost come down you cormorant  
prow!

Life still is worth her salt  
What ends well's well,  
Be brave, faint heart!

N. M.

Now this is the real Uplift book, such as you get in college booklets. Tap it up.

And there are 235 pages of such nonsense, illustrated by Peter Newell, Gellert Burgess and others.

*Such Nonsense!* by Carolyn Wells. George H. Doran Co. \$2.

## At the Theater

IF "the critic is the conscience of the public," as Professor "Billy" Phelps, of Yale says in his discursive study of *The Twentieth Century Theater*, then conscience must dispense with its traditional definition as "the still, small voice." Chapter thirteen of *The Popular Theater*, by George Jean Nathan, is proof enough! Mr. Nathan's criticisms are far too clever and creative to be labelled "conscience," and they are seldom still or small. In his witty, sometimes too satirical, diary of the habitué "first nighter" during a typical season

# There's a Film on Your Teeth

Which May Wreck Them if You Leave It

All Statements Approved by High Dental Authorities

## Brushing Doesn't End It

That slimy film which you feel on your teeth is the cause of nearly all tooth troubles.

It gets into crevices, hardens and stays and resists the tooth brush, that is why brushing fails to keep teeth safe and clean.

That film is what discolors. It hardens into tartar. It holds food which ferments and forms acid. It holds the acid in contact with the teeth to cause decay.

Dentists call it bacterial plaque, because millions of germs breed in it. Those germs, with tartar, are the chief cause of pyorrhea.

## Must Combat It

Scientists have long sought some way to combat that film. A dentist removes it when he scours your teeth, but it comes right back. So millions of teeth brushed daily still discolor and decay.

Now a film remover has been found which seems to solve this problem. Able authorities have proved it by four years of clinical tests. A very large number of leading dentists have now tried it and approved it. It is evident now that this invention means much to everyone. In every home it should displace the inefficient tooth pastes. So we offer you a

One-Week tube to show you what it does.

## Based on Pepsin

This new-day dentifrice is called Pepsodent. It is based on pepsin, the digestant of albumin, for the film is albuminous matter.

The object is to dissolve the film, then to constantly prevent its accumulation. It long seemed impracticable to combat the film in this way. Pepsin must be activated, and the usual agent is an acid harmful to the teeth.

But science has found a harmless activating method. Five governments have already granted patents. That method has made possible this ideal pepsin dentifrice.

## A Test Is Free

We send to anyone who asks a One-Week tube of Pepsodent, and let it prove itself.

Send the coupon for it. Use it like any tooth paste. Note how clean your teeth feel after using. Note the absence of the film. Note how teeth whiten as the fixed film disappears.

You will know in one week that Pepsodent does what nothing else has done. You will know what clean teeth mean. And you will want your teeth kept that way, we believe.

## THE STONE SCHOOL

Cornwall-on-Hudson, Box 5, New York  
FIFTY-SECOND YEAR

A School in the Heart of the Open Country. For Boys from 9 to 19.

LOCATION: 50 miles from New York, on a spur of Storm King Mountain, 900 feet above sea level. Healthful, invigorating, unusually adapted to a sane and simple out-of-door life.

WORK: Preparation for College or Business Life: recent graduates in 12 leading colleges. Each boy studied physically and mentally to increase individual efficiency. Small classes: A teacher for every seven boys.

ATHLETICS: Two fields with excellent facilities for all sports, under supervision; hiking, woods life, swimming pool.

You are invited to come and see for yourself. Catalog sent on application.

ALVAN E. DUERR, Headmaster

of Broadway plays the editor of *The Smart Set Magazine* holds up to discriminating ridicule four-fifths of the plays he saw. Take these entries, for example:

August 31, 1916. To the Hippodrome. Excellent amusement for persons who estimate everything by size, and so regards Fatty Arbuckle's posterior as of vastly greater importance than Gerhart Hauptmann's brain.

October 23, 1916. To the George M. Cohan Theater to see "She Stoops to Conquer" in sub-Mason and Dixon dialect. Title "Come Out of the Kitchen."

November 6, 1916. To the Booth to see a performance of Shaw's "Getting Married," a play to be acted in the theater in the same sense that Mrs. Rorer's Cook Book is a book to be read in the library.

December 3, 1916. To the Empire to see Sarah Bernhardt. Rosemary in mothballs. Love letters in the hands of a prosecuting attorney.

But most of Mr. Nathan's book is more constructive in its criticism than the diary. His discussion of What the Public Wants is an illuminating challenge to the theater audience to play its own part.

In *The Twentieth Century Theater* Professor Phelps provides a pleasant textbook to coach the public in its part. He discusses present-day theatrical tendencies from vaudeville to Shakespeare, reviews recent achievements on the stage and points out problems to come and some of their solutions.

*The Twentieth Century Theater*, by William Lyon Phelps. Macmillan Co. \$1.25. *The Popular Theater*, by George Jean Nathan. Knopf. \$1.60.

## WITH THE BUFFALOES IN FRANCE

(Continued from page 50)

sang together, played together, ate together, slept together and fought together. The world was safe for democracy. These men will not hold these friendships lightly. These white "bunkies" of the Buffaloes will not subject them to the old humiliating prejudices. The Buffaloes have gained a new respect and knowledge of their fairer brothers. Neither will forget easily. These war attachments and alliances have been welded together by a common ideal, a common country, a common danger and a reciprocal respect and admiration; peace will weld them closer.

The white soldier has learned that it was a psychical and intellectual impossibility for the colored soldier to have lived in glorious America for more than three hundred years, attend its schools, study its history, its literature, absorb its ideals, its principles, its culture, and, yes, serve its best families, without becoming thoroly Americanized, without becoming an integral and inseparable part of the Republic.

The colored soldier has learned that there are millions of his white brothers who are really democratic in spirit and practise; that they have considered him a man apart, a foreigner, because they did not know him, because they had not investigated him impartially, because they did not understand him nor properly appreciate his marvelous progress under their tutelage.

Contrary to general belief among some of the whites, the colored soldier, broadly speaking, is more anxious to get back home than the whites. In spite of the fact that he has experienced what it means to be really free; in spite of the fine, cordial relations existing between him and the French; in spite of the fact that he has penetrated the hitherto mystic veil of white society by his associations with the French of all classes and found warmth and welcome everywhere; in spite of the injustices, discriminations, indignities and perhaps lynchings, he knows he will have to face and fight, he yearns to return home—for he is an American.

Metz Sector, France

## DENISE AND THE OLD CONTEMPTIBLES

(Continued from page 56)

Germans broke. Some ran for their lives, some died fighting, some threw down their arms and begged for mercy. Slowly the sun sank to rest, shedding a watery light over the stricken field. And the British army or such brave men as survived rested in the same lines as they had held at dawn.

Late at night a weary gunner officer picked his way thru the ruins of what once had been the homes of the village of Richebourg and by the ruined church. On the outskirts of the town he was arrested by a woman's cries for help. As soon as the string of ammunition wagons had brought up the precious rounds to feed the guns he took six of his men with him, armed with picks, shovels and crowbars and set out for the ruins from whence had come the call for help. The cries had now given place to feeble moans. After an hour's hard work two women were gotten out; but the elder of the two was dying. Mere Duprez's life blood was ebbing fast thru a gaping wound in her side, where a shell fragment had found its billet. There amid the wreckage and carnage of a great battle field, with now and then the sullen muttering of a distant gun, the only light that from the flickering rays of a siege lantern, surrounded by soldiers of an alien land, standing reverently, wet eyed and bareheaded in the sleet, this French mother bid farewell to her little daughter. Her last words were: "Monsieur . . . le bon Dieu . . . Denise."

Leaving the men to bury Mere Duprez, where she died, the officer returned to the guns, taking Denise with him. Poor child, half frozen, wet to the skin, dazed with the events of that dreadful day, her home, her all swept away, knowing not where or to whom to turn for shelter, hers was indeed a fate to awaken pity in the hardest heart. And yet the slender figure of Denise represented only one of that great army of the homeless, the broken-hearted, the impoverished, the stricken refugees, made that Germany might have "a place in the sun" and the insatiable ambition of a Kaiser be gratified.

Upon arriving at the battery Denise was taken by her rescuer into his dugout, given hot tea and rum and a great coat, the property of a man killed during the day's fighting. A brazier was brought in to dry her clothes and warm her back to life, and restored somewhat she fell asleep in the blankets of her new found guardian and protector.

Early the next morning the battery marched for another part of the line, where the pressure was great and reinforcements urgently required. Denise was taken on one of the firing battery wagons as far as a large neighboring town, a town far enough behind the firing line to have escaped the German lust for destruction. Here Denise was taken to the parish priest, who readily undertook to find a home for her, to get her employment not too hard for her years and to buy her clothes and other necessities with money furnished by her guardian.

Time went by and the battery weathered many a storm of bitter fighting, for it was in action in a part of the line under constant and heavy shelling. Between where the guns were in action and the town where Denise dwelt there stretched six and a half miles of shell except road. To go up or down that road required great courage on the part of any soldier, seasoned veterans as they were, and yet, with the coming of Sunday, her one day of relaxation from toil, that child always braved death and wounds to visit her guardian.

# INDEPENDENT OPINIONS

War is the mother of lawlessness. *Silent enim leges inter arma.* So, as we should expect, mob violence ranging from petty persecution to downright murder has greatly increased during the past year. President Wilson's warning seems to have had no influence over his own party. The principal of Tuskegee Institute, Alabama, sends us the following figures:

According to the records compiled by Monroe N. Work, in charge of records and research of the Tuskegee Institute, there were 62 lynchings in 1918. This is 24 more than the number 38 for the year 1917. Of those lynched, 58 were negroes and 4 were whites. Five of those put to death were women. Sixteen, or a little more than one-fourth of those put to death, were charged with rape or attempted rape.

The offenses charged against the whites lynched were: Murder, 2; being disloyal, 2. The offenses charged against the negroes were: Alleged complicity in murder, 14; murder, 7, charged with threats to kill, 6; charged with rape, 10; charged with attempted rape, 6; alleged participation in fight about alleged hog stealing, 3; killing officer of the law, 2; being intimate with woman, 1; assisting man charged with murder to escape, 1; robbing house and frightening women, 1; killing man in dispute about automobile repairs, 1; making unwise remarks, 1; making unruly remarks, 1; killing landlord in a dispute over a farm contract, 1; assault with intent to murder, 1; wounding another, 1; robbery and resisting arrest, 1.

The states in which lynchings occurred, and the number in each state, are as follows: Alabama, 3; Arkansas, 2; California, 1; Florida, 2; Georgia, 18; Illinois, 1; Kentucky, 1; Louisiana, 9; Mississippi, 6; North Carolina, 2; Oklahoma, 1; South Carolina, 1; Tennessee, 4; Texas, 9; Virginia, 1; Wyoming, 1.

ROBERT R. MOTON

In the column "Remarkable Remarks" in your issue of November 16 appears a statement to the effect that "The Star Spangled Banner" cannot become the national anthem because "the God of prophets, seers, Christ Jesus, Mary Baker Eddy and their followers" will prevent it. The quite natural conclusion that one draws from this truly remarkable remark is that Christian Scientists are making a concerted effort to supplant "The Star Spangled Banner" with some composition more to their liking in sentiment and music. Please permit me to state that such is not the case so far as the Christian Science organization is concerned.

ALBERT F. GILMORE

Christian Science Committee on Publication, New York

Frequently we have to remind our readers that we do not always agree with or approve of the sentiments quoted in our column of "Remarkable Remarks." We pick them out because they seem to us, for one reason or another, remarkable, tho we do not even guarantee that. Why they are remarkable we leave our readers to determine.

In quoting from Miss Kitty Cheatham's tirade against the "Star Spangled Banner" we had no intention of ascribing her opinion to the Christian Science Church.

We are glad to see from such letters as the following that many of our readers agree with us that to refuse to learn a language because we don't like the people who speak it is both foolish and dangerous. It is not an advantage to a country to become deaf and dumb with regard to any foreign nation. If we could introduce into the peace treaty a provision prohibiting any German from learning English then we might safely abandon the study of German. Otherwise not.

"Intellectual Preparedness," issue September 21, hits a big nail square on the head. We must continue this war mentally long after we have finished our physical task.

Twelve years' service in our navy (1901 to 1913 inc.) put me in physical touch with the Japanese, Chinese, Russians, Germans, Spanish, Portuguese, French, Italians, Chileans, Brazilians, Argentinos, the natives of the Pacific Islands, and ourselves and the English in our, and their, colonies. During this period I learned a bit of many languages—just a small working vocabulary which would procure me food, drink and lodging, of most—and of them all I know more of German and Spanish than of the others. My slight knowledge of these foreign tongues I regard as a very valuable possession and would willingly devote my life to acquisition of greater knowledge along those lines. Each word of a foreign language learned has a positive value to its possessor.

Rather than stop the study of German I would encourage every patriot of any age to master that language as far as individual opportunity will allow—and thus be in a position to understand anything which might be said in his hearing in that language.

Do those who oppose the study of German on so-called patriotic lines realize that every German in this country can speak two languages—English and German—whether here for innocent, or other, purposes, and each can generally "do business" in from three to eight or ten other languages or dialects ranging from French to the patois spoken by the outlanders of the hidden spots of the earth? Japanese officers whom I have met could converse fluently in several other languages than their own. On most German, French, Japanese, Italian, and Russian warships are officers or enlisted men who can talk intelligently with almost any form of human being on earth in his own tongue, while the Americans and the English depend to a greater extent on interpreters.

Truly you have given publicity to the greatest problem facing us—now that we have helped the Allies win the war and are fast approaching the point where we shall have a determining voice in the settlement of every polyglot question arising. May that voice be understood. W. E. RICHMOND  
Verde, Arizona

## SEXUAL KNOWLEDGE

ILLUSTRATED  
By WINFIELD SCOTT HALL, M.D., Ph.D.

SEX FACTS MADE PLAIN

What every young man and

Every young woman should know

What every young husband and

Every young wife should know

What every parent should know

## TYPEWRITERS

\$10 AND UP. ALL MAKES. SAVE \$25 to \$50 on result at the factory by the well-known "Young Process." Sold for low cash—installment or rental. Rental applies on purchase price. Write for full details and guarantee. Free trial. YOUNG TYPEWRITER CO., Dept. 761, Chicago

## Don't Wear a Truss

Brooks' Appliance, the modern scientific invention, the wonderful new discovery that relieves rupture, will be sent on trial. No obnoxious springs or pads

MR. C. E. BROOKS

### Brooks' Rupture Appliance

Has automatic Air Cushions. Binds and draws the broken parts together as you would a broken limb. No salves. No lies. Durable, cheap. Sent on trial to prove it. Protected by U. S. patents. Catalog and measure blanks mailed free. Send name and address today. C. E. BROOKS, 490F State St., Marshall, Mich.

## Send Your Name and We'll Send You a Lachnite

DON'T send a penny. Just send your name and say: "Send me a Lachnite mounted in a solid gold ring on 10 days' free trial." We will send it prepaid right to your home. When it comes merely deposit \$4.75 with the postman and then wear the ring for 10 full days. If you, or if any of your friends can tell it from a diamond, send it back. But if you decide to buy it—send us \$2.50 a month until \$18.75 has been paid.

Write Today Send your name now. Tell us which of the solid gold rings illustrated above you wish ladies' or men's. Be sure to send finger size. Harold Lachman Co., 12 N. Michigan Av., Dept. 2481 Chicago

We must all do our best to make the change from war work to peace work as easy as possible. Cooperation is the Big thing needed NOW.

U. S. DEPT. OF LABOR  
WM. B. WILSON, Secretary

## KEEPING WOMEN ON THE PAYROLL

(Continued from page 49)

were invited to recruit workers as fast as they were released. Each worker was given a "blue card" showing that she was no longer at work, but allowing her to return to the employment offices of the plant as long as she was not satisfactorily employed elsewhere. Employees who did not on the first day of release sign up with a specific employer were urged to register with the United States Employment Service, which established a branch in the same room. Here the employees filled out cards stating their experience and the kind of work desired, and were entered on the books of the Employment Service.

In this way the workers laid off by the gas defense plant are practically assured of another position. In case the Long Island City office was unable to place them immediately, their cards were sent to the central clearing house of the United States Employment Service at the New York City headquarters, where they were checked with the demands for labor in other parts of the city and the applicant was referred to some concern which needed a worker of that type.

The employment bureau established by the plant, in cooperation with the Federal Service, had placed 40 per cent of those laid off during the first three days of the demobilization process. About half of the others returned to the places they held before coming to the plant or were voluntary war workers who intended to retire from industry and hence did not require the assistance offered by the employment bureau. The other half, or approximately 30 per cent of the total laid off, refused the positions offered thru the bureau with the intention of looking further before taking permanent jobs.

It was estimated that there were 6000 positions open to the 2200 employees laid off during the first three days, ranging all the way from office girls at \$7 a week to highly skilled mechanics at the prevailing rate of wages.

That the civilian woman worker has been ranked second only to the returning soldier in plans made by federal, state and community organizations is significant of the respect she has earned. The Council of National Defense, thru its state and local woman's committees, the National Council of Women, thru its cooperating organizations with a combined membership of 10,000,000 women, and the National League for Women's Service, with its widespread machinery reaching particularly women who have worked or have prepared themselves for work during the war period, immediately agreed to cooperate in each state and community where they are organized, with the United States Employment Service in replacing women war workers in occupations in or near their homes. A few days later when plans were completed for close cooperation between the War Department, the Red Cross, and the various organizations composing the War Camp Community Service, and the United States Employment Service, the Young Women's Christian Association was given representation on the cooperating central committee formed. A part of the report on the formation and plan of this committee is as follows:

The conference at today's meeting organized a cooperating Central Committee which will direct the concentrated efforts to help the nation's factory and war workers. Nathan A. Smith, Assistant Director General of the Federal Employment Service, is chairman. The secretary is Harold Stone, superintendent of the soldiers' bureau section of the Employment Service.

The other members of the Central Committee will be representatives of the American Red Cross, Y. M. C. A., National Catholic War Council, including the Knights of Columbus; Jewish Welfare Board, Wartime Commission of the American Federation of Labor, Federal Board for Vocational Training, Council of National Defense, the Y. W. C. A., the National Council of Women, the National League for Women's Service, War Labor Policies Board of the Department of Labor, Navy Department, and the Morale, Personnel and Demobilization Departments and the Committee on Educational and Special Training Services of the War Department. Other bodies will be represented as they enlist in this concerted movement.

The joint action of all these organizations brings to the aid of the Federal Employment Service more than 500,000 local agencies, such as the local units of the Council of National Defense, the 10,000 home service committees of the Red Cross, and tens of thousands of churches, social, civic and other bodies. It insures the establishment of a cooperative bureau for returning soldiers, sailors and war workers in every city and town in the country.

Special emphasis has been put upon the securing of employment in the home communities for every one, women as well as soldiers. When first approached only about half of the war workers in Washington, of whom there were in November about 75,000, wanted to go home. Because of the shortage of clerical help in many bureaus, a good many of these women were transferred to other work in Washington in the first few days and weeks after the armistice was signed. Others were offered special inducements to accept positions at home. One department with a large force of women agreed to give two weeks' extra pay and the equivalent of two weeks' leave to those who could arrange to go home within a specified time. Another made arrangements to encourage placement in the girls' home community at New Year's, so that the pleasure of spending Christmas at home might be an added inducement. Many girls, realizing that opportunity for advancement is now curtailed, have changed their minds about wanting to stay permanently in Washington.

In every case that has come to the attention of the Employment Service, appointment directors are giving adequate notice of separation from service. In most cases they either register the women to be released on Employment Service cards in their own offices or refer them to the Service files.

A bill to provide transportation for these war workers seems likely to pass Congress at an early date.

There are a number of reasons for this policy of returning war workers to their homes. Small communities, farms and western and mid-western sections have been stripped of their best blood for the army and the huge war industries which transportation conditions required should be located near the Atlantic seaboard. Therefore it is only justice that so far as possible their quotas be returned to them.

The educational value of the experience which these young people have had can be of a large factor making for good in the next few years, if the results of this experience can be used to enrich the life and thought of the small places which have of necessity been remote from many elements of disturbance of settled thought and habit the war has brought to centers of war activity.

And the moral good to be gained, and the dangers avoided, in having these hundreds of thousands of girls and young women under home influences during the period of readjustment is obvious.

Washington, D. C.

## The Independent Lesson Plans

### ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOOK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT  
HIGH SCHOOL, NEW YORK CITY

- I. Cold Comfort.** By Frank A. Waugh.
  1. Did the writer of the essay have in mind telling a story, giving an explanation, or producing an effect? Explain your answer.
  2. Point out various instances of sense appeal. How do these instances help the writer to accomplish his purpose?
  3. What spirit pervades the entire article? By what methods does the writer emphasize this spirit?
  4. Point out unusual words that appear in the article. What effects are produced by the use of these words?
  5. Point out figures of speech that occur in the article. What do the figures of speech add to the article? What would have been the effect if the writer had used no figures of speech?
  6. Point out sentences that give especially good descriptions.
  7. Point out well-chosen words that add to the suggestive nature of the descriptions.
  8. Explain what is meant by the "friendly" character of hills.
- II. The Secrets of the Workers.** By Nell M. Clark.
  1. Give a talk, suggested by the poem, explaining the ideal relationship that should exist between employers and employees.
  2. Show in what ways this poem is related to Dickens's "A Tale of Two Cities."

- III. "Y" Work Silhouettes.** By William L. Stidger.
  1. Give a talk summarizing the character of the American soldier as presented in the article.
  2. Give an oral summary of what the article says concerning the need of religion. Show in what ways the thought of the "Sir Roger de Coverley" essay called "The Coverley Sunday" is like the thought of this article.
- IV. Denise and the Old Contemptibles.** By a British Artillery Officer.
  1. Give a talk explaining the origin of the term "contemptibles" and the present significance of the term.
  2. Give a talk, based on the article, summarizing the spirit of the British soldiers.
  3. Read aloud the paragraph beginning: "The batteries were almost reached," reading the paragraph in such a way that you bring out its full spirit.
  4. What effect is produced by the account of Mere Duprez and Denise?

- V. The Mystery of Diesel.** By Edwin E. Slosson.
  1. Give the derivation, and the meaning, of every one of the following words: imminent, inevitable, consolidated, clarifying, hypochondria, competence, reciprocating, supremacy, cosmopolitan.
  2. Write an original adventure, or detective, or spy story, in which you explain what became of Dr. Rudolf Diesel. Center your story around one character. Make the events of the story lead to a strong climax.
  3. Give an oral explanation of the advantages gained by the Diesel engine.
- VI. Keeping Women on the Payroll.** By Margaretta Neale.
  1. Present a definite, convincing argument for or against the principal proposition presented in the article.
  2. Consider the article paragraph by paragraph, and tell by what method every paragraph has been developed.
  3. Does the article have an introduction? If it has, does the introduction fulfill the requirements for a good introduction?
  4. Name the principal points that are discussed in the body of the article. In what order have these points been arranged? Why?

- VII. Editorial Articles.**
  1. Why should the people of the United States feel grateful to the British navy?
  2. Read aloud the examples of American heroism presented in "The Way They Fought."
- VIII. The Story of the Week.**
  1. Give a clear oral account of President Wilson's experiences in Europe.
  2. Read aloud the extracts from President Wilson's European speeches. Explain the meaning of every selection.
  3. Explain the present situation in Germany.
  4. Give a clear, oral explanation of the present situation in Ireland.

### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE,  
NEW YORK CITY

- I. The British Elections—"The Elimination of the Liberals," "The British Elections."**

1. "The great Liberal party . . . has been swept away as by a cyclone." Study the table given in the editorial and see whether you can explain the election results.
2. "In the four years before the war the Liberals . . . carried thru Parliament a remarkable series of reforms." What connection had Lloyd George with these reforms? Will he be able to carry forward the reform program now?
3. What is the significance of the Sinn Fein victory in Ireland? How will it affect British politics?
4. "It was emphatically a khaki election." What does this mean?
5. Study the political situation (a) in England at the end of the Napoleonic Wars, (b) in France in 1870-1871. Do you see any similarities to the present situation in England, in Germany, in Russia?

- II. The Terms of Peace—"The Case of the Kaiser," "The President's English Speeches," "Attitude Toward the President."**

1. What, in your judgment, would be the best way to dispose of the former German Emperor and his heirs?
2. Comment on the following statements of the President: (a) ". . . there must now be not a balance of power, . . . but a single, overwhelming, powerful group of nations," etc.; (b) "If the future had nothing for us but a new attempt to keep the world at the right poise by a balance of power, the United States would take no interest in it."
3. Are the leaders of English thought in agreement with the President? What is Premier Clemenceau's attitude? Is there any way of reconciling the differences between Wilson and Clemenceau?

- III. The Negro as Fighter and as Citizen—"With the Buffaloes in France," "Independent Opinions."**

1. "France was a terrestrial heaven where they [the negro troops] could forget that they were sinners simply because they were black." What does this statement mean?
2. "For the duration of the war he has put aside his grievances," etc. What are these grievances? How did they come about?
3. Has the negro earned a place of honor beside his white brother in the fighting during this war?
4. Is the hope for future equality between negroes and white men in this country justified by the facts?
5. Are the facts about lynchings significant of the present and future status of the negro in this country?

- IV. The Steam Engine and Its Successors—"The Mystery of Diesel."**

1. ". . . if Diesel's inventive genius had been transferred to the other side it would have been worth more than an army corps to the Allies." In what sense is this true?
2. Summarize the mechanical and economic advantages of the Diesel engine over the steam engine. Over the gasoline engine.
3. "The commercial supremacy of England . . . has been based upon the exploitation of her coal fields," etc. Make this statement the basis for a brief review of British commercial enterprises. Why is British commercial supremacy in danger at the present time?
4. Why, up to the present, has Germany led the world in the development of Diesel type engines?

- V. Women in Industry—"Keeping Women on the Payroll."**

1. Answer the three or four questions propounded in the first paragraph.
2. "There is to be no wholesale withdrawal of women from the industries." Why not?
3. What will be the economic effect of the continuous employment of women in industry?
4. What provisions are being made at the present time for the continuous employment of women in industry? What safeguards will be necessary for the protection of women workers?

# "How I Saved 43% on Typewriters"

## An Expert Buyer's Statement

*"Formerly the typewriters used in our office were priced at \$100 each. Now we buy Olivers at \$57. This saving of nearly half means a great deal to us because we use so many machines. If any typewriter is worth \$100, it is this Oliver Nine, which we buy direct from the maker. After using Olivers we will never go back to \$100 machines. It is pure waste."*

### Among our customers are:

United States Steel Corporation

## Oliver Typewriters

Over 700,000 Sold

Now  
\$57

The Oliver Typewriter Company now sells direct. It has discarded old and wasteful ways.

During the war we learned that it was unnecessary to have great numbers of traveling salesmen and numerous, expensive branch houses throughout the country. We were also able to discontinue many other superfluous, costly sales methods. You benefit by these savings.

Our new way saves \$43 and so we sell brand new Oliver Nines for \$57.

This is the exact \$100 machine—not a change has been made. Such is our \$2,000,000 guarantee.

### Free Trial

Merely mail us the coupon and we will send you an Oliver for five days' free trial. Try it at your office or at home. If you decide to keep it, pay us at the rate of \$3 per month. If you return it, we will gladly refund the outgoing transportation charges. Old machines are accepted in exchange at fair valuation.

The Oliver Nine has the universal standard keyboard. So any operator may turn to it without the slightest hesitation. And it has a dozen other features which attract. It is greatly simplified in construction, having far less parts. It is noted for its freedom from trouble, great durability and easy operation.

### Why Be Wasteful?

Whether you use one typewriter or one hundred, this new Oliver plan saves you half.

No machine does better work. No typewriter is speedier. None are more satisfactory in the long run than the Oliver Nine.

All this you can know for yourself very easily. You are your own salesman and decide for yourself.

Read the coupon. Note how simple our plan is. Then mail it today for either a free-trial Oliver, or our amazing book entitled "The High Cost of Typewriters—The Reason and the Remedy." With the latter we send an illustrated catalog describing the Oliver in detail.

Which for you? Check one or the other item on the coupon now.

Canadian Price, \$72

## THEODORE ROOSEVELT'S REMARKABLE REMARKS

Dee lighted.  
My hat is in the ring.  
I'm for the square deal.  
Walk softly, but carry a big stick.  
No man is happy if he does not work.  
I believe emphatically in organized labor.  
We believe in a real, not a sham, democracy.

Peace is not the end. Righteousness is the end.

We Americans are the children of the crucible.

When the weather is good for crops it is good for weeds.

It is almost as harmful to be a virtuous fool as a knave.

I don't care a hang for the law! I want that canal built.

A lie is no more to be excused in politics than out of politics.

It is almost as irritating to be patronized as to be wronged.

The most important thing that a nation can save is its own soul.

We must judge a nation by the net result of its life and activity.

After you have learned to fight you can be as peaceful as you want to.

Patriotism should be an integral part of our every feeling at all times.

The nation, like the individual, cannot commit a crime with impunity.

A man to be a good American must be straight, and he must also be strong.

This is not and never shall be a government either of a plutocracy or of a mob.

Our armies do more than bring peace, do more than bring order. They bring freedom.

Americanism is a question of spirit, conviction and purpose, not of creed or birthplace.

No nation can be really great unless it is great in peace, in industry, integrity, honesty.

We fear God when we do justice to and demand justice for the man within our own borders.

A good motto for us all is never to hit unless it is necessary, but when you do hit, hit hard.

Leadership is of avail only so far as there is a wise and resolute public sentiment behind it.

If a man will submit to being carried, that is sufficient to show that he is not worth carrying.

And more than that, don't you do it if you expect me to pussy-foot on any single issue I have raised.

It is difficult to make our material condition better by the best laws, but it is easy to ruin it by bad laws.

The worst foes to America are the foes to that orderly liberty without which our republic must speedily perish.

Any man who says he loves the country from which he came as well as this coun-

try is no better than the man who loves another woman as well as he loves his wife.

Envy is merely the meanest form of admiration, and a man who envies another admits thereby his own inferiority.

Our nation is that one among all the nations of the earth which holds in its hands the fate of the coming years.

Hardness of heart is a dreadful quality, but it is doubtful whether, in the long run, it works more damage than softness of head.

There is a revolting injustice in punishing the weak scoundrel who fails, and bowing down to and making life easy for the far more dangerous scoundrel who succeeds.

## ROOSEVELT'S LAST MESSAGE

Read at a meeting of the American Defense Society in New York on January 4, the night before Mr. Roosevelt died.

I cannot be with you and so all I can do is to wish you Godspeed. There must be no sagging back in the fight for Americanism merely because the war is over. There are plenty of persons who have already made the assertion that they believe the American people have a short memory and that they intend to revive all the foreign associations which most directly interfere with the complete Americanization of our people.

Our principle in this matter should be absolutely simple. In the first place we should insist that if the immigrant who comes here does in good faith become an American and assimilates himself to us, he shall be treated on an exact equality with every one else, for it is an outrage to discriminate against any such man because of creed, or birthplace, or origin.

But this is predicated upon the man's becoming in very fact an American and nothing but an American. If he tries to keep segregated with men of his own origin and separated from the rest of America, then he isn't doing his part as an American.

There can be no divided allegiance here. Any man who says he is an American, but something else also, isn't an American at all. We have room for but one flag, the American flag, and this excludes the red flag, which symbolizes all wars against liberty and civilization just as much as it excludes any foreign flag of a nation to which we are hostile.

We have room for but one language here and that is the English language, for we intend to see that the crucible turns our people out as Americans, of American nationality, and not as dwellers in a polyglot boarding house; and we have room for but one soul loyalty, and that is loyalty to the American people.

## THE NEW PLAYS

*Keep It To Yourself.* A typical French farce, cleverly written and ably presented. Very amusing for those who enjoy bedroom comedy. (Thirty-ninth Street Theater.)

Fay Bainter demonstrates that *East Is West* in a prettily staged and entertaining comedy with music. It has all the elements of melodrama, but contents itself with being a charming romance. (Astor Theater.)

For those that like it *Somebody's Sweetheart* is the kind of thing they like. Romantic Spanish setting, colorful costumes, snappy tunes, numerous jokes—all the ingredients of a successful musical comedy. (Central Theater.)

# Speed Up Production The Factory at Your Fingers' Tips

IT'S difficult these days to make good promised deliveries with present shortage of man power and shipping congestion—but you can stimulate production by keeping records efficiently. You can master many conditions peculiar to today if your records tell instantly the condition of any order at any time.

## **RAND**

### **Visible Record Equipment**

does this. Occupies little space—visualizes your factory orders, and flashes before your eye the condition of every order—each operation, time of arrival and departure from each department. You know which machines are active—which idle. You can plan, route and dispatch advantageously—you can follow these from

your desk. You can keep an efficient perpetual inventory; a stock record; a list of parts showing location in stock room; employees' records; take off shortage reports in minimum time; prevent over-buying of material. These things RAND Equipment is doing today in hundreds of businesses, and just as easily it can accomplish such results for you.

Here's a RAND Card Record Machine carrying a R A N D S. O. S. Panel—the vital data on each card, in plain view; missing card signalled by "Card Out." Transparent signals in seven distinctly different colors may be used for classifying your records, thus greatly increasing their efficiency. Record information or refer to your records without

handling or removing card. Simply lift card and the information is before you.

## **RAND**

**Visible Record Equipment**  
**is Indispensable, too, In**  
**Credit, Sales, Purchasing and Accounting**  
**Departments.**

RAND users now represent every line—and all continue buying more and more equipment. If you want to hasten production and insure future orders by making good now on promised deliveries, you need a RAND—need it badly. Write on your business letterhead for interesting information on production records now handled with RAND Equipment.

*Handling Production Records on a RAND low-inclined desk stand.*

*This is how the Burroughs Adding Machine Co. handles its employees' records.*

## **THE RAND COMPANY**

1555 **RAND** Building

North Tonawanda, N. Y.

*Originators and Patentees of Visible Indexing*

'Twould be hard to reckon the millions of dollars that this little machine is *saving* for American business. Always a quick and economical way of duplicating all kinds of typewritten letters and forms! But with the arrival of the new Dermatope stencil—"a thin sheet of dark-blue paper"—the Mimeograph becomes tremendously more useful. *It does finer work.* And, as the new stencil is practically indestructible, it does quicker work—and cheaper. Also it easily prints maps, plans, designs and the like—opening new possibilities for development. In thousands of American industries the Mimeograph is now effecting essential economies. Cogitate! At this crucial time don't you think it worth while to investigate what it can do for you and your business? All information—and catalog "E"—from A. B. Dick Company, Chicago—and New York.

HARPER'S WEEKLY

## A STRENUOUS LIFE

ROOSEVELT practised what he preached. He advocated the strenuous life and he led it. It is a calamity to his country and a grief to his countrymen that his career was cut short at the age of sixty-one, but he did more than three men's work in his three score years. In a page full of tributes by public men we will find him praised for such diverse achievements that we might think they were talking of different men were it not that they agree as to the fundamentals of his character, such as his courage, his sincerity, his energy and his patriotism. He might have stayed alive longer if he had shirked effort and shunned danger, but then he would have been the less alive. He might have avoided making so many bitter enemies, but then he would not have made so many fervent friends. He was not only a keen politician and an astute statesman, he was also a good sportsman, an enthusiastic naturalist, a wide reader, a voluminous author and a brilliant editor. If one has written forty volumes, some of them histories involving years of research, some of them travels involving thousands of miles of travel, he might think himself entitled to rest upon his laurels, but Roosevelt did not rest, nor were these his chief laurels. He always went after the big game in every field. He aimed straight at whatever he wanted to hit. He began his career with an attack on police corruption in New York. He campaigned for a big navy in the arid regions of the West. He advocated national appropriations for irrigation in the East, where the people were opposed to extending the area of cultivation. He denounced race suicide in Paris. He criticized the British administration of Egypt in London. He delivered a double blow at religious intolerance in Rome.

Roosevelt advocated large families and he had a large family. He urged the sending of young men to France and he sent his own sons. Two of them were wounded and one was killed. He volunteered himself in spite of his inflammatory rheumatism and the loss of one eye, and when his services were refused it was a disappointment almost as keen as his defeat for the Presidency. But the efficiency of our army and navy in the present war was largely due to his efforts in the days when appropriations for that purpose were unpopular. The target practise he had started in the navy proved useful at Manila and Santiago. He promoted Pershing in the face of infuriated opposition and now everybody is glad he did.

Roosevelt's many-sidedness has made him peculiarly liable to misrepresentation by those who see only one of his aspects. His injunction: "Walk softly and carry a big stick," has been repeated by friend and foe with exclusive emphasis on the "big stick" clause, both parties forgetting that he put first the duty of avoiding offense. Consequently Roosevelt the Militarist has overshadowed Roosevelt the Diplomatist. His title of Colonel kept perpetually before the

public his services in raising the Rough Riders, but no titles are given to those who make peace, or, what is better, preserve it. For his services in bringing to an end the Russo-Japanese war he got merely a Nobel medal and the temporary ill-will of both belligerents. The full story of how he staved off the Great War for eight years has not yet been made public, but on another page of this issue Mr. Howland tells how Roosevelt by timely intervention saved the Algeciras Conference from failure. It is only recently that the world has learned that in the crisis over Morocco France was daily expecting war and the British fleet was steamed up and cleared for action. If war had come then Germany might have won, as the French admit, but by this postponement France, Belgium, Russia and Great Britain were enabled to prepare for the impending war. Again in the same year Roosevelt's tact and courage prevented a threatened conflict between Japan and the United States.

Both Roosevelt and Cleveland deserve credit for championing the cause of helpless Venezuela and forcing arbitration upon the European Powers that were about to resort to force, but there is a noticeable difference in the way the two Presidents accomplished their aim. Cleveland issued a defiant and arrogant manifesto against Great Britain that might easily have been construed as an insult and that made it very difficult for the British Government to recede from its position and accept a compromise. Roosevelt used other tactics. He remarked quietly to Ambassador Holleben that unless the Kaiser changed his mind and consented to arbitrate his difficulty with Venezuela within forty-eight hours Admiral Dewey would be ordered to sail with the Atlantic squadron. Within thirty-six hours Dr. Holleben came to the White House with a despatch that the Kaiser would arbitrate. Whereupon President Roosevelt publicly complimented him on his devotion to the principle of arbitration and the Kaiser was enabled to add this unearned encomium to the other evidences of his peace-loving disposition.

As he had brought together Japan and Russia, as he had joined the Atlantic and the Pacific, so he labored incessantly to unify the United States by healing the class divisions between capital and labor and the sectional divisions between North and South, and between East and West. Born in the densest part of the largest city of America, he went to the open range for his training. He brought together in the same regiment his Harvard classmates and his cowboy companions. He voiced the vague unrest of the radical West and gained for it a hearing in the most conservative quarters of the East. The Progressive party was not a political success but as an educational machine it was irresistible. His enemies tried to get rid of him by making him Vice-President, by shooting him and by banishing his name from

the newspapers. But he rose out of the Vice-Presidency, recovered from the shot, and today the papers are filled with him, not with the perfunctory eulogies bestowed upon any prominent man at his demise, but with expressions of widespread admiration and heartfelt affection.

His was a happy life—so he said, and he alone knew. That it was a successful as well as a strenuous life we all know.

## CHANGING PARTNERS

ONE gets dizzy watching Europe nowadays. It looks like a wild barn dance, some shifting partners and some in constant revolution.

We read in the morning paper that Turks and Bulgars are fighting over Adrianople. So they were in 1913, but in the meantime Turks and Bulgars have been allied in a war against the Serbs and Greeks, who in 1912 were allied with the Bulgars against the Turks. The Rumanians, who in 1913 joined with the Turks against the Bulgars, were in 1917 fighting against Turks and Bulgars.

The Polish legion under Pilsudski which in 1915 was fighting under the Austrian flag to aid the Germans in the conquest of Poland is now fighting to drive the Germans out of Poland and the Austrians out of Galicia.

During the war Poles and Ukrainians served as comrades under the same flag in both the opposing Austrian and Russian armies. As soon as the armistice was signed Poles and Ukrainians began fighting each other over Lemberg.

Morocco, which the French conquered in 1913, was an active aid to the French in 1914.

Germans who were fighting the Allies in November are now asking their protection against their own countrymen, just as Russians last year begged the Germans to enter and defend them from the Bolsheviks.

The Czechs who first served in the Austrian army against the Russians went over to the Russian side and fought the Austrians and now are fighting the Russians in Siberia.

The Ukrainians at first were fighting in the Russian army against Germany. Then they broke with Russia and declared an independent republic which France financed. Next they made peace with Germany, but later the Germans occupied the Ukraine and upset the republic. When the Germans were beaten in France the republic revived, but now it is being put down by the French, who have called to their aid the German troops.

The Germans whom the Allies a few months ago were trying to drive out of Russia are now asked—and according to report ordered—to stay there and keep the Russians out of the Russian Baltic provinces. The armistice was amended by the Allies at the last moment with this object.

In 1855 British, French, Turkish and Italian forces united in an invasion of Russia. In 1914-17 Russia was allied with Great Britain, France and Italy against Turkey. In 1918 British, French and Italian forces united in an invasion of Russia.

Russians and Japanese were fighting in Manchuria and Siberia in 1905. Ten years later they were friends. Now they are again fighting each other in Manchuria and Siberia.

Mannerheim, who in 1905 fought the Japanese, was in 1915 as their ally fighting in the Russian army against the Germans. In 1918 he was fighting against the Russians with the aid of the Germans, and now is Premier of independent Finland.

In 1918 British, French and American troops landed on the Murmansk coast of Russia at the invitation of the Soviet and with the approval of Trotzky. In 1919 they are fighting the Soviet Government to overthrow Trotzky.

Slovenes who early in the war served in the Austrian army in the war against Serbia are now uniting with Serbia. Croats who first fought under the Austrian flag against Italy and later deserted to the Italian army are now quarreling with the Italians over the Adriatic coast. Serbia has virtually declared war against Italy on the ground that

Italy has occupied lands inhabited by the Serbian race which Serbia, with the aid of Italy, has fought to free from the Austrian yoke.

Italy and Rumania, which were in alliance with Germany and Austria up to 1915, took sides against them in the present war. Most curious of all is the fact revealed in the publication by the Bolsheviks of the secret treaties, that the dual alliance of 1895 between Russia and France, which formed the basis of the present entente alliance, was originally designed to protect Russia and France against Great Britain and Belgium, who were suspected of forming an aggressive alliance with Germany and Austria!

Now in considering such cases as these we must not assume that they necessarily imply inconsistency or indecision. A nationality struggling for existence has to make such alliances as seem at the moment most likely to advance its interests. Nations are never units but are cut across by racial, class and sectarian divisions. But the observation of these shifting affiliations gives emphasis to President Wilson's argument that such alliances cannot be depended upon and that the peace of the world can only be maintained by a world-wide organization.

## THE PRO-GERMANS

THE defeat of Germany does not mean the suppression of Germanism. On the contrary it has stimulated the spread of Germanic ideas among the Allied nations. We have foiled the efforts of Germany to bring the world under the sway of her military power, but there is danger that the world may be dominated by her moral influence. There is a new and insidious form of pro-Germanism now finding expression in the most respectable periodicals and pulpits which consists in holding up for our imitation those German practices that once were reprobated. For instance, we have such arguments as the following:

Germany in 1871 seized French territory without regard to the wishes of the inhabitants. Therefore France and Belgium should seize German territory as far as the Rhine without regard to the wishes of its inhabitants.

Germany in 1871 imposed upon France a huge indemnity for the purpose of crippling French commerce for a generation. Therefore the Allies should do the like.

Germany proposed in case of victory to annex all the British, French and Belgian colonies in Africa. Therefore all the German colonies should be annexed by these powers.

The German armies in France and Belgium destroyed cathedrals, looted homes and wrecked factories. Therefore Germany should be treated in the same fashion.

The Germans robbed the art galleries and museums of France and Belgium. Therefore the chief art treasures of Germany should be confiscated by the Allies.

The German officers in the occupied territory imposed various unnecessary and vexatious regulations upon the population. Therefore the Allied and American officers should enforce the same code on the German territory they occupy.

The German Government restricted freedom of speech and press and suppress the linguistic rights of minor nationalities. Therefore the American Government should do the same.

Germany required military service of all her young men. Therefore we should do the same.

Germany undertook to build as large a navy as Great Britain. Therefore we should do the same.

Germany deliberately cultivated a spirit of national hatred. Therefore we should do the same.

These and many similar arguments, almost as baldly put, are constantly being advocated. Now we are not saying that some of these things are not desirable or necessary. The Allied and American troops were forced to follow the German example in the use of poison gas and the aerial bombardment of cities. Nor do we say that we should never

earn anything from our enemy. On the contrary we might well imitate Germany in some things. For instance, America might well reduce the illiteracy among our recruits from 10 per cent, as it is now, to .01 of 1 per cent, as it is in Germany. America might raise 200 bushels of potatoes to the acre instead of 100, and America might abolish lynchings in time of peace. What we object to in the above arguments is the use of the term "therefore." We dislike to have the very things for which Germany has been denounced picked out as models for America.

## A NEW WAY OF LEARNING

THE close of the war has given an opportunity for trying out various much needed educational reforms. The British Government is reorganizing the British system from the primary grades to the universities. The "modern school" movement launched by ex-President Eliot and Dr. Flexner has materialized in the practical and promising Lincoln School in New York. The project for a national university is to be brought again before Congress.

A more novel departure from traditional methods is "The New School for Social Research" which will open in New York in February. It is startling to read in the prospectus that the number of regular students will be small, perhaps not more than a hundred. But when we read on we see the reason for this modest expectation. It seems the doors of the New School are not to open to all at the sesame of so many units of language, mathematics and science, dutifully acquired. No, the prospective students "will have to prove their exceptional intelligence and special interest in the work in hand. They should show promise of becoming high-class editorial writers, original teachers, public administrators or their capacity for taking responsible positions where it is essential to deal with the problems of labor, industry and government." But on the other hand nobody so qualified is debarred by reason of being of the wrong sex or for lack of a college or high school diploma. And anybody can get admission as an "auditor" regardless of aims and ability.

In its methods of instruction—perhaps we should say guidance—the New School will also be unconventional. It will try to get rid of the perfunctory reading, the mere listening to lectures and the mechanical examinations of the ordinary university. The teaching will be personal and informal. "Field work" in administration, politics and commerce is to be a special feature. Whatever may be thought of this novel plan of work, certainly we can expect some interesting results when a hand-picked body of students get to working with such stimulating teachers as James Harvey Robinson, Charles Austin Beard and Thorstein Veblen.

## DWINDLING DESTINY

IT is a significant thing—or if it isn't significant of anything it is at least a curious coincidence—that three of the most popular plays now running in New York should deal with destiny: Maeterlinck's "Betrothal," Barrie's "Dear Brutus" and Woods's "Roads of Destiny." One might think that we were back in ancient Athens where a play had to have a fatalistic theme in order to be orthodox, and since the drama was a religious exercise it had to be orthodox. Or back in Puritan Boston, where they had no plays but found their amusement in discussing free-will and predestination. Hitherto the American playwright, if he had a religion or philosophy—which wasn't likely—was afraid of frightening away the public by exposing it, so he carefully concealed it like some obscene thing, or rather concealed it behind some obscene thing.

But now, behold, the advertisement of "Roads of Destiny" is boldly headed by "Do you believe in fate?" with the same confidence in the attractive power of such an appeal as rival advertisements on the same page display in their slogans: "It's naughty but it's nice" and "The pret-

tiest darlings in New York." The Barrie play prints on its program the reminder that its title is taken from Shakespeare:

The fault, dear Brutus, lies not in our stars but in ourselves that we are underlings.

In the Maeterlinck play Destiny actually appears on the stage in *propria persona* at first as a bronze giant who dwindles gradually to a whining babe in arms.

To make the coincidence the more significant or at least curious, the three plays present the same solution of the old problem, namely, the modern scientific view that character creates destiny and that character is built up out of the past. "The Roads of Destiny" is a dramatization of O. Henry's ingenious fable in which he shows that to a man standing at crossroads it does not matter so much as he thinks which way he takes, for he will come out about the same in the end, since he takes with him in each case the chief determinant, himself. In "Dear Brutus" the characters are given by some midsummer magic the chance to live their lives over again, but find themselves no better off since the characters remain the same. Maeterlinck is now engaged in putting on the stage the philosophy that he formerly expressed so clearly—or at least so beautifully—in his essays. For instance, in the essay on "The Foretelling of the Future" in "The Double Garden," he says:

Time is a mystery which we have arbitrarily divided into a Past and a Future in order that we may understand something of it. In itself we may be almost certain that it is but an immense eternal, motionless Present, in which all that has taken place and all that will take place takes place immutably, in which Tomorrow, save in the ephemeral mind of man, is indistinguishable from Yesterday and To-Day.

In "The Betrothal" young Tytyl objects to his assembled progenitors dictating his choice of a wife and exclaims: "They keep on telling me that it's not my business. Everybody's allowed to get a word in except me. Where do I come in? That's what I want to know!" To this the Great Ancestor, who lived in the troglodyte age, replies:

But you have the right to choose. I and the others are all you. Those who have lived in you live in you just as much as those who are going to. There is no difference. It all connects and it's still the same family.

And the final injunction of Light, his guide, is:

Good-bye, Tytyl. Remember, dear, that you are not alone in this world and that all you see in it has neither beginning nor end. With this thought in your heart, letting it grow with your growth, you will always know whatever may happen, the right thing to say, the right thing to hope for.

The Light of the play is the Wisdom of Maeterlinck's essay on "Wisdom and Destiny." The two motive powers are contrasted somewhat as Schopenhauer's "Will and Idea." Destiny comes out of the past. Wisdom is drawn from the future. One looks backward; the other looks forward. The former is a blind push; the latter is clear-eyed guidance. Both are deterministic but differ vastly in intellectual and moral value. If a man knew where both the forked roads before him led to he would have no hesitation which to choose. He would take a certain one of them as instantly and inevitably as if he were shoved into it by an irresistible external force.

The fatalism of the Greek drama and of the Arabian tales was blind destiny. Curiously enough Maeterlinck's early plays of the "Pelleas and Melisande" period were built about the theme of an overruling fate of the Greek sort, not only arbitrary and indifferent but actually malevolent toward mankind. But Maeterlinck likes to make fun of his former selves. He put into Blue Beard's dungeon the anemic heroines of his youthful plays and in "The Betrothal" he makes a laughing stock of the Destiny with which he used to scare us.

As man grows in purposeful Wisdom he ceases to be the slave of blind Destiny. That is Maeterlinck's message. And thousands will get it from the stage to one who would read the essays. Why did not Spencer, Kant and Plato dramatize their philosophies? But, come to think of it, Plato did.

# THE STORY OF THE WEEK

The Death of Theodore Roosevelt mourned the death on January 6 of Theodore Roosevelt, twenty-sixth President of the United States. He died quietly in sleep at his home in Oyster Bay from a blood clot entering the lungs, due indirectly to the fever which he contracted in his Brazilian explorations in 1914.

Mr. Roosevelt had filled sixty years of strenuous life with his activities as soldier, naturalist, author, historian, publicist, explorer, rancher, statesman and above all patriot. Not only in this country but thruout the nations he had come to symbolize the spirit of Americanism and by his clarity of thought and force of personality he furthered the cause of progress far beyond ordinary achievement.

As Assistant Secretary of the Navy under President McKinley, Mr. Roosevelt increased its fighting efficiency tenfold; as Lieutenant-Colonel of the "Rough Riders" he played a brilliant part in winning the Cuban war; as Governor of New York he accomplished the passage of laws for the prevention of food adulteration, for efficient administration of the state canals, for the extension of civil service regulations; as historian he produced two works of recognized authority and prominence—"The War of 1812" and "The Winning of the West"; as explorer and naturalist he made a notable collection of unknown animals of Africa and discovered in Brazil a new river a thousand miles long, now named Rio Teodoro; as international statesman he won the Nobel Peace Prize by his personal intervention in ending the Russo-Japanese War and averted conflict between Germany and France in 1906 by his influence at the

Algeciras conference; as President of the United States he accomplished the conservation of our natural resources, regulated the dangerous trend of big business monopoly, reformed the organization of our diplomatic corps, promoted self-government in Cuba and the Philippines, settled the dispute with Canada over the Alaskan boundary and Newfoundland fisheries, achieved the passage of laws for labor protection, the reorganization of national banking, the reclamation of 3,000,000 acres of arid lands, and built the Panama Canal.

It is difficult to suggest by superficial summary the enormous achievements and far-reaching consequences of Roosevelt's life. And no summary can bring out the importance of his personal influence, constantly making itself felt in speech and print.

**Sixty Strenuous Years** Theodore Roosevelt was born on October 27, 1858, in New York City, a direct descendant of Claas van Roosevelt, who came to this country from Holland in 1649. As a boy he was rather frail; when he entered Harvard in 1876 he was described as slight, flat-chested, weighing only 135 pounds. During college he made good his determination to build up his physique, and he also held class office, was an editor of *The Advocate*, and won academic honors.

He married in 1880 Alice Lee, who died in 1884, leaving one child, Alice Roosevelt. He married again in 1886, Edith Kermit Carow, who is still living. Her children are Theodore Roosevelt, Jr.; Kermit, Ethel, Archibald and Quentin. From 1882-4 Mr. Roosevelt was a member of the New York Legislature, from 1884-6 he was a ranchman

in North Dakota. He was president of the New York Police Board from 1895-7. In 1897 he was appointed Assistant Secretary of the Navy and resigned a year later to organize a cavalry regiment for service in the Cuban war. He was Governor of New York from 1889-1901.

Elected Vice-President of the United States in 1900, he succeeded to the Presidency on the death of McKinley, September 14, 1901. In 1904 he was reelected President by the largest popular majority ever given a candidate. At the end of this term he led an exploration and hunting trip in Africa. In 1912 he was the Presidential candidate of the Progressive Party. The next year he made a lecture tour in South America and in 1914 led an exploring party in the undiscovered wilds of Brazil. At the Presidential conventions in 1916 he was nominated by the Progressive Party, but declined the nomination and supported the Republican candidate, Charles E. Hughes.

When the United States entered the war in 1917 Mr. Roosevelt offered to raise an army division and lead it to France, but the offer was declined by President Wilson. The last years of his life were given chiefly to writing and speaking on America's participation in the war.

The news of Roosevelt's death came as a sudden shock to even his most intimate friends. In Washington Congress and the Supreme Court adjourned at once out of respect. Colors were ordered at half-mast thruout the country and at sea, and in European countries the Stars and Stripes were lowered for the first time in honor of a private citizen.

## ON THE WAY TO BERLIN

This is the 22nd Infantry of the 1st Division of the American Army of Occupation marching down the valley of the Moselle to the Rhine. Evidently some of the civilian enemy are not sorry to see them come.

Mr. Roosevelt's The funeral, held at Friends Oyster Bay, was altogether simple in accordance with Mr. Roosevelt's own wish. But the few outside his immediate family could pay their respects in person, thousands of expressions of grief and tribute poured in from all parts of the world. Senator Lodge, a lifelong friend of the ex-President, said in the Senate:

He was a great patriot, a great American, a great man. He devoted his life to his country; he tried always to serve it.

Among other tributes were:

**President Wilson**—In Theodore Roosevelt's death the United States has lost one of its most distinguished and patriotic citizens, who had endeared himself to the people by his strenuous devotion to their interests and to the public interests of his country.

**William H. Taft**—We have lost a great patriotic American, a great world figure, the most commanding personality in our public life since Lincoln.

**Secretary of War Baker**—During his long and brilliant career he touched the public life of America in more ways than any other of our public men.

**Secretary of the Navy Daniels**—Original, forceful, courageous, he was the monitor of millions of his fellow countrymen, who will miss his inspiring leadership.

**Major-General Leonard Wood**—A loss even greater to the nation than it can be to any individual.

**Charles Evans Hughes**—Back of all that was done in the war was the pressure of his relentless insistence.

**Director-General William G. McAdoo**—He will always be distinguished for one great achievement—the construction of the Panama Canal. This monumental work profoundly affected the world's commerce, and is one of those distinctive and epochal contributions to the progress of civilization.

**Senator Poindexter**—He was a "happy warrior" for truth and justice.

**Governor Townsend of Delaware**—America's leader of thought and action is dead.

**Governor Coolidge of Massachusetts**—He was the advocate of every good cause.

**William J. Bryan**—The rare qualities that won for Colonel Roosevelt a multitude of devoted followers naturally arrayed against him a host of opponents, but his death puts an end to controversy and he will be mourned by foe as well as by friend.

**D. E. Johnson, Foreman**—We, the Red Cap Porters, Union Station, Washington, extend our sympathy and regret that we have lost one of the greatest friends our race ever had.

**Thomas A. Edison**—He was one of our greatest Americans.

**Oscar S. Straus**—He is surpassed by no statesman in our national history.

**Lyman Abbott**—He raised the whole standard of honesty and purity in American political life.

**John R. Mott**—In all my world-wide travels, which have taken me to nearly fifty nations, I have never visited a land in which I did not find that Roosevelt had appealed powerfully to the imagination of the most aggressive and progressive elements among the people. He leaves a colossal gap.

**Darwin P. Kingsley**—Theodore Roosevelt was a physical and moral dynamo.

**James W. Gerard**—Theodore Roosevelt was the greatest American of his day.

**Abram I. Elkus**—Roosevelt not only served America and its people, but he did similar work for the whole of humanity.

These eulogies of his fellow-countrymen were supplemented by expressions of esteem and loss from national leaders the world over.

**King George and Queen Mary of England**—We had a great personal regard for him, and we always enjoyed meeting him. He will be missed by many friends in this country, to whom he endeared himself by his attractive character and many talents.

## THE GREAT WAR

January 2—President enters Italy. Poles occupy Frankfurt-on-Oder.

January 3—President at Rome. International organization formed for food relief.

January 4—President finished visit and left Rome. Ukrainians attack Lemberg.

January 5—President at Genoa and Milan. Serbo-Croatian-Slovene union announced.

January 6—President at Turin. German Government taking measures to resist Bolsheviks.

January 7—President returns to Paris. Radical revolt in Berlin.

January 8—Messrs. Lansing and House and Lord Robert Cecil confer on League of Nations. Trotzky as Dictator arrests Lenine.

**Premier Lloyd George**—Mr. Roosevelt was a great and inspiring figure far beyond his own country's shores and the world is poorer for his loss.

**President Poincaré of France**—Friend of liberty, friend of France, Roosevelt has given, without counting sons and daughters, his energy that liberty may live.

**Jose M. Gomez, ex-President of Cuba**—America has lost one of her greatest men and Cuba one of her best friends.

**Czecho-Slovak National Council**—Theodore Roosevelt was always a great friend of the Czecho-Slovaks. They now feel keenly the loss of so ardent a supporter of oppressed peoples.

**Premier Borden of Canada**—The whole world mourns with you.

**Guglielmo Marconi**—With the death of Theodore Roosevelt the United States lost one of the most forceful and magnetic personalities of our time, a man whose broad views and liberal mindedness were fully appreciated, not only in his own country but the world over.

**Sir Gilbert Parker of Great Britain**—He could do what no other man dared to do. He could lecture England on her duty in Egypt and no one in this country was offended.

**Baron Makino, head of the Japanese Peace Commission**—His services were not confined to America, but extended to the Orient.

**The President in Italy**—The President and his party, having left Paris on Wednesday, January 1, arrived in Rome late in the forenoon of Friday. The passage of the train had been acclaimed by great

throng all the way down from the French border, and in Rome an enormous and enthusiastic multitude was assembled to greet the visitors. Mr. and Mrs. Wilson were met by the King and Queen, and shortly after their arrival the President was formally received by the King, Ministry and Parliament in the Chamber of Deputies, where he made an address on the objects of his mission abroad. Several other addresses, void of political significance, were made by the President in Rome; Roman citizenship was formally bestowed upon him; and on his visit to the Forum branches of laurel and myrtle were presented to him according to an ancient custom. On Saturday he visited the Vatican and had a private conference with Pope Benedict which lasted nearly half an hour, and at which were discussed the chief social problems of the day, the general question of treaties, and the special interests of Palestine and Armenia. Later in the day he visited the American Protestant Episcopal Church and there received representatives of other Protestant denominations, including the Baptist, Methodist and Presbyterian.

Leaving Rome late on Saturday night the President went next to Genoa, where he visited the reputed birthplace of Columbus and the tomb of Mazzini, and laid a wreath at the feet of a statue of Columbus, and where the freedom of the city was conferred upon him. Milan was next visited, where an address on the issues before the Peace Conference was made. A final visit was made to the old Sardinian capital, Turin, and the party then returned to Paris, arriving there on Tuesday, January 7. It was announced that the President would leave Paris for home about February 12, and would return to Europe after the adjournment of Congress.

**The President's Addresses**—The address of the President to the King and Parliament of Italy was in two respects one of the most significant that he has made during his European tour. A few days before the French Prime Minister had declared his firm adherence to the old principle of alliances and balance of power, and this had widely been regarded as interposing an obstacle to the adoption of the President's plan of a League of Nations. At Rome the President said:

The only use of an obstacle is to be overcome. All that an obstacle does with brave men is not to frighten them, but to challenge them. . . . We know that there cannot be another balance of power. That has been tried and found wanting, for the best of all reasons that it does not stay balanced inside itself, and a weight which does not hold together cannot constitute a make-weight in the affairs of men. Therefore there must be something substituted for the balance of power, and I am happy to find everywhere in the air of these great nations the conception that that thing must be a thoroughly united League of Nations.

Equally significant was his reference to Balkan affairs, in which he said:

The great difficulty among such states as those of the Balkans has been that they were always accessible to secret influence; that they were always being penetrated by intrigue of some sort or another. Now the

Darling in New York Tribune

IT'LL TAKE A BIGGER WAVE THAN THAT TO WRECK THE OLD BOAT! EH, MATE?

© Committee on Public Information, from Western Newspaper Union

#### THE POLES GO ON FIGHTING

While they are trying to establish their new government the Polish troops are carrying on a war against the Russian Bolsheviki in the east and north and against the Prussian troops near Posen, fifty miles north of Berlin

intrigue is checked and the bands are broken. . . . They have not been accustomed to being independent. They must now be independent.

The significance of this lay in the fact that the Italian Queen is a Montenegrin Princess, and that Italy claims important special interests in Albania and elsewhere in the western Balkans. Indeed, under a secret treaty made with France and Great Britain in 1915 she is believed to make pretensions which clash with the demands of the Serbs and Jugo-Slavs, subjecting her to some suspicion of exerting the "secret influence" and "intrigue" which the President condemned. The President's address was received, however, with every mark of cordial approval.

At Milan the President said:

I am very much touched to receive at the hands of wounded soldiers a memorial in favor of a League of Nations, and to be told by them what it was they fought for—not merely to win this war, but to secure something beyond—some guarantee of justice, some equilibrium for the world as a whole, which would make it certain that they would never have to fight a war like this again. This is an added obligation upon us who make peace. We cannot merely sign a treaty of peace and go home with a clear conscience. We must do something more. We must add, so far as we can, the security which suffering men everywhere demand.

**Some War Details** It is authoritatively reported that the Allies destroyed or captured 202 German submarines during the war, while fourteen such vessels were destroyed by the Germans themselves and seven more were interned in neutral ports. There have under the armistice been surrendered at British ports 122 submarines, leaving at least 58 still to be given up. There are also 170 not yet finished in German shipyards, which will also be surrendered to the Allies. Thus there were put into commission during the war at least 403 of these vessels, of which one-half were destroyed or captured, a percentage of losses which scarcely seems to commend that type of craft.

The Australian Government reports that, while the five Australian divisions at the front never numbered more than 100,000 men, they captured 28,665

prisoners, 333 cannons, thousands of machine guns, mortars and vehicles, and millions of rounds of ammunition; recaptured 116 towns and villages, and released 251 square miles of soil from the German invaders; certainly a record of high efficiency.

**French Plan for a League of Nations** Interesting proposals for a League of Nations have been put forward by M. Leon Bourgeois, formerly Prime Minister of France and now President of the French Association for a Society of Nations and a prospective delegate to the Peace Conference. His plan provides that France, Great Britain, Italy and America, and perhaps also Belgium, Serbia and other allies, shall form a Society of Nations among themselves, fixing the conditions and fundamental rules, including compulsory arbitration and limitation of armaments; that this society shall dictate to Germany terms of peace, including reparation and chastisement; and that finally it shall call a universal conference, at which other nations will have opportunity to join the society, provided that the charter members, after very strict consideration of each case and examination of the guarantees given by the applicant, approve their doing so. This plan, M. Bourgeois says, will be submitted to the Peace Conference upon its organization.

Two tentative British plans have also been prepared, the one by Lord Robert Cecil and the other by General J. C. Smuts, of South Africa, a member of the War Cabinet. These are being studied by the American delegates at Paris, but their details have not yet been disclosed.

**The German Situation** Apart from an acute but probably merely local outbreak in Berlin, affairs in Germany seem to be improving. There is less turbulence, and more serious thought is being given to the coming election of a National Constituent Assembly, which shall be charged with the determination of the future government of the country. The

great Centrist or Catholic party, which holds from one-fourth to one-third of the political power of Germany and which may hold the balance of power in the Assembly between the Moderates and Radicals, has issued a detailed and specific program, in favor of a democratic commonwealth, free from any sort of class control; a League of Nations, freedom of the seas, compulsory arbitration of international disputes, disarmament, preservation of German unity, universal suffrage for both sexes, the protection of private property rights and business enterprises, graduated taxes upon incomes and large fortunes and unearned increments, and freedom of worship, of speech and of the press. The Centrist is probably the best organized and disciplined party in Germany, and is a close second in size to the aggregate of all shades of Social Democracy.

The people of northern Schleswig, anticipating that the Peace Conference will decree their reunion with Denmark, have decided to abstain from voting in the German elections, tho of course they would have a perfect right to vote.

Count von Brockdorff Rantzau, the new German Minister for Foreign Affairs, on January 4 issued a declaration of policy to the effect that Germany must not yield to every condition of peace which her foes may prescribe; which is interpreted by the *Tageblatt* of Berlin as meaning that "no peace must be signed which differs by the breadth of a hair from the principles of President Wilson's fourteen points."

**"Red" Revolt in Berlin** The differences between the provisional German Government and the "Red" or "Spartacan" faction culminated on January 6 in an organized revolt of the latter at Berlin, with the avowed object of effecting a "Bolshevik revolution." The Spartacans were led by Dr. Karl Liebknecht, Rosa Luxemburg, and two Russian Bolshevik envoys, Adolf Joffe and Karl Radek, and were reinforced by the Independent Socialist party. Serious street fighting occurred, machine guns being used, and much loss of life was reported. The

THE INVASION OF RUSSIA

Through the collapse of the Central Powers it is now possible to enter Russia from all sides. The Czechs-Slovaks control the railroad from the Pacific to Perm. The Japanese have entered from Port Arthur and the Sea of Okhotsk. The Americans occupy Khabarovsk. The British have taken Baku and the Trans-Caspian. British and French fleets have entered the Black Sea. British troops have been landed on the Baltic coast. Three Allied and American expeditions have entered from the Arctic Ocean.

Government summoned all available troops to its support, and express confidence in its ability to maintain itself. The disorganization of all ordinary means of communication has made the obtaining of precise information impossible, but there are no indications that the outbreak will become general throughout Germany.

**The Polish Conflicts.** While organizing their new Government the Poles continue fighting at both sides of their country. At Lemberg, Vilna and elsewhere at the north and east they are in conflict with the Russian Bolsheviks, and in the province of Posen they are fighting the Prussians, who resist their attempt to occupy Prussian Poland at least in advance of the decree of the Peace Conference. It was reported on January 2 that they had occupied Frankfort-on-Oder, Beuthen in Silesia, and Bromberg in Posen, and on January 5 it was added that they had taken Kruschwitz, in Posen, and were advancing along the Kreuz-Danzig railway.

The Polish Charge d'Affaires in Switzerland reports that the new Polish Government is moderately socialistic republican, five of the fourteen members being Socialists. Equal universal suffrage has been established, and equal rights for all races and creeds have been decreed.

**The Chaos of Russia.** Russian affairs continue in a chaotic condition. American and Allied forces are advancing southward from Archangel, and are doing some severe fighting against the Bolsheviks. Anti-Bolshevik Russians and Czechs-Slovaks are advancing westward from Perm, expecting to effect a junction with the Allies at Vologda. A Russo-French force advancing from Odessa, and a Cossack army from Rostov on the Don, aim to meet and cooperate against the Ukrainians at Kiev. Two Bolshevik armies have moved southward from Petrograd into Esthonia and Lithuania, and one of them has

come into hostile contact with a British force at Riga. Allied, including American, warships patrol the Baltic Sea. It was announced on January 2 that British forces had been landed at Riga, Libau and Windau.

On the other hand it was announced on January 4 that nearly all the Japanese troops were to be withdrawn from Siberia, and that Allied intervention in that quarter was regarded as a failure owing to discord and jealousies among the powers. On January 7 it was further announced in London that British troops were being withdrawn from Russia as rapidly as possible, and that the port of Riga had been occupied by the Bolsheviks.

The representation of Russia in the Peace Conference remains undetermined. The Bolshevik Government is understood to be sending a representative who will seek entrance. Meanwhile the former Russian Ambassadors to the Great Powers are forming a Provisional Council at Paris and will endeavor to obtain a hearing in the Peace Conference for such men as Prince Lvoff, former head of the Russian Provisional Government; Nicholas Tchaikowsky, the head of the Archangel Government; and M. Sazonoff, formerly Minister for Foreign Affairs at Petrograd.

**Trotsky, Dictator, Arrests Lenine.** According to a Moscow dispatch by way of Sweden on January 8, Leon Trotsky, the Russian Bolshevik Minister of War and Marine, ordered the arrest of his colleague and Prime Minister, Nicholas Lenine. Their differences are said to have arisen over Lenine's desire to form a coalition with the Mensheviks or Moderates, while Trotsky wished to continue the Red "Reign of Terror." These differences began to develop some weeks ago, when Lenine found that it was practically impossible for him to administer the economic affairs of Russia without the cooperation of the bourgeoisie, and his overtures to them alienated Trotsky and the more extreme wing of their party.

**Norway Seeks Indemnity.** It is reported from Christiania that the Norwegian Government will probably file with the Peace Conference a claim for a billion crowns, or \$260,000,000, indemnity for shipping sunk by U-boats during the war, that being, it is said, the amount of insurance on the vessels lost. Norway is known to have been one of the chief sufferers from the U-boat campaign.

**"Greater Serbia" and Her Claims.** An interesting sequel to the President's remarks at Rome about the Balkan states was the announcement on January 6 that a Serbo-Yugoslav kingdom had been formed by the union of Serbia, Montenegro, Bosnia, Croatia and Slavonia, and that it would insist upon what it considers to be its territorial rights, in opposition to the claims which Italy is making under the secret treaty of 1915. Italy is understood to claim practically the whole Dalmatian coast, which she desires in order to confirm her control of the Adriatic. The Serbs and Yugoslavs contend that most of that coast properly belongs to them, being chiefly inhabited by people of their race, and they protest against being shut away from the sea by the cession of that coast to Italy. Rather than permit that, said Dr. Vesnitch, the Serbian Minister to France, "Serbia would fight again, and fight to a finish." He added that the Italian claim was based upon a secret treaty, that the United States thru President Wilson has demanded as one of the terms of peace the abolition of secret treaties, and that therefore Serbia looks to this country to secure the nullification of the treaty in question and the granting to Serbia of a suitable frontage upon the Adriatic.

**Armenia and Syria.** Reports multiply of renewed Turkish atrocities in Armenia, during the withdrawal of the Turkish army from the Caucasus; apparently with the purpose of completing, if possible, the extermination of that long-suffering people. Nazim Bey, formerly Prefect of Kharput, declares that he was removed from office by Talaat Pasha because of his protests against the massacres of Armenians who were, he says, by order of the Turkish Government, thrown into the Black Sea and drowned.

The Armenian Military Commission in London has presented to the British Government a note outlining the territorial and other claims of that country. These provide for an independent Armenia extending from the Mediterranean to the Black Sea, with an equal place with other nations in the Peace Conference.

Meantime the French Syrian Congress began its sessions at Marseilles on January 4 and prominent French statesmen declared that France would assert her traditional rights as the possessor of special interests in those regions and therefore as the "protector" of Syria and also, it was intimated, of Armenia. It is recalled that according

## OUR FIRST U-BOAT CAPTURE

Only now is the censorship lifted to permit the publication of this photograph taken by a sailor on U. S. destroyer "Fanning." It shows the first German prisoner captured by our navy. He is one of the crew on the "U-58" forced to surrender to the "Fanning" more than a year ago

to the London treaties of 1916 and 1917 Syria, the Lebanon and much of Armenia were assigned to the French "sphere of influence," and all of Mesopotamia to the British sphere, while Arabia was to become an independent kingdom. Now it is explained that this does not mean that the powers are to establish colonial governments over those lands, or even dominate or control them, but merely to assist and advise those peoples in self-government.

**Mr. Hoover's New Work** The President at Paris has appointed Mr. Herbert C. Hoover and Mr. Norman Davis as the American members of an international commission for the relief of liberated countries, of which organization Mr. Hoover will be director general. There will be two members each from France, Great Britain and Italy. The commission will assume charge of food supplies, shipping resources and financial aid for the various countries needing relief.

**Congressional Queries** Congress is not so much doing as asking just now. Most of the Senators and Representatives are from Missouri when it comes to a discussion of Administrative programs and achievements.

The War Department has been the target for many criticisms lately. Following Senator Chamberlain's attack last week on the inefficiency of the army's methods in paying troops and in caring for wounded men, Senator Weeks, of Massachusetts, spoke on January 2, scoring severely the delays and errors of the War Department in compiling casualty lists, and the failure of the War Department to cooperate with the Red Cross service in sending reports of casualties to the soldiers' families. The work of the Adjutant

General's office, he said, had been inexcusably slow and at the same time inaccurate.

Senator La Follette, of Wisconsin, and Senator Kenyon, of Iowa, both spoke at length, asking information as to why our troops are being kept in Russia. Senator La Follette went further and defended the Soviet Government in Russia, adding:

There can be no pretext that the American troops are in Russia now to fight the Germans or any one else save the Russians themselves. No grounds have been presented to this Congress to warrant any declaration of war against Russia, and I am confident that there could not be.

That the American troops in Russia have sufficient food and clothing and that their morale is good was announced by Secretary Baker as the basis of a cablegram from Archangel. The total casualties to date, he said, are six officers and 126 enlisted men.

Secretary Baker also made public a cable report from General Harbord, commanding the American port at Brest, which was in response to complaints of conditions there. General Harbord admitted that the living conditions in the camps at Brest were bad, due chiefly to the daily rains, but said that all possible progress was being made toward their improvement.

A resolution calling for investigation of the naval contracts made with Henry Ford for the construction of "Eagle" boats was introduced by Senator Lodge, of Massachusetts. He charged that:

Millions of dollars—fifty at the very least—is the price the navy is going to pay for refusing to confess publicly the failure of Henry Ford's Eagle boat program and abandon it.

The Senate Commerce Committee has called for a complete investigation of the Hog Island shipyard, which has cost over \$60,000,000 and turned out so far only three ships. General Manager Piez, of the Emergency Fleet Corporation, has testified that the cost of the yard seems to him reasonable and that the Shipping Board is satisfied with the administration of the Hog Island yard by the American Interna-

tional Corporation, contractor for the yard and for the ships built therein. Nevertheless, the Department of Justice has advised a further investigation and the Senate is now trying to find out why the project cost twice its original estimate, and whether it was worth it.

Secretary Baker's request that all informal and verbal war contracts be validated was amended by the Senate Military Affairs Committee to include only the claims of manufacturers, thus eliminating commitments relating to real estate. A commission of three members, representing the War Department, the Department of Justice and business interests, will pass on all claims and make awards.

To find out why the Government took over the communication systems and what is to be the future policy in their control and development was the purpose of a resolution introduced by Senator Kellogg, of Minnesota. He asked the Senate Interstate Commerce Committee to investigate the Government's assumption of control over telegraph, telephone, marine cable and radio systems, their future ownership, the conditions under which they may be permitted to consolidate, their sufficiency to meet the requirements of business in the United States and of commerce with foreign countries.

**What Secretary Daniels Wants** The Secretary of the Navy has caused general discussion and much criticism by his statement before Congress that if the Peace Conference should fail to come to an agreement on a plan for disarmament

Then it is entirely obvious to all that the United States, if she is to realize her destiny as a leader of democratic impulse, if she is to play her proper part, as she has played it in this war, in the protection of small nations, the preservation of the freedom of the seas and for the world at large, must have a navy that will be as powerful as that of any nation in the world.

Secretary Daniels said that he had President Wilson's support of his program for a bigger navy and that the program is essential to our position on

Paul Thompson

## TO SAVE THE STARVING PEOPLE OF THE NEAR EAST

This commission from the American Committee for Relief in the Near East has sailed for Europe to direct the use of the committee's funds in the work of bringing relief to the suffering civilians of Armenia, Syria, Serbia and the other countries of the Near East. The head of the mission is Dr. James L. Barton (center), a former missionary to Turkey and foreign secretary since 1894 of the American Board of Congressional Foreign Missions. At the left of the photograph is Dr. G. H. Washburn, an eminent physician who has spent many years in Turkey, and at the right is Mr. W. W. Peet, business manager and diplomatic representative of Turkish missions.

the Monroe Doctrine and to our own defense. He added:

It is my firm conviction that if the Conference at Versailles does not result in a general agreement to put an end to naval building on the part of all nations, then the United States must bend her will and bend her energies, must give her men and give her money to the task of the creation of incomparably the greatest navy in the world.

The specific recommendations that Secretary Daniels urged included the building of ten first class battleships, to cost, exclusive of armor and armament, \$21,500,000 each; six battle cruisers, to cost, exclusive of armor and armament, \$23,500,000 each; ten scout cruisers to cost \$7,350,000 each, and 130 small craft, the character and cost to be determined later. It is estimated that such a program would place the United States on the same relative footing with Great Britain, giving this country, with the vessels now building, sixty-two first class battleships, while England has sixty-one at present in commission.

As to enlistment in the navy, the Secretary said that 250,000 men would be required, of which number 60,000 would be assigned to the merchant vessels. Originally the United States Shipping Board asked for 131,000 men to man the vessels under its direction. By reducing the number of enlisted men Secretary Daniels said that he had been able to reduce his estimates for wages from \$579,000,000 to \$211,000,000. By action of the Shipping Board on December 13, the navy hereafter will be required to man only troopships to be commissioned and those now in the service. All cargo and steam ships to be commissioned hereafter will be manned by civilian crews.

Increased pay was also recommended for men in the navy and a new system of officers' promotion on the basis of merit instead of seniority.

The Congressional reactions to Secretary Daniels' speech were chiefly deprecatory or skeptical. Even friends of the Administration saw in it an attempt to force a premature issue on the question of international disarmament. Less sympathetic critics referred to it as an "ineffectual bluff," an unfortunate attempt at "twisting the lion's tail." The general opinion in Washington seems to be that Secretary Daniels will not be able to put thru Congress his three-year naval building program at a cost of \$600,000,000 and that he is hampering by his arguments in its favor President Wilson's efforts to establish firm international friendships with the Allies.

**A Transport Aground** Just as it was reaching the port of New York on New Year's Day with between two and three thousand wounded soldiers aboard, the troopship "Northern Pacific" went aground at Fire Island and could not be got off. An unusually heavy fog was chiefly responsible for the ship's mishap. The waters near Fire Island offer at any time a difficult piece of navigation, since ships must pass thru a comparatively narrow channel between a sub-

Off in Chicago Tribune

**THE DANGER OF REDUCING PRICES** merged sand bar and the Long Island coast. The "Northern Pacific" was misled by the fog and went too close inshore.

#### LINCOLN IN LONDON

The long-standing discussion on which statue of Lincoln should be given to the British Government to stand in Westminster has been ended by the British decision to accept this statue by St. Gaudens, the original of which stands in Chicago. The choice is based on a report presented by Howard Russell Butler, vice-president of the National Academy of Design, accepted by the Royal First Commissioner of Works in London. The statue was originally accepted in June, 1915, to mark a century of peace between Great Britain and the United States. In the spring of 1917 the chairman of the American Peace Centenary Committee offered in place of the Gaudens statue a figure of Lincoln by George Grey Barnard, stating that the latter figure was a superior substitute. A widespread dispute followed on the respective merits of the St. Gaudens and Barnard statues. In a referendum by readers of The Independent the St. Gaudens statue held first place with 9820 votes, and the Barnard statue came last with 1207 votes. The Barnard statue has now been offered to the city of Manchester, England

get the ship off the sand, naval patrol boats and the hospital ship "Solace" were sent to take off the wounded men. Rain and snow, northwest winds and a heavy sea made the work particularly difficult and somewhat dangerous. Twenty-one hundred wounded men—all who were able to walk with crutches or without—climbed down rope ladders from the sides of the stranded ship to the decks of small boats forty feet below, and were thus taken into New York harbor and sent to nearby army debarkation hospitals.

The small boats, difficult to manage because of the wind and sea, kept staggering into the hull of the transport and then pulling away the length of the hawser. It sometimes proved a tantalizing task to juggle a man safely from the dangling ladder to a wobbling deck. But the soldiers took this supplementary test of their heroism in good spirits and even sang cheerfully as they crowded shivering into the patrol boats for a cold, uncomfortable five-hour trip.

Ashes to ashes!  
Dust to dust!  
If the Boche don't get us  
The navy must!

There were two hundred "stretcher cases" on the "Northern Pacific," and these men, too sick to sit up, were kept on the ship for a day and a half. When it finally became evident that the "Northern Pacific" was in danger of breaking up, these men were lifted into wire baskets and swung over the side of the ship into the hospital ship.

After everyone was off wrecking tugs were sent out to try to pull the "Northern Pacific" into deep waters. And when this attempt failed, the transport was temporarily sunk to prevent the vibration of the waves from breaking her up. This is the second trip from France that the "Northern Pacific" has made bringing wounded soldiers home.

**Five Socialists Convicted** Congressman - elect Victor L. Berger and four other Socialist leaders have been found guilty by the Federal Court in Chicago of violating the espionage law by delivering speeches and circulating published articles with the wilful intent to cause insubordination, disloyalty and refusal of duty among naval and military forces of the United States, and with interfering with the recruiting service and enforcement of the selective draft law.

The verdict will, of course, bar Mr. Berger from Congress. He is at present publisher of the Milwaukee *Leader*. The other convicted men are: Adolph Germer, secretary of the National Socialist party; William F. Kruse, editor of *The Young Socialist*; Irwin St. John Tucker, writer and speaker; J. Louis Engdahl, editor of *The American Socialist*.

All the defendants have asked for a new trial and are now released on bond. Their punishment on this conviction may be from one to twenty years' imprisonment, a fine from \$1000 to \$10,000, or both.

# THEODORE ROOSEVELT AND HIS TIMES

BY HAROLD HOWLAND

**B**RAVE times, stirring times, times big with promise of a new age filled with a more generous conception of the rights of man and a richer measure of human sympathy and justice. Such were the times of Roosevelt. When the Great War came to turn the page and to write a new chapter heading in the history of the American people, much that was definite and irrevocable had been achieved. A deal of new machinery for the use of the people in their proper business of governing themselves had been set up and put smoothly into operation. The right and duty of the people thru their government to take a hand in the control of private business for the protection of the well-being of the weak individual in his relations with powerful aggregations of wealth had been once for all established. The superiority of human rights to the rights of property had been burned deep into the common consciousness and written indelibly on the statute book and the tablets of judicial decision. Democracy had been transformed from an obsolescent word into a dynamic reality. The times had proved to be for the American people not merely a period of awakening to the demands of their own future development, but the best possible preparation for the work of making the world safe for democracy which was to be thrust upon them by the arch enemy of human rights.

So much for the times.

What of the man himself? Where lay the secret of Theodore Roosevelt's effectiveness as a leader in this renaissance of democracy?

The secret was fourfold.

First, he believed in a sternly moral standard of conduct. Right is right and wrong is wrong. It does not make wrong right to say that it is done in defense of property, on the one hand, or, on the other, done on behalf of the people. He once put it this way:

"Certain representatives of labor called upon me and in the course of a very pleasant conversation told me that they regarded me as 'the friend of labor.' I answered that I certainly was, and that I would do everything in my power for the laboring man except anything that was wrong. I have the same answer to make to the business man. I will do everything I can do to help business conditions, except any-

*"Both life and death are parts of the same Great Adventure."—Theodore Roosevelt*

thing that is wrong." At another time he said, "We are not for the poor man as such, nor for the rich man as such. We are for every man, rich or poor, provided he acts justly and fairly by his fellows, and if he so acts the Government must do all it can to see that inasmuch as he does no wrong, so he shall suffer no wrong."

His solution for the problems of the national life was not economic, not political, not social, not scientific, not new-fangled—just old-fashioned and starkly moral. "What as a nation we need is to stand by the eternal, immutable principles of right and decency, the principle of fair dealing as between man and man, the principles that teach us to regard virtue with respect and vice with abhorrence wherever either the virtue or the vice may be found."

Secondly, he believed in democracy. He believed in it not in any theoretical,

doctrinaire fashion, but with peculiar concreteness and directness. "There is just one safe motto for Americans to act upon," he said. "That is, the motto of all men up; not some men down." He believed in government by the people because he knew the people, liked them, believed in them and was convinced of their essential soundness. Wherever he went, he got into close touch with the common people—cow-punchers, miners, railway trainmen, farmers, mothers of families, tenement dwellers—all sorts and conditions of men, and showed them with a frankness that was naive and compelling how much he liked them and how much confidence he had in them. It was the same kind of interest and liking he had for the men and women of more sheltered and easeful life—not based on external and accidental conditions, but on the essential humanity in them. Such an attitude of mind and heart toward his fellow-men could only characterize a democrat. In his democracy there was no room for class feeling: "Distrust more than any other man in this republic the man who would try to teach Americans to substitute loyalty to any class for loyalty to the whole American people. Republics have flourished before now, and have fallen; and they have usually fallen because there arose within them parties that represented either the unscrupulous rich or the unscrupulous poor, and that persuaded the

majority of the people to substitute loyalty to the one class for loyalty to the people as a whole."

Thirdly he laid a compelling emphasis upon the responsibility of the individual citizen as the primary condition of national progress. "Never forget," he said, "that law and the administration of law, important tho they are, must always occupy a wholly secondary place as compared with the character of the average citizen himself." He knew, what some less practically minded men seem to forget if they ever fully realized, that "the people" is made up of just people, and that the level of virtue in "the people" can never, by any magic, black or white, be made to rise higher than the individual characters whose sum it is.

"What we care for most is the character of the average man; for we believe that if the average of character

in the individual citizen is sufficiently high, if he possesses those qualities which make him worthy of respect in his family life and in his work outside, as well as the qualities which fit him for success in the hard struggle of actual existence—that if such is the character of our individual citizenship, here is literally no light of triumph unattainable in this vast experiment of government by, of, and for a free people."

This attainment of character in the individual could, in his simple, straight-to-the-bull's-eye view, be attained only thru work: "I don't pity any man who does hard work worth doing. I admire him. I pity the creature who doesn't work, at whichever end of the social scale he may regard himself as being. The law of worthy work well done is the law of successful American life."

The work is what counts, and if a man does his work well and it is worth doing, then it matters but little in which line that work is done; the man is a good American citizen. If he does his work in slipshod fashion, then, no matter what kind of work it is, he is a poor American citizen."

He demanded for each man that he "be given the chance to show the stuff that is in him." He demanded of each man that he show the stuff that is in him. He proposed to judge every man by that standard; by that standard he offered himself to be judged.

Lastly, he held to the golden middle course, not tepidly or timorously, but with the zeal and the conviction of a crusader. He was a middle-of-the-road man, not because he was unwilling or afraid to commit himself to the position on either side, but because he found the way to truth to lie midway of the two extremes. He was a zealot and a fighter for truth, justice and righteousness. He found no monopoly of any one of these precious possessions in the camp of the extremists on either side.

"We can just as little afford to follow the doctrinaires of an extreme individualism," he said in his famous address at the Sorbonne in Paris, "as the doctrinaires of an extreme socialism. Individual initiative, so far from being discouraged, should be stimulated; and yet we should remember that, as society develops and grows more complex, we continually find that things, which once it was desirable to leave to individual initiative, can, under the changed conditions, be performed with better results by common effort. It is

quite impossible, and equally undesirable, to draw in theory a hard and fast line which shall always divide the two sets of cases."

Again and again in his speeches made while he was President and after appears this declaration: "This Government is not and never shall be government by a plutocracy. This Government is not and never shall be government by a mob." Now there were plenty of partisans of property who were ready to predict the danger of mob rule; and there were plenty of partisans of popular rights who were equally ready to inveigh against the dangers of plutocracy. But few of the former would admit any peril in the direction of plutocracy, and few of the latter would admit that there was any danger of mob rule. Mr. Roosevelt's distinction was that he could see both dangers with an equal eye, and that he set his face like flint against them both impartially. As a natural consequence extremists on both sides accused him of improper sympathy with the other—but in neither case was it true.

There were two fields, in particular, in which this faculty of his, of finding the truth midway between the poles of ultra-partizanship, gave power and effect to his leadership. They were the fields of the business problem and the industrial problem. In regard to the first a characteristic saying of his was: "It seems to me that in dealing with . . . the group of problems which come

In regard to the second he took this vigorous position: "Both kinds of federation, capitalistic and labor, can do much good, and as a necessary corollary they can both do evil. . . . Each must refrain from arbitrary or tyrannous interference with the rights of others. Organized capital and organized labor alike should remember that in the long run the interest of each must be brought into harmony with the interest of the general public. . . . Every employer, every wage-worker, must be guaranteed his liberty and his right to do as he likes with his property or his labor so long as he does not infringe upon the rights of others. It is of the highest importance that employer and employee alike should endeavor to appreciate each the viewpoint of the other and the sure disaster that will come upon both in the long run if either grows to take as habitual an attitude of sour hostility and distrust toward the other."

This was the fourfold structure of his creed: righteousness, democracy, individual character, and the true balance between opposing forces. This was the creed that he taught and preached. These were the principles that he put into practice with the same intensity and simplicity with which he preached them. It was a good creed: it was the creed that the times needed. It was proved in the popular response that it met as he set it before the people in reiterated word and cumulative action. It made its deep impress on the age in which he fought and led.

Behind this good creed he put the driving power of his exuberant personality. His motto was "Spend and be spent." He spent himself for the common good and for the right as God gave him to see the right with the fierce joy that only the selfless warrior in a righteous cause can know.

It is a curiously ironical circumstance that Theodore Roosevelt has the reputation among a considerable portion of the

Mr. Roosevelt, who had just returned from the European tour which followed his African expedition of 1908-10, talking with Mr. William Bailey Howland, late president of the Independent Corporation. The two men were friends for many years and it was Mr. Howland who arranged the lecture tour in this country which followed Mr. Roosevelt's reception in the capitals of Italy, England, France, Germany, Sweden and Holland, the most notable honor ever accorded a private citizen

into our minds when we think of the trusts we have two classes of our fellow-citizens whom we have to convert or override. One is composed of those men who refuse to admit that there is any action necessary at all. The other is composed of those men who advocate some action so extreme, so foolish, that it would either be entirely non-effective, or, if effective, would be so only by destroying everything, good and bad, connected with our industrial development."

American people of being, internationally speaking, a blustering, belligerent bully of a fellow, always looking for a fight for his country. For the facts of his two administrations are quite otherwise. Perhaps the most famous of his epigrammatic sayings is "Walk softly and carry a big stick." The public with its instinctive preference of the dramatic over the significant promptly seized upon the "big stick" half of the aphorism and ignored the other half. [Continued on page 95]

**W**HEAT, it seems, has the Government cornered. The farmer is about to have his day, and the Food Administration which, all thru the war months has pleaded "Save Wheat," is likely soon to shout from the housetops and from the billboards thruout the land, "Eat Wheat! Eat it in soups, use it in flour, use it in every possible way."

Wheat, in a word, is now the most plentiful food in the world. Argentine has a supply that has been accumulating thru more than three years. Australia likewise. India has its hoard accumulated for want of ships to remove it. And now the United States promises a tremendous crop.

But let us get at the figures:

In the United States we had a crop this year of about 915,000,000 bushels. The need for seed, which in a general way amounts to about 10 per cent, is 100,000,000 bushels. At the rate we have been consuming flour—a rate very much below the pre-war normal consumption, we shall likely use about 450,000,000 bushels in this country. We were down to a basis of 400,000,000 bushels in November, and it is to be doubted if we shall increase our annual consumption much over 450,000,000 bushels. That leaves 360,000,000 for export. Up to the end of November we had exported approximately 100,000,000 bushels as wheat and flour. The Government has now bought for export 65,000,000 bushels. That leaves about 200,000,000 more for export. And the years have gone when the United States has the only world supply. It has not been possible to get wheat to Europe except from America. The result is that the Australian and Argentine and other lesser crops accumulated, and now Europe, and even the United States, is beginning to draw on those accumulated crops. The withdrawals are not large as yet, because the world supply of ships is only now going thru the process of re-allocation

that has come with peace. So it looks as if this year America will have a surplus without taking into consideration at all the coming crop. That is why it now seems likely that before long, instead of urging people to conserve wheat, the Government will have to beg the people to eat wheat.

We have a surplus from this year's wheat crop—a big surplus, due in large part to the fact that the 1918 crop, with one exception, was the biggest in the

## AN AVALAN

BY A GR

history of the country. Now comes the forecast for 1919. There is winter wheat on 49,027,000 acres, this forecast shows. Last year we had 42,301,000 acres, so the increase this year in crop acreage is 15.9 per cent. The condition

equipment of its kind in the world. Four ships can be loaded from it at the same time

# OF WHEAT

## ERATOR

this year is 98.5 perfect. A year ago at this time it was only 79.3. The average for the last ten years is 88.2. The forecast for 1919 indicates that the yield per acre will be about 15.5 bushels, and the yield for 49,027,000 acres,

therefore, figures out to about 750,000,000 bushels.

That 750,000,000 bushels is in—it is planted—which is the best indication in the world that the farmer knows that wheat is the crop on which he is assured the maximum profit.

Now, considering that wheat is guaranteed by the Government to sell at more than double the normal price until May, 1920, what is the farmer going to do next spring?

Undoubtedly, if the cold should nip his winter planting, he will replant it in the spring. And whether the cold nips the winter crop or not, there is no reason in the world why every farmer who has any available acreage will not plant spring wheat.

Now, in normal times farmers do not try to grow spring wheat in warm sections such as New York and the Eastern States, because this spring wheat is not the hard, flinty kind grown in the West; but the Government guarantee does not make any differentiation between kinds. Wheat is wheat! On that basis, it is figured by experts of the Department of Agriculture and of the Food Administration that the probable 1919 crop is conservatively estimated at 1,250,000,000 bushels.

Next year, the experts of the Food Administration estimate, consumption may figure up to 550,000,000 bushels—if people are told often enough “Eat Wheat.” But if they consume 550,000,000 bushels, there will still be a surplus of 600,000,000 bushels. The presumption of some experts is that this surplus, discounting the percentage necessary for seed (about 10 per cent), will be exported, either as wheat or as flour; but it is clear that we will not export anything like 600,000,000 bushels when 333,000,000 was the most that we exported when all the other markets of the world were cut off. And ship tonnage is becoming available very rapidly.

As regards next year, it is clear that there are two angles, first the physical handling of the wheat; the other the price.

Now, in the physical handling, we have this billion and a quarter crop. We have a total theoretical elevator capacity in the country of a billion bushels, but in actual storage space there is not nearly room for a billion bushels. All the theoretical space clearly cannot be [Continued on page 97]

servation, the Government will beg the people to use wheat in every possible way”

# THE BOLSHEVIKI MUST GO

BY FRANKLIN H. GIDDINGS

THE civilized nations that yet have responsible governments are dealing with the men-

PROFESSOR OF SOCIOLOGY AND THE HISTORY OF CIVILIZATION AT COLUMBIA UNIVERSITY

are of Bolshevism as they dealt with the menace of German aggression. They are shutting their eyes to it, and trying to make themselves believe that it does not exist or that, if it does exist, it is a bug-a-boo and nothing to worry about.

The parallelism may in fact be carried farther. While those who should have been alert to understand the real intent of the Imperial German Government and to prepare to meet attack were wretchedly failing either to understand or to prepare, German agents were unscrupulously active thruout the world and the philosophers of pacifism, as innocently ignorant of the facts of life as twittering birds in a nest, were aiding and abetting the militarism they professed to abhor. At the present moment the agents of the social revolution are at work in every town and every rural neighborhood of Europe and America, and the philosophers of the sentimental school of humanitarianism are effectively aiding them to make converts.

In the babble of voices the plain man gets confused just as the plain man was confused in the United States between 1914 and 1917. He had been taught the tradition of British arrogance and aggression and did not doubt that Germany had a grievance against British maritime power as the American Colonists had against British taxing power over Americans unrepresented in Parliament. For many years this same plain man has been taught that he is a victim of the money power and the trusts, that his modest income is depleted by exorbitant prices for the benefit of profiteers, and that political

democracy has so far failed to democratize industrial relations. He is ready, therefore, to believe that there may be a good deal of essential justice in the demands of the social radicals under whatever name or form they may be organized. He does not believe in violence, and yet he extenuates it when it is directed against oppression and exploitation.

As the event proved, it was not a difficult matter to convince the plain man that Germany was the aggressor and that civilization was in danger when the facts were presented to him and his mind had something substantial to go on. It should not be difficult now to convince him by a similar presentation of substantiated facts that Bolshevism is a criminalist movement, and that civilization is imperiled by it as certainly as it was imperiled by German absolutism. There is no time to be lost in beginning the educational preparedness to meet the danger.

Bolshevism is not democracy; it is not socialism; it is not coöperative communism; it is not even philosophical anarchism. The assertion of its defenders in the radical press that it has been misrepresented is true only to the extent that they have misrepresented it by painting it as a hopeful popular movement to increase human freedom and happiness.

Bolshevism is a massing and turmoil of the criminal elements of society let out of jail and on the loose. So far as Russia is concerned the nucleus of the Bolshevik aggregation is the prison population that was insanely given its freedom in the early days of the Russian revolution when the constitution-

alists were in command of the situation and by wisdom and firmness might have controlled it. Most active among

the dominating spirits organizing the criminal crowd have been men who escaped from Russian and Siberian prisons to New York and who promptly returned to Petrograd as soon as amnesty for such as they was proclaimed. With our usual idealization without investigation we have assumed that these men were political offenders entitled to sympathy. According to their own boastful statements, some of which are in our possession, a large majority of them had been condemned for other than political crimes.

The creed of Bolshevism is simple and admirably suited to the Bolshevik purpose. It is all contained in three articles, (1) steal from those who have stolen, (2) kill those who resist, (3) punish no one for crime. The first of these articles appeals to impoverished men and women smarting under injustice. They know that they have been robbed, exploited and tyrannized over. Why should they not take back what, as they believe, has wrongfully been taken from them? The second article appeals to those who have risked their lives in revolutionary movements. With a price on their own heads, why should not they, themselves, do some of the killing? It is the third article that makes the other two dangerous, because it is this article that is subscribed to by millions of men and women of the sentimentalist humanitarian cult thruout the civilized world, who believe and teach that all punishment is un-Christian, that it only hardens the criminal nature, and that the only radical cure for criminality is found in forgiveness. This doctrine is playing the same dang- [Continued on page 97]

## TELLING TALES OUT OF WAR

While the fighting was still going on censorship carefully suppress these two secrets of British progress in war equipment. The ship above, for instance, earned the nickname "Hush Ship," because people began to get an inkling that some new invention was being used successfully on her, and no one could find out what it was. Now, however, it is permissible to explain that the "Hush" invention was a platform for launching a seaplane. The plane at the left of the photograph is being got ready for a flight. It will be propelled down the runway to the tip of the guns where its flight begins.

### THE CHANNEL BRIDGE

One of the best kept secrets of the war was how the British shipped trainloads of munitions and other war supplies direct from England to the battle line without reloading. The photograph at the right shows the answer—a channel ferry on which railroad cars could be run direct from their tracks and run off on the other shore. Three ferryboats were used, each with carrying capacity of 54 cars.

THE BREAKING WAVES DASHED HIGH ON THE "NORTHERN PACIFIC" AGROUND ON FIRE ISLAND

# MACHINES INSTEAD OF MEN

BY EDWARD EARLE PURINTON

DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

THE optimist and the pessimist were having an argument, and the result of this argument was remarkable. For these two natural foes became as mild as lambs, walked in the same narrow path of brotherly harmony, and together reached a pinnacle of progress where they stood contented and serene.

The firm of Root and Larkin was half pessimist, half optimist. Caleb Root was a little, dried up sort of man, with an outlook on life as narrow as his shoulders and as dark as his skin. Tom Larkin was a big, overflowing personality, radiant with health and high spirits, broad in outlook as the sea, brave as the wind, hopeful as the dawn.

Personally they were the best of friends. But in their official viewpoint they were as far apart as the Sahara Desert and the Mississippi River. Root, being older and wealthier, was senior partner. So Larkin had to fight for all he got. Being an optimist, he was the better fighter of the two, as we shall see presently.

The partners conducted a business house that supplied certain products to the trade. Located in a small town, far from the centers of business competition and the evolution created by competition, they had fallen behind in their methods of handling business routine. Larkin for years had felt this keenly. But Root stuck to the old-fashioned ways, and there was no budging him from the beaten track.

Then the war came, and with it a complete change of business conditions. Prices were regulated, costs were increased, materials were reduced, shipments were delayed, men were drafted, women and boys had to do most of the work.

The office routine was demoralized. The advertising, mailing, bookkeeping and other departments were all shot to pieces with blunders and delays.

Late one night, after going thru the books, they wrestled with the problem. Here the fight began. "We must retrench," declared the senior partner. "The only way to prevent bankruptcy is to cut down expenses. I think we should call in Williams from the road, put him in charge of the office."

The junior partner questioned this move. "Williams is our star salesman. The others on the road are all new. They need his example and influence, we need the profits he turns in."

Root smiled a bitter smile. "Why fool ourselves with hopes of large sales when we can't handle right the business we do get? We can make Williams office manager and save our endless worry over office matters now going wrong."

Larkin protested. "Give me a week to figure on the whole problem. If we can't find a better solution, I'll agree to the plan you suggest." Root grumbled, "One week—no more." and reached for his hat.

Larkin caught the midnight train to the

Every man in this office is equipt with a dictaphone to save time and expense

nearest large city. Next day he spent with a noted business counsellor and efficiency engineer. The fee was \$100 a day, but Larkin was convinced that the man he saw could deliver the goods. In three days Larkin was back, with a plan in his pocket.

"We can save money, save Williams and save ourselves by a very simple and easy method. For half the yearly salary Williams would expect, we can put in a modern set of office machines that will do 75 per cent of our routine work, do it without an error, do it from two to five times as fast as our employees now take for their hand-operated system. And tho our payroll will be less, the salaries may be larger, making everybody better satisfied."

"Huh!" interrupted Root, "you expect me to believe a miracle will happen right before my eyes, do you? Well, it won't, and you're wasting time figuring on such a possibility."

"Of course I knew you would demand proof," smiled Larkin—"so I just brought it along. We have here Exhibits A, B and C. First in Exhibit A a complete statement of average costs—from hundreds of offices in the United States—of routine operations such as counting, sorting, folding, stamping, sealing, addressing, billing, bookkeeping, adding, estimating, copying, cost

© A. W. Shaw & Co.

Machines that sort cards punched with tiny holes to indicate certain information, turn them out at the rate of 250 a minute

finding, listing, duplicating, dictating. Then we compare Exhibits B, which offers attested figures showing costs of the same operations when performed by machines. Will you look over the two lists?"

"Oh yes, I'll look 'em over," grudgingly assented the senior partner, "but I won't promise to be convinced. Your Exhibit B, as you call it, was of course furnished by the dealers or manufacturers of these wonder-working machines. They want to sell machines, and I wouldn't trust their machines or their figures."

Larkin said nothing, for he held in his pocket Exhibit C, which would ut

terly sweep away the last objection. So Root spent a silent half hour, comparing the cost sheets.

But the senior partner still had his doubts. "Where did you get these facts?" he queried. "How do you know they are impartial and reliable?" Forthwith Larkin drew from his pocket a bundle of papers on which the label "Exhibit C" boldly stood out. "We have here," he replied, "attested copies of statements regarding the use of office machines from officials of the leading business and professional concerns of the United States. They don't lie. And they aren't fools."

The senior partner read as follows. (We condense the statements a little, but can vouch for their accuracy because we know the names of the firms using these machines and also the names of the manufacturers selling them.)

An official of the largest merchandising organization of its kind in the world wrote thus: "We sell over \$150,000,000 worth of goods a year. We don't employ a single salesman. We handle the entire business from a mailing list of 6,000,000 handled by a modern system of addressing machines, one of which is capable of printing 4000 addresses per hour."

Another statement from a smelting and refining company: "Where formerly our mailing list requirements kept five people steadily employed addressing market reports and literature sent to customers, we are now able to accomplish this same result with one employee. The machine installed a few months ago has given us such eminent satisfaction in the handling of our mailing list that we have been wondering how we got along for so many years without it."

From the secretary of a national fraternal organization: "Where before it took hours to do my work, now it is a matter of only a few minutes. The machine is so easy to operate that my little boy five years old gets out my list each month."

From a lumber company: "We use a machine for getting out circular letters, report blanks, price lists, shipping tickets, scale cards and stock sheets. It has saved its cost a dozen times."

From an automobile supply company: "A single duplicating machine has printed

From a manufacturer of men's garments: "We were told that the right way to get accuracy into a bookkeeping department was with a modern posting machine. We tried it. We got accuracy—because accuracy is automatic when a good machine keeps the books. We also noticed that the new methods were making merely daily routine of the work that used to pile up and be troublesome. Instead of needing more help, we found that we had time to do things better—and had the means, too. The machine has absorbed so much additional work beyond that for which we

From the controller of the world's most famous manufacturer of watches: "We use the accounting machine for balance sheets, profit and loss, cost, payroll, auditing, budget, overhead, reports, schedule and statistical work. Each machine pays for itself over again at least once a year, thru its great speed and accuracy."

The junior partner, filled with enthusiasm, regarded this precaution unnecessary, but finally conceded the point. He placed an order for a machine outfit costing about \$1000. He could have started the experiment with one \$50 machine, but being an optimist he was afflicted with prematurely expansive ideas, and made his initial order twenty times as large as it should have been. # WHAT'S TO BE DONE WITH WAR MOTORS?

BY JOHN R. EUSTIS

DIRECTOR OF THE INDEPENDENT MOTOR SERVICE

ONE subject which is being widely discussed at this time is that of the disposition to be made of the vast motor vehicle equipment used by the United States and the Allies in the successful prosecution of the war. While the subject includes all types of motor vehicles, interest is largely centered in the army motor truck first because of the great numbers which have been acquired by the various military forces, and second because of the effect that their resale to commercial users would have on the world's motor truck market.

There is no official information on the exact number of motor trucks now owned by the United States, England, France and Italy. At the time the armistice was signed this country had at least 80,000 motor trucks with its armies abroad, and the number in this country must have been half as many again. This gives a total to the United States of 150,000 army motor trucks, which is a conservative estimate, because statements have been forthcoming from many quarters giving the figure at 200,000 and over. Another 150,000 is a conservative estimate for the motor truck equipment of the English, French and Italian armies, especially as a recent semi-official statement from Paris gave 70,000 as the figure for the French army alone. Fully 80 per cent of the motor trucks with the American army abroad are of American manufacture, and France and England during the four years of the war secured more than 40,000 American-made motor trucks.

At this writing there has been but one official statement made public from Washington concerning the disposal of army motor trucks. This is in the form of a letter to the National Automobile Chamber of Commerce from Col. F. Glover, Q. M. C., Chief Motors and Vehicles Division, of the Purchase, Storage and Traffic Division of the War Department. This letter reads as follows:

"There is no basis in fact for the rumor that the Government intends to put on sale all trucks and motor passenger cars that are now being used for war service.

"The Director of Purchase and Storage advises me that there is being prepared a public statement which relates to this matter and which will put at rest any uneasiness which now obtains in automobile circles."

It would seem that this statement should allay the fears of those who are of the opinion that any resale of army motor equipment will seriously affect motor vehicle business conditions. There is, however, in the first paragraph a single word ("all"), which largely nullifies the value of the statement. As previously discussed in this department of The Independent, the United States Post Office Department plans to take over a large number of the army trucks and use them in a nation-wide motorized parcel post service. The number that can thus be utilized in the next five years could hardly exceed 20,000 and it may not be more than half of that. Pos-

© Western Newspaper Union

sibly an equal number will be used in connection with the proposed highway improvement program, which is now being seriously considered by the Federal Government. This plan is involved in a bill now in Congress which calls for an expenditure of \$500,000,000 from the national treasury in the next five years, this bill having the endorsement and support of the American Automobile Association and its affiliated interests.

It is thus evident that, with the number of motor vehicles which the army will naturally retain, the quantity likely to be placed on the open market is not large and can hardly approximate more than 20 per cent of this country's annual production of motor trucks. It is also more than offset by the tremendous expansion in the use and demand for motor trucks, resulting from the remarkable performance record made by the army truck in the war and the experiences gained therefrom. Not the least of the advantages gained is that of proper appreciation on the part of all law-making bodies, from town council to Federal Senate, of the real value of the motor truck as a transportation agent. Tangible evidence of this is found in the recent action of the United States Senate in eliminating from the revenue bill now under consideration the 5 per cent tax on motor trucks, tractors, trailers, and parts therefor. At this writing the revenue bill is in the Conference Committee of the Senate and the House, and there is said to be little likelihood that the special tax on motor trucks first imposed over a year ago will be included in the new revenue bill.

Despite the slight bugbear of the army truck, the future of motor transportation in this country is a most promising one. The conditions of the reconstruction period will serve to increase the use of motor trucks almost as much as did those of war time. In this connection Harry Wilkin Perry, secretary of the Commercial Vehicle Committee of the National Automobile Chamber of Commerce, has unearthed some interesting comparisons. It seems in the year 1832 England was faced by famine conditions and a Select Committee of the

House of Commons, after three months' investigation, made a report of which the following is a part:

"Inquiries have led the committee to believe that the substitution of inanimate for animal power, in draft on common roads, is one of the most important improvements in the means of internal communication ever introduced. Its practicability, they consider, to have been fully established; its general adoption will take place more or less rapidly, in proportion as the attention of scientific men

shall be drawn by public encouragement to further improvement."

That was the time when the first experiments were being made with steam-driven road vehicles, and about a score were then in use on the highways of England. It was found, however, that the racking received from running over rough roads soon wore out the vehicles. The next step was to provide iron rails for these vehicles to run on, and thereby the modern railroad was born.

That was eighty-six years ago, and over a half a century intervened before the advent of the internal combustion motor and the rubber tire (the latter developed by the bicycle) made possible the practical application of mechanical power in the propulsion of road vehicles.

Returning more specifically to the subject under discussion, it is interesting to recall that early in 1915 there was formed in Germany a commission including in its membership both motor vehicle manufacturers and army officials. The purpose of this commission was to take over all motor equipment discarded by the German army and so to dispose of this equipment that its resale would not affect the regular business of the German motor vehicle makers. One feature of the plan was that all discarded motor equipment before being offered for resale would be returned to the factory where it originated, there to be repaired or if necessary rebuilt.

This brings up the question of the condition of the average army motor truck. In most cases it has been subject to much hard use, and while maintenance has been more or less carefully attended to, yet storage in the open in all kinds of weather must have had a deteriorating effect.

Furthermore, much of the army's motor equipment is especially designed, particularly in the case of car bodies, for specific military usage, and it is therefore not readily adaptable to ordinary commercial requirements.

It is therefore apparent that the future of the army truck involves no serious setback for the automobile business, and that the benefits to be derived from its record in the war will more than balance its resale, even in considerable quantities, to commercial users. And, on the other hand, the commercial user who is anticipating an opportunity of securing good motor trucks in fine condition from the Government at bargain prices, will have a considerable wait, even if he is not altogether disappointed.

*Ask the Motor Efficiency Service anything you want to know concerning motor cars, trucks, accessories or their makers. While The Independent cannot undertake to give in this department an opinion as to the relative merits of various makes of cars or accessories, it is ready to give full and impartial information about any individual product*

## ROOSEVELT AND HIS TIMES

(Continued from page 84)

But a study of the acts of Mr. Roosevelt as President readily show that in his mind the "big stick" was purely subordinate. It was merely the *ultima ratio*, the possession of which would enable a nation to "walk softly" along the road of peace and justice and fair play.

The secret of Mr. Roosevelt's success in the realm of foreign affairs is to be found in another of his favorite sayings: "Nine-tenths of wisdom is to be wise in time." He has himself declared that his whole foreign policy "was based on the exercise of intelligent foresight and of decisive action sufficiently far in advance of any likely crisis to make it improbable that we would run into serious trouble."

William Hard, an acute and discriminating journalistic commentator on American affairs, has summed up admirably the achievements of this alleged firebrand in the peaceful settlement and avoidance of international disputes. He writes:

I find that Roosevelt had many bully opportunities to plunge the United States into foreign complications. I find that he was obliged to face and handle three great crises with three of the greatest countries in the world. I find that he was obliged to take a hand, a decisive future-fixing hand, in the affairs of three small countries—small but nearby and turbulent and dangerous to the world's peace. I find that he was obliged to have dealings with many other countries in matters capable of bearing fruits either of friendship or of hatred. I find that he wrote on a visiting card the terms on which a violent European controversy was settled. I find that foreigners think of him as a great historical figure not because of the part he took in railway legislation or in pure-food legislation or in conservation legislation or in any other activity of domestic politics, but because of the part he took in international politics—in the politics of the world at large. I find that Europe and Asia regard him as having been primarily—for good or ill—a diplomat.

Mr. Hard adds with perfect justice. This is the Roosevelt least known to Americans.

A considerable portion of Mr. Roosevelt's success as a diplomat was the fruit of personality, as must be the case with any diplomat who makes more than a routine achievement. He disarmed suspicion by transparent honesty, he impelled respect for his words by always promising—or giving warning of—not a hair's-breadth more than he was perfectly willing and thoroly prepared to perform. He was always cheerfully ready to let the other fellow "save his face"; he set no store by public triumphs. He was as exigent that his country should do justly as he was insistent that it should be done justly by. Phrases had no lure for him, appearances no glamour. The fact alone interested him; the righteousness of the fact was the test of its desirability.

It was inevitable that so commanding a personality should have an influence beyond the normal sphere of his official activities. Only a man who had earned the confidence and the respect of the statesmen of other nations could have performed such a service as he did in 1905 in bringing about peace between Russia and Japan.

Both nations wanted the war to end. Each had much to lose and no certainty of anything to gain by its continuance. But neither could admit it openly. They could only whisper it to a mutual friend whom they both knew that they could trust. No man of less than commanding international stature would have been the one to receive such confidence. No man without the mind and heart of a statesman would have been able to take advantage of them to the almost complete satisfaction of both sides. A less dominant personality would not have succeeded, at a critical moment in the negotiations, in persuading the two governments to agree to mutual concessions which [Continued on page 103]

## Millions Are Lost on Breakfasts

*Which Cost 10 Times Too  
Much*

Compare the cost of other breakfasts with the cost of Quaker Oats.

Compare the cost per calory, the measure of energy value.

You will find that meats, eggs, fish, etc., run 8 to 16 times the cost of Quaker Oats.

Why do you pay that multiplied cost when Quaker Oats is known to be vastly better food?

Mark how Quaker Oats excels in calories per pound:

Calories Per Pound				
Quaker Oats	.	.	.	1810
Round Steak	.	.	.	890
Eggs	.	.	.	635
Dried Beef	.	.	.	790
Veal Cutlets	.	.	.	695
Salt Codfish	.	.	.	325
Mackerel	.	.	.	370

Figure the price you pay per pound, and the energy you get.

See how many you can feed on Quaker Oats for the cost of feeding one on meat.

And Quaker Oats, remember, is the nearly ideal food. It is almost a complete food.

Not a costly food compares with oats as food for young or old.

Make Quaker Oats your breakfast. Use it also in bread, muffins, pancakes and cookies. This is the most delightful way to minimize your food cost.

# NATIONAL EFFICIENCY SOCIETY

The Ratio of Achievement to Effort is the True Measure of Efficiency

## SOLDIER AND SAILOR COMPENSATION INSURANCE

WHO shall bear the extraordinary compensation cost of total disability caused by successive injuries? This question is of great and pressing importance because of the rehabilitation act for soldiers and sailors being retrained for gainful occupations which they cannot enter upon until this question is properly answered and because a rehabilitation bill (H. R. 12880) is pending in Congress to provide retraining and placement of persons disabled in industry, or otherwise, which act will fall short of a practical realization, unless the right solution is found for the compensation insurance problem involved in their return to gainful occupations.

The fundamental object of the War Risk Insurance Act is to do complete justice by the soldiers and sailors of our country who fought in its defense, and to sustain its honor and influence among the nations of the world. The provisions for allotments and allowances, compensation for physical disabilities incurred in service, and life insurance at a minimum cost, were a distinct advance upon the former pension legislation for soldiers and sailors, but it was apparent early that these four provisions would not bring complete justice to men who were disabled in service. Altho the compensation benefits for physical disabilities are liberal, the great majority of the men will want to return to gainful occupations and not live upon their compensation benefits or be dependent upon their friends and the general public; besides, it is distinctly to the advantage of society for them to be productive citizens if possible, and not live out their days as pensioners. The Rehabilitation Act was passed, therefore, to provide for their physical and mental restoration, as far as possible, this physical and mental restoration work to be followed by a period of vocational education or reeducation, and this, when completed, to be followed by an earnest effort by the Federal Government to secure employment for them. These features of the scheme are being worked out by the Federal Government, but as the men are being retrained and are ready to enter upon gainful employment, they, and the employment officers meet the very definite and perplexing problem suggested by the above question.

If the employer is to be responsible, he naturally will be reluctant to give employment to handicapped men. If a soldier or sailor has lost a hand, an arm, a foot, a leg, or an eye, in the military service, and is retrained and made 100 per cent efficient for a skilled occupation, employers will look

BY RILEY M. LITTLE

Director of the American Museum of Safety

From his Address at the Twelfth Annual Meeting of the American Association for Labor Legislation, December, 1918

### HOW SOME STATES TREAT THE PROBLEM FOR CIVILIAN EMPLOYEES

*California, Colorado, Indiana, Delaware, Minnesota, Nebraska and Texas by their compensation acts relieve employers of extra liability thru employing handicapped persons, but do not give the handicapped employees compensation protection.*

*Ohio, Oregon, Washington, Nevada and Wyoming are the only states controlling compensation insurance thru state funds. Ten other compensation states have state funds but insurance carriers share the business. Ten states have no compensation acts: North Dakota and nine southern states.*

*New York amended its law, effective June 1, 1916, so that persons who have lost a hand, foot, arm, leg or eye are covered during the course of their employment by the compensation acts and benefits, according to the usual scale for recurrent disabilities; extraordinary costs to be paid from a state fund accumulated from death benefits of \$100 each when there are no dependents. If an employee is killed in an industry and leaves no dependents, the employer or insurance carrier pays \$100 to the state fund.*

*The Ohio State Industrial Commission made a ruling effective July 1, 1918, that if an employee has but one hand, arm, foot, leg or eye and subsequently loses one of these members during employment, the individual account of such employer will be charged by the State Industrial Commission for the loss of the last member only, and the remaining cost (by far the larger amount) will be distributed over the state fund as a whole. Ohio can thus deal more readily and effectively than can any other state, with every insurance emergency which arises. In Ohio practically the whole compensation insurance business converges to a common center and to a single end and motive—to solve every workman's compensation insurance problem in such a way as to serve the best interests of employer, employee and the general public.*

askance at giving him a chance to show his skill, if they are to be held responsible for his compensation should he lose the second hand, arm, foot, leg, or eye, in their employment, because if this second misfortune should befall him, he would then be a permanent, total liability against the employer, according to the state compensation act wherever he might live. While the spirit of patriotism is running high, many employers of labor would no doubt take this chance and assume the risk willingly, in order that the soldier boys may have an opportunity; but with the readjustments which are now taking place in industry, and the multitude of perplexing economic problems which confront the employers, we may expect that most of them will feel that they should be relieved of the extraordinary compensation cost, attendant upon accumulated injuries which might be received in their shops and mills. We cannot depend, therefore, upon the patriotic spirit of the employers to solve this question, nor is it clear that we ought to ask them to do so.

Inasmuch as the primary disability which stands in the way of the men securing posi-

tions was incurred in the military service of the country, would it not be just, and entirely proper, for the Federal Government to assume responsibility for the extraordinary compensation cost which may be incurred by soldiers and sailors, disabled in the military service, when they are returned to civil employment? Indeed, will complete justice for these men be wrought out by the Federal Government if this is not done? It seems, therefore, that the War Risk Insurance Act should be so amended that compensation benefits to the soldiers and sailors would be assured to them by the Federal Government when they have returned to civil employment and are injured because of their work. The act could be amended to provide a scale of compensation for the soldiers and sailors equivalent to the benefits of the Federal Compensation Act for the civil employees of the United States. When a soldier or sailor who has been disabled in the military service, meets with a compensable accident in civil employment, the State Compensation Commission, or Industrial Board, or Court, should make an award according to the provisions of the Federal Compensation Act of September 7, 1916, and the money should be paid from the State Treasury, to be reimbursed by the United States Treasury. If this plan were adopted, it would be necessary for the War Risk Insurance Bureau to review the findings of the

State Compensation Commissions, or Courts, as it would hardly be legal for a State Court or Commission to be more than an agent for the Federal Government in discharging its responsibility; or, the Federal Compensation Act referred to could be so amended so as to give to all soldiers and sailors disabled in the service, and who are receiving compensation from the War Risk Insurance Bureau, the status of civil employees of the United States for the purpose of compensation for injuries received on account of their employment in civil life, their claims to be adjudicated by the Federal Compensation Commission. This arrangement would provide for uniformity of administration, and the soldiers and sailors would be accorded the same treatment as the civil employees of the United States.

In order to assure the returned soldiers and sailors an opportunity to work, it would be well if the whole compensation cost were paid by the United States. In New York and Ohio only the extraordinary cost for the second or recurrent injury is paid from a general fund, the employer paying the ordi-

## THE BOLSHEVIKI MUST GO

(Continued from page 88)

erous part in relation to Bolshevism that pacifism has played in relation to the self preservation of civilization.

It is this doctrine above all things that must be exposed and opposed. No one desires to see a return to barbarous methods of dealing with the criminal element in human society, but the day has come when sane men and women must make up their minds that criminality cannot be permitted in the name of humanity to go on the loose. It must be taken in hand with a firmness that cannot be misunderstood and a way must be found to exterminate it. The kings have gone. The criminal must go.

## AN AVALANCHE OF WHEAT

(Continued from page 87)

filled with wheat, because there are different grades of wheat which must be taken into consideration, and there are other grains that have to be stored—crops of corn and oats, for instance. So it is figured by the experts that we will not have over 350,000,000 bushels of storage space available for wheat, and nearly twice 350,000,000 bushels to look out for. The head of the grain corporation, Mr. Barnes, has given estimates to Congress of 650,000,000 bushels which must be looked out for.

All this points out that the Government cannot handle the crop next year, even tho it has guaranteed to pay more than \$2 a bushel for it. There simply is not the physical capacity for handling it.

But the guaranteed price runs to May 31, 1920. Suppose that the farmer in America is being paid for his wheat in accordance with the guarantee, when wheat is worth only \$1 in the world's markets. The new wheat from the far Southwest will come in and then work north. Then the farmers will be in a position to work in new wheat at their so-called \$2 price, which, by the way, is \$2.26 on the Chicago market. The President was authorized in the Lever Law to fix the price of wheat, and fixed the price at \$2 upon the recommendation of the so-called Fair Price Committee, which named \$2.20 as a fair price at Chicago. Later he authorized the Food Administration to adjust the price, which it accordingly did, at \$2.26 in Chicago—making allowance for the advance in freight rates of last June. When, in the world's markets, wheat will be worth \$1 and on the farm only 75 cents, it will be selling under the Government guarantee at \$2.26 in Chicago.

Now, when we come to the matter of prices, the price guaranteed by the Government \$2.26, in Chicago, which is \$2.30 in New York to include the various handling charges storage, etc.—it would cost the Government \$2.50 at seaboard. Yet, with the enormous quantities of wheat that there are in the other countries, wheat might be selling in those countries at only \$1. The foreigners will buy where they can buy cheapest, of course. They won't pay us \$2.50 when they can buy wheat elsewhere for \$1. There is, thus, a possibility that the world's markets will force our Government to sell wheat at \$1 which has cost the Government \$2.50. All this leads to another point: If our Government is selling to Europe wheat at \$1, will our American people be willing to buy their flour on the basis of \$2.50 wheat? In other words, if our Government is selling to Europe on the basis of flour at approximately \$5 a barrel, will our people be will-

## Serving The Ipswich Mills

The Ipswich Mills retain Lockwood, Greene & Co., Engineers, to render them a constant engineering service.

Whether for new construction at one of their five large knit goods plants, or for rearrangement of power, processes or lighting, or for the setting of valuations, or for any other matters in which engineering plays a part, the Ipswich Mills call upon us for advice or supervision of the work. Thus they avoid the expense of maintaining a costly engineering department, and gain the abilities of a large engineering organization.

"BUILDING  
with  
FORESIGHT"

This is but a glimpse of the service which we are fitted to render—fitted by sixty-eight years of experience in planning and supervising the construction of thousands of plants. We have gained a broad knowledge, not only of technical, but also commercial, financial and business conditions and how to meet them in any industry. "The Successful Knit Goods Plant," a new book describing a number of plants we have engineered, will be of interest and value to the head of every knit goods manufacturing concern. It will be sent you at your request.

ing to pay around \$12? If we are shipping wheat to foreign millers at \$1, making flour cost nominally \$5 a barrel in the bulk in Europe, of course the millers of this country could not pay \$2 or \$2.50 for wheat and compete in shipping flour for export. It follows that unless the Government drove the American millers out of the export market entirely, they would have to sell them wheat for export, at least, on the \$1 basis. Otherwise, you would have the millers selling domestic flour to local consumers at, let us say, \$12.50 a barrel, and selling it for export at \$5 a barrel.

Now, what is the remedy? There is none! As far as any one is able to figure out, the Government is out about a billion dollars. Certainly no one in the Food Administration or the Department of Agriculture has been able to devise any other workable plan.

In the first place, the Government cannot break its promise to the farmers, who have accepted their share of the agreement and planted tremendous acreage in wheat.

The suggestion has been made that the Government buy all the wheat from the farmers thru its various agencies at the guaranteed price and then sell it back to the public at the world market price. Now just what would that mean? In Kansas, we will say, the Government will buy the wheat from the farmer at \$2.18, Kansas City. The Kansas City miller would buy it at just as low a price as possible. So would the Minneapolis miller. In actual practice it is impossible to work out an absolutely fair relationship between the various markets of the Government in consideration of the various characteristics of the wheat. For instance, the Kansas City wheat is much lower in moisture than the Northwestern wheat, but under the guaranteed price there is no differentiation made as to the characteristics of the wheat.

Another suggestion is that the farmer sell wheat at any price he can get for it and get a certificate of the selling price and make a bill on the Government for the difference between that price and the Government's guaranteed price. How would this work out? A miller would have a good farmer friend, B. Smith, let us say. The miller might say, "Bill, you won't suffer any loss on this wheat business if you sell your wheat to me for fifty cents. All you have to do is to make a bill on the Government for the difference between fifty cents and the guaranteed price." From this extreme illustration it is clear that the miller might buy his wheat at less than a dollar. And that would mean more trouble still.

Then, the suggestion has been made that the Government build storage accommodations to take care of the storage next year. But mere storage warehouses will not take care of the wheat properly. If wheat is a little damp, it will spoil in some conditions, and as a general precaution all of it, or at least a great deal of it, would have to be turned over. Tanks would have to be supplied, and the wheat would have to be run thru to let the air into it, to keep it from suffering from heat or deterioration. Suitable storage is worth somewhere around twenty cents a bushel in cost of proper buildings and storage facilities. Moreover, it would cost approximately two cents a month to carry this wheat in storage. Storage and interest charges accumulate very rapidly. It is estimated, in other words, that these charges amount to about twenty-five cents a year per bushel. And at the end of the year the Government might not be able to get as much for its wheat as it could get before it had stored the wheat. The quantity of wheat that would have to be stored would be so enormous, likely,

that tremendous storage buildings would have to be erected. From estimates made by the Food Administration, it might be necessary to build storage facilities for 400,000,000 bushels, which would cost about \$80,000,000. Then, in addition, you would have the interest charges which, in the case of wheat alone, amount to about 1½ cents a month per bushel, at 6 per cent. Then you have to add the interest on the other investment. You have to charge off an enormous amortization, because you have no use for your storage facilities later. So it is safe to say that the storage will cost, including losses on the investment in building, thirty to forty or even fifty cents a year per bushel. And then, to top all that, at the end of a year of storage, the price might not be any better, because the market, in all probability, would be no higher.

The total loss to the Government in the working out of any of these plans would seem to approximate about a billion dollars, which is a goodly share of a fair-size Liberty Loan. "There is," said an authority of the Food Administration, "no way out of the situation that I can see. The probable 1919 crop is 1,250,000,000 bushels. The domestic consumption of wheat, figured liberally, amounts to 650,000,000 bushels. The balance to dispose of amounts to 600,000,000 bushels. The maximum elevator capacity, including public and private storage available for wheat, is only 350,000,000 bushels. And the balance, for which there may be no storage room, unless all this quantity of wheat can be exported, which is unlikely, would be 250,000,000 bushels. So 350,000,000 bushels in storage would have to be disposed of by the Government in addition to the 250,000,000 bushels for export. In other words, the Government will have 600,000,000 bushels to dispose of. The largest wheat exports on record are for 1902, 235,000,000 bushels; for 1916, 243,000,000 bushels; for 1915, 333,000,000 bushels. In 1905, a fairly typical year, we exported only 44,000,000 bushels.

It looks as the Congress by its guarantee, resulting in an unprecedented probable crop as above, has created a situation that it will be physically impossible to make good to the producer, for the reason that aside from the enormous amount of money that must be used by the Government to make good this guarantee, there will not be the storage room in which to place the wheat, with the result that they cannot accept delivery from the farmers by May 31, 1920. New crop movement (1920) starts in June, and if the time of delivery is extended into June or even later as would be necessary, farmers may then be expected to try to deliver the 1920 crop at the so-called \$2 price, when in the world's market it may be worth only \$1 or less. So any way we come at it, it looks as if the Government were cornered, by Congress, the President and the farmer.

While the Government is obligated to pay the farmer \$2 or more, it cannot force the foreign buyer to pay more than actual world market values, which will be based on world supply and demand. In other words, if Australia offers Europe wheat at \$1, that will be the price at which the United States Government will be forced to sell wheat that has cost it \$2 on the farm or \$2.50 seaboard.

It seems then, to conservative experts with the widest possible view of the wheat situation that the Government is "in" to the extent of about a billion dollars. The Government made the wisest possible provisions for winning the war, of course, and this huge sum can accordingly be charged off to victory; nevertheless, the U. S. A. must face the bill.

# ARE YOU INTERESTED IN AUTOMOBILES TRACTORS OR AERONAUTICS?

## OPPORTUNITIES

always open for "men who know." The real big progressive fellows are constantly seeking knowledge of modern industry. Men who want to learn more about Automobiles, Tractors and Flying Machines, read the **American Automobile Digest**; it is a monthly digest of the automobile field; a practical monthly magazine brimful of instructive, helpful and money-saving information. It is virtually a complete course of instructions coming to you monthly, keeping you posted on all new things also. The highest salaried specialists in America are regular contributors. The editorial staff is a specially picked body of trained men who have the exceptional faculty of explaining vital points in the simplest and

most easily understood language. Such subjects as steering systems, carburetors, magnetos, vaporizers, proper lubrication, tire problems, economical maintenance, home repairs and a hundred other money-saving stunts are clearly explained and illustrated. Every Car Owner and Chauffeur should read it regularly. **AUTOCRAFT** is a 257-page, profusely illustrated, DeLuxe bound volume, overflowing with instructive, helpful information on the automobile. The author, **R. Engelman** has carefully and thoroughly explained every part of the automobile so that you will be able to make minor repairs and adjustments yourself. It will save you many dollars yearly. This is the very book you have been looking for.

## FREE THIS INSTRUCTIVE "AUTOCRAFT" AUTOMOBILE BOOK

The price of a year's subscription to the **AMERICAN AUTOMOBILE DIGEST**, twelve big issues printed in colors, is \$1.00. Send us your subscription for the next twelve big numbers, and we will promptly mail you, postpaid, a volume of **AUTOCRAFT** ABSOLUTELY FREE. This special offer is limited and will be withdrawn April 1st, 1919. Don't delay! Fill out coupon, send it with a dollar bill, personal check or money order immediately.

Money refunded if you are not entirely satisfied.

## MACHINES INSTEAD OF MEN

(Continued from page 93)

## "At Last—a Real Job and Real Money!"

"And if only I'd started earlier, I could have had them five years ago. I didn't realize at first what spare time study would do for a man. Taking up that I. C. S. course marked the real beginning of my success. In three months I received my first promotion. But I kept right on studying and I've been climbing ever since."

Every mail brings letters from some of the two million students of the International Correspondence Schools telling of advancements and increased salaries won through spare time study. How much longer are you going to wait before taking the step that is bound to bring you more money? Isn't it better to start now than to wait five years and then realize what the delay has cost you?

One hour after supper each night spent with the I. C. S. in the quiet of your own home will prepare you for the position you want in the work you like best.

Yes, it will! Put it up to us to prove it. Without cost, without obligation, just mark and mail this coupon.

TEAR OUT HERE

### INTERNATIONAL CORRESPONDENCE SCHOOLS BOX 4502B, SCRANTON, PA.

Explain, without obligating me, how I can qualify for the position, or in the subject, before which I mark X.

How to Learn the Secret of Being a Convincing Talker is told on the inside back cover of this magazine.

All went well for a few days. Then it developed that this concern had peculiarities and necessities that the machines ordered were not prepared to accommodate. There is as much difference between various kinds of office machines as there is between various breeds of horses or various makes of automobiles. One must know the product of all manufacturers before he can safely buy any.

These particular machines did not give entire satisfaction. Old Caleb Root was grumpy joyful. He gave orders that when the free trial period of a month should be over the machines were to be thrown out.

Larkin rushed to New York and made a personal inspection of a score of different machines. At last he came upon the very one that suited him, signed a personal contract for installation with preliminary free trial, took a sample machine back with him as personal baggage, and reached the office a day before the month was out on the other machines. It was up to him to make good in twenty-four hours. Did he? He did.

He selected a couple of the best workers, offered them triple time to stay on the job till midnight, had the new machine delivered while the senior partner was at dinner, and to this gentleman said nothing about the evening work ahead. With his two helpers he spent four hours mastering the details of the new machine. By midnight they could work it. They all went home in a taxi, got a few hours sleep, and were in the office again before the senior partner came next morning. When he arrived, the new machine was turning out the most beautiful results imaginable. No bother, no hitch, no mistakes anywhere.

A sample of the product lay on the desk of the senior partner, with an attached note containing the words, "Respectfully submitted for your approval," and signed with the initials of the junior partner. The old man rubbed his eyes, looked hard at the elegant sheet of blameless character, spoke a word not used in theological seminaries, and left abruptly for Larkin's office. "Where did this come from?" the old man snorted. "From our agreement that does not expire till this afternoon," Larkin answered. "The machines we have tried for a month will be returned to the maker as you ordered, but a better machine has been set up as I ordered. By the terms of our agreement both orders will stand." Root saw the point. "You win," he said.

The fiscal year came to a close. Root and Larkin were examining the books together on the last day of the year. The new machines had paid for themselves twice over, and left the business in shape to reduce expenses and thus increase profits next year anywhere from 10 to 30 per cent. With the complete statement before them Root and Larkin both fell to thinking.

Root spoke first. "I must be getting old and feeble-minded. We should have lost thousands of dollars if you had listened to me when I wanted to keep antiquated methods in the office." Larkin stopped him—"What about that thousand dollars or more that we should have lost buying the first set of machines if I had not listened to you? We're about even on the deal. And I have been thinking that hereafter we would do better if each of us listened more and argued less. You naturally look downhill, I naturally look uphill, so to keep on the level and move forward rapidly we should always try to balance between the different viewpoints. Let's take for our motto next year *Adjustment—Not Argument.*" The senior partner answered "Right!" and they shook hands. Thus the

optimist and the pessimist were reconciled, marvelous to relate. And they all lived happily ever after, which is the proper way for the story of any life experience to end.

Now we come to the point of the story. Why should not investigation and adoption of the best office machines and appliances be as universal as the need for their use and the advantage from it? We have mentioned about a score of endorsements by concerns of the highest standing. Letters of approval and appreciation might be quoted from hundreds of other commercial, industrial and professional organizations and institutions all pointing in the same direction, all urging the office manager to buy and use more office machines.

Wherever a good office machine is available, it offers ten probable advantages over the crude, unscientific method of doing the job by hand. These are speed, accuracy, legibility, economy, safety, uniformity, health, production, liberation, promotion.

A good machine works about ten times faster than the human hand or brain. It never makes a mistake. It presents a result neat, legible and certain. It operates at a cost of 10 to 50 per cent less than the old-fashioned way. It prevents confusion, misunderstanding, waste, loss of life or property. It puts the various departments of the business on a standardized basis. It reduces for employees the liability to fatigue, eye strain, occupational diseases, functional and nervous disorders. It boosts production without demanding overtime. It liberates high officials for higher work, and employees on large pay for specialized duties that deserve large pay. It hastens promotion of minor employees by helping them to work their hands faster and thus earn more, and their heads better and thus prepare for better positions.

There are now more than sixty office operations reliably, quickly and inexpensively performed by machines. A list of the principal ones appears in the diagram headed "Office Machine Gage." Whether a complete outfit of mechanical appliances will save money, time and trouble in your office remains for you to decide, but the chances are that you need twice as many machines as you have. When you are convinced that you need more help of this kind, or at least that you should investigate the possibilities, the part of wisdom then is *not* to buy any machine till the maker of it has proved beyond the shadow of a doubt that his machine is unqualifiedly the best for your purpose.

For example, there are a dozen popular adding machines on the market, each claiming superiority over the others. And the same is true of typewriting machines, duplicating machines, time recording machines, bookkeeping machines. How are you going to pick the best? By the rigid application of certain advance tests of both manufacturer and machine. The following series of tests was deduced from a comparative study of the method and character of the largest and best manufacturers of office machines. The items appear in chronological order—not in order of relative importance. You will find upon investigation that the most reliable manufacturer of a superior office machine does the following things:

He advertises regularly in trade papers and business journals.

He publishes free literature of general information. He wants and tries to help you do your work better—no matter whether he sells you a machine or not. You should find his literature valuable apart from the advertising features.

# Give Them Their Jobs Back

THE men who left your shop or your office to finish the Big Job over there have been working for you all the time they have been away.

And though not on your payroll, they have saved your business and your home from things worse than bankruptcy or fire.

Their experience has developed them and made them more valuable to you.

When they return, give them more than a welcome home. Have their places, at bench or desk, ready for them.

## DURAND STEEL LOCKER CO.

1572 Ft. Dearborn Bk. Bldg. Chicago  
972 Vanderbilt Bldg. New York

*Get right down to the point and you will find that the Spencerian Steel Pens are the best*

**"What your Handwriting Reveals"**

A booklet of 32 pages, 50 fac-simile writings interpreting character will be sent with sample box of 10 pens, different patterns, on receipt of 10c.

**SPENCERIAN PEN CO.**  
349 Broadway New York, N. Y.

He quotes endorsements of national users of the machine. Either in print or on personal request he gives names and addresses of concerns and individuals using the machine to advantage.

He demonstrates its value by free trial on your own work in your own office.

He arranges installation of machine by an expert.

He invites a competitive test with other machines.

He promises definite results and guarantees them satisfactory. Should results be defective or deficient, he will make good with a new machine, or with free repairs for the old, provided you have given it proper use and care.

He insists that the buyer must "sell" himself. The argument is not oratory but demonstration. If your judgment fails to sell you the machine the manufacturer withdraws cheerfully—and no harm done.

He furnishes complete instructions, rules and cautions in printed form to cover not only the regular use of the machine but also emergencies and accidents.

He maintains a free service department where the advice of experts may be had by the owners of the machine at any time without cost. Every branch office or local agency thruout the country acts as a receiving station of the service department, for application by owners of machines either for advice or for repair of defective parts or for satisfaction of demands or complaints by the user.

Before buying an office machine, study the manufacturer and check him up on the preceding ten points. He should qualify on at least seven, to deserve your patronage.

But even more vital than the selection and support of the best manufacturer, is the analysis and appraisal of your own office regarding the number and kinds of machines that your special work demands. The table on page 93, which is the first of its kind ever printed, shows in a graphic way what machines you require most and first, and how profitable each may become. The following directions will enable you to use the table effectively.

1. Go over Modern List of Office Operations and check each that your work requires.
2. Number the items thus checked in order of relative importance, judging each by the amount of time consumed, or the number of motions made, or the sum of salaries or wages now paid to operators doing the work by hand.
3. Obtain directory of manufacturers of all machines performing operations listed as applying to your work. Directory to be had from Independent Efficiency Service, 119 West Fortieth Street, New York.
4. While awaiting arrival of directory analyze cost of your principal operations, if you have not already done so. Fill out first seven columns of Office Machine Gage according to headings of columns. Unit of time suggested is an hour, but a minute may be used if preferred, or a decimal portion of an hour, or any other uniform division of time. The salvage cost in column six refers to average waste per unit of time due to delays, mistakes or spoilage.
5. Obtain catalogs and other descriptive literature of machines most needed, from manufacturers named in directory you will receive from the Independent Efficiency Service. Get catalogs of at least three makes of any machine you think of buying.
6. Consult manufacturers on doubtful points. If you have problems or queries not covered by the catalog write the manufacturers personally.
7. Choose various machines tentatively—with a first and second choice for each operation.
8. Fill out last seven columns of Office

# You've got to have the right pencil

If your pencil work is to be always up to top speed, top efficiency, you've got to have a pencil not only of the best quality but of the degree of lead exactly suited to your work.

## DIXON'S ELDORADO

*"the master drawing pencil"*

is proclaimed by artists, architects, engineers, business men and other connoisseurs, as a real American achievement. The strong, long-wearing leads do not easily break or wear down quickly. Their responsiveness makes your work less tiring, and quicker. First of all specify the Eldorado; then be sure you are getting the right grade.

**How to find your grade.** Note in the chart below that 6B is the softest, 9H the hardest and HB is medium (the degree most used in general work). Select the degree you think will suit your work and your liking. If not exactly right, next time choose a grade harder or softer. When you have thus found your degree, specify it every time and you will always have pencil satisfaction.

Send us 16c in stamps now, specifying the degrees you want and we will send you full-length samples worth double the money.

## Emanuel SWEDENBORG'S BOOKS

at a nominal price—5c

Any or all of the following four volumes will be sent, prepaid, to any address on receipt of 5 cents per book:

- "Heaven and Hell" 624 Pages
- "Divine Providence" 605 "
- "Four Leading Doctrines" 593 "
- "Divine Love and Wisdom" 598 "

Each book is printed in large type on good paper, and is substantially bound in stiff paper cover.

Endowed for that purpose, this Society offers to send you these books without cost or obligation other than 5 cents each for mailing.

Address all orders to Room 742

The American Swedenborg Printing  
and Publishing Society  
3 West 29th Street New York

Machine Gage Catalogs of manufacturers should include data required by headings of these columns:

9. Buy machines where total savings tabulation in column fourteen warrants purchase. Find this profit or loss by comparing totals of column seven and column thirteen, adding to yearly machine operation cost the original price divided by number of years representing average life of machine.

10. Secure active belief, enthusiasm and cooperation of employees handling machines. If you are not certain how to do this, we will suggest ways.

11. Be sure that all machines are used strictly according to directions from the beginning. Train every employee assigned to a machine according to instructions of manufacturer. At least a third of the value on a machine lies in the mental and manual motive and process of the worker who handles it.

12. Arouse and develop the latent ambition of employees along higher lines leading to promotion. While machine operators usually make more money than hand operators, they are likely to deteriorate into human machines themselves, and to gain promotion less rapidly because of it. The work of a machine is execution but the work of a man is origination. So far as the employee is concerned, the ultimate purpose of an office machine is to give him time and energy to think about his job, above his job, ahead of his job.

## SOLDIER AND SAILOR COMPENSATION INSURANCE

(Continued from page 96)

nary cost for the accident. To illustrate: If a young man with one eye loses his other eye in the course of employment, his employer thru the insurance company, or the state fund, pays him compensation for 128 or 100 weeks, and thereafter during his life he receives compensation from the state fund. If we had to consider only the question of compensation and not the related problems of employment, this would be strictly fair in arranging a scheme of compensation for the soldiers and sailors; but there is involved the difficulty of securing employment for men who have suffered permanent functional losses, and it is hardly worth while to seek legislation that would complete a compensation scheme for handicapped people, but which still leaves them under the handicap of an adverse attitude upon the part of employers. It is just as necessary to make handicapped people employable from the point of view of the employer as it is to arrange a just and workable scheme for compensation costs.

Furthermore, if the Federal Government expects to do complete justice to the soldiers and sailors disabled in service who want to return, and ought to return, to civil employment, the Government can quite well afford to place this slight premium upon its military servants, as it will free them from the disadvantage of not being wanted by employers, both because they are handicapped, and also because they may bring increased risks into their plants. The only solution of the insurance problem involved is for the Federal Government to assume the extraordinary compensation cost for recurring injuries in civil employment; and in order that the problem of securing employment for them may be solved, the Federal Government likewise should assume the full cost of compensation for them on account of any injuries they may receive in the course of their employment.

ROOSEVELT AND HIS TIMES

(Continued from page 95)

resulted in averting disaster from the undertaking.

In the next year the influence of the Rooseveltian personality was again felt in affairs outside the traditional realm of American international interests. Germany was attempting to intrude into the situation in Morocco, where France, by common consent, had been the dominant foreign influence. The rattling of the Potsdam sabre was threatening the tranquillity of the *status quo*. A conference of eleven European powers and the United States was held at Algeiras to readjust the treaty provisions for the protection of foreigners in the decadent Moroccan empire. In the words of a historian of America's foreign relations,

Altho the United States was of all perhaps the least directly interested in the subject matter of dispute, and might appropriately have held aloof from the meeting altogether, its representatives were among the most influential of all, and it was largely owing to their sane and irenic influence that in the end a treaty was amicably made and signed.

But there was something behind all this. A quiet conference had taken place one day in the remote city of Washington. The President of the United States and the French Ambassador had discussed the approaching meeting at Algeiras. There was a single danger point to be got over in the impending negotiations. It was at that point that Germany was likely to attempt to make trouble. The French must find a way around it. The Ambassador had come to the right shop. He went out with a few words scratched on a card in the Roosevelt handwriting containing a proposal for a solution. The proposal went to Paris, then to Morocco. The solution was adopted by the conference, and the Hohenzollern menace to the peace of the world was averted for the moment. Once more Mr. Roosevelt had shown how being wise in time was the sure way to peace.

But no portrait of Theodore Roosevelt, and no picture of his times, can be complete without the bold, firm outlines of his Panama policy set as near as may be in their proper perspective. His action in the Panama matter was above all characteristic. It sprang full-formed from his devotion to achievement, his love of the short course straight to the end in view, his hatred of chicanery and greed, his sense of justice and fair play, his conviction of the value of the fact and the viciousness of the fiction. His critics, of course, would state it otherwise. They would doubtless say that it was the expression of his determination to have his own way, and an example of his addiction to the "big stick." But in any case they would not fail to agree that the course he took was just what it would be natural to expect from him. For, whichever way you take it, that is precisely the kind of man he was, exactly the kind of President he was.

Wall Street hunch do not increase the food supply!—*The Spur*.

Germany has found a substitute for everything she. It shouldn't be hard to find a substitute for the Kaiser—*St. Louis Star*.

"Where are you going?" asked one reader of another.

"Going to the blacksmith shop to get my tin hat refitted"—*Pittsburgh Sun*.

One thing which youth probably never will understand is why middle age declines a chocolate cream just before dinner for fear it will spoil its appetite.—*Ohio State Journal*.

### ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOOK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

#### I. Theodore Roosevelt and His Times. By Harold Howland.

1. In a short, spoken paragraph sum up the principal impressions produced by the article.
2. Prove that the times when Roosevelt lived were "lively," "stirring," and "big with promise of a new age."
3. Explain the expression, "The superiority of human rights to the rights of property."
4. Explain the expression, "We are not for the poor man as such, nor for the rich man as such."
5. What reasons led Roosevelt to come into close touch with the common people? What similar action is indicated in Shakespeare's "Henry V"? In Addison's "Sir Roger de Coverley Papers"?
6. Prove that the following saying by Roosevelt is particularly important at the present time: "Distrust more than any other man in this Republic the man who would try to teach Americans to substitute loyalty to any class for loyalty to the whole American people."
7. From your own experience, or from "A Tale of Two Cities," "Ivanhoe," "Silas Marner" or any other book, give examples that will explain both expressions, "The unscrupulous rich" and "The unscrupulous poor."
8. Prove that Roosevelt was right in saying: "What we care for most is the character of the average man."
9. Apply the following definitely to school life: "If he does his work in slipshod fashion, then, no matter what kind of work it is, he is a poor American citizen."
11. Imagine that you are present at a meeting of people who somewhat sympathize with the Bolsheviks. Explain why "government by a plutocracy" and "government by a mob" are equally bad.
12. Roosevelt's motto was "Spend and be spent." Give a talk suitable for your school assembly, pointing out cases of pupils, or teachers, in your school, whose work has shown belief in the same motto.
13. Prove that Roosevelt's conduct of foreign affairs entitles him high rank as a statesman.

#### II. Roosevelt's Last Message.

1. Read the entire selection aloud to your class, reading it so emphatically that you present its thought to the best advantage.
2. Prepare a well-written brief for an article on "Methods of Preventing the Segregation of Foreigners in the United States."
3. Give a short, spirited, patriotic talk on the following: "Any man who says he is an American, but something else also, isn't an American at all."

#### III. The Death of Theodore Roosevelt.

1. For every one of the following words write a complex sentence concerning Mr. Roosevelt: soldier, naturalist, author, historian, publicist, explorer, rancher, statesman.
2. Write a short essay on "The True American Spirit," drawing illustrative material from the life of Roosevelt.

#### IV. Sixty Strenuous Years.

1. Compare, or contrast, the early days of Roosevelt and the early days of Washington Irving.
2. Compare, or contrast, the entire career of Roosevelt and the entire career of Lincoln.
3. Point out the principles of journalistic writing that may be deduced from the article.

#### V. Mr. Roosevelt's Friends.

1. Explain the meaning of every tribute to Mr. Roosevelt, and tell why the tribute is well deserved.
2. What literary principles guided the selection and arrangement of the list of tributes?
3. Make a grammatical analysis of the first sentence of every tribute.

#### VI. A Strenuous Life.

1. Write a paragraph of negative statement concerning "The Strenuous Life."
2. In a single paragraph summarize the thought of the article.
2. By what method has every paragraph been developed?

#### VII. The Fighting Roosevelt's.

1. Write a short poetic article, in verse or in rhythmical prose, that might appropriately be printed opposite the page of pictures.

### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

#### I. Theodore Roosevelt—"A Strenuous Life," "Theodore Roosevelt and His Times," "Roosevelt's Last Message," Story of the Week.

1. Give some of the facts that justify the judgment of the editorial writer in his statement beginning, "He was not only a keen politician and an astute statesman," etc.
2. What acts in Roosevelt's career entitled him to the Nobel Peace Prize?
3. Contrast Roosevelt's action in dealing with the Venezuelan affair with that of Cleveland.
4. Justify the statement made in the first sentence of the last paragraph of the editorial. In what sense is it true that the Progressive party was less a political success than an educational machine?
5. What, according to Mr. Howland, were the four dominant characteristics of Roosevelt's faith? Give one or more examples of his application of these standards to practical affairs.
6. Give one or more examples which illustrate his "exuberant personality."
7. What is the significance of his saying, "Walk softly and carry a big stick"?
8. Discuss in some detail Roosevelt's attitude in handling (a) the "Trust" Problem, (b) the Labor Problem, (c) the problems of Good Government.
9. Discuss his activities in (a) the Moroccan Affair, (b) the Russo-Japanese War, (c) the building of the Panama Canal.
10. Do you agree that Roosevelt's Last Message is an excellent valedictory to his whole life?

#### II. Balance of Power or League of Nations—"Pro-Germans," "Changing Partners," "The President in Italy," "The President's Addresses," "Greater Serbia" and Her Claims," "Armenia and Syria."

1. Give some of the historic facts back of the nine or more propositions enunciated in the first mentioned editorial. Does the writer state the case of the Allies and of the United States fairly in each proposition?
2. Should the Allies and the United States insist on (a) seizure of German territory, (b) payment of a huge indemnity, (c) annexation of German colonies, etc.? Give your reasons in each case.
3. Locate on a map the various races and nations discussed in the editorial "Changing Partners."
4. Write a brief summary of one or more of the racial and national conflicts referred to in this editorial.
5. Show that in "changing partners" as they have done these races and nations have not been guilty of "inconsistency or indecision."
6. Why did Pope Benedict wait for the President to visit him instead of going to meet the President as the King of Italy did?
7. What is the significance of the President's visit to the tomb of Mazzini?
8. "The address of the President . . . was in two respects one of the most significant," etc. Comment on this statement.
9. How do the provisions of the Secret Treaty of 1915 "clash with the demands of the Serbs and Jugo-Slavs"?
10. How will the Peace Conference reconcile the American demands for a League of Nations with the provisions of the Secret Treaty of 1915 and the London Treaties of 1916 and 1917?

#### III. Revolution in Europe—"The Bolsheviks Must Go," "The Chaos in Russia," "Trotzky Arrests Lenin," "The German Situation," "Red" Revolt in Berlin," "The Polish Conflicts."

1. Why does Professor Giddings oppose the Bolshevik movement? In his judgment how should the revolutions in Europe be dealt with?
2. What is the present attitude of the United States and the Allies toward affairs in Russia? Do you think that this attitude is wise?
3. State as clearly as you can the elements in the political struggle now going on in Germany. What in your judgment should be the attitude of the United States toward the various parties to this struggle?
4. Summarize the status of the revolutionary movements in other parts of Europe.

## THE NEW PLAYS

*A Little Journey* with Rachel Crothers's delightful characters is decidedly worth taking. So genuine, human and exquisitely done that you can't afford to miss it. (Little Theater.)

*Chatterton*, by Alfred de Vigny, is a play of the period when suicide was all the rage and a poor poet was sure of sympathy if nothing else. (Theatre de Vieux Colombier.)

*The Melting of Molly* derives an amusing plot and witty dialog from the novel of Maria Thompson Davies, but the musical comedy features form an incongruous combination. (Broadhurst Theater.)

A Harvard man looking for local color met a Mennonite maid in a narrow Dutch Pennsylvania "willage"—Result: an entertaining comedy with deep human appeal. "Doc," played by John W. Ransone, is the best piece of character work we have seen in many seasons. Patricia Collinge is *Tillie*, a heroine of winsome *naiveté*. (Henry Miller's Theater.)

## P E B B L E S

"Parsnips," says a food garden expert, "are best left in the ground." We agree.—*Lunch*.

Do you take exercises after your bath? Yes; I generally step on the soap as I get out.—*Portland Evening Express*.

We have just been enjoying the latest photograph of the Clown Prince. His is, indeed, the face that launched a thousand quips.—*St. Louis Star*.

The bishop remarked that somebody had a blank expressionless face, and the thoughtful printer rendered it "a — expressionless face."—*Linotype*.

St. Peter—So you were a newspaper editor, big circulation of course?

Applicant—No—small—smallest in the country, in fact.

St. Peter—Go in and pick out your harp. *Passing Show*.

What are you studying now?" asked Mrs. Johnson.

"We have taken up the subject of mole-cules," answered her son.

"I hope you will be very attentive and practice constantly," said the mother. "I tried to get your father to wear one, but he could not keep it in his eye."—*Life*.

What has become of the greyhound you had?

"Killed himself,"

"Really?"

"Yes, tried to catch a fly on the small of his back and miscalculated. Bit himself in two."—*Tut Bitts*.

"One of my pupils," says a Buffalo teacher, "could not understand why I thought that the following paragraph from the composition on 'A Hunting Adventure' lacked animation and effectiveness: 'Pursued by the relentless hunter, the panting gazelle sprang from cliff to cliff. At last she

could go no farther. Before her yawned the chasm, and behind her the hunter."—*Montreal Daily Star*.

"Are they seasoned troops?"

"They ought to be. They were first mustered in by their officers and then peppered by the enemy."—*Baltimore American*.

Mr. Tomkins was obliged to stop overnight at a small country hotel. He was shown to his room by the one boy the place afforded. "I am glad there's an escape here in case of fire," commented Mr. Tomkins, as he surveyed the room, "but what's the idea of putting a Bible in the room in such a prominent place?"

"That," replied the boy, "is intended for use in case the fire is too far advanced for you to make your escape, sir."—*London Opinion*.

## REMARKABLE REMARKS

GERTRUDE ATHERTON—The world has gone mad in spots.

REV. BRYANT PRESTON—Pep without purpose is piffle.

KARL LIEBKNECHT—We do not want a lemonade revolution.

DOUGLAS MALLOCK—The biggest liar in the world is They Say.

T. ELSON WILLIAMS—In the end it is man power that counts.

REV. W. T. McELVEEN—Life is not merely staying above ground.

THE EX-CROWN PRINCE—I should be happy to work as a laborer in a factory.

CHARLIE CHAPLIN—If my work I don't trust anyone's sense of humor but my own.

HERR HAASE—Perhaps foreigners do not realize our impotence so strongly as we do.

AGNES M. ELIAS—Few employers have realized that women have no mechanical sense.

JAN IGNACE PADEREWSKI—The Bolsheviki idea is to kill all users of the toothbrush.

MARSHAL JOFFRE—France must remain in the future the guardian of the liberty of peoples.

E. W. HOWE—The man who believes in equality is a man who believes equality will give him some of yours.

CARO LLOYD—That once proud verse, "Westward the star of empire takes its flight," is in immediate need of revision.

WOODROW WILSON—I not only favor the League of Nations, but I believe the formation of such a league is absolutely indispensable.

JAPANESE PREMIER K. HARA—The narrow provincial spirit of seeking one's own benefit at the expense of others has been found out of date.

HARRY DANA—When everything else in the world has been made safe for democracy, men may at last turn and apply democracy to our education.

WILLIAM HOWARD TAFT—My feeling about the League of Nations to Enforce Peace is that the stars in their courses are fighting to make it inevitable.

S. WILBUR CORMAN—For my own business I can ask no better fortune than that we shall fail to get the business of any client whom we wouldn't fit.

GRAND DUCHESS ANASTASIE OF MECKLENBURG-SCHWERIN—It will take Russia fifty years to understand the meaning of the words republic and president.

JUDGE ELBERT H. GARY—When our competitors in other lands are ready to adopt the laws of free trade that will be soon enough for us to consider similar action favorably.

PREMIER LLOYD GEORGE—It must be a just peace, a sternly just peace, a relentlessly just peace. Justice must not be merely vindicated in the victory, it must be vindicated in the settlement as well.

DR. HARRY EMERSON FOSDICK—Germany did not walk to her defeat blindly. She took the one high road of military preparedness. Any other nation that takes this road will meet the same end.

© International Film

## A GATHERING OF THE REDS

*Crowds of revolutionists and their sympathizers started this demonstration in front of the former Imperial Palace, now headquarters of the Ebert government. Troops still obedient to army discipline were called out to do police duty and keep down the crowds*

Press Illustrating

## THE SOLDIERS' PATROL

*These armored cars with mounted guns have been used by soldiers of the German army to patrol the streets of Berlin in support of the Ebert government and against the extremist uprising. The disorders reached a climax on January 11 when 1300 revolutionists were killed. General Hindenburg is supporting the Ebert government and brought large bodies of troops to its aid*

## GERMAN POLITICAL PARTIES

**T**HE election for a German constitutional convention set for January 19 is of tremendous importance to the whole world, for it will determine whether we shall have a respectable and responsible Germany to deal with or whether that nation will dissolve into incoherent anarchy or pass under the control of some ruthless dictator. If the issue is determined by bayonets or bombs instead of ballots, there is little hope for the peace of Europe, whatever the Paris conference may decide. Some of our American papers still profess to regard the German revolution as a hoax, a kind of camouflage, but even they must admit that it is carrying camouflage into realism when the streets of Berlin are daily reddened with the blood of hundreds of victims. What did cause astonishment and arouse incredulity at first was to see the all-powerful aristocracy swept swiftly aside and the scepter pass quietly into the hands of the Social Democrats, who a few years before had been looked down upon as pariahs. It was a swing to the left as violent as the Russian revolution, but whereas in Russia there was nothing below the autocracy to check the movement till it came to the untutored workingmen hastily organized into soviets, in Germany the government was assumed by men who in education and executive ability are at least equal to the bureaucrats they replaced. It used to be said that the Social Democratic party was next to the German army the best disciplined and most formidable body of men in the world, so it is no wonder that when the army collapsed the party succeeded to its power. In fact the two were largely the same. Since one private in three voted that ticket Hindenburg has during the war been in command of an army of two million Socialists. These men were already armed and trained, so all that was necessary to make a red army out of them was to tear off the black and white stripes from their flags, and the epaulets from their officers.

The Socialists by creed were anti-monarchical and anti-militaristic, but on the outbreak of the war the majority decided unfortunately but not unnaturally to put patriotism before principle and to accept the outstretched hand of the Kaiser. But as the war went on and it became clearer to all that Germany was the aggressor, the anti-war minority, who at first had acquiesced in the decision of the caucus, broke away from the leash of party discipline and formed an Independent Social Democratic party, which refused longer to support the Government. Some of the seceders went farther and tried to organize mutinies. Dr. Karl Liebknecht, whose father had in 1872 gone to jail for denouncing the annexation of Alsace-Lorraine, issued secretly a series of anti-war pamphlets under the pen name of Spartacus. Our older readers who on Friday afternoons used to declaim: "Ye call me chief and ye do well," will recall that Spartacus was leader of a servile insurrection in Rome

B. C. 72. Liebknecht was finally arrested while attempting to address a street mass meeting in Berlin, but as he had taken the precaution to print several thousand copies of his speech in advance and deposit them in safe places, his message was not lost. On the outbreak of the revolution he was released and at once began to attack the moderate Socialists in power with the same violence as he used toward the Kaiser and is now imprisoned again. His followers, who might properly be called Spartacites, or Spartacists or Spartacans, are commonly called "Spartacides" in the American press, altho that name would be more appropriately applied to Socialists of the other wing who are now shooting down the Spartacus people with machine guns. Still more extreme than they are the Internationalists, a smaller group in Berlin, led by Borchardt, who in 1912 was chased around the Landtag building by the police because of his disturbances in the chamber. Beyond them are the Anarchists who fight under the black flag instead of the red and are quite in their element in the present confusion.

When on November 7 the Socialists took over the Government of the German Empire an effort was made to unite the various factions. The first cabinet consisted of Philipp Scheidemann, Friedrich Ebert and Herr Landsberg of the Majority or pro-war wing, and Hugo Haase, Wilhelm Dittmann and Richard Barth of the Independent or anti-war wing. They also brought together in the Government the leaders of the rival factions in the party before the war, Karl Kautsky, the uncompromising champion of the old orthodox class-struggle Marxianism, and his opponent, Edward Bernstein, Revisionist and Opportunist, who favored a gradual and peaceful introduction of socialism.

But this Socialist Coalition left out Liebknecht and other extremists who are commonly and rightly called "Bolsheviki" since they have much the same aims and temperament as the party ruling in Russia and their movement is supported by millions from the Russian treasury. The Bolsheviki purpose to sweep away all national boundaries and existing governments and substitute an industrial organization of society for the present political system by placing all power in the hands of local committees (soviets) of workingmen. They are just as much opposed to German state socialism or American republicanism as they were to Russian autocracy.

The crucial contest in Germany came, as in Russia, over the control of the soviets. As in Russia, the Bolsheviki were at first voted down in the German soviets, and, as in Russia, they then resorted to arms. But here the parallel ends, at least for the present, for the German soldiers and sailors have so far mostly favored the more moderate faction, and Ebert, unlike Kerensky, has not hesitated to shoot.

The Spartacans, or German Bolsheviki, wanted to establish not a democracy but a working class dictatorship, as

in Russia. They therefore opposed the plan of Ebert and Scheidemann to submit the question of the future form of government to a convention to be elected promptly by universal suffrage. Since the working class now were in power, why not stay there by force and not risk their supremacy by submitting it to a vote? The Independent Socialists agreed with them on this point and favored at least postponing the election until the first steps toward socialization had been taken. When the Majority Socialists insisted upon holding an election as soon as possible the Independent members withdrew from the Government and many of the party joined in the Spartacan riots.

But what the Ebert-Scheidemann cabinet lost on the left it gained on the right. All the anti-Socialists of course supported it in its effort to hold an election, because that was their only chance to get any share in the Government. How these parties stand and what is their strength cannot now be determined with any exactness, for the censorship for America is still on and party lines have been broken up by the revolution. But from such data as available we have made a rash attempt at a classification in the chart above. It is arranged to correspond with the seating arrangements of European parliaments where the more radical representatives sit at the speaker's left and the more conservative at his right. But no diagram in one dimension is sufficient to represent their real relationships. It would need at least four.

By comparing the first line of the chart with the second it will be seen that the conservative parties have changed their names to "People's" parties of some sort and profess very democratic ideals. The Ultra-conservatives (*Hochkonservativen*) have joined with the Imperialists (*Reichspartei*) to form the new German National People's party (*Deutsche Nationale Volkspartei*). This is by tradition the party of Prussian junkers or feudal landholders, stanch defenders of the established Lutheran Church and of the military caste. To this wing belong all who hope for the restoration of the Emperor and old regime. Its main support was in the country districts of the east and it looked with suspicion upon the rise of the industrial cities of the Rhine. The Roman Catholic Church was supported by the party that occupied the Center of the Reichstag chamber and was next in size to the Social Democratic party. It is constitutionally opposed to the radical and irreligious views of the Social Democrats, but joined with them in trying to put an end to the war in 1917 by forcing thru the Reichstag the peace resolutions which were commended by President Wilson. The old Center party under its new name of the Christian Democratic People's party has put out a comprehensive platform advocating immediate peace, international law on Christian principles, League of Nations, in-

dependence of the Holy See, freedom of speech, liberty of religion, equal suffrage, Christian education, encouragement to large families, pensions for disabled soldiers and widows and orphans, protection to laborers and promotion of agriculture. The leader of this party is Matthias Erzberger, who headed the armistice delegation.

The National Liberal, which was Bismarck's party and corresponded roughly with the Liberal party in England and the Republican and Democratic in America, was being gradually squeezed out before the war between the extreme parties on either side, and now it has split in two. The right or conservative wing has gone to form the new German People's party, while the left or radical wing has united with the old Progressive People's party (*Fortschrittliche Volkspartei*) and old Radical (*Freisinnige*) party to form the new German Democratic party. To this party have rallied some strong men of various types: Theodor Wolff, of the *Berliner Tageblatt*, Pastor Naumann, editor of *Hilfe*, and advocate of the Central Europe scheme; Dr. Dernburg, who came to America as a German propagandist, and Prince Max of Baden, the peace Chancellor. The German Democratic party will be liberal and progressive but not socialistic; it contains a large Jewish element and will stand for the rights of the individual and the security of the middleman.

One group in the old Reichstag will be missing from the new, the Poles, Alsations and Danes, who, like the Irish Nationalists, subordinated all other issues to the interests of their own nationalities. The new Germany will be the stronger for their elimination, especially if the Austrian Germans are allowed to unite with Germany.

## A NEW MEANING TO SERVICE FLAGS

THE suggestion made by The Independent at the time when America entered the war, that a gold star should be placed upon the service flag for every fallen hero, has been universally adopted. Whenever a gold star is seen in the red border every one knows what it means. But what do the other stars mean? Are the men they represent still in military service abroad or have they returned to their old civilian service at home or have they been cast adrift in midwinter to hunt for a job of some kind, of any kind they can get? At the outbreak of the war many firms patriotically assured their employees that any who volunteered or were drafted would find their places waiting for them. But has this promise in all cases been kept? We hear complaints that some employers, having found it possible to get along with a harder worked staff or with cheaper girls, are not giving the homecoming hero the welcome he had reason to expect. Such establishments still display their

star-spangled service flags and so get credit for more patriotism than they deserve.

We suggest that whenever a man discharged from the national service is offered his old place or its equivalent the star be marked in some manner, say by a white disk in the center. Of course some of the men will not want to return to their former work, as the war has developed new abilities in them or opened new opportunities to them. The firm having found out that such is the case would be entitled to mark the star just the same. In the service flag of a church a marked star would mean that the man had either returned to that church or had been granted a letter to some other. At the end of a year from the signing of the armistice most of the men should be home except those who are permanently enlisted. By November 11, 1919, then, every star on the flag should be marked on the center field or be placed in gold on the margin. This would mean 100 per cent patriotism.

## REVOLUTION IN LUXEMBURG

THE Luxemburgers are disposed to follow the example of their neighbors, the French and Germans, in deposing their sovereign and declaring a republic. The revolution really took place two months before, but the movement was checked by the advent of the American military forces. Four days before the Americans entered the capital the Luxemburg parliament passed a resolution to submit the question of the future form of government to a referendum and the Grand Duchess was requested to abstain from all administrative acts until the decision of the people should be determined. To this she consented and withdrew from the capital. The revolutionary leaders were therefore dismayed to learn that General Pershing had invited the Grand Duchess to join him in reviewing the troops on their entry into the city of Luxemburg. They sent a delegation to the American Army Headquarters to request that the American commander-in-chief should not stand on the balcony of the royal palace beside Grand Duchess Marie Adelaide on that occasion because it would have a bad effect upon public sentiment and might precipitate a riot. But the American officer who received the delegation said to the chairman: "General Pershing's plans will not be changed and if any one starts anything you may be among the casualties."

This witty but perhaps not altogether tactful reply was efficacious in preventing disorder and the republicans confined themselves to refusing to participate in the civic procession, which filed past the palace where stood their discredited and virtually deposed sovereign supported by the representative of the military power of the American republic. We may commend General Pershing's determination to avoid disturbances and we may admire his chivalrous attitude toward a young and beautiful duchess in distress, but as a first appearance of America in European politics the effect was unfortunate. For the ex-Grand Duchess Marie Adelaide had alienated her subjects and forfeited her rights by her pro-German attitude during the war. She did indeed make a formal protest when the German army first violated

the neutrality of Luxemburg, but she soon showed her sympathy with the German cause and her lack of sympathy with her people, who have suffered almost as much as the Belgians during the German occupation. Altho Luxemburg was until 1867 a member of the German Federation and remained till the war in the German *Zollverein*, the people are rather inclined in the opposite direction. More than two thousand young Luxemburgers managed to slip over the border to enlist in the French and Belgian armies. It was naturally not pleasing to them or their relatives to hear that the Grand Duchess had telegraphed to the Kaiser that she prayed every day that "his army might be successful and bring back to Germany a heavy harvest of laurel." Fortunately her influence with the Heavenly Powers proved to be negligible. As a final affront to public sentiment Princess Antoinette, younger sister of Marie Adelaide, became betrothed to Crown Prince Rupprecht of Bavaria just before the rout of his armies on the Ypres sector.

It is no wonder then that the people determined to sweep away this Teutonic dynasty just as soon as the Teutonic armies withdrew from their land. We may easily imagine their disappointment when the American army of occupation appeared also at first to take the side of their sovereign. This was of course a gross misinterpretation of the American policy, which has thruout our history been to favor republican movements the world over.

The deposition of the Grand Duchess will give the people of Luxemburg for the first time a chance to determine their own destinies. It will not be necessary here to explain the peculiar position of the Grand Duchy, for that has been told in our issue of December 21 by Miss Putman, author of the best book on the subject, "Luxemburg and Her Neighbors." But we must call attention to the fact that the first act of King Albert on reëntering Brussels was to renounce the treaty of 1839 by which France, England, Prussia, Austria and Russia forced the separation of Luxemburg from Belgium against the will of both. It was in the debate in the Belgian parliament on this question that the historic remark, "treaties are not mere scraps of paper" (*les traités ne sont pas de simples chiffons*) was applied to the Belgians who refused to conform to the treaty of London. Now that this treaty is out of the way and Belgium free from her overlords, the Belgians are planning to recover Luxemburg, which was then made independent, and Limberg, which was given to Holland. But it is doubtful if a republican Luxemburg would consent to accept a sovereign even so mild mannered as King Albert. The French republic might prove a more congenial associate. Now that the American troops have left the city of Luxemburg and Foch has replaced Pershing, the anti-monarchical movement has been resumed. On January 9 the Chamber of Deputies determined to demand the abdication of Marie Adelaide and when her supporters, the Clericals, withdrew in disgust, the rump went further and declared a republic and sent a delegation to Paris to ask annexation to France. But on the following day the Chamber reversed its action and by a vote of 30 to 19 asked Princess Charlotte Adelaide, eldest of the five sisters of the deposed sovereign, to become Grand Duchess. Obviously this is an unstable compromise.

## DEATH AND ROOSEVELT

BY ERNEST HAROLD BAYNES

*He turned your lance, O Death,  
Full often from its mark;  
But he fought only in the day,  
Nor dreamed you'd take the coward's way  
And stab him in the dark.*

*Were you afraid, O Death,  
So brave the front he kept?  
Dared you not face him in the light,  
But crept upon him in the night  
And slew him as he slept?*

# THE STORY OF THE WEEK

## Progress Toward Peacemaking

With the return of President Wilson from Italy to Paris, practical preparations for the opening of the Peace Congress were resumed. The Supreme Inter Allied Council met at the French Foreign Ministry on January 12, there being present the President and Secretary of State of the United States and the Prime Ministers and Foreign Ministers of France, Great Britain and Italy. As the President has expressed a wish to be ranked merely as a Prime Minister and not as a Head of State, and as the Secretary of State is in effect Foreign Minister, the four nations were thus equally represented. For a part of the time there were also present General Bliss for the United States, Marshal Foch for France, and General Sir Henry Wilson for Great Britain, as members of the Supreme War Council. The French Ministers of Finance, of Marine, of Commerce, and of Industrial Reconstruction were also at hand in a consultative capacity.

Apart from discussion of the order of business and agenda of the Peace Congress, the Council considered the question of extending the armistice, and also that of giving aid to the Poles in their conflicts with the Russian Bolsheviks on the one hand and with the Germans on the other. It is also thought that there was an animated debate over the question of Russian representation in the Peace Congress. The precise transactions of the meeting were not, however, disclosed.

On January 13 another meeting was held, lasting all day. The American forces were augmented by the presence of Admiral Benson, Admiral Grayson, Herbert C. Hoover, Bernard M. Baruch and Edward N. Hurley; the French by Admiral De Bon; the British by Andrew Bonar Law, and the Italian by General Robilant; while Japan also was represented by Viscount Chinda and Mr. Matsui, the Ambassador at Paris. While secrecy was observed concerning most of the work of the meeting, it was made known that it had been decided that in the Peace Congress France, Great Britain, Italy, Japan and America should each have five representatives; Brazil, three; Belgium, Serbia, Greece, Poland, Czechoslovakia, Rumania, China, Canada, Australia, South Africa and India, two each; and New Zealand, Portugal, Siam, and the states which severed diplomatic relations with Germany but did not wage war, one each. Jugoslavia, it was assumed, would have the same representation as Serbia.

The meeting adopted the following two general principles:

One—Each delegation being a unit, the number of delegates forming it shall have no influence upon its status at the conference.

With the return of President Wilson from Italy to Paris,

Two—In the selection of its delegation each nation may avail itself of the panel system. This will enable each state at discretion to intrust its interests to such persons as it may designate.

The adoption of the panel system will in particular enable the British Empire to admit among its five delegates representatives of the dominions, including Newfoundland, which has no separate representation, and of India.

Because of the meeting of the French Parliament on January 14, no meeting of the Council was held on that day, but a final meeting preparatory to the Peace Congress was held on January 15, at which arrangements were com-

## THE GREAT WAR

January 9—Increasing insurrection in Berlin. French delegates to Peace Congress named.

January 10—Civil war in streets of Berlin. Abdication of Grand Duchess of Luxemburg demanded.

January 11—Defeat of Berlin revolutionists. Republic proclaimed in Luxemburg.

January 12—Arrest of German revolutionary leaders. First formal meeting of Supreme Inter-Allied Council.

January 13—Second meeting of Supreme Inter-Allied Council. Extension of armistice granted.

January 14—Ukrainians fighting in Galicia. Arrangement to use German shipping for food transportation.

January 15—German commission favors trial of former Kaiser at Berlin. Allied mission to Russia decided upon.

pleted for the formal opening of the Peace Congress at the French Foreign Office on Saturday, January 18.

Considering the League of Nations project of a League of Nations, which is expected to command first attention in the Peace Congress. The two plans most discussed during the week were those of General Smuts, the British South African soldier-statesman, and of Leon Bourgeois, formerly Prime Minister of France and now President of the French Association for a League of Nations, both of which were regarded as possessing admirable features and as presenting hopeful bases for constructive action. General Smuts's plan provided for a year's postponement of war in every case of international conflict, to afford time for investigation, mediation, adjudication or other means for averting an appeal to arms, somewhat after the manner of the numerous peace treaties negotiated by Mr. Bryan early in President Wilson's administration. The chief criticism made upon this by the American delegates was that it did not go far enough, and that if the League of Nations could delay war for a year it might as well have power to prohibit it altogether.

The plan of M. Bourgeois provided that before the Peace Congress began work the Allies should commit themselves to the fundamental rules of a League of Nations; that the peace treaty should prescribe compulsory arbitration and limitation of armaments; and that immediately after the signing of the peace treaty a universal congress should be summoned to complete the details of the League of Nations. It was suggested that an international armed force should be created for compelling compliance with the decrees of the League, and that diplomatic, juridical and economic measures should be employed for the isolation of contumacious states. Germany, M. Bourgeois thought, would have to undergo both political and moral regeneration before she could be admitted to the League.

It was confidently reported, however, on January 14, that there was a practically unanimous sentiment among the American delegates against any supernational executive power lodged in any individual nation; any federation of states under an international cabinet, legislature or judiciary; or any supernational police force with permanent high command of army or navy.

Extension of the Armistice The Supreme War Council on January 13 sanctioned a renewal or extension of the armistice on January 17 with certain additional penalties for Germany, chief among which

was the restitution of machinery and material stolen by Germany from Belgium and France. It was reported that to this condition the German Government would demur, insisting that all such goods should be retained by it until definitively disposed of by the Peace Congress; but it was assumed that such demur would be verbal and formal only, and that Germany would perforce yield to whatever terms the Allies prescribed.

**A New British Cabinet** Mr. Lloyd George's overwhelming victory in the British general elections was followed on January 10 by the announcement of a reorganization of the Cabinet. Mr. George remains Prime Minister, of course, and Mr. Balfour remains in the Foreign Office. Mr. Bonar Law remains Leader of the House of Commons with the ornamental office of Lord Privy Seal, but is succeeded as Chancellor of the Exchequer by Mr. Austen Chamberlain, who formerly held that place. Lord Curzon is President of the Council and Leader of the House of Lords; Lord Milner is Secretary for the Colonies; Mr. Winston Churchill is Secretary for War; Mr. Montagu is Secretary for India; Mr. Walter Hume Long is First Lord of the Admiralty; Lord French is Lord Lieutenant and Sir James Ian Macpherson is Chief Secretary for Ireland; Mr. F. E. Smith is Lord Chancellor; and Mr. Cecil Harmsworth, a brother of Lord Northcliffe, is Under Secretary for Foreign Affairs. The Cabinet is really dominated by Conservatives, although its head is a Radical Liberal.

The Ministry (not the Cabinet) contains several representatives of the Labor party, and for the first time one Indian, Sir S. H. Sinha, the Under Secretary for India.

Kirby in The New York World

#### THE NEW ENEMY—HUNGER

**Storm Clouds in Ireland** There was published on January 9 in the *London Globe* (a Unionist paper) what purported to be the Irish Constitution adopted by the Sinn Fein leaders after their great victory at the recent elections. This document, recalling the attempted revolution at Easter in 1916, declares that Sinn Fein aims at securing international recognition of Irish independence, denies the right of the British Government to exercise authority over Ireland, and promises to "make use of any and every means available to render impotent the power of England to hold Ireland in subjection by military force or otherwise." It also provides for the summoning of a constituent convention to formulate measures for the welfare of the people.

The British Government is assumed to be prepared to maintain its authority thruout the United Kingdom, if necessary by force. Thirty-four of the Sinn Fein members of Parliament chosen at the recent election are now in prison

for sedition and other offenses, and tho it is expected that the Government will soon grant their release there is no indication of yielding to the Sinn Fein demands.

#### The German Outbreaks

The attempted revolution in Berlin reached its climax during the week, and was suppressed with a strong hand. This outbreak began when Eichhorn, the Berlin Chief of Police, refused to accept his dismissal from office at the hands of the Ebert government, that dismissal being on account of his marked sympathy with the Bolshevik movement. The Spartacans and other extremists rallied to his support, precipitated something like civil war in the city streets, and on January 9 organized a new government under the name of "the Revolutionary Committee." The Ebert government at once proclaimed a state of siege and summoned all loyal troops within call to suppress the rebels. It issued an appeal to the people on January 10, denouncing the revolutionists as trying to prevent or nullify the popular elections which were about to be held for a Constituent Convention.

By January 11 the fighting reached its high. Machine guns and hand grenades were freely used in the streets, and it was reported that about 1300 persons had been killed on the side of the revolutionists. Georg Ledebour and Ernst Meyer, Socialist leaders, were arrested. Karl Radek, the Russian Bolshevik leader who had been smuggled into Berlin, sought to encourage the revolutionists with false promises that a Russian army would come to their aid. General Hindenburg gave his aid to the Ebert government, formidable bodies of loyal troops came into action, and on January 12 it was announced that the insurrection was practically suppressed. The various strongholds of

#### WHY 500,000 MEN ARE OUT OF WORK IN FRANCE

These are only two of the many instances of French mines wilfully destroyed by the retreating Germans. The new armistice terms are to demand from Germany immediate return of stolen machinery and goods. At present France has no means of providing work for her demobilizing army

#### REMODELING GERMANY

Planning a house to suit the whole family is no cinch," says the cartoon at the left, which shows Ebert in the center hampered by the dissenting factions: Minority Socialists, Soldiers' Councils and Spartacists. At the right an even more pessimistic view—the Ins and Outs fighting for possession of the government lifeboat while the common people, crying for help, drown

the Spartacists were captured, many of the leaders of the revolt surrendered, while Dr. Liebknecht, Eichhorn, Radek and Rosa Luxemburg took to flight. The revolutionists having court-martialed and shot seven government soldiers, the government made reprisals in kind upon the captured Spartacists.

There were sympathetic outbreaks in many other places, sufficient to indicate that if the Berlin revolutionists had been successful the movement would have extended thruout the empire. British troops occupied Düsseldorf on January 12 to check Spartacan activities. In Munich, Bavaria, the government was temporarily compelled to go into hiding. In Stuttgart the municipal government was overthrown. In Dresden there was violent fighting in the streets. In Bremen a socialist republic was proclaimed. At Leipzig resolutions of sympathy with the Berlin insurgents were adopted by the Workmen's and Soldiers' Council. Violence and fighting were reported at Ratisbon, Halle, Spandau and other places. But with the victory of the Ebert government in Berlin these other disturbances generally subsided.

#### German Political Movements

Apart from the attempted insurrection, there is apparently a considerable movement in Germany to dissolve the empire into a group of states, or at least to throw off the dominance of Prussia. A strong separatist sentiment is reported in Westphalia and the other Rhine provinces. Highly significant was a declaration made by Count von Hertling, formerly Imperial Chancellor, a few days before his recent death. He said that in Bavaria—to which country he belonged—and elsewhere there was bitter resentment against Prussia "for having so badly steered the common ship"; that "the name of Prussia will disappear from the map of Europe"; and in the new federal Germany there will be no place for the disproportionate Prussia, surrounded by feeble satellites. The new Germany will comprize six or seven states

approximately equal in importance. Instead of Prussia we shall see the state of Brandenburg and Pomerania, the state of Hanover and the Lower Elbe, and the state of Westphalia, bound by federal ties to Bavaria, to Saxony and to Württemberg and united to the old Grand Duchy of Baden.

This utterance of the former Chancellor, it will be observed, almost exactly agrees with suggestions for the reorganization of Germany which have been made by non-German authorities in this country and elsewhere.

Another highly significant movement has been the alliance of the Roman Catholic Centrist party with various Protestant organizations in a "New Centrist" or Christian party. Leading Protestant theologians have appealed to their disciples thruout Germany to join this movement for a Christian but non-sectarian party for the settlement of foreign and domestic affairs of state, leaving both religious factions free to pursue whatever courses they please

after the more urgent national needs have been met.

It was announced on January 15 that a German commission appointed for the purpose had officially recommended that the former Kaiser be brought to trial for his responsibility for the war.

#### The Menace of Bolshevism

Serious concern was felt and expressed by the representatives of the Allies over the ominous spread of Bolshevism, as manifested in the German disturbances and the Russian attacks upon Poland. It was thought by some that the Peace Congress would do well to give its very first attention to repressing the so-called "Red Terror." Opinions were much divided, however, as to the means of effecting this. French spokesmen inclined toward forcible measures, particularly the sending of military aid to Poland, and perhaps the Allied occupation of Berlin. British counsels, on the other hand, were in favor of sending food to the ill-fed countries and thus allaying discontent. The American delegates agreed with the British, and President Wilson on January 13 sent an urgent message to Congress, asking for the immediate appropriation of the \$100,000,000 asked by Mr. Hoover for the supplying of food as a barrier against anarchy.

Some sensation was caused on January 12, and for a moment fears of dissension among the Allies were provoked, by the disclosure that the British Government had suggested to the other powers a conditional recognition of the Bolshevik government at the Peace Congress. Its idea was that, since the Congress would have to deal with the state of Russia, and since it could not well do so in the absence of any representatives of that country, the various *de facto* government, including the Bolshevik Soviets, be invited to send delegates to the Congress for consultation; on condition, how-

#### AMERICAN INTERVENTION IN LUXEMBURG

The proclamation of a republic in Luxemburg, made on January 11, is said to have been delayed nearly two months by the fact that General Pershing stood with the Grand Duchess of Luxemburg in the review of troops entering the city after the armistice was signed. The apparent support of the American army to the Grand Duchess averted temporarily the popular demand for her abdication. In this photograph, taken during the review, the Grand Duchess is second from the left on the balcony of the royal palace; General Pershing is third from the left.

ever, that all those governments immediately cease their fighting and other violent practises and comport themselves in an orderly manner. To this the American Government made no reply, but the French Foreign Office promptly replied that it could give no such recognition to such a criminal organization as the Bolshevik government. The governments did not mean to publish this correspondence, but it was surreptitiously secured and disclosed by Radical Socialists in Paris, apparently intent upon causing the Government embarrassment and rousing dissension among the Allies; a purpose which completely failed. The French Government was actually strengthened by the disclosure, while an amicable agreement was readily secured and maintained between it and the British Government.

It was decided by the Allies on January 15 to send a mission of investigation to Russia, to ascertain the exact condition of affairs there and to report thereon to the Peace Congress.

Bolsheviki in South America More than 800 people have been killed and 5000 injured in riots in Buenos Aires that began with a strike of steel workers in the Vasena Iron Works and spread into general anarchistic uprisings thruout the larger cities of Argentine, Peru and Uruguay with such violence as to cause the establishment of martial law and the use of troops to put down the revolution.

On January 11 it was announced by the union heads in Buenos Aires that the general strike had been called off and that the strikers would return to work. This official announcement, however, failed to check the lawlessness thruout the city. Anarchists and troops engaged in general street fighting; the revolutionists guarded all centers of food distribution in an attempt to force a crisis by preventing the delivery of food. Railroads stopped running thruout the republic and all newspapers were suppress with the exception of La Vanguardia, the Socialist organ. General Dellepaine, commanding the Argentine troops, proclaimed a military dictatorship in support of the Government and brought machine guns and cannon to the aid of the fighting troops. The Argentine Chamber of Deputies declared the republic under martial law for a period of thirty days and summoned 10,000 reserves to the army.

General Dellepaine's quick work in organizing the military forces was effective in getting the rioting in Buenos Aires somewhat under control. Over 2000 agitators, most of them Russians, were arrested in the streets and confined in military barracks. Buenos Aires is a city of over 1,146,000 population, increasing by immigration at the rate of a hundred thousand a year. In this foreign population is a large percentage of European revolutionists who are fugitives from their own countries.

While the Government was conquer-

THE DANGER ZONE OF EUROPE

The question of the extent of the new Poland is now the chief source of disturbance. There is fighting on all frontiers, for the claims of the Poles are disputed by the Lithuanians, Russians, Ukrainians, Czechoslovaks and Germans. The shaded parts of the map shows the extent of predominant Polish speech as delineated by Dominian in his "Frontiers of Language and Nationality in Europe," published by the American Geographical Society. The black line follows approximately the boundary of old Poland as it was just before the first partition by Russia, Austria and Prussia in 1772. The Poles want this at least restored and the more ambitious of them would like to see the boundary extended to cover all territory formerly under Polish rule, which would include Frankfort, Breslau, Odessa, Kiev and Riga. The city of Danzig, claimed as a Polish port, contains only about 10 per cent of Poles.

ing revolutionary riots in Buenos Aires the spread of anarchy was growing thruout the Argentine republic and in other South American states. In Rosario, Argentine, a general strike was called on January 13 and numerous casualties were reported from street fighting. More than 20,000 workers struck in Lima and Callao, Peru, on the same day, but the Government already had troops on patrol and kept the situation under control. Stores, offices and factories were all closed and food became almost unobtainable. Part of the Central Railway was blown up. A mob of strikers attacked the arsenal in Lima and there was a serious battle before the troops drove them off.

In Montevideo, Uruguay, the police arrested four men who seem to hold the key to the whole uprising. They are Russians who have lived some time in South America; they came to Montevideo recently from Buenos Aires. Their aim is to overthrow the present governments and establish soviets in South America in an organization similar to that planned by Lenine in Russia. Isaac Molinoff, chief of these propagandists and director of their "Centro Cultura," was arrested in Buenos Aires during the strike last August on the charge of carrying a highly explosive bomb. Over 80 per cent of the rioters arrested in Buenos Aires during the present strike are Russians, most of them fugitives on account of revolutionary activities in their own country.

#### A Luxemburg Revolution

The little Grand Duchy of Luxemburg, with its girl sovereign, has been in the throes of revolution. On January 10 a Committee of Public Safety was formed, a republic was proclaimed, and the Grand Duchess withdrew from the capital and went to a chateau in another part of her domain. There were popular demands for her abdication. Against this the Government protested in a proclamation, declaring, however, that the Grand Duchess was willing to abdicate if her retention of the throne would be an obstacle to the forming of an economic alliance with the Entente Powers, especially France and Belgium. On January 14 the Chamber of Deputies voted to accept the abdication of the Grand Duchess and to recognize her sister, Princess Charlotte, as her successor. The following day Princess Charlotte was formally installed as sovereign of the state.

#### Cabinet Crisis in Italy

Italy seemed on January 15 to be upon the verge of a Cabinet crisis, due primarily to differences of policy concerning the annexation of the Dalmatian coast. Signor Bissolati, formerly a member of the Cabinet, recently declared in a public speech at Milan that Italy should be content with Fiume and Istria, and should not insist upon taking the whole Dalmatian coast, much of which is claimed by the Jugo-

Slavs and is necessary to them if they are to have an adequate frontage upon the Adriatic. This speech was received with much popular disfavor and indignation, yet its principles were and are supported by a part of the Ministry and by a certain proportion of Parliament and people. It was because of this speech that Signor Bissolati was constrained, just before President Wilson's visit to Rome, to resign the Ministry of Pensions.

This incident was followed on January 12 by the offered resignation of Signor Francesco Nitti, Minister of Finance, who is also inclined to concede much of Dalmatia to the Jugoslavs, and who thus radically disagrees with Baron Sonnino, the Foreign Minister. Altho this policy of Signor Nitti's is unpopular with the majority of Parliament and people, it was thought not improbable that his resignation would compel the fall of the Orlando Ministry, and that he would be called upon to form a new Cabinet, with himself as Prime Minister. If so, this would be not because of but in spite of his Dalmatian renunciation policy, and because he is looked to by the Catholic party and other conservatives as the best man to withstand Bolshevik and other radical influences.

**The Drys Have It** With the ratification by thirty-six states of the Federal amendment for national prohibition, the measure becomes a law to take effect on January 16, 1920. In the last few days' legislation on the amendment there was a rush of state legislatures to pass their ratification in time to have it included in the necessary two-thirds. The states which ratified the amendment, in chronological order, are Mississippi, Kentucky, Virginia, South Carolina, North Dakota, Montana, Idaho, Maryland, Arizona, Delaware, Texas, South Dakota, Massachusetts, Georgia, Louisiana, Florida, Michigan, Ohio, Oklahoma, Maine, Tennessee, West Virginia, Washington, California, Kansas, North Carolina, Indiana, Alabama, Arkansas, Illinois, New Hampshire, Iowa, Colorado, Utah, Oregon and Nebraska. No states have voted against it.

In California, the legislature's ratification of the prohibition amendment was directly contrary to the popular vote of last November, in which the people returned substantial majorities against both bone-dry prohibition and liquor regulation. There are large wine and grape growing interests in California which will of course meet a heavy financial loss by the prohibition law.

Under this Federal amendment the United States will become "bone dry" one year after the date of ratification. All manufacture and sale of alcoholic liquor will be prohibited. Prohibition as a wartime emergency measure had previously been enacted by Congress to take effect from July 1, 1919, until the demobilization of the armies.

Prohibition advocates have already presented in Congress a bill to provide machinery for the enforcement of the law by a national commission which will report any instances of its

## THE PROHIBITION AMENDMENT

*Section 1. *Section 2. The Congress and the several states shall have concurrent power to enforce this article by appropriate legislation.*

*Section 3. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of the several states, as provided in the Constitution, within seven years from the date of the submission hereof to the states by Congress.*

violation to the proper prosecuting officers or make complaint before the proper court and conduct the prosecution. An appropriation of \$1,500,000 is asked to assure adequate financial support for the enforcement of the prohibition law.

The Supreme Court gave a decision on January 13 upholding the legality of the Reed "bone dry" amendment enacted by Congress, thereby overruling the decision of the West Virginia court. The Reed amendment prohibits the carrying of liquor into a dry state, except for scientific, sacramental, medicinal or mechanical purposes, and therefore imposes on some of the dry states a prohibition more strict than that required by their own laws. The thirty-two dry states affected by the amendment are: Alabama, Arkansas, Arizona, Colorado, Florida, Georgia,

### OUT OF THE CABINET

Attorney-General Thomas W. Gregory has presented his resignation, effective March 4, 1919, when he will return to his law practice in Texas

Idaho, Indiana, Kansas, Iowa, Mississippi, Michigan, Montana, Maine, North Dakota, North Carolina, New Hampshire, New Mexico, Nebraska, Nevada, Ohio, Oklahoma, Oregon, South Dakota, South Carolina, Tennessee, Texas, Utah, Virginia, Washington, West Virginia and Wyoming.

### The Attorney General Resigns

The resignation of Thomas Watt Gregory, Attorney General of the United States since 1914, has been accepted by President Wilson to take effect March 4, 1919. "Pecuniary responsibilities" and the demands of his law practise were mentioned by Mr. Gregory as the reasons of his resignation. He was a member of a law firm in Austin, Texas, previous to his Federal appointment, and directed the prosecution of several corporations, notably the oil trust, for violation of the Sherman anti-trust law.

During the war the Attorney General's work has included the functions of policing the country, seeking out dangerous enemy aliens for prosecution or internment, combating German propaganda, and rounding up draft slackers.

Mr. Gregory is the fifth member to resign from the Cabinet during President Wilson's administration. The others were Secretary of State Bryan; Secretary of War Garrison; Attorney General McReynolds, Mr. Gregory's predecessor, who was appointed to the Supreme Court, and Secretary of the Treasury McAdoo.

### A New Director of Railroads

Walker D. Hines, former Assistant Director General of Railroads, has been appointed by President Wilson to succeed Mr. McAdoo as the Director General. Mr. Hines has been in the railroad administration ever since the Government took control. Before the war he was chairman of the board of directors of the Atchison, Topeka and Santa Fe Railroad.

In accepting his appointment as Director General of the Railroads Mr. Hines said:

From the first day of Government control of the railroads I have been a part of Mr. McAdoo's administration, and it will be my purpose, as Director General, to carry forward the policies he has so ably put into effect—fidelity to the public interest, a square deal for labor, with not only an ungrudging but a sincere and cordial recognition of its partnership in the railroad enterprise, and fair treatment for the owners of railroad property, and for those with whom the railroads have business dealings.

Until the signing of the armistice the Government's first railroad duty was to run the railroads to win the war, but now, that the war is won, the Government's railroad job is to render an adequate and convenient transportation service at reasonable cost.

He also announced specifically his approval of Mr. McAdoo's plan to continue Federal control of the roads for a five-year period, and said that he would make an early request to Congress for an additional appropriation of \$500,000,000 to be used mainly in extending loans to railroads to cover the program of improvements and ex-

tensions. The railroads have been operated by the Government at a net loss of \$253,000,000.

**What the Railroads Want** The railroads' own plan for their future control was presented to the Senate Interstate Commerce Committee by J. Dewitt Cuyler, chairman of the Association of Railway Executives. In general it calls for private ownership and management of the railroads under strict Federal supervision, which would require the appointment of a Cabinet officer, to be known as Secretary of Transportation, who would take over the administrative functions of the Interstate Commerce Commission.

The salient features of the railroads' plan are compulsory Federal incorporation, Federal supervision of securities issues, Federal control of state as well as interstate rates, statutory guarantee of adequate earnings, and perpetuation in large measure of the unification effected under Government control. Labor troubles would be adjusted by the Government, strikes and lockouts being forbidden.

The program allows the roads to initiate rates, which would be subject to judicial review by the Interstate Commerce Commission. Regional commissions would be created to perform certain rate functions.

The hurried return of the railroads to private management without intervening legislation would be financially disastrous, Mr. Cuyler said. The roads must lose money if they are run at the present rates of charges and wages.

The Interstate Commerce Commission, with the exception of one member, advocates the return of the railroads to private management "after a reasonable period of readjustment" and "with the adoption of appropriate provisions and safeguards for regulation under private ownership." It opposes definitely Mr. McAdoo's proposal of a five-year period of Federal control and makes the following suggestions as the basis of a program of immediate action:

1. Revision of limitations upon united or cooperative activities of both rail and water carriers.
2. Emancipation of railway operation from financial dictation.
3. Regulation of issue of securities.
4. Elimination of the twilight zone of jurisdiction between Federal and state authorities, in order that an harmonious rate structure and adequate service can be secured, state and interstate.
5. More liberal regulations governing the treatment of competitive as compared with non-competitive traffic.
6. Efficient utilization of equipment and provision for distributing the burden of financing equipment on an equitable basis among the respective carriers.
7. A more liberal use and interchange of terminal facilities by the railroad.
8. Limitations within which common carrier facilities and services may be furnished by shippers or receivers of freight either by ownership, lease or hire.

**Paralyzing the Port of New York** The strike of harbor workers that has been threatening for two months to tie up transportation in New York harbor came to a head on January 10 when 16,000 men

© Western Newspaper Union

#### THE HIGHEST PAID WOMAN STATE EMPLOYEE

Miss Frances Perkins has been appointed by Governor Smith of New York as State Industrial Commissioner at a salary of \$8000 a year. She has been instrumental in the enactment of many labor reform measures. Miss Perkins in private life is Mrs. Paul Wilson, wife of the secretary to the late Mayor Mitchel of New York

of the Marine Workers' Affiliation walked out. They were supported by 45,000 longshoremen, who promised a sympathetic strike if it became necessary.

For three days ferries and all transportation facilities in New York harbor were practically at a standstill. And since the chief avenues for bringing food into the city terminate in ferries from New Jersey, there was temporary danger of a serious food shortage. Freight coming into New York piled up at the terminals and the railroads had to declare a general freight embargo against the port of New York. Forty thousand commuters who lived on Staten Island were marooned when the municipal ferryboats stopped running. The New York police and enlisted men of the army and navy were called out to do emergency duty in manning a few ferries and relieving food shortage where it was most dangerous.

Darling in New York Tribune

MEET HIM AT THE DOCK WITH THE FATTED CALF

So serious did the situation seem that when Federal efforts to bring about an agreement failed, Secretary of Labor Wilson cabled to the President of the United States asking his intervention to end the strike. President Wilson cabled in reply:

I consider this a very grave emergency and understand that it has arisen because the parties to the controversy failed to make a joint submission to the National War Labor Board. I earnestly request that you take up this case again and proceed to make a finding.

Altho the National War Labor Board, up to the signing of the armistice, was concerned solely with the prevention of stoppage of war work and the maintenance of production of materials essential to the conduct of the war, I take this opportunity also of saying that it is my earnest hope that in the present period of industrial transition arising from the war, the board should use all means within its power to stabilize conditions and to prevent industrial dislocation and warfare.

The President's request led the marine workers to call off the strike pending decision by the War Labor Board on the merits of their demands and to make the following answer:

The striking marine workers of New York Harbor have returned to work, and submit their cause absolutely to the National War Labor Board, which you have declared to be the instrumentality set up by our Government to settle such controversies.

We do this ungrudgingly, with the sincere hope that you may be undisturbed in mind and spirit in the splendid work of leading in the creation of a new birth of freedom for all the peoples of the earth, and proving, if need be, that the toilers of your own land are supporting you enthusiastically and to a man.

Our only demands are for a living wage and an eight-hour day, both of which have been proclaimed by you to be the inherent right of every worker in the nation.

The immediate cause of the strike was the refusal of the private boat owners to submit their case to the National War Labor Board for arbitration—a refusal that they based on the alleged labor sympathies of members of the board. After the strikers returned to work, however, Chairman William Howard Taft overruled the owners' objection and announced that the board would proceed to hear all the evidence from both sides.

The chief point of dissension is the workers' demand for a basic eight-hour day and on this point they are determined not to yield. An increase in wages, ranging from 35 to over 100 per cent over the present rates, is also asked, but on this point the workers are willing to agree freely to whatever decision is reached by the War Labor Board. The lowest wages at present are \$70 a month for deckhands, firemen and cooks. They ask now to be paid \$145 a month. In support of this demand the unions quote a series of budgets prepared for the War Labor Board by Professor Ogburn of the Department of Sociology in the University of Washington. Professor Ogburn finds that a "bare subsistence budget" to give a family of five in New York City the simple necessities of life would be \$1500 a year. Frank P. Walsh, former chairman of the War Labor Board, is presenting the evidence for the six marine unions.

# WHY WE NEED A GREAT NAVY

By Secretary Daniels

Reported by Donald Wilhelm

Paul Thompson

*The Secretary of the Navy making a speech at the time of the laying of the keel of the "California" in the Brooklyn Navy Yard*

I have been contending for, and urging, ever since I was in office, an agreement between the great nations of the world by which competitive naval building should be ended, and in the bill I proposed to Congress there is incorporated a provision that the construction of the new three-year program should not be carried out in full if such an agreement can be arrived at. In fact, the first year's appropriation would only authorize us to contract for one-third of the program and to spend only one-seventh to one-sixth of the money, and if the conference in Paris, as I profoundly believe will occur, creates an international tribunal and organizes in some way a naval police force, the necessity of America's expansion of its navy will be eliminated.

But pending action of this conference, I strongly believe that the United States ought to adopt the British phrase, "Carry on," and in that event my proposition is to authorize another three-year program similar to the one authorized three years ago, instead of a hand-to-mouth year-by-year program.

I do not believe that the conference will adjourn without reaching an agreement for an international tribunal. But when it does reach such an agreement for an international tribunal, America must make a contribution to the world navy in proportion to its wealth and its importance, and to the tremendous length of its shore line; certainly its contribution should be as great as that of any other nation.

I set all this out, in different language, in my hearings before Congress, but in response to inquiries I did say that I believe all this to be the rock-bottom principle which all Americans should stand upon; that if, *unhappily, the great nations should not agree on the program which President Wilson has set forth, and there exists a balance of power and force, then the United States ought not to build merely the second largest navy in the world, but incomparably the greatest navy in the world.*

Certainly it is clear that we ought never to depend upon another nation to defend our rights or our country. Just as certainly as I believe that we ought to cooperate with all other nations toward reducing armament, I believe that if there should be any failure of an international arrangement, then it is the duty of the United States, at any cost, to have a navy which has no superior.

The impression was put forth in some quarters that my remarks presupposed some divergence between this country and Great Britain. There is no warrant for any such impression. To the contrary, the free nations of the world, I believe, are too wise to permit any differences to cause them to return again to the unspeakable conditions that prevailed before this great war, when nations felt that they must be armed to the teeth against the powers of greed and conquest.

But the nation which was the menace to the world's peace has been humbled and deprived of its power to threaten other nations or to levy tribute upon them, and we must make it impossible for any other nation, or group of nations, to enforce their will upon the world. A new policy of justice and right must replace the old, centuries old, world spirit, which held in the days of Alexander, of Cæsar, of Napoleon and of the German Emperor and of men of that class.

The spectacle of the boundary line between Canada and America, mutually respected tho unarmed, thru the years, is the best illustration of the condition which ought to exist all over the world. It is a practicable suggestion for an international tribunal or league of peace.

Certainly there must be enough statesmanship in the conference at Paris to overcome the obstacles to "a parliament of man and confederation of the world."

Washington, D. C.

## PARALYZING THE PORT OF NEW YORK

*There were three bad days for New York City when a strike of 16,000 marine workers stopped all transportation of freight or passengers thruout the harbor. Most of the city's food comes by rail to terminals in New Jersey and is carried across the Hudson to New York on ferries. The photograph above shows the congestion near one of the ferry houses on the first day of the strike as hundreds of trucks and wagons waited hoping for a chance to cross the river. The strike was called off only after a cabled request from President Wilson stressing the gravity of the emergency and ordering arbitration by the War Labor Board. The news item on page 115 gives a more detailed account of the strike*

## THE DIRECTOR-GENERAL OF RAILROADS

Federal administration of the railroads will be carried on by Walker D. Hines, the new director-general, in accordance with the policies already developed under Mr. McAdoo. Mr. Hines has been assistant director of the roads ever since the Government took control and his previous experience as a railroad executive included chairmanship of the directors of the Atchison, Topeka and Santa Fe Railroad. He is in entire accord with Mr. McAdoo's proposal for a five-year extension period of Government control of railroads. In announcing President Wilson's appointment of Mr. Hines to take effect immediately, Mr. McAdoo said: "Mr. Hines has been my assistant at Washington since the beginning of Government control and has a thoro knowledge of organization and administration of the railroads under Federal control, as well as of the fundamental problem involved in the railroad situation. His ability and experience admirably fit him for the great trust and responsibility"

## AMERICA'S REPRESENTATIVES FOR WORLD RECONSTRUCTION

This is the first group photograph of the five peace delegates from the United States in Paris. It was taken by an official photographer of the United States Signal Corps and shows the American representatives in informal conference at the Hotel Crillon. At the extreme left is Colonel E. M. House, who has been in Europe as the President's personal representative throughout the whole war. Next is Secretary of State Robert Lansing, an authority on international law. This is Secretary Lansing's fifth experience as representative of the United States in an international tribunal. In the center is President Wilson, who is not only chief spokesman of the United States but who shares with Premier Lloyd George of Great Britain and Premier Clemenceau of France the leadership of the entire conference. Henry White is the delegate from the United States of chief diplomatic experience; he has been American Ambassador to Italy and to France. At the extreme right is General Tasker H. Bliss, former Chief of Staff and now military adviser

**T**HE greatest gain of the war is the rapprochement of Great Britain and the United States. This war has proved that an *entente cordiale* is stronger than an alliance and that a good understanding—in plain English—is stronger than an *entente cordiale*. The greatest danger to the world now is that the cordial feeling and the practical cooperation of England and America should be destroyed by a quarrel over opposing policies. But there is no necessity of this. It may be that we cannot come to an agreement, but we can come to an understanding with mutual comprehension and respect for irreconcilable views.

President Wilson's proposals as a basis for peace were accepted by Germany *in toto* and by the Allies with one possible exception, the freedom of the seas. This, then, is the only point on which there can legitimately arise a fundamental disagreement.

There are three views on this question:

1. The historic British policy: That the British navy must keep command of all the seas of the world.

2. The historic American policy: That in war "all merchant vessels shall be allowed to pass free and unmolested" (Franklin, Jefferson and Adams, 1785).

3. President Wilson's proposed solution: "Absolute freedom of navigation upon the seas outside territorial waters, alike in peace and war, except as the seas may be closed in whole or in part by international action for the enforcement of international covenants."

Now there is no ambiguity about these three statements. Anybody can see what they mean and understand the reasons for them. When Admiral Sims said: "I am unable to find any one on either side to give a definition of the freedom of the seas," he should have been reprimanded as he was for a similar indiscretion at a lord mayor's dinner in 1910. If he does not know what the American navy has been fighting for chiefly during the past 140 years he is not qualified to command that navy, and if he cannot find in any of the hundreds of volumes that have been written on it any definition that he can understand he needs to be sent back to school.

The phrase, "freedom of the seas," was not, as English journalists are apt to think, "made in Germany," nor was it, as some have said, an invention of Colonel House's. It was first introduced into international law by the Dutch jurist Hugo Grotius, in his book *Mare Liberum*. "The Freedom of the Seas or the Right which belongs to the Dutch to take part in the East Indian trade," written in 1604, and he supports his thesis by abundant citations from Greek and Latin authors. This question was the issue between Crete and Phoenicia, between Athens and Sparta, between Rome and Carthage, between Spain and England, and in many other wars. It will remain a cause of contention until all nations become permanently peaceable and quite unselfish, or until equal freedom for all is guaranteed by some international or supernational authority.

The navigation laws of England, which made smuggling seem a patriotic duty, started a breach with the colonies that led them to break away from the mother country, but England, although forced to relinquish her hold on the land, did not recognize American rights on the sea. So another war was fought in 1812-1814 and again we won. Or at least we thought we had, but the Englishman never knows when he is beaten and in this case he declined to admit it. Consequently the Treaty of Ghent did not establish the principle for which we had fought. In this war the Barbary Powers had aided England by piratical attacks upon our shipping in the Mediterranean, so our next battle for the freedom of the seas was against them. In 1815 Decatur went back to complete the job he had begun in 1804 and forced Algeria, Tunis and Tripoli to forego the tribute they had hitherto levied upon all the maritime powers.

The prestige acquired by the American navy in these three wars went far to secure the freedom of the seas for American shipping, and the persistent efforts of American diplomacy during the next hundred years obtained a considerable degree of acceptance of many of its principles. When Mr. Choate, at the instigation of President Roosevelt, pleaded for immunity of private property at sea before the Hague Conference of 1907, he was able truthfully to say:

It may not be improper to observe that the Government of the United States has uniformly advocated the doctrine of immunity under all the vicissitudes through which it has passed without regard to its effect upon its temporary interests for the time being.

The Declaration of London, which was agreed upon in 1909 by the representatives of the United States, Great Britain, France, Russia, Japan, Italy, Germany and Austria, though not ratified by all these governments, came the

nearest to embodying the American ideal and upon the outbreak of the Great War our Government urged both parties to agree to it. Germany was willing, but Great Britain objected to some of its provisions and later discarded it altogether. The United States in the first months of the war protested against the "act of the British authorities clearly subversive of the rights of neutral nations on the high seas" and proved the British policy "unjustified by the established rules of international conduct," "ineffective, illegal and indefensible." Finally Secretary of State Lansing, in his note of

Battleships of the United States fleet that he

# OF THE SEAS

GLOSSON

at Britain and the United States." The naval surrender of the German fleet, are, from left to right, King George, of the United States Navy; King George; and the United States fleet in European waters

October 21, 1915, sums up the American case and insists that the relations between the United States and Great Britain shall be governed

not by a policy of expediency but by those established rules of international conduct upon which Great Britain in the past has held the United States to account when the latter nation was a belligerent engaged in a struggle for national existence.

This task of championing the integrity of neutral rights, which have received the sanction of the civilized world against the lawless conduct of belligerents arising out of the bitterness of the great conflict which is now wasting the countries of Europe, the United States unhesitatingly assumes

and to the accomplishment of that task it will devote its energies.

But soon the German violations of maritime rights became so numerous and flagrant, being carried out with such unprecedented cruelty and wholesale destruction of neutral property and lives, that we quite forgot our quarrel with England. Before Germany had built her big navy and supposedly invincible U-boats she professed adherence to the American doctrine of the freedom of the seas. In fact the statement of the principles from Franklin's pen that I have quoted above is taken from the treaty of 1785 between the United States and Germany, which was renewed in 1828 and is presumably still in force, since, unlike other treaties, it is not abrogated by war or invalidated by violation. In his note of July 21, 1915, to Germany Mr. Lansing denounced the "illegal and inhuman acts," the "grave and unjustifiable violations of the rights of American citizens by German naval commanders," and urged Germany to maintain the freedom for which she had hitherto stood. And he added significantly: "The Government of the United States will continue to contend for that freedom, from whatever quarter violated, without compromise and at any cost."

It is an interesting though perhaps idle speculation to consider what would have been the effect on the war if the Powers signatory to the Declaration of London had kept to this agreement. In the early part of the war it would have been to the advantage of Germany, for the British fleet could not have so completely shut off food and supplies if it had kept within the limitations of a legal blockade. But on the other hand Germany could not later have sunk 7,000,000 tons of shipping on the high seas. English naval authorities now admit that if Germany had started in 1914 with the ruthless U-boat warfare

## KIPLING ON THE FREEDOM OF THE SEAS

"Oh, where are you going to, all you Big Steamers  
With England's own coal, up and down the salt seas?"  
"We are going to fetch you your bread and your butter,  
Your beef, pork and mutton, eggs, apples and cheese."

"Then what can I do for you, all you Big Steamers,  
Oh, what can I do for your comfort and good?"  
"Send out your big warships to watch your big waters,  
That no one may stop us from bringing you food."

For the bread that you eat and the biscuit you nibble,  
The sweets that you suck and the joints that you carve,  
They are brought to you daily by all us Big Steamers,  
And if anything hinders our coming you'll starve!"

From Rudyard Kipling's "History of England" published in 1911 by Doubleday, Page & Co.

of 1917 England would have been isolated and starved out. As it was, England had time to accumulate provisions and to work out methods of defense. If then the Germans had shown that marvelous foresight with which popular superstition accredits them, England's possession of a fleet twice as large as the German would not have saved her from disaster.

So we see that the war has destroyed the grounds of confidence of both the English and American theories. The strongest navy in the world cannot insure safety, for some secret invention in the way of submarines, torpedoes or airplanes may render it ineffectual. On the other hand, the American dependence upon treaties proves to be frail still. No documents could stand the strain of such a war as this. The Hague conventions have been disregarded because the Powers that came together to enact them did not stay together to enforce them. It is not enough to say that the seas should be free; they must be kept so and not by any one nation but by the common will of all. The three theories, reduced to their lowest terms, may be thus expressed:

1. The American idea: The seas should be nobody's.
2. The British idea: The seas should be somebody's.
3. The President's idea: The seas should be everybody's.

The first has never proved practicable and at present appears impossible. It is an American characteristic to place too much dependence upon good intentions and legislation. We said to ourselves, "If all nations should promise not to interfere with shipping, then no navies would be needed." This was like saying: "Let's all agree not to rob and then we need not lock our doors"; quite true, but not [Continued on page 122]

# OLD ANDREW JACKSON

BY VACHEL LINDSAY

*Old Andrew Jackson was eight feet tall,  
With an arm like a hickory limb and a maul.  
His sword was so long he dragged it on the  
ground.*

*Every friend was an equal. Every foe was a  
hound.*

*Andrew Jackson was a Democrat,  
Defying kings in his old cocked hat.  
His vast steed rocked like a hobby horse.  
But he sat straight up. He held his course.*

*He whipped the British at New Orleans,—  
Beat them out of their elegant jeans.  
He piled the cotton-bales twenty feet high,  
And he snorted "freedom," and it flashed  
from his eye.*

*The American Eagle swooped thru the air  
And cheered when he heard the Jackson swear:—  
"By the Eternal, let them come:  
Sound Yankee Doodle. Let the bullets hum."*

*And his wild men straight from the woods fought on  
Till the British fops were dead and gone.*

*And now Old Andrew Jackson fights  
To set the sad big world to rights.  
He joins the British and the French.  
He cheers up the Italian trench.*

*He's making democrats of these,  
And Freedom's Sons of Japanese.  
His hobby horse will gallop on  
Till all the infernal Huns are gone.*

*Yes,  
Yes,  
Yes!  
By the Eternal!  
Old Andrew Jackson!*

A year has passed since I said in these pages that a consolidation of practically all of the railroads in the United States might be the solution of the railroad question. Since that time I have spent eight months in Washington in the financial division of the Railroad Administration, during which time I had an opportunity to examine the problem from the inside. My experience confirmed my original belief that the problem of the railroads is one of the gravest which the country faces today and that the financial questions relating to railroad affairs are as important as those relating to the physical operation of the roads. I also learned that the human element is very important in rail-

Mr. McAdoo made a signal success as Secretary of the Treasury. This success was due not so much to Mr. McAdoo's personal ability as a financier, for his record shows that financial operations with which he was identified in the past were not successes, but to his ability to pick for his war finance organization a group of young men who were not so well known nationally, and who, in fact, were only known locally in their own business sphere. I believe that he picked these men because he knew that they were capable and honest and because he had a real job before him. War exigencies required immediate action and no experimenting, and the men had to "deliver the goods." The men I refer to include: Lewis B. Franklin, of the bond department of the Guaranty Trust Company; R. C. Leffingwell, of Messrs. Cravath and Henderson, and Albert C. Rathbone, of Joline, Larkin & Rathbone, both New York lawyers of ability, and Fred C. Kent, foreign exchange expert of the Bankers Trust Company, also of New York.

These men were not politicians, they were professional or business men of high caliber. They were called to Washington after they had offered their services and in some instances I believe no compensation was given for some time. In fact, both Mr. Leffingwell and Mr. Rathbone worked for many months without any title although they each received appointments as Assistant Secretaries of the Treasury. They all demonstrated their fitness for the high offices they held and these results were shown because they must have managed their offices in a business-like manner, unhampered by experimenters, sore head politicians or other theorists. To them is due the fact that the press of the country said that the resignation of Mr. McAdoo as Secretary of the Treasury was a distinct loss,

# THE RAILROAD MUDDLE

BY LUIGI CRISCUOLO

DIRECTOR OF THE INDEPENDENT SERVICE TO INVESTORS

*The Independent publishes this article because it believes, first, that the public is entitled to know what allegations of facts are made in regard to the railroad situation by men in a position to know, and, second, that the public can judge of the situation and wisely react to it in public policy only when it has heard what such men and all interested parties have to say. Mr. Criscuolo is an authority on matters of finance and he has been for the past eight months in the Finance Division of the Railroad Administration*

Photographs © Underwood & Underwood

even the *Commercial and Financial Chronicle* joining in the expression of this sentiment.

But Mr. McAdoo's administration of the railroads of the country was in clear contrast to his able direction of the country's financial policy during the war. From the first he was antagonized by the financial interests, because in his official capacity he began to embarrass the railroads, either by not paying the rentals due to them under the act, or by holding up the declaration of dividends on stocks, or by neglecting to provide funds for improvements or the meeting of maturing obligations when due. I cast the responsibility upon Mr. McAdoo for this because all of these things occurred by order of the Director General of Railroads, altho in most instances I believe the Director of Finance dictated the policy. The act for the Federal control of railroads provided a revolving fund of \$500,000,000 to take care of the financial requirements of the railroads. It was called a revolving fund because as money was used for railroad purposes where the roads had no funds, it was replenished from time to time with the surplus of such roads as were making money even under Government operation.

Instead of formulating a policy as to finance, accounting and operation from the first day that the roads went under Government control, these important matters were allowed to drift, drift, with the result that interest on bonds was allowed to default, dividends were discontinued or delayed, vouchers aggregating millions of dollars for materials and supplies were unpaid for months, and railroads which desired to borrow funds in the open market were advised that they could not pay over 6 per cent for funds, altho the current market rate was 1 per cent higher. As I have said, Mr. McAdoo not only alienated the railroad officials and financial interests, but he also created distrust among business men and investors. Business men who sold supplies to railroads flooded the Division of Finance with telegrams requesting payment for material sold to railroads, investors complained that bond interest and dividends on stocks were not being paid. All of these protests received scant atten-

tion for a long time, tho finally a bureau of complaints was organized; however, this bureau took care of minor matters and had no jurisdiction over broad matters of finance or payment of large vouchers. Legitimate complaints did not receive the same sort of attention that similar complaints would have received in any well-ordered business organization. Letters or propositions from railroad officials to the Division of Finance were seldom acknowledged, and the officials never knew whether they had been received or not until after decisions had been made, unless the letters had been sent by registered mail with return receipt requested.

In the Division of Finance, propositions

were referred to the Advisory Committee, of which I held the office of secretary and financial expert. The Advisory Committee had no public standing but was merely appointed to advise the Director of Finance, Mr. John Skelton Williams. The reports of this committee to Mr. Williams were confidential and were used by him in making his decisions on matters of finance. Often decisions were not made for months altho I prepared recommendations which were approved by the committee and sent to the Director of Finance within a few days or a week of their receipt. Railroad officials were treated with scant courtesy and made to loiter around the offices of the Division of Finance for days without being able to obtain a hearing, while the officials attended to their multifarious duties.

Mr. McAdoo's great mistake was to continue in office as Secretary of the Treasury while he was Director General of Railroads. Either office was big enough for the biggest man in this country and the biggest man in the country could not hold both and conduct his work efficiently. Mr. McAdoo stated that his resignation from both offices was to recoup his health as well as his fortune. He could have resigned his office as Secretary of the Treasury, which paid but \$12,000 a year, and retained that of Director General of Railroads which was easily worth \$75,000 and which salary nobody would have begrudged him, not even Congress, which such a figure for a public office would have ordinarily staggered. Mr. McAdoo should have required Controller of the Currency Williams to resign that position or else his position as Director of Finance and Purchases in the Railroad Administration, preferably the latter. My impression is that while Mr. Williams is none too well liked as Controller of the Currency, his administration of that office has not resulted in his receiving so much criticism as his conduct of the office of Director of Finance in the Railroad Administration. The office of Director of Finance and Purchases is important enough to require all of any efficient man's time and not merely a few hours at the end of each day, as was Mr. Williams's wont.

Mr. Williams held a very predominant position in the Railroad Administration,

the important for a man whose dislike of certain large financial interests was well known and which dislike was largely engendered by his having been ousted from the control of the Seaboard Air Line some years ago. Needless to say, the Seaboard line was suffered from the lack of Mr. Williams's counsel. His dislike for this "trust" was so pronounced that he never seemed to miss the opportunity to get revenge by exercise of his official prerogative as Controller of the Currency. Mr. Williams's controversy with Messrs. J. P. Morgan & Co. on the renewal of the \$15,000,000 issue of Chicago & Western Indiana Railway notes which became due last September is history now, but it was a shameful episode which will be remembered for many years by bankers and students of finance.

Shortly after resigning Mr. McAdoo announced that he had no policy to suggest as that should be left to his successor. Then the President made some indefinite recommendations to Congress on the subject. Later on, Mr. McAdoo startled the country by the announcement that he favored Government control for a period of five years so that the railroads could be placed in proper physical and financial condition. The fact is that the Railroad Administration has had no policy since it was organized. The question of financing the requirements of the railroads for physical purposes received more than ordinary attention but no successful plan was evolved. The Director of Capital Expenditures announced last summer that over a billion dollars were required to place the railroads in good physical condition. Of course, it was not expected that this sum could be expended in one year. As a matter of fact, it would be inadvisable to spend it in one year, even if possible, because of the abnormally high cost of material, supplies and wages. Then, of course, there is the question of financing the requirements for which no provision had been made.

Last May, while in Washington, I made a study of the financial question and proposed to my superior official that a special bond issue be created by the Government to provide funds for railroad purposes. My conclusions were published in *The Independent* of June 29. In this study I pointed out that the Government could borrow money at 4½ per cent while private corporations were obliged to pay as high as 7 to 10 per cent for money. It was proposed that bonds be issued in denominations of as low as fifty dollars and sold thru recognized distributors of securities all over the country. Nothing was done. While the Division of Finance ruled that rail-

roads could not pay over 6 per cent for money and retained this attitude right along, funds were not available in the open market at less than about 6.50 per cent, for offering to the public at about 6.25 per cent. The fact that money was high and that bankers were in business to make commissions, and not to display patriotism in lending funds to the railroads, did not seem to impress the Division of Finance in the least. If a special bond issue had been created, bonds could easily have been sold on a 5 per cent basis with a semi-governmental guarantee, and there is no doubt that with Congress recognizing the gravity of the situation its members would have welcomed a proposal for legislation on such an issue of bonds.

The situation did not influence the Director of Finance to be liberal with money from the \$500,000,000 revolving fund which the railroads so urgently needed for improvements or for meeting maturing bond issues. In June, the Union Pacific Railroad sold an issue of \$20,000,000 ten year 6 per cent bonds to the public on a 6.25 per cent basis. The Baltimore & Ohio sold \$10,000,000 one year 6 per cent notes to bankers on a little over 6 per cent basis. Later the Lehigh Valley Railroad sold to the public thru bankers an issue of \$15,000,000 ten year 6 per cent bonds on a 6.35 per cent basis. But when the issue of \$15,000,000 notes of the Chicago & Western Indiana Railway due September 15 were about to mature the Director of Finance engaged in a wordy controversy with Messrs. J. P. Morgan & Co. who were openly accused of asking a usurious rate for money. The rate was indeed high, but I would not have recommended the purchase of the notes of that company at even 7 per cent in competition with the Union Pacific or Lehigh Valley notes.

The whole transaction was intended to discredit Morgan & Co. altho to those who knew the situation it was merely an attempt to justify the neglect of the Railroad administration, which controlled this railroad, to provide sufficient funds to meet the maturing notes or else to provide a plan for their refunding. There was ample time in which to do so. The intelligent man-in-the-street knew the situation and felt that the Division of Finance was discrediting the whole Railroad Administration because of the attitude of its Director. According to my own recollection, the Chicago & Western Indiana first made its request for funds to meet the maturing notes early last summer, so the Railroad Administration was advised in due time to prepare a plan. The Division of Finance could

easily have determined whether the notes could be sold to the public on a 6 per cent basis or not. Knowing that the notes could not have been placed on a 6 per cent basis or perhaps even on a 7 per cent basis, the Railroad Administration should have made every effort to advance the money from the revolving fund in order to take care of this maturity. But it did not because its policy apparently became that of antagonizing and criticizing reputable bankers without offering a remedy for conditions as they existed.

When the railroads were taken over by the Government, the President said that the financial requirements of the roads should, during the period of the war, be "wisely related to the financial operations of the Government." Have they been? Early in October, Mr. McAdoo announced that such railroads as had obligations maturing between then and July 1, 1919, and which could not be met at a rate of 6 per cent or less, would be taken care of by the Railroad Administration, provided such railroads had made every reasonable effort to obtain funds thru the usual banking channels. Directly in contrast to this was the refusal of the Director of Finance to advance the Kansas City Terminal Railway Company approximately \$10,500,000 which the company required in order to meet notes which were about to mature. Finally the Director of Finance approved the sale of an issue of \$9,850,000 five year 6 per cent notes at a price to the public of 98½.

Now to return to the revolving fund and its application; the money was used for payment of rentals for Government operation, to provide the corporations with funds to meet maturing obligations and to provide funds for capital expenditures. Aside from this revolving fund the Government had a call on the current earnings of all of the railroads which were under Government control and could use those funds as it saw fit, the same as those held in the revolving fund. The Division of Finance acted on the applications for advances on account of compensation, loans, authorities to pay dividends on stocks in cases where the rate was not uniform with the rate paid during the entire period 1915-17, authorities to issue bonds or stocks, and in fact on all propositions relating to finance, as well as with regard to purchases of equipment, supplies, material, etc. Technically, rentals were due to the railroads every month as soon as the Government assumed control, because the railroad corporations had to meet interest on bonds, dividends on stocks, salaries of corporate officials, etc. During the six [Continued on page 134]

An instance of freight congestion in one of the large terminal railroad yards along the river front opposite New York

## POEMS FROM THE FRONT

FROM the thousands of poems that have come from the trenches, some of the best, expressing in soldier language every phase of soldier life and thought, have been collected by Lieutenant C. E. Andrews, U. S. A., under the title *From the Front*. There is no pretense of style and the soldiers have written just what they see, hear, think and feel.

"Dawn in the Trenches" is by Eric Thirkell Cooper:

Dawn o' day! And birds a-singing;  
Sniping starts along the line;  
"Stand to, all," comes quickly ringing.  
"Pray the coming day is fine;  
Mind the pools from last night's drizzle,  
Post 'day-sentries' straight away——"  
Rifles cleaned whilst rashers frizzle—  
So to us comes break o' day.

Two other volumes of similar content and equal literary value and sympathetic appeal are *Songs from the Trenches*, compiled by Herbert Adams Gibbons, and Frank Foxcroft's *War Verse*.

Of the author of *Fairies and Fusiliers*, John Masefield said: "There is a gay young singer named Robert Graves, who has written poetry about the war which will live."

The tiny bookful of short lyrical poems by Robert Graves strikes a high average of literary excellence and individual appeal. Many of the fifty poems were written in the intervals of fighting at the front, where Robert Graves is a captain of the Royal Welsh Fusiliers. They paint with genuine simplicity and keen imaginative skill one soldier's reactions to the emotions of war. "Not Dead" is one of them:

Walking' thru trees to cool my heat and pain,  
I know that David's with me here again.  
All that is simple, happy, strong, he is.  
Carelessly I stroke  
Rough bark of the friendly oak.  
A brook goes bubbling by: the voice is his.  
Turf burns with pleasant smoke:  
I laugh at chaffinch and at primroses.  
All that is simple, happy, strong, he is.  
Over the whole wood in a little while  
Breathes his slow smile.

But not all these verses are of war. There are whimsical scraps of philosophy and some charming poems of children. Doesn't this stanza from "Double Red Daisies" remind you of the days when you were young?

Double red daisy, that's my mark:  
I paint it in all my books!  
It's carved high up on the beech-tree bark.  
How neat and lovely it looks!  
So don't forget that it's my trademark:  
Don't copy it in your books.  
Clara has a tear-rose, but she didn't plant it  
Ben has an iris, but I don't want it.  
For us, double red daisies for me,  
The beautifullest flowers in the garden.

The ugliness of war, the pain, the loneliness, the devastation, are forcefully presented in *The Other Side*, war poems by Gilbert Frankau, staff captain in the British army. This description of Ypres was written after he fought there thru the winter campaign of 1915:

This is the City of Fear!  
Death  
Has ringed her walls with his picket, has choked  
her streets with his breath,  
In her cellars the rats feed red  
On the bodies of those whom their own roof-  
beams betrayed to him as they fled.  
For none live here.

*From the Front*, collected by Lieutenant Clarence Edward Andrews, U. S. A. D. Appleton & Co. 21. *Songs from the Trenches*, by Herbert Adams Gibbons, Harter & Brown, 21. 25. *War Verse*, by Frank Foxcroft, Thomas Y. Crowell Co. 21. 25. *Fairies and Fusiliers*, by Robert Graves, Alfred Knopf, 21. *The Other Side*, by Gilbert Frankau, Alfred Knopf, 21.

## McCutcheon's New Dress Cottons for Spring, 1919

OUR showing of Dress Cottons for Spring, 1919, embraces the newest textiles, designs and color combinations from France, Switzerland, Great Britain and our own country.

We would call especial attention to a fabric entirely new to this country "ENGLISH PRINTS," made for and sold exclusively in the United States by James McCutcheon & Co. It is ideal for dresses for children, misses and grown ups. There are hundreds of quaint printed designs, in small and conventional effects, on white or tinted backgrounds. 32 inches wide. 95c yard.

**PRINTED DIMITIES.** Complete assortment, plain colors, stripes, checks, dots and floral designs. 28 inches wide. 35c and 60c yard

**HANDKERCHIEF LINEN.** All the plain colors and a generous assortment of novel printed designs. Plain colors, \$1.25 yard; printed, \$1.00 yard.

**GINGHAMS.** For the coming season we have prepared a very interesting collection of this most fashionable fabric, every plain color and an almost endless variety of the popular checks, plaids and stripes, featuring such famous brands as "David and John Anderson," "Glen Roy" and "Lorraine." 55c to \$1.35 yard.

**ORGANDIES** will be very much in vogue this season and our stock is replete with the newest shades, printed checks, dots, stripes and foulard effects, coming direct to us from Switzerland and France.

\$1.25 to 2.50 yard. Reg. Trade Mark

**CREPE GEORGETTE.** A charming fabric (silk mixture) in a host of new French designs, such as foulards, spots, scrolls, floral and conventional. Considered one of the season's smart fabrics. 95c yard.

**WOVEN VOILES AND TISSUES** in pleasing color combinations—checks, stripes, plaids and embroidered effects. 75c to \$1.50 yard.

**ENGLISH OPEN CHECK VOILE** in White and plain colors; a very fine fabric with open lace effect. \$1.75 yard.

**DOTTED SWISS,** one of the season's most popular fabrics (made in Switzerland); comes in White grounds with colored dots or colored grounds with White or contrasting dots. \$1.95 yard

**FRENCH CREPE.** A heavy quality crepe composed of Silk and Cotton in White and all the leading shades; very smart for dresses, negligees, smocks, etc. \$1.95 yard.

Samples mailed on request

Fifth Avenue, 34th and 33d Streets New York

# HEAD OF THE THRIFT FAMILY

BY W. E. UNDERWOOD

DIRECTOR OF THE INDEPENDENT INSURANCE SERVICE

INNUMERABLE are the eulogies I have heard and read of life insurance. Naturally, the vast majority of them came from the lips and pens of men within the business for, as no others can, they appreciate its multifarious advantages in the human scheme of things. But I cannot now recall a characterization of it so unequivocal as that made by Joseph Chapman, vice-president of the Northwestern National Bank of Minneapolis, in closing an address to the members of the Association of Life Insurance Presidents in New York last month. I quote the particular paragraph to which I refer:

Having been an insurance policyholder since the age of twenty and having had a banking experience extending over thirty years, my experience teaches me that for the average man an investment in life insurance is the safest possible method of saving money, to say nothing of the protection afforded the policyholder and his family during the life of the policy.

In form this statement is not eloquent. It paints no picture, it does not stir the blood, sets into action no emotion. In these respects it lacks all the elements of eulogy. But it is as beautiful as truth, because it is the truth discovered and revealed by an expert workman in his line. To me it is one of those dull gray stones which in their natural state are unattractive to the eye, but are diamonds none the less. The witness who is testifying is an expert; he has had personal experience of various forms of thrift; his daily work for years has consisted in aiding men to make a success of their ventures; he is, because he has had to be, a student of human nature, that is to say of human weaknesses and infirmities; and the final conclusion of these years of experience and observation is: "Life insurance is the safest possible method of saving money."

The reader will observe that this statement, as I have just paraphrased it, relates solely to the living policyholder himself. Mr. Chapman added: "to say nothing of the protection afforded the policyholder and his family during the life of the policy." On this occasion he was not discussing the protective—which, indeed, is the great, the important side of life insurance. His full attention was concentrated on it as an instrument of thrift, the rewards of which are enjoyed during their lifetime by the prudential.

In the course of his address, which, the theme considered, was very brief, Mr. Chapman touched lightly on many correlative facts, among which was that reflecting an experience drawn several years ago from the records of certain surrogates' courts. I have somewhere safely laid away where I cannot find it, a full copy of the report which I wish now I could lay before you; but I will piece out the story with the fragments contained in the allusions occurring in Mr. Chapman's address.

The figures compiled from the surrogates' records indicate that the estates of but three men out of every hundred who die leaving estates are worth \$10,000 or more; that but fifteen others leave an estate valued at between \$2000 and \$10,000, and that eighty-two leave no tangible assets whatever. With the result,—I will quote Mr. Chapman:

that out of every one hundred widows, only

eighteen are in good and comfortable circumstances; forty-seven others are obliged to go to work and often lack the ordinary comforts of life, and thirty-five are left in absolute want and must depend on charity to live.

In considering this statement keep in mind that these are widows of men who are supposed to have been prosperous, men who had estates to be settled by the courts. Of course, any life insurance they had is not included in the figures from which the foregoing results are drawn.

Just what would happen socially if every person who died were as well equipt financially as the fortunate 3 per cent recorded, it would be difficult to predetermine; but the problems involved should not, I take it, discourage one of us from striving industriously for election. In the language of a popular song, it is yet a long, long trail we are plodding. We are the wasters of the world—because, perhaps, we are the nabobs. We even have "money to burn," as any thoughtful man who will study the records of our fire losses will agree. The bill for 1918 exceeds \$300,000,000—values totally annihilated, remember, 80 per cent of which was preventable.

We are spending \$700,000,000 a year for tobacco; \$2,000,000,000 for alcoholic beverages; wasting another half billion every twelve months in soil erosion; \$600,000,000 thru damage to crops and fruit trees; \$250,000,000 in live stock thru the attacks of insects and, finally, billions in the aggregate in countless other ways. We stand up under it only because we are so abundantly rich in natural resources. When we set ourselves to saving and practising self-denial, as during the eighteen months we were in the war, note what we can do. No such continuous succession of good crops have been produced in this country as we raised when we undertook, since 1914, to feed all the world except the Central Empires. Prior to that year \$4,000,000,000 of American securities were held abroad and \$1,000,000,000 of our property was owned by non-resident foreigners. Since July 1, 1914, our excess of merchandise exports over imports total \$10,110,000,000, making us a creditor nation to the extent of nearly \$6,000,000,000; in addition to which we have loaned our allies in the war \$7,732,976,666.

Prior to January 1, 1914, 200,000 of our people owned \$1,000,000,000 of Government bonds; today 22,000,000 own \$17,852,000,000 in bonds and war savings stamps. These figures indicate the awakening of our people to national thrift.

RETURNING to Mr. Chapman's address, which has furnished the figures and the text of much of which I have written, I find him crystallizing his observations in the following words:

The most potent factors today in America for

*The Insurance Department of The Independent will undertake to furnish on the request of readers any information respecting the business of insurance and the companies transacting it which we have or can procure. Address all communications on insurance subjects to the director of The Independent Insurance Service*

encouraging thrift are the Government, the insurance companies, the banks and the home building and loan associations. After the war, the Government will cease to be the principal member of the Thrift family, and Insurance [life insurance] will again take the head of the table.

Every life insurance worker is warranted in feeling proud, every policyholder in experiencing an access of confidence as the result of such a statement from a hard-headed man of business.

He shows that in the four years from January 1, 1914, to December 31, 1917, the number of life insurance policies increased from 38,206,394 to 50,345,300 and the amount insured from \$20,564,469,945 to \$27,189,009,697—gains, respectively, of 12,138,906 and \$6,624,539,752. He then asks:

How can the thrift momentum be kept up and increased until we shall be a nation of home owners and want be banished from our shores?

Here is his answer:

Some so-called thinkers believe in socialism, but the war has taught us that socialism means the death of Democracy and the substitution of Autocracy, dominated by passion, class hatred and ending in ruin. Socialism is the foe, not only of Military Autocracy, but also of Democracy. Our own form of government offers the best protection to all classes of citizens of any in the world. Let us take advantage of the lessons learned from our own mistakes and those of other nations and build on our own foundation a nation whose motto shall indeed be "Justice to all and special favors to none."

Continuing and elaborating this thought, he said:

The scope of individual advancement should be free as the air, under wise and patriotic government control exercised by the best representatives we can elect to our seats of government. . . . Gathering its millions annually in the shape of premiums and using the savings thus gathered in developing our farms and our railroads, the life insurance companies are the greatest asset for usefulness the Nation has today.

IT is permissible, and I think it necessary, in connection with the observation made about socialism, for me to venture the opinion that there is a drift in this country toward state insurance, the present manifestation of it being confined to the particular interests affecting the members of organized labor, such as workmen's compensation and proposals for old-age pensions, unemployment indemnities and maternity.

The cost of all present forms of insurance is borne by those who avail themselves of the benefits; the cost of the forms proposed under the state is to be placed on the shoulders either of the consumers or the taxpayers. The cost of workmen's compensation is paid by the consumers of the articles produced by the industries employing labor; the laborers in other vineyards must pay for their own or go without. If the business is run by the state and proves unprofitable, then the deficit is repaired out of taxpayers' funds. This insurance idea is widening and gaining strength. It is frankly called social insurance by its advocates. Those who believe in individualism, who hold that "advancement should be free as the air," might well pause and consider what the result will be to democracy if policies such as those here intimated find final application to the businesses now classed as "public utilities."

## THE FREEDOM OF THE SEAS

(Continued from page 121)

very useful. We could not, of course, live up to our ideal of free seas so long as the rest of the world refused to accept it. In our Civil War we took the fullest advantage of British precedent to develop the theory of "continuous voyage," which has been extended to attenuation in the present war. All the other compromises, prohibitions, regulations and subtleties have also broken down. The old distinctions between contraband and noncontraband goods, between armed and unarmed ships, between civilian and military population, have been erased. What is the use of maintaining that three miles from shore is out of gunshot when there are guns shooting seventy-five miles? How can a submarine or airplane hold up a ship for search and removal of passengers? It seems hardly worth while to get up new rules unless there is some international machinery for enforcing them.

Let us now turn to the second idea: "The seas should be somebody's," and the British leave us in no doubt as to who that somebody should be. It was one of the most discussed issues in the recent campaign, and I will quote several of the declarations, for it is important that Americans should not only know but appreciate the British position. We can now for the first time in history listen to these sentiments without resentment and with some sympathy, for we realize what inestimable value the British sea-power has been to the world. Our own effort would have been ineffectual without it, for half our men were carried over on British vessels.

Sir Frederick E. Smith, the Attorney General, states the British position clearly:

The British people are perfectly sound on this question of the freedom of the seas which really means the command of the seas. We want no discussion on that point. . . . The proposal made by President Wilson really means that the British fleet is going to be under international control. That will never be allowed.

Winston Churchill, Minister of Munitions, says:

We enter the Peace Conference with the absolute determination that no limitation shall be imposed on our right to maintain our naval defense. We do not intend, no matter what arguments and appeals are addressed to us, to lend ourselves in any way to any fettering restrictions which will prevent the British navy maintaining its well-earned and well-deserved supremacy.

Havelock Wilson, president of the Seamen's Union and the most powerful of the labor leaders, says:

For centuries past Great Britain has made the ocean safe, suppressed piracy and welcomed vessels of foreign nations to her ports, but in war it must be unhesitatingly said, her command of the sea must be exclusive and unchallenged, for once we let our enemies ship where they like and trade with whom they choose we wantonly hold at our own throat a knife to commit national suicide.

Horatio Bottomley of *John Bull* says:

The freedom of the seas spells the suicide of the British Empire. It is vital to our very existence that we should obtain the command of the sea. What we have we will hold and we will never surrender it to friend or foe.

*Blackwood's Magazine* for November, 1918, says:

Upon the mastery of the sea depend the prosperity and freedom of Great Britain. We have not fought for more than four years merely to descend upon an act of suicide. Against the freedom of the seas we fought Napoleon for some twenty years.

Mr. Macpherson, Deputy Secretary of State for War, said in a recent speech that Great Britain would never consent to the "freedom of the seas." The British Navy League passed unanimously the resolution that "in negotiating any terms of peace the so-called 'freedom of the seas' shall not form

# The Teeth Problem Is Up to You

All Statements Approved by High Dental Authorities

## This You Must Decide

Do you think your present methods of teeth cleaning are sufficient to save your teeth?

We think you know they are not. Teeth still discolor, still decay. Tartar still forms on them. And most folks at some time, despite their brushing, suffer pyorrhea.

Statistics show that tooth troubles are constantly increasing, yet the tooth brush never was so widely used as now.

Science has found a reason. It lies in a film—a slimy film—which you feel with your tongue. That causes most tooth troubles.

That film is what discolors—not your teeth. It hardens into tartar. It holds food substance which ferments and forms acid. It holds the acid in contact with the teeth to cause decay.

Millions of germs breed in it. They, with tartar, are the chief cause of pyorrhea. So that film is your teeth's great enemy.

You brush teeth and think you have cleaned them. But much of that film remains. It clings to the teeth, gets into crevices, hardens and stays.

It is doing a ceaseless damage, while you ignore it, relying on tooth-brush protection.

There is now a way to combat that film—a way proved and approved by many high authorities. It is easily used and as pleasant as any other tooth paste, but it does what nothing else can do.

That way is called Pepsodent. We urge you to try it, then decide for yourself if you want it.

## A 10-Day Revelation

What we urge is a 10-day test. It will cost you nothing. Compare the results with your present results, and decide which you prefer.

Pepsodent is based on pepsin, the digestant of albumin. The film is albuminous matter. The object of Pepsodent is to dissolve it. Then, day by day, to prevent its accumulation.

The use of pepsin seems simple, but it long seemed impossible. Pepsin must be activated, and the usual agent is an acid harmful to the teeth. Today it is possible because science has found a harmless activating method. Five governments have already granted patents on it.

Dental authorities subjected Pepsodent to every form of clinical test. Years were spent in proving it before it was offered to users. Today its results are known beyond question, and dentists all over America are urging its adoption.

See what it does. Send this coupon for a 10-Day Tube. Use it like any tooth paste. Note how clean your teeth feel after using. Mark the absence of the film. See how teeth whiten—how they glisten—as the fixed film disappears.

Do this for your own sake. See the effects, read the reasons for them, then judge if you want them continued. A delightful surprise awaits you. Cut out the coupon now.

## Training for Authorship

How to write, what to write, and where to sell.

Dr. E. Schwein

Cultivate your mind. Develop your literary gifts. Master the art of self-expression. Make your spare time profitable. Turn your ideas into dollars.

Course in Short-Story Writing. Course in Journalism. Play Writing. First play written and taught personally by Dr. J. Paul Emerson.

For many years editor of *Espresso's Magazine* and a host of literary papers. A constructive criticism. From student to paid author. *Real teaching.*

One pupil has received over \$5,000 for stories and articles written mostly in spare time. "play work," he calls it. Another pupil received over \$1,000 before completing her first course. Another a busy wife and mother is averaging over \$75 a week from photoplay writing alone.

Does it seem that education is agency doing so much as writing, poetry, and so on? The universities recognize this. The most distinguished members of the English language and higher institutions are studying in our Literary Department. The editors recognize it, for they are constantly recommending our courses.

Near the center of interest—comfortably distant from the area of confusion.

a basis for discussion." Lord Beresford in addressing the Navy League said:

It seems to me in time of war one might as well talk of the freedom of the land as of freedom of the seas. If war broke out what would be the good of Belgium, Northern France, Rumania or Serbia talking about the freedom of the land?

The moment a condition of war arises great coercive, elemental, primeval forces assert themselves. We leave the region of law and come to a region of assertion by military and naval force. The belligerents, when war is declared, have a right to carry on war. The neutrals have a right to carry on trade, despite the state of war existing, but if and when there is a collision between the right of belligerents to put constraint on the enemy and the right of neutrals to carry on trade, then the subordinate right of the neutrals must give way to the imperious and primary right of the belligerents.

This shows admirably the difference between the British and American ideas. It has always been the contention of America that the high seas do not belong to the nation having the largest navy; that neutral merchantmen have as great a right there as battleships; that to monopolize the neutral ocean for belligerent purposes was like the occupation of neutral Belgium for the purpose of fighting France, and, lastly, that law should not altogether give way to primeval force even in time of war.

The above citations from the spokesmen of various parties and classes are sufficient to show that Englishmen will still sing in full chorus the old song:

All thine shall be the subject main  
And every shore it circles thine.  
Rule, Britannia, Britannia rule the waves.

The sea-power of Great Britain has been unshaken for a hundred years and now, by the acquisition of the German fleet, is stronger than ever. We cannot expect the British to relinquish or reduce that power unless they are convinced that they can obtain equal security by entrusting the supremacy of the seas to a supernatural authority. Some are already convinced of it, for instance Viscount Grey of Fallodon, who in a campaign speech at Dewsbury said:

Probably what is in President Wilson's mind is that freedom of the seas should be secured to any nation which observes the covenant of the League of Nations and should be denied to any nation which breaks the covenant of the League of Nations. (Cheers.) If that be so, then a League of Nations is the solution of the whole question. (Renewed cheers.)

Two other passages of Lord Grey's speech are important:

I think we ought to receive a little more recognition than we do receive for the fact that we have never used British naval power in time of peace to make the use of the seas more easy for ourselves without making it at the same time more easy for others on the same terms.

In the early stages of the war our blockade could not have been nearly so complete, because the United States raised many questions about it. But in the later years of the war the blockade was made complete with the cooperation of the United States, and without that blockade success in the war could not have been won. Indeed, without that blockade Germany might have won the war.

Lord Grey is right. We should gratefully recognize the fact that in time of peace and in recent decades Great Britain has been fair and lenient in the exercise of her unique power and position. In the matter of customs duties, coaling facilities and port privileges the British regulations have been so generous as to allow her competitors to outstrip her in her own markets.

But as we must point out this policy of equal treatment for all nations will not be continued. Enemy goods and shipping will be excluded or discriminated against in British ports for five or seven years at least and the commerce of the British Empire will henceforth have preference over that of Allied or neutral nations. So the old time freedom of the seas in the British sense of equality of maritime privileges in peace time has gone. Also we may note that according to Lord Grey's admission, Great

## Books That Will Live!

### Experiments in International Administration

By FRANCIS BOWES SAYRE

What do you know about the history of International Administration? The author has made a study, not done before in any other country, of the more recent experiments in International Administration. He describes attempts at a League of Nations in the past giving the details of organization and accounting for the resulting success or failure. Three times the great European Nations have failed utterly to establish a permanent peace. Why? The author does not attempt to solve these difficulties, but merely collects the data and submits the evidence. Post 8vo, \$1.50.

### Guarantees of Peace

By WOODROW WILSON

The new and timely volume contains messages and addresses of the President of the United States, from January 1st, 1918 to December 2nd, 1918. Among the most important public papers are the address to the Congress, February 11th, 1918; the famous "Force to the Utmost Speech" and lastly the eagerly awaited statement of December 2nd, 1918. 16mo, \$1.00.

### Impressions of the Kaiser

By DAVID JAYNE HILL

*The New York Times* says: "The volume is both interesting and important; it must be carefully read and considered, to be appreciated at its full value."

*The New York Evening Sun* says: "Dr. David Jayne Hill's 'Impressions of the Kaiser' has the weight of authority . . . He has chosen the best of all methods of condemnation by letting the subject portray himself as far as possible." Reg. 8vo, \$2.00.

## THE NEW BOOKS

### The Peace Settlement

**THEODORE MARBURG'S** *League of Nations* must not be appraised by the modesty of its dimensions. It lays succinctly before the reader the enduring principle of human progress. The author contends that this does not lie in the growth of the material, but the spiritual, including the intellectual, and also in the growth of justice—man to man, employer to employee, in the law court, of the government to its people, and nation to nation. War, he displays as the obliterator of justice, hence the great crime of Germany, and the hour now for us to decide whether there shall ever come to pass again such an iniquity. *The People's Part in Peace*, by Ordway Tead, is an able treatise on such subjects as the League of Nations, international labor legislation, national economy, etc. His review of the present status and aims of international labor is masterly in both grasp and penetration. Whether, however, we should enact in a peace treaty the nine planks of the International Berne Labor Congress he is not prepared to say. The task before the Peace Congress he admits to be gigantic, but that alone should not frighten us from tackling it to the establishing of a just and enduring peace if five given wrong ideas, which hitherto have controlled people's thought and action, are cast overboard. André Chéradame returns in *The Essentials of an Enduring Victory* with a solemn warning that the Allies grant, at their immediate future peril, anything short of drastic peace terms to the Germans. He refuses to discriminate between Kaiserism and the German people, holding that German pacific overtures are merely a camouflage to hasten a patched up peace in the interest of Pan-Germanism. Says M. Chéradame: "One cannot all at once patch up a peace and reconstitute Europe on a firm basis: the thing cannot be done." If done, he foresees financial collapse in France and among the Allied nations, of which Germany would take speedy advantage. He produces figures to prove that so far from Germany having been ruined by the war, she has profited immensely by it, statements otherwise emanating from Germany being purposely deceptive propaganda. Those who stand on "bitter end" ground will not be disappointed in M. Chéradame's conclusions regarding the position Germany would occupy among nations when the delegates rose from the peace table. If *After the War—What?* by James H. Baker, had been published a year or even six months ago possibly some of his conceptions of the readjustment period might have been hailed as more novel than they read at present. In his forecast of a greatly extended coöperation between government and the universities to the end of material progress, Mr. Baker overlooks a third partner in organized labor. One has but to carry Mr. Baker's idea a few steps further to accord to labor recognized university courses together with academic degrees in the new age. The old order changes apace these days and stranger things are happening.

Robert W. Rogers is evidently a practical man as well as an author. In his *The Basis of a World Order* he straightway settles

upon The Hague as a kind of international District of Columbia for the permanent Court of Humanity to adjust world troubles, appropriating land and tidewater for the purpose. True, Holland has not been heard from about it, but no matter, for after every one is comfortably seated there, all runs smoothly even to changing the name of Australia to East Britain—Australian papers will perchance take notice—and Alaska to Arctic America. By the same token perhaps some delegates will rise and propose changing the name of Boston to North New York. Many a diverting hour could be passed in this fashion. Richard Nilson Boynton in *The Vital Issues of the War* concedes that Germany, before the war, led the world in several branches of effort, and also asks why there should not have been legitimately, at that period, Pan-Germans as there were Pan Angles, Pan-Americans, etc.? To Mr. Boynton, a kind of modified commercial Pan-Germanism might be almost necessary in his future United States of Europe for the peaceable development of neglected lands. Many readers will, of course, promptly question a modified Pan-Germanism even shorn of its military backer. His view of the issues does not seem to extend much further than the destruction of autocracy and militarism, with but a passing glance at the ominous significance of the Russian Revolution.

*League of Nations*, by Theodore Marburg. Macmillan Co. 60 cents. *The People's Part in Peace*, by Ordway Tead. Henry Holt & Co. \$1.10. *The Essentials of an Enduring Victory*, by André Chéradame. Charles Scribner's Sons. \$1.50. *After the War—What?* by James H. Baker. The Stratford Co. \$1. *The Basis of a World Order*, by Robert W. Rogers. R. A. Badger, Boston, \$1.50. *The Vital Issues of the War*, by Richard Wilson Boynton. The Beacon Press. \$1.

### Fast as the Wind

**RIGHT** at the start of *Fast as the Wind*, by Nat Gould, it is imprest upon us that altho our good looking hero is lonely aboard his yacht, the "Sea-mew," yet he is popular. "There are such men," contends the author. We don't doubt it, especially when one's lonesomeness is "all for a woman, and such a woman." Out of this sympathetically appealing situation springs a hound chasing murder mystery mixt up with lively horse racing. Everything, of course, is cleared up at the end, with great satisfaction to the reader in leaving our lonesome hero quite a family man with two boys and two girls and a host of friends.

*Fast As the Wind*, by Nat Gould. Frederick A. Stokes Co. \$1.

### Creative Impulse in Industry

**WE** would go far toward a solution of our labor difficulties if we would give the creative instinct of the worker a free rein, and make him feel that his individual part contributed toward and was necessary to the whole.

The economic organization of modern society, tho built on the common people's productive energy has discounted their creative potentiality. . . . We are not even conscious that industry is the great field for adventure and growth because we use that field not for the creative but for the exploitive purpose.

This is the opinion of Helen Marot in her stimulating book, in which she analyzes present-day industry from the angle of the

psychology of the worker and tries to link it up with industrial education and the school system. It is peculiarly timely. Labor, in all its phases, is an acute problem. We are finding that we cannot discount the human element. The recognition of the human element is, after all, but the recognition and education of the creative impulse and its consequent satisfaction.

Miss Marot, long connected with the Woman's Trade Union League, speaks as one having authority. Her book, based on a survey made for the Bureau of Educational Experiment, is of distinct value, educationally and industrially. It is a book for educators, for employment managers, for all those who admit that the psychology of the worker is the really vital factor in the all-important question of labor efficiency.

*Creative Impulse in Industry*, by Helen Marot. E. P. Dutton & Co. \$1.50.

The Iliad of the Insects

VERY interesting is the book written by Jean-Henri Fabre in his old age on *The Wonders of Instinct*. It begins:

This is what I wished for: a bit of land, oh, not so very large, but fenced in, to avoid the drawbacks of a public way; an abandoned, barren, sun-scorched bit of land, favored by thistles and by wasps and bees.

Never did a bit of earth produce a richer crop than this Wasp Farm of Fabre's. Its fruit is in his last book, so full of patient observation, fascinating description of the folk-ways of insects, and a gentle spirit of half-mocking philosophy. The war does not shadow the page, tho the insect world has many tragedies of its own, described with an unfailing vivacity by the veteran naturalist, who loves his winged wards, tho he never condones their crimes.

*The Wonders of Instinct*, by Jean-Henri Fabre. Century Co. \$3.

My Antonia

TO those who appreciate style in fiction, and for that quality alone can enjoy a story that has neither exciting plot nor swift action. Miss Cather's new book, *My Antonia*, will make strong appeal. With sympathy and understanding she tells a tale of youth and courage in the red grass region of Nebraska, when that part of our country was being settled by a large foreign immigration. The simple tale of growth centers about a Bohemian girl and an American lad, but Antonia is the main character. The story of her development thru the hardships of frontier life is full of human appeal and the fascination of the making of Americans from the foreign born.

*My Antonia*, by Willa S. Cather. Houghton Mifflin Co. \$1.60.

City Tides

ARCHIE AUSTIN COATES has combined in *City Tides* a variety of verse that reflects his own complex and interesting career as a newspaper man, business man, and his present work as chief yeoman in the navy. He brings into contemporary poetry a note of freshness and youth at times humorously flavored with delightful cynicism. His realistic pictures of city life are drawn with the sympathetic hand of one who has observed its lighter as well as its deeper side, and who smiles understandingly at both.

Mr. Coates's work has been characterized as clever, but one feels that he doesn't make clever remarks for the sake of making them, but rather because that is his way of saying what he has to say.

*City Tides*, by Archie Austin Coates. George H. Doran Co. \$1.25.

### FOR EXAMINATION AND TRIAL

An astonishing offer. Seize it quickly. MUSIC WITHOUT NOTES! A sensational success. Over 300,000 people now play piano by this wonderful new EASY FORM MUSIC; even young children learn quickly. Here is your opportunity. Don't miss it.

### PLAY PIANO NEW WAY in One Hour

Simple as a-b-c. No teacher required. No correspondence lessons by mail. No knowledge of note music required. This remarkable book, sent FREE on trial, contains ONE HUNDRED of the world's most famous vocal and instrumental selections printed in EASY FORM MUSIC. Send no money.

If you DON'T learn in five days to play not merely one but SEVERAL popular pieces, send it back; no obligations whatsoever. Or, if you wish to keep the book, pay only 65c each for the selections—special half price offer to those who write at once. No extra charges of any kind. Complete course of easy instructions free with the book. Be sure to tell us how many white keys on your piano or organ. Send a postal NOW.

EASY METHOD MUSIC CO., 142 Clarkson Bldg., Chicago, Ill.

**CHICKENS SICK?** Roup, Colds, Canker, Limberneck, Sorehead, etc., the best remedy is always GERMOZONE. At most dealers or 75c postpaid with 5 book poultry library free. GEO. H. LEE CO., Dept. 720 Omaha, Neb.

### Send Your Name and We'll Send You a Lachnite

DON'T send a penny. Just send your name and say: "Send me a Lachnite mounted in a solid gold ring on 10 days' free trial." We will send it prepaid right to your home. When it comes merely deposit \$4.75 with the postman and then wear the ring for 10 full days. If you, or if any of your friends can tell it from a diamond, send it back. But if you decide to buy it—send us \$2.50 a month until \$18.75 has been paid.

**Write Today** Send your name now. Tell us which of the ladies' or men's solid gold rings illustrated above you wish. Be sure to send finger size.

Harold Lachman Co., 12N. Michigan Av., Dept. 2481 Chicago

## Independent Opinions

An officer "fresh from the ordered uniformity of a well-conducted post" makes the following pertinent observation on the costumes of men who have been soldiers and are going to be civilians:

"If this be reconstruction, make the most of it," is apparently the motto of a rather conspicuous part of the demobilized army. It is, without any doubt, a hard winter for men who had burned their bridges behind them (might one say burned their breeches?) and had fully expected to be wearers of khaki till gentle spring returned.

But it rather shocks a man fresh from the ordered uniformity of a well-conducted post to find all sorts of ungainly hybrid costumes defacing the streets of his home town. On Broadway this morning we saw an enlisted man, civilian from the heels to the neck, wearing a service hat with no cord—which is a horrid sight at any time, and then a captain, with double-looped braid still adorning his regulation ulster, but with a bowler at one end and civilian shoes at the other!!

The American people will never be sticklers for military punctilio, thank Heaven, but, after all, the military way of doing things is in essence nothing more than a regularized decency and order. A way has been provided for civilians, lately enlisted men, to indicate their civilian status clearly and unmistakably—the scarlet chevron on the left sleeve. If it is too soon to buy a new overcoat or a new hat out of reconstruction wages, he can wear all the good issued wool he wants, and yet not present the sloppy appearance that is inevitable with the mixt costume. And as for officers—they ought to know better.

Is this sentence grammatically correct? There are three (two's) (too's) (to's). How could the three words in brackets be indicated as one single word in writing?

If a sentence can be repeated orally, and if it cannot be indicated in writing, is it correct?

Any of the three forms of sentence that you quote in your letter "There are but three (two's) (too's) (to's)," is correct but unintelligible when spoken. It is incorrect but intelligible when written.

A similar case is this: "2 is the Arabic symbol and II is the Roman symbol for the second numeral." It is impossible to convey this orally in the form in which it is written. Homophones, that is, different words pronounced alike, are confusing in oral discourse. If you hear a person talk of a "teer" you want to know whether it is in an eye or a church before you can understand it.

Homographs, that is, different words spelled alike, are confusing in print. If you read the word "tear" you want to know whether it is in an eye or a dress before you can pronounce it. Simplified spelling would do away with the homographs of different pronunciation

but increase the difficulty with homophones in print. A wright may write right according to rite. But if he tries to write right according to reason he will be accused of ignorance of spelling. When both homophones and homographs come in the same sentence neither the tongue nor pen is altogether adequate and we can only get the meaning by context. For instance: "If you read much you must have read of a reddy beside a red reed." Written and spoken English are two distinct languages differing in rhetoric as well as grammar. An eloquent oration may not read well or a fine essay sound well.

You have, of course, read of President Wilson's reply to King George. I direct your attention to the following paragraph: "For you and I, Sir—I temporarily—embody the spirit of two great nations, and whatever strength I have and whatever authority I possess it is only so long and so far as I express the spirit and purpose of the ALL the people."

It strikes me that the act of the President addressing the King of England as "Sir" deserves some editorial mention.

T. BRADY, JR.

Brookhaven, Mississippi

All right. But what should we say about it?

Mr. Holt, in his splendid article on his experiences in England, makes the statement that "Booze is a favorite joke producer in England, while here, on account of the prohibition movement, other vehicles of humor are used."

I am a member of the "Lambs" so interested in the theater here and abroad is naturally more or less intense. I witnessed a performance of "Oh Boy" Monday of this week. The great scream of the evening is where the Quaker Aunt drinks three Bronx cocktails by mistake, gets a beautiful bun on and thinking the furniture in the room is a merry-go-round mounds a couch, proceeding to have the time of her life, inviting others who enter the room to join her in the riding party. In the musical comedy "Oh My Dear," the story is woven around an establishment for dipsomaniacs, so you can imagine the "Booze" jokes here. In fact, sir, with all due respect to my friend Hamilton Holt, *seventy-five per cent of all stage productions in the United States are based on booze.*

The theater is usually miles behind human progress. We presume that the booze joke will keep the stage long after booze is abolished, like many another jest that has lost its point.

Please explain the principles and aims of the Bolshevik. Also tell us clearly the meaning of "Soviet" and "Czecho-Slovak":

This request reminds us of the British consul in Central Africa who, when he came to the question "Manners and Customs?" in the blank provided for his annual report, wrote "Manners none. Customs nasty." We are tempted to say of the Bolsheviks: "Principles none. Aims bad." But for those who are not satisfied with this we would refer to The Independent of July 20 and December 14, where we have tried to explain the ideas of the Bolsheviks and their soviet. In the issue of November 9 we told who the Czecho-Slovaks are.

# How One Man Has Solved the Labor Problem For 40 Corporations

One man has *done away with strikes in 40 corporations*—has completely done away with all "Labor Troubles" in those corporations.

By the operation of a single big idea he has done away entirely with the ill-will and antagonism of labor. He has gotten from 30% to 300% *MORE WORK* from the workers. He has increased production, lowered costs, cut out gigantic wastes, paid *BIGGER WAGES* to Labor and *BIGGER PROFITS* to Capital.

He has done the impossible. He has not only *revolutionized labor conditions* but he has also given *CAPITAL* a new chance.

His name is John Leitch. And he has done all this merely by putting in operation in these 40 corporations a unique plan which he originated some ten years ago—a plan which he has named "*INDUSTRIAL DEMOCRACY*."

In not one of all these 40 industrial plants has there been a strike since Leitch's plan was introduced and carried out. In not a single plant has there been labor dictation, labor antagonism or dissatisfaction. And every one of these plants has *INCREASED PRODUCTION, LOWERED COSTS, PAID BIGGER WAGES AND MADE BIGGER PROFITS.*

John Leitch's plan is somewhat startling—some might even call it revolutionary—but the all important thing about it is *that it WORKS.* It gets *RESULTS*—results that are oftentimes astounding.

And this unique plan is now available to *every Employer.* Leitch's whole scheme of *INDUSTRIAL DEMOCRACY*—exactly as operated in 40 industrial corporations—is now open to every Employer who wants to investigate its workings.

In a simple, easily read book of less than 300 pages, he has given not only the full details of his plan, but also the *ACTUAL RESULTS IT HAS ACCOMPLISHED* for Capital and for Labor in the 40 industrial concerns where it has been carried out. And this book is now ready under the title of

## MAN TO MAN The Story of Industrial Democracy

In this book John Leitch doesn't give you fanciful theories or the dreams of an impractical idealist. He simply gives you the *PROVED METHOD* which 40 corporations have successfully put into practice. He gives you specific instances of remarkable accomplishment in plants that are known throughout America—and with the full approval and endorsement of their owners, gives you the *NAMES OF THE CORPORATION* and the cities in which they are located.

He gives you the plan record of what *INDUSTRIAL DEMOCRACY* has accomplished with hard-fisted workers and hardheaded employers, in factories and foundries, with both male and female labor, with skilled and unskilled workers, with the illiterate and the intelligent, with those who couldn't speak English and those who could—in plants making steel, pianos, automobile parts, paints, women's wear, men's clothing, boys' waists, paper bags, furniture, tobacco pipes, textiles of various sorts, and in machine shops.

### Some Things that John Leitch tells in "Man to Man"

He tells you how in the small power plant of a manufacturing concern in Indiana the workers themselves, as the result of his method, reduced the annual cost of coal, water, oil and labor from \$12,350 to \$7,693—a clear saving of \$4,657—and gives you the name of the plant and shows you how they did it.

He tells you of a group of piece workers getting a piece work rate of 42 cents, who themselves devised new and ingenious rigs, cut out lost motion—and *THEN THESE WORKERS SUGGESTED THAT THEIR PIECE WORK RATE BE CUT FROM 42 CENTS TO 11 CENTS.* And they made more money at the low rate than they did before.

He gives you the name of a small factory that formerly employed 268 men, working at top speed, that is now turning out *MORE GOODS* and *BETTER GOODS* than ever before in the company's history—and *DOING IT WITH ONLY 168 MEN.* Both workers and factory are making big profits.

He tells what happened in a foundry where production was constantly falling lower in spite of wage increases piled one on top of another, and how, in the fifth month of the working of the new plan, production was increased *52 per cent over the best previous month in that foundry's history.*

He shows how under his plan the slackers and wasters and professional agitators who block production and cripple profits are automatically thrown out without any worry on the part of the management.

### A Small Edition—for Employers Only

We have printed only a small edition. It is not for general distribution. We have printed only a sufficient quantity to fill the needs of those executives and employers who are vitally interested in *SETTLING THE LABOR PROBLEM* once and for all, and settling it *RIGHT.*

John Leitch's book is not a popular novel. It is not a book to be skimmed through in an hour. On the contrary, one of the best informed men in American industry says: "*This book is one of the greatest contributions to American business that has ever been penned. It offers the only practical solution to intolerable labor conditions. Its methods and principles are the methods and principles that MUST BE PUT INTO PRACTICE if we are to escape the scourge of anarchy and riot and wild-eyed BOLSHEVISM—that must be put into practice if Capital is to have a fair chance, and if the people of America are to be happy, contented and prosperous.*"

### You Need Send No Money

unless you prefer to, for your own convenience. We don't want anyone to pay for a copy of "*MAN TO MAN*" unless he appreciates its value. If he does not, we would much rather he would send it back for the use of someone else. Therefore you need send no money—merely mail the coupon and we will send the book all charges paid. If you find it worth many times its price, send us your check for \$2.00—if not, *SEND BACK THE BOOK.*

**We Reserve the Right to Refuse all Orders after this First Small Edition is Exhausted.**

**B. C. FORBES PUBLISHING CO.**

*Publishers of Forbes Magazine*

Dept. MM-4—299 Broadway—New York

### MAIL THIS COUPON

Please send me, postage paid, a copy of "*MAN TO MAN*," by John Leitch. I will either return the book to you or send you \$2.00, within five days after I receive the book.

## The Trustee and the Individual Investor

THE steady growth of our trust fund business is significant. It shows that trustees are coming to recognize very generally that they can command from us an unusual service.

To the individual investor, such a service is of equal value and importance. He rarely has the time or facilities for thoroughly investigating the investment situation, and it is the part of wisdom for him to seek the best advice.

We shall be pleased to have you consult us.

Our current offerings of Bonds and Short Term Notes will be sent upon request for Circular I. 96.

Bonds Short Term Notes Acceptances

**6%** For 36 years we have been paying our customers the highest returns consistent with conservative methods. First mortgage loans of \$200 and up which we can recommend after the most thorough personal investigation. Please ask for Loan List No. 710. \$25 Certificates of Deposit also for saving investors.  
**PERKINS & CO. Lawrence, Kans.**

## AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the **METROPOLITAN LIFE INSURANCE COMPANY**, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$623.60 absolutely beyond question of doubt. The Annuity Department, **METROPOLITAN LIFE INSURANCE COMPANY**, New York, will give advice as to the return at any age, male or female.

## THE RAILROAD MUDDLE

(Continued from page 124)

months ended June 30 the ruling was made that railroads could use funds on hand technically Federal and not corporate funds, to meet maturing interest, regular dividends, sinking fund payments, etc., without asking definite authority to do so. After that time it was insisted that there be a complete separation between the Federal and the corporate accounts of the railroads and then the trouble began. The corporations no longer had absolute control of the revenues and gradually Federal officials began to take the place of corporate ones. When the plan was completed such corporations as had no funds of their own, apart from those received from operation, were obliged to go to the Government every time they needed money to pay interest, dividends or corporate salaries. Of course, they applied for such funds on account of the standard return, or compensation, claimed under the act.

The Railroad Administration made it a rule not to advance funds to a railroad corporation unless the funds were actually required for a specific purpose, except in cases where contracts had been signed and these were rare. As a general proposition, no funds were advanced up to December 1 last except for specific purposes, even the rental was due a corporation. It is obvious that with funds being advanced from the revolving fund for every conceivable tho necessary purpose, and with the annual rentals due the railroads from the Government aggregating nine hundred million dollars, the revolving fund of five hundred millions was hardly adequate. My opinion is that in fixing five hundred million as the amount of the revolving fund, the Government had not counted on a deficit in the operation of railroads in the first six months of 1918 as was the case with many roads.

When the railroads complained that they were not receiving the rental due them, the rejoinder was made by the Division of Finance that so many millions had been advanced that month to the railroads, and a long list was published purporting to show how generous the Government had been to the railroad corporations. As a matter of fact, while the original revolving fund is exhausted at this writing, a great part of the fund was not advanced by the Government to the corporations as rentals but as loans for which the Government exacted securities of some sort, or else it was advanced to the Federal officials for the purpose of meeting operating expenses which are for account of the Government and have no relation to the rentals which the corporations claim. If a proper division were made between (1) advances on account of compensation, (2) loans on collateral, (3) advances to Federal officials for operation, and (4) expenditures on railroads for improvements, later to be capitalized by the corporations—you would have the true status of the revolving fund and you would know just how much money the Government has really advanced to the railroad corporations. The statements in their present shape are misleading.

I have before me a file of press-clippings on the Government control of railroads since the date of the President's proclamation taking control of the railroads. On April 4, 1918, the *Wall Street Journal* published an article headed "Railroads Soon to Make Contracts with Government." From that time onward, all of the New York daily newspapers have printed similar headlines from week to week, yet until last November not one contract had been signed with a railroad system of any con-

sequence. What was the reason for the delay? I place it at the door of the Railroad Administration's lack of policy, lack of able men to handle the work who would have been content to work under the circumstances obtaining in Washington. There is no reason why with an able staff the contract question, the accounting question, the financial question, could not have been settled in the first few months of railroad control instead of allowing the matter to drag along for a year.

The accounting question is another involved one. In making advances to the railroads on account of compensation, we were required to strike a balance between the Government and the corporation in order to ascertain whether the company owed the Government money or vice versa. In the absence of a complete separation of the accounts, the recommendations of the Advisory Committee, largely based on my studies, were not at all conclusive because it was not possible to swear to the accuracy of the accounts. In the case of one large railroad the accounts were being separated when the influenza epidemic crippled its force; this coupled with the intricate work involved resulted in the accounts becoming so confused that the company was obliged to call a firm of expert accountants to straighten out its books. In this case I had told the committee that based on my figures there was no basis for an advance and that if the Government wanted to make the company a loan, secured or not, it could do so as that was the only alternative. As the company was in need of funds, I believe a loan was made altho this took place after I left Washington.

Another matter deserves attention—the interpretation of the law with respect to the question of dividends. The law says that no carrier can declare or pay any dividend in excess of the regular rate paid during the three years ended June 30, 1917, without the prior approval of the President and that such carriers as have paid no dividends during that period may, however, pay a dividend with the prior approval of the President. The first proviso was construed by the Administration to mean that if a company paid dividends of 5 per cent in each of the years mentioned, the company could continue to pay dividends at that rate. However, if the company paid 2 per cent in 1915, 3 per cent in 1916 and 5 per cent in 1917 (years ended June 30) and desired to pay 5 per cent in 1918 and thereafter, it could not do so without the approval of the Government; in fact, if the company wanted to pay anything over 2 per cent, such authority was acquired. In computing the standard return, or rental, which the Government must pay to the railroads for control the basis was the *average* railway operating income of those three years. Why is not the average used in order to establish a regular dividend rate, rather than the minimum, especially as the law is not clear on this point? There have been cases where railroads which were in excellent financial condition were denied the authority to pay dividends because of such a technicality, causing much concern to its security-holders.

I am essentially a product of Wall Street because my financial education was gained there, but I am glad to say I belong to the "progressive" school. This does not mean that I am an out and out Bolshevik, but that I am not a dyed-in-the-wool corporation defender. There is an element in the investment banking world which sees that the world is moving, which recognizes a

solemn obligation to the investors who have purchased securities from them. This new element is a young element, but it is growing and its members prefer to deal in honest goods and keep customers year in and year out than make large profits on questionable securities. I believe that the investment banker must stand by his wares so I hold no brief for the railroads. I went to Washington with the idea that perhaps the railroads were wrong and had been wasteful and that Government control might be the remedy for the whole ailment. I was glad to go because it gave me an opportunity to study the inside workings of the Administration as well as the personal characteristics of some of the higher officials. I learned that many men who have big names are not infallible.

And while I went to Washington in the hope that Government supervision coupled with the coöperation of the railroad men of the country might evolve an efficient system of railroads with an indestructible financial structure, I soon found out my misconception. I had believed that the whole system of railroads of the country could undergo a financial readjustment involving an exchange of the hundreds of issues of stocks and bonds for those of a consolidated corporation controlling all of the railroads in the country. In fact I met some prominent railroad executives who favored the plan altho one of them thought that one corporation would be unwieldy and preferred seven or eight regional corporations. And while I entertained the idea that something might come of Government control, after I had been in Washington six months I realized that a very excellent theory would be smashed because the human element might not coöperate with the theory. While the railroads can be efficiently and profitably administered under Government control, this can only result when the personnel in charge of the direction are men of the highest type; not men with a reputation for wealth, not men who are chosen for membership of high sounding committees of this or that Government bureau, but some of the men who work in the back offices of the railroads, of the great law firms, of the great banking houses, of the great business firms of the country.

I close this long article with the opinion that Government control, intelligent control, of the railroads of the country can be a success if administered by intelligent men, men of ability, men without personal grudges; that with the proper man at the helm the people of the United States could entrust the control of the railroads to the Government for five years longer, but that such a man must not be a politician but a business man; that even if such a man can be induced to serve, the only solution of the railroad problem is (1) an immediate striking of a balance of the accounts between the Government and the railroads, (2) the creation of a special bond issue to take care of the railroad finances for the next few years, such an issue to be of at least a billion dollars, (3) the study of the manner in which the roads are to be returned to the security holders, with a possible provision for regional operation under Government supervision, and (4) the return of the roads to their security holders in such form as the committee composed of security holders, Government representative and the railroad officials shall decide. This work should be effected within twenty-one months from the signing of a peace treaty between the United States and Germany. Actual Government ownership might come later but I would advise against such a departure at this critical time, tho the matter could be studied.

## The Question of Safety

IS by far the most important question in selecting an investment. Prompt payment of interest and especially prompt payment of principal when due should be the first requirement of every investor. Make entirely sure of "safety first" before considering income yield or any other factor.

### How to Test Safety of Any Investment

We have prepared a "Questionnaire for Investors," which indicates definite tests by which the soundness of any security may be determined. Write for this Questionnaire, together with circulars describing first mortgage 6% bonds, thoroughly safeguarded under the *Straus Plan*, in \$100, \$500 and \$1000 denominations. Ask for

**HOW TO STUDY THIS NUMBER**  
The Independent Lesson Plans**ENGLISH: LITERATURE AND COMPOSITION**

BY FREDERICK HOOK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

**I. Poems from the Front.**

1. Define the following expressions: lyrical poems, genuine simplicity, imaginative skill, whimsical scraps of philosophy.
2. In books that you are now studying in school find passages that illustrate every one of the above expressions.
3. What emotions are expressed in the selection beginning "Walking thru trees"?
4. Compare the selection with Sidney Lanier's poem, "A Ballad of Trees and the Master."
5. Contrast the selection with Burns's "Ye Banks and Braes o' Bonnie Doon."
6. "Double Red Daisy" does not express a notably selfish spirit. What spirit does it express?
7. Explain exactly what comparisons are made in the figures of speech in "This Is the City of Fear." Name the figures. Tell why they are appropriate.
8. Point out the elements of pathos in "Dawn o' Day."

**II. Old Andrew Jackson. By Vachel Lindsay.**

1. Show that there is harmony between the selection of words, the style of the poem, and the thought.
2. Compare, or contrast, this poem with any of the poems in "Poems from the Front."
3. Point out examples of simile, metaphor, personification, and hyperbole.
4. Draw from the poem material for a prose paragraph characterizing Andrew Jackson.
5. Give the syntax of the prepositional phrases in the poem.

**III. The Freedom of the Seas. By Edwin E. Slosson.**

1. Define the following expressions: *rapprochement*, *entente cordiale*, *in toto*. What rules govern the use of foreign expressions in English?
2. Show how the writer refers to authority. Of what value is reference to authority? How can you refer to authority in writing school compositions?
3. Show how the writer makes use of quotations. What principles govern the use of quotations? Why did the writer make use of short quotations? How can you make use of quotations in writing school compositions?
4. Write a paragraph of exposition explaining why the United States will contend for the freedom of the seas "from whatever quarter violated, without compromise, and at any cost."
5. From the various quotations concerning the British view of freedom of the seas draw material for a single paragraph that will express the British view.
6. In a single complex sentence explain what ideal solution is suggested for the question of the freedom of the seas.

**IV. Why We Need a Great Navy. By Secretary Daniels.**

1. Explain in what respects the article agrees with, and in what respects it differs from, the article on "The Freedom of the Seas."
2. Write two contrasting paragraphs, the first on the "world spirit which held in the days of Alexander, of Caesar, of Napoleon and of the German Emperor"; the second on the "new policy of justice and right."

**V. Independent Opinions.**

1. Define homographs. Define homophones.
2. Explain the sentences concerning "rite."

**VI. Editorial Articles.**

1. Express the principal thought of every editorial article in a series of two or three simple sentences.
2. In a single long complex sentence explain your reasons for approving, or disapproving, of any editorial article.

**VII. The Story of the Week.**

1. Imagine that you are a reporter, and that you were assigned to interview all sorts of people connected with the New York Harbor strike. Write one or more of your "interviews."
2. You have a cousin employed in an office in Buenos Aires. He writes you a thrilling personal letter concerning the work of the Bolsheviks. Reproduce his letter.
3. Write an original short story founded on the Luxemburg Revolution—the Grand Duchess to be the heroine.
4. Write a short scenario for a "movie" based on the German outbreaks.
5. Give a short talk summarizing the progress toward peacemaking, and the development of the League of Nations.

**HISTORY, CIVICS AND ECONOMICS**

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

**I. Freedom of the Seas—"The Freedom of the Seas," "Why We Need a Great Navy."**

1. What is the historic basis for the three views on this question stated by Mr. Slosson in his third paragraph?
2. "The phrase 'freedom of the seas' was not . . . 'made in Germany,' etc. What is the proof of this assertion?"
3. Inasmuch as "the United States protested against the acts of the British authorities as clearly subversive of the rights of neutral nations," why did the United States finally join Great Britain in making war against Germany?
4. What was the attitude of the English politicians in the recent election toward the proposal of President Wilson as stated in his address of January, 1917? What action will the United States probably take if this attitude is maintained?
5. Compare the last paragraph of Mr. Slosson's article with the declared attitude of Secretary Daniels. Do you feel that their statements are a plea or a threat?

**II. Problems of Peace—"Progress Toward Peacemaking," "Considering the League of Nations," "The Menace of Bolshevism."**

1. Distinguish between the Interallied Council, the Supreme War Council and the Peace Congress mentioned in the news items.
2. Summarize the chief subjects of discussion and the chief conclusions which have engaged the Interallied Council thus far.
3. How was the representation of the Allied nations determined? How will the representation of the former Central Powers probably be determined? Of Russia?
4. What are the chief problems which will come up for discussion in the Peace Congress? Have you any idea how any of these problems will probably be settled?
5. Compare General Smuts's plan for a League of Nations with that of M. Bourgeois. How far do these plans conform to the ideas of the American delegates?
6. What is the attitude of the English, the French, the American delegation toward the revolutionary movements in Germany, in Russia? What do you think of the British plan for handling the Russian situation?

**III. The British Political Situation—"A New British Cabinet," "Storm Clouds in Ireland."**

1. Who are the various members of the new British Cabinet? Why was each of them chosen to fill his particular position?
2. "The Cabinet is really dominated by the Conservatives, altho its head is a Radical Liberal." How do you account for this fact?
3. What are the foreign policies for which this Government stands? The internal policies?
4. What is the significance of the recent Irish election returns? How will the present Government of Great Britain probably deal with the Irish situation?

**IV. The German Political Situation—"German Political Parties," "The German Outbreaks," "German Political Movements."**

1. Tabulate the various political factions in Germany and indicate the leaders and the political principles of each group.
2. What is meant by "the Left," "the Right," "the Center" in the discussion of European politics? Why have we no such distinctions in this country?
3. "If the issue is determined by bayonets . . . there is little hope for the peace of Europe," etc. Why not?
4. "The Spartacans . . . want to establish not a democracy but a class dictatorship," etc. What is the difference?
5. Do you think that the revolution in Germany is likely to proceed along the lines of the revolution in Russia?

**V. Labor Disturbances—"Paralyzing the Port of New York."**

1. Define as carefully as possible the parties to the dispute in the New York harbor struggle. What are the rights of each party?
2. What authority has the War Labor Board to interfere in this case?
3. Why did the President feel called upon to act in this matter? What was the result?
4. Do you know of any other labor dispute which is going on at the present time? If so, discuss it in detail.

## THE NEW PLAYS

*The Invisible Foe.* A strong, well-acted, psychic play in which the clue to a suspected man's innocence of crime is found with the aid of the dead. Thrillingly tense situations well worked out. (Harris Theater.)

*The Climax*, by Edward Locke, owes a successful revival to Eleanor Painter's charm of voice and acting. The theme is an old one—marriage versus career—but the character delineation is humanly live. (Comedy Theater.)

Who was *The Woman in Room 13*? The audience knows, but the chief of police and one woman's husband keep guessing till the curtain goes down on the most exciting melodrama of the season. (Booth Theater.)

Stuart Walker's season opens with three plays of unusual artistic merit: *A Night in Arignon*, a richly poetic play by Cole Young Rice; *Stingy*, a colorful naive pantomime; *The Laughter of the Gods*, Lord Dunsany's fatalistic drama of decadent pomp and eternal vengeance in ancient Egypt. (Punch and Judy Theater.)

## REMARKABLE REMARKS

**THE EX-CROWN PRINCE**—My father did not desire war.

**GELLETT BURGESS**—He almost keeled over, killed with cold.

**LLOYD C. DOUGLAS**—Prophets are about as chummy as comets.

**E. W. HOWE**—We all denounce autocracy, and all practise it.

**WOODROW WILSON**—Just a little exposure will solve most questions.

**DOUGLAS MALLOCK**—Nothing is lost by repetition except a reputation.

**MARSHAL JOEHL**—It is not I who am victor of the Marie—it is the poison.

**REPRESENTATIVE SLOAN**—I am opposed to giving \$100,000,000 to keep Woodrow in the king row.

**CAPTAIN B. C. PRESTON**—The Belgians propose to annex Lemburg so as to add strength to their frontier.

**W. L. GEORGE**—It is not the accurate people who are always accurate. It is the inaccurate people on their guard.

**WILLIAM HOWARD TAFT**—I verily believe we are in sight of the Promised Land. I hope we may not be denied its enjoyment.

**SENATOR KING**—Genuine orthodox socialism does have some merit, but Bolshevism, sturdily out condemned by God, man and even by Hell itself.

**SAM MARSHALL**—Agitation for industrial democracy have at least common front: they can look into a mirror without a desire to expectorate into each other's faces.

**WILLIAM D. GUTHRIE**—We should not forget that economic and racial considerations at times overthrow reason and abstract justice, which are found to be the case when it became necessary for us to violate a treaty with China, as evidenced

## POETS OF TODAY

People who have never fought like to read poems of war's glory and ennobling sacrifice. But the men who have been there know war better than that. Their reactions, sometimes humorous, sometimes bitter, always sincerely founded on the realities of experience, have been put into poetry by Siegfried Sassoon, a captain in the Royal Welsh Fusiliers, who has been thru three periods of fighting in France and one in Palestine. Robert Nichols repeats the soldiers' opinion of Captain Sassoon's poetry: "That's the stuff we want. The more he lays it on the better. We're fed up with the old men's death-or-glory stunt."

Mr. Nichols himself says: "You civilized persons who read this book, not only as a poet, but as a soldier, I beg of you not to turn from it. Read it again and again till its words become part of your consciousness. While war is a possibility man is little better than a savage and civilization the mere moments of rest between a succession of nightmares. It is to help to end this horror that Siegfried Sassoon and the many others who feel like him have continued to fight, as after the publication of this book he fought in Palestine and in France."

The two poems by Captain Sassoon that we quote below are taken from *Counter-Attacks and Other Poems*, published by E. P. Dutton & Co.:

### THE GENERAL

"Good-morning; good-morning!" the General said  
When we met him last week on our way to the line.  
Now the soldiers he smiled at are most of 'em dead,  
And we're cursing his staff for incompetent swine.  
"He's a cheery old card," grunted Harry to Jack  
As they slogged up to Arras with rifle and pack.  
But he did for them both by his plan of attack.

### SUICIDE IN THE TRENCHES

I knew a simple soldier boy  
Who grinned at life in empty joy,  
Slept soundly thru the lonesome dark,  
And whistled early with the lark.

In winter trenches, cowed and glum,  
With crumps and lice and lack of rum,  
He put a bullet thru his brain,  
No one spoke of him again.

You snug faced crowds with kindling eye  
Who cheer when soldier lads march by,  
Sneak home and pray you'll never know  
The hell where youth and laughter go.

# INDIANA LESTONE

*The* ARISTOCRAT of BUILDING MATERIALS

Pierhead at Baltimore. Trimmed with Indiana Limestone.  
Theodore Wells Pietsch, Architect.

Indiana Limestone Residence of Thomas Kenyon, Esq., Pittsburgh.  
Messrs. Alden & Harlow, Architects.

4th Presbyterian Church, Chicago. Variegated Indiana Limestone. Messrs. Cram, Goodhue and Ferguson and Howard Shaw, Esq., Associated Architects.

Coombs Street Bridge, Fort Wayne, Indiana. Solid masonry of Indiana Limestone.

## A TRULY GREAT BUILDING MATERIAL

Since the human race dwelt in caves in the rock nearly every human being has harbored the feeling that the great fundamental building material is stone—protecting, massive, everlasting, dignified, beautiful stone. No manufactured substitute has taken or ever can take its place.

The substitution of other materials has always been largely a matter of price. But today, Indiana Limestone, "The Aristocrat of Building Materials," is within the reach of almost everyone.

### INTRINSIC MERIT

You are no doubt familiar with Indiana Limestone, for there is no locality in the United States or Canada where it is not represented. Quite likely, however, you know it only as "that beautiful grayish stone the post-office is built of"—or the court-house or the Smith's residence. Fuller knowledge and positive identification is an asset to all who are interested in any building and the producers of Indiana Limestone are associated together to furnish this information. The undersigned has nothing to sell, but has a service to give. See below.

### "INDUSTRIALIZED" PRODUCTION

Banish from your mind the "old stone quarry" in which you used to swim and hide; forget the "big" quarry in the outskirts of your town and substitute a picture of *two counties* in Indiana cut up with yawning chasms from which *mountains* of Indiana Limestone have been taken; a picture of millions of dollars invested in modern machinery, equipment, and buildings; of interlacing railway spurs and of the energetic, orderly activity of great forces of men. Place the whole at the "center of population" of the United States (the U. S. Census places it there) and you have this ancient-modern building material more accessible to the average American than any other.

### MODERATE COST—QUICK DELIVERIES

So the comparatively low price of Indiana Limestone, "The Aristocrat of Building Materials," which makes it available and availed of for such a diversity of buildings everywhere, is the result of modern production methods and transportation facilities. Indiana Limestone can be and is produced and delivered with all the facility and promptness of a manufactured article.

**INFORMATION**—We invite you to be further informed. Write for Vol. 1, General Information; Vol. IV, Banks; Vol. XVII, Designs for \$12,000 houses. A sample of Indiana Limestone showing several finishes will be sent if requested. Ask questions. It is a cardinal principle of this association not to recommend Indiana Limestone where something else would be better.

## THE ACID TEST OF RUSSIA

IT is curious to see that among the representatives of twenty-seven nations assembled at Paris to settle the state of Europe according to the principle of self-determination there is no representative of the nation that has more European territory and population than all the twenty-seven put together, and has suffered more losses than any of them in fighting on their side. It is like a corporation meeting with the holder of the majority stock excluded. The Allied Powers are holding official conferences with their friends, their enemies and the neutrals, but Russia being, it seems, neither friend, enemy nor neutral, they are not on speaking terms with her. In true democratic fashion Liberia and Hayti, Czechoslovakia and Hedjaz have seats at the table beside such great powers as China, the United States, and Great Britain, but there is no spokesman for the 180,000,000 Russians. Yet obviously something must be done about Russia even if nothing can be done with Russia. Any settlement that does not settle the affairs of a country comprizing one-sixth of the land in the world and inhabited by an active, not to say turbulent, population is likely soon to be unsettled. The President in his address to Congress of January 8, 1918, defining the war aims of the United States, said:

There is, moreover, a voice calling for these definitions of principle and of purpose which is, it seems to me, more thrilling and more compelling than any of the many moving voices with which the troubled air of the world is filled. It is the voice of the Russian people. . . . Whether their present leaders believe it or not, it is our heartfelt desire and hope that some way may be opened whereby we may be privileged to assist the people of Russia to attain their utmost hope of liberty and ordered peace.

One of the famous fourteen stipulations which the President prescribed and the Allies accepted is:

VI. The evacuation of all Russian territory and such a settlement of all questions affecting Russia as will secure the best and freest cooperation of the other nations of the world in obtaining for her an unhindered and unembarrassed opportunity for the independent determination of her own political development and national policy and assure her of a sincere welcome into the society of free nations under institutions of her own choosing; and, more than a welcome, assistance also of every kind that she may need and may herself desire. The treatment accorded Russia by her sister nations in the months to come will be the acid test of their good-will, of their comprehension of her needs as distinguished from their own interests, and of their intelligent and unselfish sympathy.

The difficulty of securing a representation of Russia at the table where her fate is being decided is that there is no one authorized to speak for the country as a whole. In Paris claiming recognition there are such men as Sazanov, the Czar's Foreign Secretary who negotiated the scandalous secret treaties, and Prince Lvov, who headed the first Provisional Government; but they are without honor in their own country. Professor Millukov, who was the leading spirit in that Government and is well known in America, has been expelled from France, presumably because he is accused of conspiring with the Germans to restore the monarchy.

Kerensky, who also was once popular here, is not allowed to come to the United States or return to Russia. He hates the Bolsheviks as much as anybody can, for they overthrew him, but he suspects the Allies, as the following extract from a letter recently published in *The Dial* shows:

I believe it is possible to call a general election for a constituent assembly, to include delegates from every part of Russia. England and France oppose this, because it would restore Russia to her former international position. They opposed my going to America in September, because they did not want America to know the truth about Russia.

The victorious Allies are forgetting their idealistic war aims. England and France already have agreed on the division of their spheres of influence in disintegrated Russia. If three men are fighting a brigand and one of them is knocked out, the others, who continue to whip him, ought to help their comrade to his feet, instead of robbing his pockets.

I appeal to America to remember the good side of Russia's part in the war, as well as the unfortunate. Perhaps President Wilson's presence at the peace conference will prevent any brigandage.

Nicholas Tchaikowsky, a revolutionist of the old school and formerly a Kansas farmer, has come to Paris from Archangel, but the Government of which he is the nominal head is altogether dependent for its limited power upon the Allied and American forces.

The last remnant of legal government was the group of members of the Constituent Assembly gathered at Omsk, Siberia, but they have been shot, imprisoned or dispersed and Admiral Kolchak has become absolute dictator at Omsk. But his sway over Siberia is disputed by General Semenov, who controls the railroad from Lake Baikal to Manchuria and threatens to cut off his supplies. The two factions have come into conflict and it is said that the British and French favor Kolchak and the Japanese favor Semenov.

Then there is General Deniken with a Cossack army fighting the Bolsheviks of the Caucasus and the Republicans of the Ukraine.

Lastly, there are the Bolsheviks, who have no more legal standing than these factions, but much more real power. The advance of the Allied and American armies into Russia rallied to their support the peasants and other opponents, and the collapse of Germany has given them an opportunity to recover the border lands of Esthonia, Lithuania, Courland, Poland, White Russia, and Ukrainia, which the Germans had taken from Russia by the treaty of Brest-Litovsk. The Soviet Government has now six well equipped armies in the field and is spending millions in foreign propaganda.

But it seems that the two men who have by working together succeeded in maintaining control of Great Russia for over a year, are now parting company. Trotzky, who is by temperament fanatical, intolerant and jealous, is still stubbornly opposed to any concessions or compromises, but Lenine, who is more diplomatic and practical, has tried to come to an agreement with the Mensheviks (minority oppo-

sition) of Russia and with outside Powers. It is variously rumored that Trotzky has executed, imprisoned, and exiled Lenin, but if so his triumph will be short lived, for without such a counterpoise he can hardly retain his power.

It is known that at least as early as October overtures from the Lenin faction were made to the Allies and America for an armistice and a conference. These repeated appeals, like all others from Bolsheviki, met with no official response, and apparently produced no impression, but we now learn thru the publication by the Socialist journal *Humanité* of the secret correspondence of the French Foreign Minister that the British Government favored receiving delegates of the Soviet Government as well as of the other Russian factions. This was at first received with incredulity, and both Secretary of State Lansing at Paris and Acting Secretary of State Polk at Washington denied that any such proposal had been received from the British Government. But the French Foreign Minister, M. Pichon, acknowledged the authenticity of the published letter and on the following day, January 12, Mr. Polk explained that the State Department at Washington had received the British note but did not forward it to Paris because it was assumed that the American peace commission would have the same information. The Pichon note as printed in *Humanité* begins:

On January 5, 1919, the British Embassy sent to me a British proposition, which also was sent to Rome, Washington and Tokio, suggesting the sending of a message to the Government of the Soviets at Moscow, to the Governments of General Kolchak at Omsk, General Denikine at Ekaterinodar and Nicholas Tchakowsky at Archangel, and also to all the other governments constituted by the different Russian nationalities.

This message would invite all these governments and all Russian parties completely to cease hostilities, violence and reprisals and establish peace both among each other and with the neighboring states. This truce would be requested for the duration of the peace conference, one of the ends of which is to re-establish peace in Russia and the neighboring countries and bring the desired succor to the suffering populations.

In case the various Russian governments, including that of the Soviets, should comply with this invitation, they would be permitted to send delegates to the peace conference.

To this proposal Foreign Minister Pichon returned a determined and indignant refusal, beginning:

The criminal regime of the Bolsheviki, which does not represent in any degree that of a democratic government or furnish any possibility whatever of developing into a government, since it is supported solely by the lowest passions of anarchical oppression, in negation of all the principles of public and private right, cannot claim to be recognized as a regular government.

If the Allies were weak or imprudent enough to act thus they would give the lie, in the first place, to the principles of justice and right which constitute their force and honor and would give to the Bolshevik propaganda in the outside world a power and extension to which they would run the risk of being the first victims. The French Government, so far as it is concerned, will make no contract with crime.

The French policy as declared by M. Pichon before Parliament and by M. Noulens, the French Ambassador to Russia, before the Peace Conference, is to root out Bolshevism with all the power of the Allied armies. The French have in fact begun active operations from the south with Odessa as a base. But it will be difficult to get coöperation in such a gigantic undertaking from the war-wearied nations. There is serious opposition in the United States Senate to the further employment of American troops in a country against which we have not declared war. The Canadian troops ordered to Vladivostok are disgusted, it is rumored, to the point of mutiny. The Japanese have withdrawn 25,000 of their men from Siberia. The Czechs are anxious to get back to their own land and accuse the Allies of having induced them to remain in Russia by assurances of reinforcements that have never been sent. The attempt to set Russia aright by force has had the effect feared by President Wilson when he said:

Military intervention in Russia would be more likely to add to

the present sad confusion there than to cure it and would injure Russia rather than help her out of her distresses.

But the Allies insisted upon military intervention in the expectation that it would bring about a speedy collapse of the Soviet and that in the occupied territory the Russians would unite to form stable and democratic governments. Both these hopes have signally failed and now the Allies have agreed to adopt the policy that President Wilson and Premier Lloyd George have advocated, that of finding out from the Russians themselves what they want. This does not involve an official recognition of the Soviet Government, but merely consultation with the Soviet leaders. The objection sometimes heard that since these men are tyrants and criminals and their hands are stained with blood it would be impossible to meet them at the green table is a manifest absurdity. We have heard similar language applied to the Germans, also with reason, yet the Allied authorities are in daily conference with the German generals whom a few weeks ago they were fighting. If the Princes' Island conference restores peace to Russia it will rank only second to the Paris conference restoring peace to western Europe.

## SEMI-SECRET DIPLOMACY

THERE is one thing worse than secret diplomacy, that is, semi-secret diplomacy. A little knowledge is a dangerous thing—when it is so selected as to present only one phase of a subject and is assumed to present the whole. The pictures we get of European countries resemble those once fashionable photographs known as "the Rembrandt effect" in which one side of the face was very white and the other dead black.

For instance, it is known that the French Government contrived to prevent the Brest municipality from giving the civic welcome to President Wilson that had been prepared for his landing because Brest was a Socialist center, but as a compromise it was arranged that the President should receive a Socialist delegation at Paris. What the President in his reply said to the Socialists was duly cabled over, but who knows what the Socialists said to the President?

So, too, we get thru the calculated indiscretion of the Paris paper *Humanité* the text of Foreign Minister Pichon's indignant rejection of the British proposal to invite delegates from the Russian Soviet Government to Paris. But what did Lloyd George say in the note to which this is the reply?

The French News Agency issues a statement denying the story printed in the *New York Times* that the American army suppress the republican movement in Luxemburg. But the *Times* has not printed any such story—not yet, at any rate.

Funniest of all was the statement sent out on January 16 by the American Committee on Public Information at Paris that "President Wilson categorically denies making the statement attributed to him in the telegram in the *New York Tribune* that he threatened to withdraw American troops from France unless the conference agreed with his views." On the following day the Associated Press cabled over that Premier Clemenceau in the French Chamber of Deputies said that he had shown the telegram to Mr. Wilson, who had declared it "an abominable falsehood." This was something of a puzzle on the American side of the water, since the *Tribune* had not published or even received any such statement. But when inquiries were sent to Paris the despatch came along on the afternoon of the 17th. Apparently there had been "static inference" somewhere on the wire. Who can say now that a denial can never catch up with a lie?

We are getting a lot of news about the revolution in Germany nowadays, but how much have we read about the revolution in Austria-Hungary? The newspapers run col-

umns about Paderewski's side of the Polish controversy, but do we hear anything from his rival Pilsudski, who is the real power in Poland? The newspapers are freely opened to all kinds of attacks on the Bolsheviki by any of their enemies, but when a statement is issued by Lenine himself of what he is trying to do, the powerful appeal for industrial efficiency printed by the Rand School of New York, under the title of "Soviets at Work," it is prohibited from circulation thru the mails.

It does not matter how these things come about, whether thru censorship, or ill balanced propaganda, or defective fairness on the part of correspondents, or the breakdown of lines of communication. We merely call attention to the state of things so as to warn the reader to be a little cautious about making up his mind on disputed points unless he has heard both sides. Just remember the old adage: one story is good till the other is told.

## THE GERMAN ELECTIONS

**I**N our last issue we gave a classification of the German political parties as they lined up for the first contest under a republican regime. The returns of the polling of January 19 show that the center of gravity of the new electorate lies near the boundary between the Socialist and non-Socialist groups. The largest vote was given to the most moderate of the Socialists, those of the old Majority or Ebert faction now in power. The next largest went to the German Democratic party, the most radical of the non-Socialists, formed by a union of the old Progressives and the left wing of the old National Liberals. The old Center or Catholic party, under its new name of the Christian People's party, keeps its solid block, being particularly strong in the Rhineland occupied by Allied and American troops. The extremists at both ends of the line, on the right the German National party that comprizes the conservatives and monarchists, and on the left the Independent and Spartacus Socialists, polled fewer votes than anticipated.

The result is encouraging, for it indicates that the National Assembly, which is to meet at Weimar, Goethe's town and the historic center of German liberalism, will consist in large majority of men of democratic principles and progressive policy, instead of being divided between irreconcilable groups of reactionaries and fanatical Socialists. The election confirms what has always been supposed, that the four and a quarter million votes polled by the Social Democratic party before the war did not all come from convinced Socialists but included a large proportion of non-Socialist radicals who took that way of expressing their opposition to the reactionary Government.

The women, who are on account of the war losses in large majority in Germany, participated in this election for the first time on equal terms and without apparent injury to their sex or their country. This might encourage those timid American states that still linger behind Prussia in the matter of democracy.

## THE DOOM OF THE LIQUOR TRAFFIC

**W**HAT some persons call the "wild rush" of the legislatures to ratify the Prohibition amendment is to multitudes an overwhelming surprize. Indeed everybody is, more or less, astonished. Even those who have long hated the saloon and wished earnestly for its elimination from American life, rub their eyes bewildered. The end of the saloon was a consummation devoutly to be wished, but few of us ever dreamed we should live to see the day when thruout the country there would be no legalized saloon. In the hearts of the friends of the saloon and of those who have been sponsors for it, the surprize mounts to the level of amazement. They do not know how to account for this mighty movement which like a tidal wave is sweeping everything before it. The liquor traffic has so long lorded it over us, and the daily papers have thru so many years

promulgated its falsehoods and specious arguments and covered up its villainies and atrocities, that many of us had come to feel that the drink traffic was one of the necessary institutions which could never be uprooted. To those who look only on the surface, the present anti-saloon movement seems a sort of fury, a spasmodic frenzy, a sudden madness which does not realize the magnitude and the peril of the thing it is attempting to accomplish. But those who look beneath the surface see in this vast upheaval fresh evidence of the tremendous and immeasurable power of the Christian church. The church oftentimes appears to be impotent in the field of needed achievement, and it is a habit in certain circles to count it a negligible force in the realm of social reform. But the church is the mightiest agency under heaven for the creation of moral energy, and for the releasing of those forces of the human conscience by which iniquities and abominations are swept away. No one clergyman can do much, but there are nearly two hundred thousand of them in this country, and they are speaking to the conscience all the time. No one congregation can accomplish large visible results, but there are many tens of thousands of them and they are scattered over the entire country, and every one of them is a fountain from which regenerating streams flow.

There are other forces, of course, which have been working for the same ends, but not all of them together are comparable with the force exerted by organized Christianity. The pulpit is only one agency thru which the church has made its power felt. It has made use of the Anti-Saloon League. By this league the church has brought its influence to bear upon the halls of legislation. So long as the distillers and brewers were permitted to manipulate the newspapers and the legislatures without interference, these gentlemen worked their will. But as soon as the Anti-Saloon League entered the arena, and with its speakers and lawyers and campaign leaders and political experts began to wrestle in the realm of practical politics with the champions of Alcohol, the days of the saloon were numbered. It has been a long, desperate, uphill fight. No one knows who has not made a careful study of the history of the last quarter of a century what a furious and incessant battle it has been. But the end has been certain from the beginning. The liquor traffic is an unmitigated and intolerable curse. It has plagued the country far too long. The day of its overthrow is at hand. Let all the people rejoice!

## END THE RAILROAD WAR

**T**HE recent decision of the Interstate Commerce Commission in favor of California lumber companies which found cause for complaint in the rates fixed by the Federal Railroad Administration has brought into timely prominence a point of importance in the problem of railroad control—that is, the question as to whether or not the signing of the armistice ended the war emergency period during which the railroads were run solely by the Director General, setting aside the authority of the Interstate Commerce Commission and of the railroad owners. The Interstate Commerce Commission says that the war emergency is over and seeks now to reassume its former control. The Director General is, however, still responsible by President Wilson's proclamation for the administration of the roads.

The controversy that has thus arisen is a fortunate one if it serves to call congressional attention to the pressing need of immediate railroad legislation. The present situation is unfair to all the parties concerned; the longer it is allowed to drift the more difficult will be a solution of the tangle. Undoubtedly there is not time in the few remaining weeks of the present session for Congress to come to any satisfactory action. But for the sake of the railroads, the shippers and the public let a special session of the new Congress be called without delay to decide the whole question of the future of the roads.

# THE STORY OF THE WEEK

**Opening of the Peace Congress** The Peace Congress at Paris, the greatest international conclave in the history of the world, began its first session on January 18, at three o'clock in the afternoon, in the great hall of the French Ministry for Foreign Affairs, the official representatives of the belligerent powers—excepting, of course, Germany and her allies and Russia and the powers which severed diplomatic relations with Germany, without actually declaring war, being in attendance. The proceedings were marked with much dignity and even solemnity, and yet with a certain informal spontaneity in the addresses which augured well for the sincerity and the sympathetic comradeship of the participants.

M. Poincaré, President of the French Republic, made an address of welcome, and then, not being himself a member of the Congress, retired. Mr. Wilson, President of the United States, nominated for the presidency of the Congress M. Clemenceau, the French Prime Minister. This nomination was seconded by Mr. Lloyd George, the British Prime Minister, and by Baron Sonnino, the Italian Foreign Minister; and the election was made unanimous by the Congress. Afterward a vice-president was chosen from each of the principal powers, Mr. Lansing, Secretary of State, being the American vice-president.

Rules for the guidance of the Congress were adopted. These provide that the five chief belligerents, America, France, Great Britain, Italy and Japan, shall take part in all meetings and commissions. The other belligerents, Belgium, Brazil, the British Dominions and India, China, Cuba, Greece, Guatemala, Haiti, the Hedjaz, Honduras, Liberia, Nicaragua, Panama, Poland, Portugal, Rumania, Serbia, Siam, and the Czecho-Slovak Republic, and also the non-belligerent powers which severed diplomatic relations with the Central Powers: Bolivia, Ecuador, Peru, and Uruguay, shall take part in all meetings in which questions concerning them are discussed. Neutral states and states in process of formation may have hearings at sittings devoted specially to questions concerning them, provided that they are thus invited by the chief powers.

After some discussion in advance of the opening, representatives of the press were admitted, and will be admitted to all except executive sessions; thus vindicating the President's principle of "open covenants of peace, openly arrived at."

**Program of the Congress** The question of a League of Nations was placed foremost in the agenda of the congress. The state of Russia was considered at the session of

January 20, at which only the representatives of the five chief powers were present, M. Noulens the French Ambassador lately returned from Russia, giving testimony concerning it; and the same subject was taken up on January 21, with testimony by Mr. Seavenius, the Danish Minister at Petrograd. Three plans were under consideration: To intervene with force for the suppression of the Bolsheviks; to give all possible aid to the non-Bolshevist governments without intervention; and to observe strict neutrality toward all parties. Finally, on January 22, it was decided, at the instance of President Wilson, to invite all four of the rival Russian governments, without discrimination, to cease fighting and to send representatives to meet commissioners from the Peace Congress on Princes' Islands, Sea of Marmora, on February 15, then and there to discuss frankly and amicably plans for the pacification and rehabilitation of Russia. This invitation was immediately issued and it was considered certain that it would be accepted.

It was announced that various international questions relating to the in-

Handled in Brooklyn Daily Eagle.

## THE FOUNDATIONS OF PEACE

terests of labor had been placed upon the program for discussion, following those of responsibility for the war and punishment for crimes committed during hostilities.

Meantime the German Government is sending a delegation to ask a hearing at the congress, comprising Count von Brockdorff-Rantzau, the Foreign Minister; Prince Lichnowsky, formerly Ambassador at London; and Philipp Scheidemann and Karl Kautsky, the Socialist leaders. They will seek suspension of economic measures against Germany, and protest against Allied demands beyond those expressed in President Wilson's peace proposals.

## The Opening Addresses

The addresses at the opening of the Congress were notable for their harmony and cordiality of tone. In his extended address of welcome, read from carefully prepared manuscript, President Poincaré said:

If you are to remake the map of the world it is in the name of the peoples, and one condition is that you shall faithfully interpret their thoughts and respect the rights of nations, great and small, to dispose of themselves, and reconcile with this the equally sacred right of ethnical and religious minorities—a formidable task which science and history, your two advisers, will contribute to assist and facilitate.

President Wilson, in nominating M. Clemenceau, in an extemporaneous but eloquent speech, referred thus to the purposes of the congress:

We are trusted to do a great thing, to do it in the highest spirit of friendship and accommodation, and to do it as promptly as possible in order that the hearts of men may have fear lifted from them and that they may return to those purposes of life which will bring them happiness and contentment and prosperity.

Mr. Lloyd George in seconding the nomination reëmphazized the same thought:

The world is thirsting and hungering for peace. There are millions of people who want to get back to the world work of peace. And the fact that M. Clemenceau is in the chair will be proof that they will get there without any delays which are due to anything except the difficulties which are essential in what we have to perform.

Baron Sonnino, with much fervor, expressed the same sentiments, and then M. Clemenceau, in accepting the presidency, declared:

All . . . must be subordinated to the necessity of a closer and closer union among the nations who have taken part in this Great War and to the necessity of remaining friends. For the League of Nations is here. It is yourself. It is for you to make it live, and to make it live we must have it really in our hearts.

## The British Dominions

One of the interesting features of the Peace Congress is the admission of delegates from the British Dominions and India, separately from those from the United Kingdom. This is assumed to give to Canada, Australia, New Zealand and South Africa an international status comparable with that of Belgium and Serbia, and in some quarters it is anticipated that these states may place themselves in opposition to the United Kingdom on some subjects.

## Tribulations of Russia

Russian affairs remain in a chaotic state, with four separate governments seeking recognition and with war raging in the western and southern border provinces. Unity of command for the invading Allied forces in Siberia has been effected under the French General Janin, who has been leading the Czecho-Slovaks, and the Omsk

Government is receiving increased popular support. It was announced on January 17 that this Siberian army was about to effect a junction with the Allied army from Archangel at Ust Tsilma, on the Pichora River.

The forces of the Bolshevik Government were reported on January 20 to have captured Kiev and to have overthrown the Ukrainian Government. The next day news came that Esthonian troops, aided by Finns, had routed the Bolshevik army at Narva, on the Petrograd-Reval railway. The Polish Government was reported on January 16 to have taken over the administration of Lithuania, at the request of the President of that country, in order to give it protection against the Bolsheviks; and on January 18 it was announced from Warsaw that the Bolshevik troops had halted their advance upon the Polish frontier. As a result of these operations, Leon Trotzky, the Bolshevik Minister of War, who was with the troops and himself narrowly escaped capture at Narva, announced that the Bolsheviks would probably have to abandon Petrograd, since they were unable to defend it.

A dispatch from Kiev on January 20 declared that White Russia had proclaimed its union with the Soviet Republic of Russia. The White Russians number about 5,000,000 and occupy eastern Lithuania, Minsk and Mohilev.

The Foreign Minister of the Bolshevik Government is reported to be endeavoring to obtain recognition for the Soviet regime from the Allied Powers, on the conditions that that regime be maintained intact, that all executions and massacres committed by it be condoned, and that its confiscation of property and capital be approved as lawful.

**The Armistice Extended** Allied and German commissioners met at Treves on January 17 and agreed upon an extension of the armistice for another month from that date. Germany is penalized by being compelled during that month to surrender 58,000 agricultural machines of various kinds, and to permit the Allies, if they see fit, to occupy additional lands on the right bank of the Rhine. Russian prisoners of war are to be surrendered, property stolen from invaded countries is to be restored, all completed submarines are to be surrendered, and all unfinished ones destroyed, and the German merchant fleet is to be placed at the disposal of the Allies. Matthias Erzberger, the German commissioner, made a fruitless plea for the immediate raising of the blockade and full restoration of German commerce.

**The Guilt of the ex-Kaiser** Eminent French jurists have reported to M. Clemenceau that the ex-Kaiser is legally subject to being held personally responsible for the crimes committed by his army during hostilities. In their report, published on January 19, they quote from a letter written by the then Kaiser to the then Aus-

Stimson in Dayton Daily News

#### BEHIND THE CLOUDS LIES RUSSIA

trian Emperor early in the war, in which he said:

My soul is torn asunder, but everything must be put to fire and blood. The throats of men and women, children and the aged, must be cut, and not a tree nor a house left standing.

With such methods of terror, which alone can strike so degenerate a people as the French, the war will finish before two months, while, if I use humanitarian methods, it may prolong for years. Despite all my repugnance, I have had to choose the first system.

The report adds that modern jurisprudence does not recognize irresponsible authority, not even at the head of a state, but brings the state itself down to submission to the rule of the judge. There can be no question, therefore, it concludes, of saving from the judge, thru either national or international law, the man who is "at the summit of hierarchy."

G. S. Jarrett, from Western Newspaper Union

#### THE FIRST AMERICAN TO FIGHT

On the day that Great Britain declared war on Germany G. S. Jarrett, later captain in the British army, landed from New York. He enlisted immediately upon his arrival in London and on August 15, 1914, was actually in the trenches. He spent the four years of the war on the western front.

**Some Relief for Germany** Brigadier General Smith, in charge of the civil administration of the sector of Germany occupied by our troops, at and about Coblenz, has arranged, with the sanction of the Allies, to permit German factories in that district to sell goods in either France or Germany, and to get the necessary amount of coal. It is believed that this will not restore any of Germany's military strength, but will give France some needed supplies and will avert the danger of disturbances and revolts in that part of Germany bordering upon France.

**The German Elections** General elections for delegates to a national constituent convention

were held thruout Germany on Sunday, January 19. The 39,000,000 voters were divided among 38 districts, and 433 delegates were elected, who are to meet in convention on February 10. Both the ante-election campaign and election day itself were marked with some violence, and in some places the holding of elections was rendered impossible. On the whole, however, the elections were orderly, and there was polled a large percentage of the votes of 21,000,000 women and 18,000,000 men. Each delegate was supposed to represent approximately a population of 150,000. The elections were conducted on the proportionate system, assuring minority representation of all except the smallest parties.

The result of the elections was a practical victory for the Provisional Government headed by Herr Ebert by a substantial plurality tho not a majority vote. Its party, the "Majority Socialists," polled about 44 per cent of the votes; the Liberals, or Democrats, 20 per cent; the Centrists, or Clericals, now joined by some Protestants as a "Christian People's Party," 18 per cent; the Conservatives, now called the National Party, 7.5 per cent; the Independents, or Radicals, 6.5 per cent; and the Junkers, or Pan-Germans, paradoxically calling themselves the People's Party, 4 per cent. Under the system of proportional representation, the strength of the various party delegations in the convention will approximate these same percentages. It is assumed that the Majority Socialists, with 44 per cent, and the Liberals, with 20 per cent, will act together, thus forming a coalition majority of nearly two-thirds of the convention.

**Collapse of the Spartacans** The Spartacan revolt at Berlin and elsewhere in Germany received, apparently, its death blow in the killing of its chief leaders, Karl Liebknecht and Rosa Luxemburg, on January 15. Liebknecht had been arrested by the Government forces and was being conveyed to prison when he escape from his guards and was shot. Rosa Luxemburg also had been arrested and was being taken to prison when a mob halted the car in which she was riding, beat her into insensibility, shot

her then the head, and hung her body into the canal. Other Spartan leaders were arrested, but the former Chief of Police, Kautz, made his escape. Thereafter the Spartan movement generally declined. The Republic of Rastenburg, proclaimed by the Spartans, was abandoned on January 18 and a similar fate was anticipated for the organizations at Bremen, Düsseldorf and elsewhere.

#### The New German Constitution

The new constitution of Germany will be framed by the convention which is to meet on February 10. Seeing that the Ebert Government is practically certain to control that body, a forecast of what the constitution is likely to be may be found in a draft prepared by members of that Government and made public on January 20. This draft provides that Germany shall consist of its former constituent states and any other territories which under the rule of self-determination wish to be annexed—referring doubtless to the German provinces of Austria. The people are to have the right to form by division new states within the republic, of not less than two million population each. There is to be a President, elected for a single term of seven years by an absolute majority of the popular vote. War and peace must be made by the Parliament and it shall also have the power of ratifying treaties. The Chancellor and other Cabinet Ministers will be chosen by the President of the Parliament and will be responsible at all times to that body.

A significant feature of the scheme is the political elimination of Prussia by division into a number of separate states. Indeed, all Germany is thus to be rearranged into fifteen states, each with a local state government after the American plan, as follows: 1—Silesia, German Posen and German Bohemia; 2—The German parts of East and West Prussia; 3—Brandenburg, Pomerania and Mecklenburg; 4—Berlin and

its environs; 5—Lower Saxony, Hanover and Schleswig Holstein; 6—Westphalia and Lippe; 7—The Rhineland; 8—Prussian Hesse and the Grand Duchy; 9—Thuringia; 10—Saxony; 11—Baden; 12—Württemberg; 13—Bavaria and parts of Bohemia; 14—German Austria; 15—Vienna and its environs.

#### Four Cabinets Changed

A new Italian Cabinet was announced on January 20, of which Signor Orlando remains Prime Minister and Baron Sonnino Foreign Minister. Most of the former members retain their portfolios, but Signor Stringher, president of the Bank of Italy, replaces as Finance Minister Signor Nitti, whose resignation led to the crisis; General Caviglia succeeds General Zupelli as Minister of War; Signor Facta replaces Signor Sacchi as Minister of Justice; and there are several other changes. Signor Villa, who resigned the place of Minister of Transport, was made Vice-Premier, a new office, which he will hold during the absence of the Prime Minister, Signor Orlando, in Paris. The new Ministers are all understood to uphold strongly Italy's claims to the Dalmatian coast.

A Cabinet crisis occurred at Budapest, and a new Hungarian Ministry was announced on January 20. Mr. Berinkey, a former Minister of Justice, became Prime Minister, Minister of Foreign Affairs, Minister of Justice and Minister of Nationality. The Socialists decided to coöperate with the Government and four of them accepted Cabinet places, including the portfolios of War, of Interior and of Public Instruction, and one Ministry without a portfolio.

The Serbian Prime Minister, Nikola P. Pashitch, resigned his place on January 17, and Prince Regent Alexander asked Stoyan Protitch, who had been Minister of Finance, to form a new Cabinet for the new Serb-Croat-Slovene kingdom.

Los Angeles Times

BERLIN

The resignation of Premier Malinoff and the whole Bulgarian Cabinet was announced on January 20. That Ministry had been in office since the armistice.

#### The Sinn Fein Republic

Dublin was the scene of an extraordinary performance on January 21, when the Sinn Fein National Assembly formally met at the Mansion House and proclaimed an independent Irish Republic, completely separated from the British Empire. Among its members were about half of those who had been elected to the British House of Commons but who, while accepting such election, had refused to sit at Westminster. The other half were in jail on charges or suspicion of sedition. A "Declaration of Independence" was read and other proceedings were conducted, all in the ancient Gaelic tongue. The meeting was orderly and dignified in tone, and was not interfered with in the least by the British authorities at the neighboring Dublin Castle. It is intended to send a delegation to the Peace Congress to ask for the international recognition of the new republic, and it is apparently expected that the British Government will acquiesce therein, as no preparations for the exercise of force are visible.

#### Reaction in Portugal

A reactionary revolution, for the restoration of the monarchy, was attempted in Portugal on January 20, which, despite the efforts of the Republican Government quickly attained menacing proportions. It was led, in the north, by Senhor Paiva Conceiro, who organized a provisional government at Oporto and proclaimed the reestablishment

of the monarchy. The former King, Manoel, who had been living in England, is said to have deprecated any such attempt, not deeming the moment opportune for it. Nevertheless, upon the occurrence of the outbreak at Oporto he was reported to be missing from his English home and it was suspected that he was preparing to resume the throne if the movement gathered sufficient strength.

**The New Polish Government** Mr. Paderewski on January 16 reached an agreement with General Pilsudski, the Polish military dictator, for the organization of a provisional cabinet. It was at first intended that Mr. Paderewski should be Prime Minister and General Pilsudski Foreign Minister, but eventually the former took both those offices and the latter remained outside the cabinet. Twelve other Ministers were appointed. It was then announced that the National Parliament, or Constituent Assembly, elected by popular suffrage, would meet on February 9, to promulgate a constitution and to appoint a new and permanent Ministry.

**International Labor Meetings** Mr. Samuel Gompers and other American labor delegates reached England on January 17 and proceeded to Paris on January 22. In conference with British leaders they agreed upon a plan for an International Trades Union Congress, to meet simultaneously with the Peace Congress but to be entirely separate from the International Socialist and Labor Conference already arranged for at Berne. It is announced that German and Austrian delegates will attend the Berne meeting, as Mr. Arthur Henderson and other British representatives will do; but it is thought that Mr. Gompers and his American colleagues will have nothing to do with it.

**Soldier and Citizen Too** During the war 162,864 men in the American army have become citizens of the United States—an impressive total in view of the fact that the large percentage of our soldiers were already citizens. That this additional

—PRESIDENT WILSON

The cartoon at the right paraphrases President Wilson's statement by "A Square Meal—Poison to Anarchy." At the left is another illustration of the same idea, "The Cure of Bolshevism"

number is so large is due chiefly to the work of the Naturalization Bureau of the Department of Labor, which conducted an intensive campaign at army camps and cantonments. From time to time examiners and judges held a special session at each camp and alien soldiers were naturalized by the hundreds. The naturalization regulations were somewhat relaxed in favor of men in the army and it was held that a soldier's enlistment was equivalent to taking out his first naturalization papers.

#### **Ships Borrowed and Returned**

Three million tons of German shipping now in German ports have been borrowed by the Allies and America to be used to transport food to Europe and to carry home American and Australian soldiers. The arrangement whereby these ships are taken was made at a conference in 'Treves, conducted by Chairman Hurley of the United States Shipping Board. The use of the ships is to continue at least during the armistice period. At the end of that time further arrangement may be made. Germany is to be paid for the ships at the average current rate and she must spend this payment for the food supplies to be brought her in the borrowed ships.

Most of the three million tonnage is in cargo ships; the 700,000 tons of passenger ships will be divided evenly between British and American troops. Among those coming to America is the "Imperator," the largest liner in the world.

Aside from its practical value this shipping conference is significant as the first economic agreement to be made with Germany.

The Dutch ships requisitioned by the Shipping Board for war emergency operation, with the exception of those engaged in Government service, are now to be turned back to their owners as fast as they become available in American ports.

The United States Shipping Board has also announced the release of all American owned steamships from requisition charter, excepting those in the

Harding in Brooklyn Daily Eagle

service of the War Department or employed in other Government service. In the case of these the owners are given privilege to obtain from the Shipping Board steamships of equal tonnage, which they will be permitted to operate on their own account.

#### **What Are Our Ships Worth?**

Chairman Edward N. Hurley, of the Shipping Board, has proposed a post-war program for shipbuilding that contains the startling suggestion that the United States "write off" a third of the cost of the Emergency Fleet Corporation's ships, including those now under construction, in order to bring their fixed charge to a competitive basis with other ships. Since the total cost of our war program of shipbuilding is about \$3,800,000,000, this would mean a direct loss of more than a billion dollars, spent presumably to obtain speed in building ships. The Shipping Board substantiates its proposal with an explanation of the economic situation and argues the necessity of putting the United States fleet in a fair position to compete with ships of other nations.

Inasmuch as one of the very important factors in ship operating costs is that part of the overhead cost represented by interest and depreciation, it is recognized that a readjustment of ship values should be made. It is also evident that sound commercial practise and proper accounting methods require a reduction in values at which ships already built and now building under war conditions are carried. It is estimated from the figures so far obtained that the proposed write-off of from 30 to 40 per cent would be the minimum amount properly chargeable to the cost of the war.

The operating cost of the United States Government owned ships is necessarily high because of the high construction cost due to the war. The question of future rates, therefore, makes necessary a readjustment of the values at which American shipping is carried. The proposed reduction should put American shipping on an adequate post war footing, both as to values and cost of operation. Similar methods, it seems, might well be applied to a reduction in shipyard values.

The proposed new valuation of ships would put the United States, in so far as the present Government owned ships purchased or built during the war are concerned, in a position to name rates in competition with such rates as may be offered

#### **THE GREAT WAR**

January 16—Karl Liebknecht killed at Berlin. Turks surrender Medina.

January 17—Armistice extended one month. Paderewski Prime Minister of Poland.

January 18—Opening of Peace Congress at Paris. Spartan revolt in Germany crushed.

January 19—General elections for German Constituent Convention. New Italian Cabinet.

January 20—Peace Congress considered Russian problem. Monarchist revolt in Portugal.

January 21—Sinn Féin Republic proclaimed in Ireland. Bolshevik government of Russia seeks parley with the powers.

January 22—Supreme War Council decides to send commission to Poland. President Wilson presents Russian policy to Peace Congress.

by ships of other nations, and it is the intention of the United States Government that its own ships carry ocean rates at least as low as those offered by foreign shipping.

Protests are already forthcoming, however, from critics who consider the "striking off" plan a handsome present from the Government to the private interests that are expected ultimately to buy the ships. Another adverse criticism points out that the high cost of shipbuilding, which makes it necessary to pay a third more for the ships than they are worth, is due partly to the inflated wage scale that still prevails in the shipyards. At Hog Island, for example, time labor is paid for at about a dollar an hour.

A ten year program of Government control of the merchant marine has been advanced by one official of the Emergency Fleet Corporation as the only solution of our problem of shipbuilding and operation now. He points out that the cost of the fleet is so large that it could probably not be disposed of even at half its cost. Buyers are skeptical of the possibility of operating ships profitably under American registry and fearful of going into new enterprises in view of the heavy taxation to be faced. Another difficulty in the way of their sale is the necessity of making sure that the ships do not pass to foreign control. The best way to insure this is for the United States to keep the title to them.

**A New Angle of Railroad Control** The Interstate Commerce Commission has come to the front in the recent progress of the railroad problem. It announced on January 20 its authority to determine railroad rates of shipment and to revise rates fixed by the Director General, thus re-assuming the old power taken from it by the war emergency Federal control.

This assertion of its authority by the Interstate Commerce Commission came as the result of decision on a case brought against Federal controlled railroads and against the Director General of Railroads by eleven corporations engaged in the manufacture of lumber and forest products in the Humboldt Bay district of California. The corporations charged that unreasonable

Over in Chicago Tribune

ACROSS

rates were demanded of them by the Northwestern Pacific Railroad Company and that according to the Director General's plan natural modification by competition was forbidden. The Interstate Commerce Commission supported the lumber companies' claim and ordered the defendant railroads

to cease and desist on or before May 15, 1919, and thereafter from publishing, demanding, or collecting their present lumber rates as covered by the decision.

The importance of the case lies in the general principles it has brought out by the Interstate Commerce Commission's assertion of authority, by its somewhat antagonistic attitude toward the Director General's regime, and by its decision that for legal and business purposes the war is now in effect ended.

A measure giving practically complete control of the railroads to the Interstate Commerce Commission was introduced on January 21 in both the Senate and the House of Representatives. It proposes that the authority of the Interstate Commerce Commission

be greatly extended, with power to regulate railroad security issues, new construction or extensions, train service and operation and to require pooling, interchange of equipment, terminals and other facilities. The commission under the bill also would have authority to fix minimum rates and to make investigations upon its own motion.

**The States vs. Mr. Burleson** Eighteen states have appealed to the courts in protest

against putting into operation the new telephone toll rates announced by Postmaster General Burleson last December, to take effect January 21. The new rates, according to the Postmaster General's statement, reduce telephone toll charges. They establish a basic charge of 6 1/4 mills a mile (air-line mileage), and discriminate between station to station calls, person to person calls, and calls which require messenger service, with additional charges made on a basis of service. The rates are decreased for night calls. According to the protesting states the general effect of the new rates is to increase rather than decrease toll charges. The Ohio Utilities Commission presented the objection succinctly in a report which contained the following clauses:

The rates, tolls and charges carried in the schedule are so greatly in excess of charges now being collected for similar service as to be injurious to business or interests of the public and ought not to be established without a showing that same are necessary.

Rates, tolls and charges do not appear to be based upon any investigation or data, but appear to be arbitrary and imposed for the purpose of creating a uniform standard of rates throughout the United States.

Governor Coolidge of Massachusetts made objection from another viewpoint, that of the state's rights:

I see no reason why any of the states should surrender its rate making powers to the Federal Government. In times of

#### CALIFORNIA'S FIRST ASSEMBLYWOMEN

For the first time in its history California has women members in the state assembly: the four women here photographed just after taking the oath of office at Sacramento. Mrs. Grace Dorris is at the extreme left, next Mrs. Elizabeth Hughes, Mrs. Anna L. Saylor, and Miss E. B. Broughton

war emergencies may arise making it advisable not to stand upon the Constitution, but at the present time I feel that the state's interests should be fully protected.

Public service schedules show that the average increase in toll charges by the new rates would be from 25 to 50 per cent, and that in some instances the increase would be 200 per cent. It is pointed out that Texas is the only state actually to benefit by the new rates.

William H. Lamar, solicitor of the Post Office Department, has issued a statement that

The Postmaster General is clothed with ample authority to fix the rates, and that his action in that respect cannot be set aside by an order of a state commission.

The state commission have asked to have a resolution proposed in Congress returning the telephone properties to private ownership.

**Another New York Strike** The signs of the times seem to be chiefly strikes just now in New York City. Last week it was a general tie-up of the harbor and the docks; this week it is the walkout of 35,000 workers who make women's waists and dresses.

The garment workers' strike, which is so far an orderly one, affects approximately a thousand shops. It has been long threatened and is based on the manufacturers' refusal to grant the workers a forty-four hour week, in order to make employment continuous instead of seasonal, and an increase of 15 per cent in wages to meet the increased cost of living. The chief point of contention seems to be, however, not so much these demands as the antagonism between the manufacturers and the union. "We will resist to the limit of our ability the union's attempt to enslave us" is the employers' statement. The union, on the other hand, announces that the strike is supported by a previous popular vote of the workers.

Some years ago the garment workers used to form the storm center of continual industrial trouble in New York. The famous "protocol of peace," drawn up in 1913, provided a solution of the disturbances that proved satisfactory to both sides and that by frequent renewals kept peace in the garment industry until it ran out in December, 1918. At that time the employers and workers failed to agree on the principle of distribution of work thruout the year and of the privilege to discharge workers for any cause save union activity. The workers maintain that if the employer is allowed to dismiss employees for anything but absolute inefficiency or the like, then he can punish shop representatives of the workers who do not follow the boss's lead in disputes.

**Feeding the World** The appropriation of \$100,000,000 asked for by Food Administrator Hoover to relieve famine in Europe and the Near East, was passed by the House of Representatives on a vote of 242 to 73, induced chiefly by a cabled

appeal from President Wilson in which he said:

Food relief is now the key to the whole European situation and to the solutions of peace; Bolshevism is steadily advancing westward, is poisoning Germany. It cannot be stopped by force, but it can be stopped by food, and all the leaders with whom I am in conference agree that concerted action in this matter is of immediate and vital importance.

I do not see how we can find definite powers with whom to conclude peace unless this means of stemming the tide of anarchism be employed.

When the bill came up for discussion in the Senate it met more opposition, both on the ground that it would put too heavy a burden of taxation on the people of the United States (an additional dollar per capita) and because some Senators objected to Mr. Hoover as the distributing agent. Senators Penrose of Pennsylvania, Gore of Oklahoma, Borah of Idaho and Kenyon of Iowa all scored Mr. Hoover as incompetent to handle the economic situation involved or as intending to use the \$100,000,000 in such a way as to benefit the business of the packers' trusts. In spite of opposition it is generally conceded that the bill will be carried.

An amendment offered by Senator Lodge was adopted adding Austria, Turkey and Bulgaria to Germany as countries which are prohibited from sharing in the distribution of the funds. This in no way prevents relief

from being given to the peoples of Armenia, Syria, etc., under enemy governments.

### South America Quiets Down

All strikes in Argentine, except those affecting work in the port of Buenos Aires, were called off by a conference of labor leaders on January 16. President Irigoyen of the Argentine Republic has promised to further as far as is possible the demands of the workmen, including substantial wage increases. Reserve troops called out to suppress the strike were kept on patrol duty for some days after the official announcement of the end of the strike.

In Buenos Aires a considerable commercial loss is feared from the continued strike of the harbor workers. Eleven British steamers waiting cargo announced on January 20 that they would be obliged to put out if the strike were not settled at once. The South American shippers see in the strike a menace to their future commercial relations with Great Britain.

The Peruvian Government dealt less gently than Argentine in its handling of the strikes. Troops had the situation more or less under control from the very beginning, and the Government announced on January 16 that the labor leaders had agreed to a settlement on the basis of an eight-hour day with no increase in wages.

Paul Thompson

### CONVERTING THE SALOONS TO FUTURE USEFULNESS

Even before the adoption of national prohibition some of the liquor interests saw it coming and began to pull up stakes or to effect a transformation of their business. The two New York saloons illustrated here sold out and their places were taken, both literally and figuratively, by community clubs, which provide comfortable neighborhood meeting places for entertainment or discussion.

All Handley Page biplanes not needed by the army, and hundreds of complete sets of parts, are being given to the Post Office Department

## THE FUTURE OF FLYING

Mr. Woodhouse is one of the Governors of the Aero Club of America, editor of "Flying," and author of "The Aero Blue Book," and of textbooks of aeronautics, both military and naval. He gives in the following article suggestions for the use of aeroplanes and motors released from war work

BY HENRY WOODHOUSE

**W**HAT are we going to do with the 10,000 aeroplanes and the 20,000 Liberty motors on hand?

What are the 25,000 United States Army, Navy and Marine aviators going to do?

How are we going to use the aeronautic equipment on which the country invested about \$1,500,000,000?

Immediately on the signing of the armistice the orders for military aeroplanes and motors were canceled and during the month of December a number of army aviation fields were closed down. Not less than ten thousand army aviators have already left the army or resigned.

The Post Office can easily use 5000 planes and 10,000 motors to establish a country wide aerial mail service.

The stupendous record of the aerial mail service between New York and Washington, which has operated for months, has created country wide demand for such service. The aviators have started daily on schedule time, rain or shine, and have reduced the time required to carry letters between these two cities to two hours.

The employment of high powered De Haviland military aeroplanes to start the New York to Chicago aerial mail route was not satisfactory, and the service has been postponed until some of the twin-motored Handley-Page biplanes can be assembled and put into use.

For cross country flying, to insure complete success it is necessary to have two motors, one always running in case the other stops, and to permit the running of the motors throttled, increasing thereby the life of the motors.

That single motored aeroplanes can be relied on for distance flights has been shown by the fact that not less than two-thirds of the aeroplanes used

in the war were single-motored. But twin-motored and multi-motored aeroplanes are better and safer and absolutely necessary to make a success of commercial aerial transportation.

When the war started the life of an aeroplane motor was supposed to be not much over fifty hours, and an aeroplane that had had one hundred hours in the air was supposed to be unsafe. But as the importance of the aeroplane in the war was demonstrated, and the warring nations spent hundreds of millions and employed the best in engineering talent, the construction of aeroplanes and motors was greatly improved, and now aeroplanes are being constructed with such a high factor of safety that if equipt with two motors and run throttled down, the life of the aeroplane runs up into thousands of hours and the life of the motor is almost indefinite. With proper attention and overhauling every one hundred hours of flying, the aeroplane and the motor can be run indefinitely.

Only a small per cent of the military aeroplanes can be utilized easily for peaceful purposes, where fuel consumption becomes an important factor.

There is little use in the commercial field for a military De Haviland biplane equipt with a 400 horse power motor which consumes about twenty gallons of gasoline an hour and is only adapted to transport two persons. On the other hand, the large Curtiss flying boats, the twin-motored Handley-Page biplanes and the three-motored Caproni triplanes can easily be adapted to commercial purposes.

The navy has about 500 large flying boats equipt with two or three Liberty motors. However, it is not likely that the navy can spare any of them because hundreds of these seaplanes are required to keep the naval aviators in training and whatever may not be required for naval purposes can be used by the Coast Guard and Life Saving Service.

The United States Army has more than 300 complete sets of parts for Handley-Page biplanes and is turning over whatever it does not need to the

Post Office. This is in accordance with the provision made in the National Defense Act of 1918, which provides that military aeroplanes and equipment which cannot be used by the army shall be turned over to the Post Office for use in the transportation of mail.

The aeroplane cuts down the time required to carry mail to a fraction of the time required by other methods. The pathfinding trips made between Chicago and New York showed that mail can be carried between New York and Chicago in seven hours, which is seventeen hours less than is required at present by rail. The employment of twin-motored aeroplanes means that letters mailed in the evening in New York will be delivered in Chicago the following morning!

The army has about 20,000 Liberty motors on hand. These motors are being stored away for future use. The plans for the extension of the aerial mail announced by Postmaster General Burleson in his annual report show that the Post Office could use one-half of them during the coming year. Postmaster Burleson's program directs, first, the establishment of an aerial mail service connecting the principal commercial centers of the country by a system of trunk lines and feeders, and, secondly, connecting this country with the West Indies, and Central and South America. The trunk lines and feeders decided on under this program are:

1. New York to San Francisco, with feeders from, a, Chicago to St. Louis and Kansas City; b, Chicago to St. Paul and Minneapolis; c, Cleveland to Pittsburgh.

2. Boston to Key West, with feeders from, a, Philadelphia to Pittsburgh; b, Washington to Cincinnati; c, Atlanta to New Orleans.

3. Key West, via Havana, to Panama.

4. Key West, via the West Indies, to South America.

On this program Postmaster Burleson reports progress as follows:

(1) Boston to Key West. Of this route the Washington-New York division has been operated since May 15 and is functioning perfectly.

The Boston-New York division has been tentatively laid out and will be

established whenever, in the opinion of the War Department, its operation will not conflict with the war needs of the country.

The Washington-Atlanta and Atlanta-Key West routes are now being worked out with a view to their immediate establishment at the close of the war.

(2) New York to San Francisco. Of this route the division from New York to Chicago has been carefully worked out. The War Department, under act of Congress of July 2, 1918, has released to the Post Office Department, for the use of this division, aeroplanes of 650 pounds' mail carrying capacity which are no longer suitable for war needs. The hangars have been ordered, landing fields obtained, and the route has been ordered established before the close of the present year. In a series of aeroplane flights by the Post Office Department, early in September, the route was carefully charted for emergency and regular landing fields. In this work one aeroplane made a record flight from Chicago to New York in less than fourteen hours, including all stops en route. The flights were made thru storm and heavy rains over parts of the route. The reconnaissance developed that it will be feasible to maintain a daily nine-hour schedule between New York and Chicago, as compared with the twenty-one hour schedule of the Twentieth Century Limited. The New York-Chicago schedule for the present will call for departing from New York at 6 a. m. and arriving at Chicago about 3 p. m., thus connecting with all city deliveries. The principal mail stop will be Cleveland. The time between Chicago

and Cleveland will be cut to 3 hours 45 minutes, and between New York and Cleveland to 5 hours 15 minutes. Mail from the Atlantic seaboard will be advanced from twelve to twenty-four hours to the West and Southwest by this new service. The feeder routes from Chicago to St. Louis, Kansas City, St. Paul, Minneapolis, and the remainder of the trunk line from Chicago to San Francisco will be worked out during the ensuing year with a view to

It is a stupendous plan which opens the great airways of South and Central America and Canada.

Over 3000 Army planes and motors are to be sold. Sealed proposals in duplicate, for the property scheduled below, will be received at the office of the Salvage Branch, Supply Section, Office of the Director of Military Aeronautics, Washington, D. C. The property to be sold is:

(1) One thousand aeroplanes, Stand-

ard J. 1, manufactured by the Standard Aircraft Corporation; two-seated biplane with Curtiss OX5-90 H. P. motor, located at the Aviation General Supply Depot, Houston, Texas.

(2) Two hundred aeroplanes, as No. 1, with Hispano-Suiza 150 H. P. motor, located as above.

(3) Two hundred aeroplanes, as No. 1, without motor, located as above.

(4) Ten aeroplanes, L. W. F.; two-seated biplane with Thom-

as 135 H. P. motor, at St. Paul, Minn.

(5) Two thousand motors, four cylinder, A 7 A., manufactured by Hall-Scott Motor Car Company, Berkeley, California, located at Aviation General Supply Depot, Houston, Texas.

The Army and Navy have trained about 25,000 aviators. According to the "peace" programs announced, less than 5000 aviators will be maintained in the Army, Navy and Marine Corps combined. The tentative plans announced show that it is proposed to cut down the Army Air Service to 500 aviators and the Navy Air Service to 350 aviators. About 10 per cent of them can be used by the Post Office during the coming year and 10 per cent more for aerial transportation lines, piloting aircraft for travel, civic and scientific purposes, sport and pleasure.

© International Film

Curtiss planes, here seen in formation, are one of the types easily adapted to commerce

their immediate inauguration at the close of the war.

(3) Key West to Panama, and

(4) Key West to the West Indies and South America. Negotiations looking to the conclusion of special aerial mail conventions between the United States and the foreign countries involved for the establishment of these routes to the West Indies and Central and South America are now in progress. It is realized that these overseas routes will require the most powerful aeroplanes with wireless installation and special construction to make them safe over the seas, but the enormous commercial advantage that will result by materially reducing the time between this country and Central and South America will justify the expenditure that such a service will entail.

The Haviland biplanes with Liberty motors must be modified for peace requirements chiefly because of their great gasoline consumption

# SHALL WE SINK THE GERMAN FLEET?

BY PARK BENJAMIN

© Underwood & Underwood

*The German fleet on its way to surrender to the Allies, photographed from one of the British vessels*

**W**HAT is to be done with the surrendered German fleet, it seems must await the decision of the Peace Conference. In the meantime any generally approved proposition is wanting. The question hinges chiefly upon the disposition of the ten battleships and six battle cruisers which *prima facie* are formidable enough to constitute a material addition to any established fighting force. In fact, their number happens to coincide with that specified by Secretary Daniels as the desired increase of capital ships in our own Navy during the coming three years.

If these important ships are to be regarded as prizes of the associated national fleets which jointly compelled their surrender, then it seems to follow that they should be apportioned among the captors. The difficulty arises in finding a basis for the apportionment. If the relative strengths of the several navies is solely to govern, then Great Britain would receive greatly the lion's share. If, on the other hand, each nation should claim that its proportion should depend upon the ratio which its ships in actual war service in the North Sea bears to its entire naval force, another result might be reached; or if again it should be argued that the division should be determined by the importance of the particular naval achievements of any one nation during the war as compared with those of the other nations interested, the problem would be further complicated, and one might discover the Italians, because of their brilliantly successful and spectacular work in the Adriatic, maintaining that a much greater share should be accorded them than, for example, to the French. Battleships are not exactly products saleable in the open market. Most people don't want them. A general auction of a fleet is also hardly conceivable, nor would there probably be any way of fixing upset valuations of the units, because no one knows at any particular instant of its history what a bargain-counter price for a battleship really would be; it depends so much on one's necessities, not to say emergencies, of the moment. Greece, five years ago, wanted our "Idaho" and "Mississippi"—good ships

for the times—and we let her have them at fairly remunerative price, subsequently putting the money into something big enough and powerful enough to use up, not two, but four similar vessels in case of actual combat; but that did not establish a "quotation" of battleship values which would influence any prudent investor in like commodities. Besides, no matter how any purchaser acquired battleship property, it would alter the relation of his naval force to that of other holders, and where naval forces are determined on sliding scales there might be troublesome and expensive readjustments needed all along the line.

A fortnight ago the country was somewhat surprized by a report which attributed to our representatives abroad the opinion that the Gordian knot should be cut by towing all the German vessels to sea and sinking them. This was afterward officially denied, but not until it had been vigorously denounced as a wicked waste of good material which it certainly should be possible to turn to some profitable account. More recently the same conclusion has been reaffirmed by one of the rear admirals of our fleet, and in support thereof a variety of reasons have been presented. It is pointed out that the differences in armament and construction between the German ships and those of the Allied Powers prevent proper coördination; that their upkeep even in idleness is very expensive; that they do not lend themselves to commercial uses and cannot be altered economically; that they are more or less deteriorated by their long stay in harbors; that many of them have been stripped of metals utilized in the construction of the U-boats; that even to break them up would not pay because of the expense, and the difficulty of reworking the material; that their prime cost is no criterion of value as material only, since the greater part of that cost represents labor; and that most of them are virtually obsolete and ineffective as compared with the battleships of recent construction and those which already enter into present naval programs.

The last reason is impressive. There are only two of the German battleships

and one battle cruiser which appear to have been completed during the war. The others are distributed over the years back to 1909. Ten years is a long time in the life of a battleship and at twenty she is a Methuselah so far as her effective power goes. We thought our "Oregon" pretty near the *ultima thule* of offensive strength in 1898—for did she not throw a weight of steel of 5660 pounds at a single broadside? The "Pennsylvania," flagship of the fleet just welcomed home, throws 17,508 pounds; and the ships which we expect to have within a year or two will throw 25,200 pounds, and nobody knows what else is under the horizon. And as for size and speed the "Oregon" and her sisters, the "Indiana" and the "Massachusetts," are each 348 feet long and can make sixteen knots per hour. But the British battle cruiser, the "Hood," now nearing completion, is 894 feet long and is expected to attain a speed of forty miles an hour. She is to have 15-inch guns. Our "Mississippi" and "New Mexico" have 14-inch, but the ships to come are to go the "Hood" one better with 16-inch. The projectile of a 14-inch gun weighs 1400, and of a 16-inch, 2100 pounds. It is getting a little difficult to produce warships which are not obsolete before they are launched.

All of this being so, it is not unnatural to ask why the present joint owners of the German vessels should bother themselves with questions of relative shares in property inherently of so little apparent value. What difference, so far as the result goes, whether they died gloriously in battle or now at the hands of executioners?

Nevertheless no one wants them executed—even apart from the alleged extravagance of the proceeding. It smacks of hanging prisoners of war, Austrian fashion. There they lie in the strange harbors just as able to fight wind and wave as ever they were. Of course it is the merest sentimentality, but every sailor will personify them as he always does a ship, and wish them some better end. And this leads to a suggestion:

When armor came into use upon war vessels the proving ground tests, which determined its resistance to penetration and im- [Continued on page 16]

FROM now on the road of the motorist will become more and more smooth, convenient and liberal. On the one hand an era of highway improvement is dawning in this country and the next few years will witness more far-reaching progress in this direction than has been the case in the past twenty or thirty years. On the other hand the recognition as a public utility rather than a luxury, which the emergency conditions of war have brought to the present automobile, will soon result in uniform regulation, the elimination of distracting taxation and the removal of the most often petty inconveniences which have so far been the path of the motorist and somewhat handicapped the progress of this valuable transportation agent.

The question of highway improvement is of first importance. It has been agitated ever since the birth of this nation; the emergency needs of the Civil War gave a new impetus which found fruition largely in the development of transcontinental railroads, and the advent of the bicycle redirected attention to the highways. With the development of motor travel came a new understanding of the need for good roads and a new and more intelligent effort to secure them. This organized work has been conducted by the American Automobile Association and allied interests, and reached its initial goal some two years ago when Congress enacted the first Federal Aid Law. This carried an appropriation of \$85,000,000 and provided for its distribution among the various states, each of which adds a sum equal to its allotment. At this writing another bill is before Congress increasing this appropriation to a half billion dollars. That more serious consideration is being given to this new bill than was the case with the former one appropriating one one-hundredth the amount, prior to its enactment, is a fair measure of the new light in which motor travel is now seen; a fair promise of much better conditions for the motorist in the near future.

There are today 2,500,000 miles of roads in the United States, according to figures supplied by President Arthur H. Blanchard, of the American Road Builders' Association, of which only 12 per cent are classed as improved. He estimates, however, that not more than  $\frac{1}{4}$  of 1 per cent of the total mileage is suitable for heavy motor traffic. This is a sad reflection on the boasted civilization of this country, especially in view of the great systems of highways which are to be found in Europe. Incidentally some two million American soldiers are returning home with a profound appreciation of the character and value of these highway systems and they will exert a far reaching influence on road improvement here.

Many prominent Government officials are alive to the need of better highways to enable a comprehensive development of motor travel and motor transportation, themselves invaluable economic factors. In a recent address Secretary of the Interior Franklin K. Lane said:

You can judge the civilization of a people of a continent or of any part of a nation by the character of its highways. If you will think over that proposition you will realize that what I have said is true; that those parts of this nation are most backward where people live most alone; where they develop those diseases of the mind which come from living alone; where they develop supreme content with what is done at Washington and with what is done in their own state legislature; where they are unhappy and discontented and movements that make against the welfare of our country arise, are those parts where there are poor highways and consequently a lack of communication between the people.

There is, perhaps, no better indications of the new understanding of the value of motor vehicles than that contained in the

following statement recently sent to my desk by Earl V. S. Howland, publisher of The Independent. In it he said:

We are interested in the promotion of motor travel and motor transportation for the same reasons that we are interested in other great national developments that contribute to the efficiency of American business and the greater comfort and welfare of the American family.

At a meeting just held in Chicago and attended by Chairmen of the War Service Committees of the Chamber of Commerce of the United States, a set of resolutions was unanimously adopted which are of special interest because of their source. They are as follows:

Whereas, the President of the United States in his recent message to Congress recognized the value of improved highways in the general transportation system of the nation and definitely recommended and urged their rapid development; and

Whereas, this work is necessary to give employment to our returning soldiers and also to furnish worthy projects on which unemployed labor can be engaged during the period of readjustment; and

Whereas, we recognize the necessity for a well defined and connected system of improved highways in order to expedite the distribution of large volumes of foodstuffs now wasted on account of the lack of prompt and adequate highway transportation and to better serve the economic and military needs of the nation;

Therefore be it resolved, that a Federal Highways Commission be created to promote and guide this powerful economic development of both highways and highway traffic and establish a National Highway System.

Be it further resolved, that the present appropriations for Federal aid to the states be continued and increased and the states urged to undertake extensive highway construction so as to keep pace with the development of this country and its transportation needs, and in carrying out the provisions of the present Federal Aid Act or any amendment thereto that the State Highway Departments shall operate with the Federal Highway Commission.

Be it further resolved, that all governmental activities with respect to highways be administered by the Federal Highway Commission.

In the matter of Federalized highway improvement there is without doubt no one more influential than United States Senator John H. Bankhead, chairman of the Committee on Post Offices and Post Roads, to which all highway legislation in the upper branch of Congress is referred. Just the other day in commenting on the bills now pending Senator Bankhead wrote as follows:

The war has shown what the national strength could accomplish in the swift construction of rapid-transit highways and the use thereon of rapid-transit vehicles. The nation trained its Engineer Corps and sent it to Europe equipt for the quick construction of roads. The part which we took in the decisive campaign was rendered possible by the use of passenger cars and motor trucks over rapid-transit highways.

Now that the war is over are not highways as vitally important for the conduct of peace as they were for the conduct of war? With half the world going to bed hungry and thousands doomed to starvation, is not the swift construction of the highways to the farm products as urgent a necessity as were the roads in the battle zone? And if the need is as urgent should the nation slacken its effort or permit its road building equipment to be sold or dissipated? Should it not rather increase its efforts in this direction and proceed with the construction of highways at home on a scale commensurate with the importance and urgency of the need? It is for Congress to answer these questions and measures are pending designed to meet the situation.

Among the measures referred to by Senator Bankhead is one which authorizes the War Department to transfer to the Department of Agriculture all available and dispensable war material suitable for distribution to the several states for use by their highway departments. Another referred to hereinbefore provides an increase to the Federal Aid appropriation of \$125,000,000 for expenditures to June, 1920, and \$100,000,000 a year thereafter for four years. It is also proposed to increase the appropriation for national forest roads, now \$1,000,000 a year, to a sum sufficient to permit the construction of 17,000 miles of forest roads in the next ten years. The estimated cost of this alone is \$50,000,000.

Haynes

"An era of highway improvement is dawning in this country and the progress in this direction than has been the case in the past twenty or thirty years. On the other hand the recognition as a public utility rather than a luxury, which the emergency conditions of war have brought to the present automobile, will soon result in uniform regulation, the elimination of distracting taxation and the removal of the most often petty inconveniences which have so far been the path of the motorist and somewhat handicapped the progress of this valuable transportation agent."

ion, presents this same appearance

There are also amendments to the present road act freeing it from undesirable limitations, one of which will enable the Federal Government to construct at its own cost links in important highways. There are several other interesting bills pertaining to the same subject, but our limited space will not permit their discussion herein.

The great tire manufacturing industry of the United States has given invaluable aid toward solving the vexatious problems which have confronted motor travel and motor transportation. This aid has been largely of a practical nature, and has included interesting statistics and information resulting from carefully conducted investigations made at considerable expense and effort. An example of this is found in the following statement sent us by E. H. Broadwell, vice-president of the Fisk Rubber Company. He says in part:

The need for Federal road building is more essential than Government controlled or owned railroads. There is no one thing that will so thoroly develop this country as the building and improving of national highways. Intercity motor haulage and rural motor express are possible only where highways are improved. The value of such roads was demonstrated in the recent war emergency and where they existed contributed materially to the high national efficiency attained. As our Government is so vitally interested in the development of the country, it must turn to improved highways as the best means to secure this development. The highways are just as important as the waterways because they add another link to the chain of transportation.

Another example is found in a letter just received from E. C. Tibbitts, of the B. F. Goodrich Rubber Company. He says in part:

I believe the entire American public today is in favor of a national system of highways and they are bound to come. The business world is in favor of a Federal Highways Commission and the construction of national highways which will have regard to connecting up the present state highways systems. Our records show that in practically every state in the country the one neglected feature is that interstate highways have not been completed. As a concrete example of this three wealthy states like New York, Pennsylvania and Ohio have not yet completed the trunk route between Buffalo and Cleveland, which is the main artery of transportation between all the northern Mississippi valley and the eastern states. Another example is the Lincoln Highway connections between Ohio and Pennsylvania and between Ohio and Indiana, and there are many others.

Our highways today are considered on an entirely different plane than was the case a few years ago. They are regarded as business traffic lines not only for the motor truck but for the passenger automobile also. The utilitarian value of the latter was demonstrated when the use of gasoline was restricted on Sundays. This seriously affected highway travel and eventually it was the business of the country that caused the lifting of the ban on gasoline. Reports of the Highways Transport Committee and of the War Industries Board show that without the passenger car during the war emergency, industry, commerce, agriculture and even labor would have been seriously handicapped.

In considering the question of the regulation and taxation of motor vehicles especially in their use of the highways, interest centers in the action soon to be taken by Congress. It will be remembered that a year ago last fall Congress in planning to raise the tremendous sums of money needed for carrying on the war placed special taxation on all types of motor vehicles. At this writing the question is again before Congress and is being considered by the conference committee of both Houses. There is a likelihood that the tax will be reduced at least in the case of motor trucks and tractors. The significant feature, however, is the fact that the motor vehicle is being considered by our national lawmakers in quite a different light than was the case some fifteen months ago, and this promises well for the future.

The desideratum in the matter of regulation and taxation embodies uniform regulation thruout the United States including a uniform license arrangement and the

elimination of discriminating taxation. Motor vehicle interests recognized clearly that certain regulations are both desirable and necessary and that there must be some taxation. Arrangements whereby moneys collected thru such taxation are largely applied to highway improvement are strongly endorsed. The attitude of motor vehicle interests in this matter is well expressed by E. H. Broadwell, as follows:

There should be some form of equitable taxation which would permit of interstate privileges, and a certain percentage of the state tax for trucks should go to the Federal Government, as a contribution toward the maintenance of main highways. I have no doubt but that any company operating motor cars for profit, and profit in this instance would cover many things such as prompt delivery, personal control of delivery, etc., would be willing to pay a slight additional tax over the present state tax if they felt it was used for this purpose. I do not believe that there should be any limited franchise for passenger or freight motor vehicles except for the former within city limits where they confine themselves to a given route and operate sufficient equipment to be considered as surface cars without tracks.

Another question which is of vital concern in considering the growth of motor travel and transportation is that of the available supplies of fuel. Here again is a case where real benefits have resulted from the war. Gasoline is a byproduct in the manufacture of fuel oil and the latter has found greatly increased use in the past few years. This is particularly so with steamships, both naval and commercial, in which fuel oil is displacing coal under the boilers and in smaller craft is used directly in internal combustion engines. The demand for this fuel oil has grown tremendously and it now commands considerably higher prices. This condition has resulted in the drilling of hundreds of new wells which had not previously been opened because they could not be worked at a profit. Production of gasoline has thereby been stimulated and as the main product becomes more valuable the byproduct, gasoline, does not have to command such high prices in order to make the wells profitable. In other words there is a possibility, if not a likelihood, that for some years to come gasoline will not only be available in ample quantity but that its price will be lower than the prevailing level.

It is a well known fact that the engines of motor vehicles can be successfully operated on fuels other than gasoline including the so-called substitute fuels. It is therefore evident that any scarcity of gasoline or any prohibitive price will not materially handicap the development of motor travel and motor transportation. In this connection it is interesting to note that the "Liberty Fuel" devised for motor vehicle use and widely acclaimed some months ago by the Federal Fuel Administration is not even as successful as some other Government wartime developments which have also borne the name "Liberty." A recent report on the new fuel made by the Federal Fuel Administration shows that it contains 65 per cent of benzol, 25 to 30 per cent of kerosene and the remainder of a small percentage of amyl acetate, naphthalene, and alcohol. If the entire present production of benzol could be used for making the "Liberty Fuel" the total production of the latter would be on 2 per cent of the present production of gasoline. It also has a far greater tendency to carbonize than has gasoline.

Some interesting statistics pertaining to the manufacture and use of motor vehicles were recently compiled by State Controller Eugene M. Travis. These show that 5,500,000 motor vehicles of all types were registered in the United States during the year 1918. There are 230 manufacturers of passenger cars and 372 makers of motor trucks distributed among 32 states, with a total capitali {Continued on page 169}

A MONTHLY SECTION DEVOTED TO SENSIBLE AND EFFICIENT COUNTRYSIDE LIVING : BETTER HOUSES : BETTER ROOMS : BETTER GARDENS : BETTER ROADS AND BETTER TOWNS FOR THOSE WHOSE INTERESTS LIE BETWEEN THE CITY AND THE FARM

## PLANS FOR THE VICTORY GARDEN

BY F. F. ROCKWELL

AUTHOR OF "HOME VEGETABLE GARDENING" AND "GARDENING INDOORS AND UNDER GLASS"

THE Victory Garden this year is every bit as important as the War Garden was last year. There are just as many reasons for all home owners to make every possible effort to plant—food prices are as high; our Allies are as much in need of food supplies to combat the common enemy starvation as they were in need of food to help fight Germany last year; and fresh corn and brittle peas will be as much superior to the wilted products of the market as they ever were!

For those who are not fortunate enough to possess gardens of their own, the first step should be to make sure, early, of getting a garden plot. In a great many places last year all the garden plots available were used up long before the end of the planting season; in some cases before the beginning of it. Where the space available is not absolutely limited in extent it will be well to get as large a space as possible within reasonable bounds—say, up to a quarter or even a half acre. The initial work of getting the ground plowed and harrowed will cost little more on a space this size than on a smaller garden, and the extra returns which may be had from it will much more than make up for such additional expenses for fertilizers, etc., as may be required.

The next step toward having a really profitable garden is to *plant* it carefully. Most people are apt to make their gardens wrong end first by ordering the materials they think they will want, and then trying to make up a garden to fit what they have bought. The only sensible and efficient way is to decide on just what kind of a garden you want and what is to go into it *first*, and, afterward, to order such seeds, plants and roots as may be needed to make it.

The first thing of all to consider in planting your garden is the amount of time which will be available in which to take care of it. The time limit is really more important than the size of the garden, because the amount of time required properly to take care of any garden depends much more on what is being grown in it than upon its size. A few hundred feet of rows of onions, for instance, would take as much actual time and hard work as a quarter acre of sweet corn and squashes. One person, with some experience in gardening, should be able to take care of a plot as large as that represented by the plan on the next page, during the amount of spare time ordinarily available for such work. The point should be emphasized, however, that a half hour or an hour a day *regularly* will amount to as much as twice that amount of time used spasmodically at irregular intervals in keeping the garden clean and in good growing condition.

Altho, for obvious reasons, it is not possible to standardize gardens, nevertheless there are some general principles upon which a plan for a garden of any size should be based: the time of planting, the general arrangement of the different crops for most effective results, the approximate relative proportion of the different vegetables, etc., will be the same for most gardens, no matter how much they may be varied in detail to suit the individual gardener.

The vegetables to be planted should not be put in as they happen to come, as is usually done. They should be grouped together so that those which are similar in their cultural requirements will be next to each other; and so that the different things to be planted at approximately the same

time will be adjacent. The time of maturity should also be considered, so that those things which will be used at about the same time, leaving the ground available for a second planting on the same soil, will be grouped together on this basis. The arrangement of the vegetables ordinarily planted will be about as follows:

### April 1st to 15th

Cabbage	Plants	Peas (smooth)
Cauliflower		Lettuce (spring)
Lettuce		Kohlrabi
Beets		Turnips (early)
Radish		Beets
Spinach		Carrots

### May 1st to 15th

Lettuce (summer)	Beans (pole)
Beets	Tomato
Carrots	Peppers
Turnips	Egg-plant
Beans (bush)	Melons
Corn (early)	Cucumber
Corn (late)	Squash

### June 15th to July 15th

Lettuce (summer)	Second planting for fall and winter
Beets	
Carrots	
Rutabaga	
Beans (bush)	
Corn (early)	
Corn (late)	
Cabbage	
Celery	
Turnips	

### August 1st to 15th

Salsify	Onion sets
Parsnips	Swiss Chard and Barley
Onions	

This arrangement will serve as a basis for any garden plan which the individual gardener may want to make up to suit his own requirements. Further suggestions may be had by a careful study of the garden plan on the next page. In this case the tomatoes and pole beans have been put

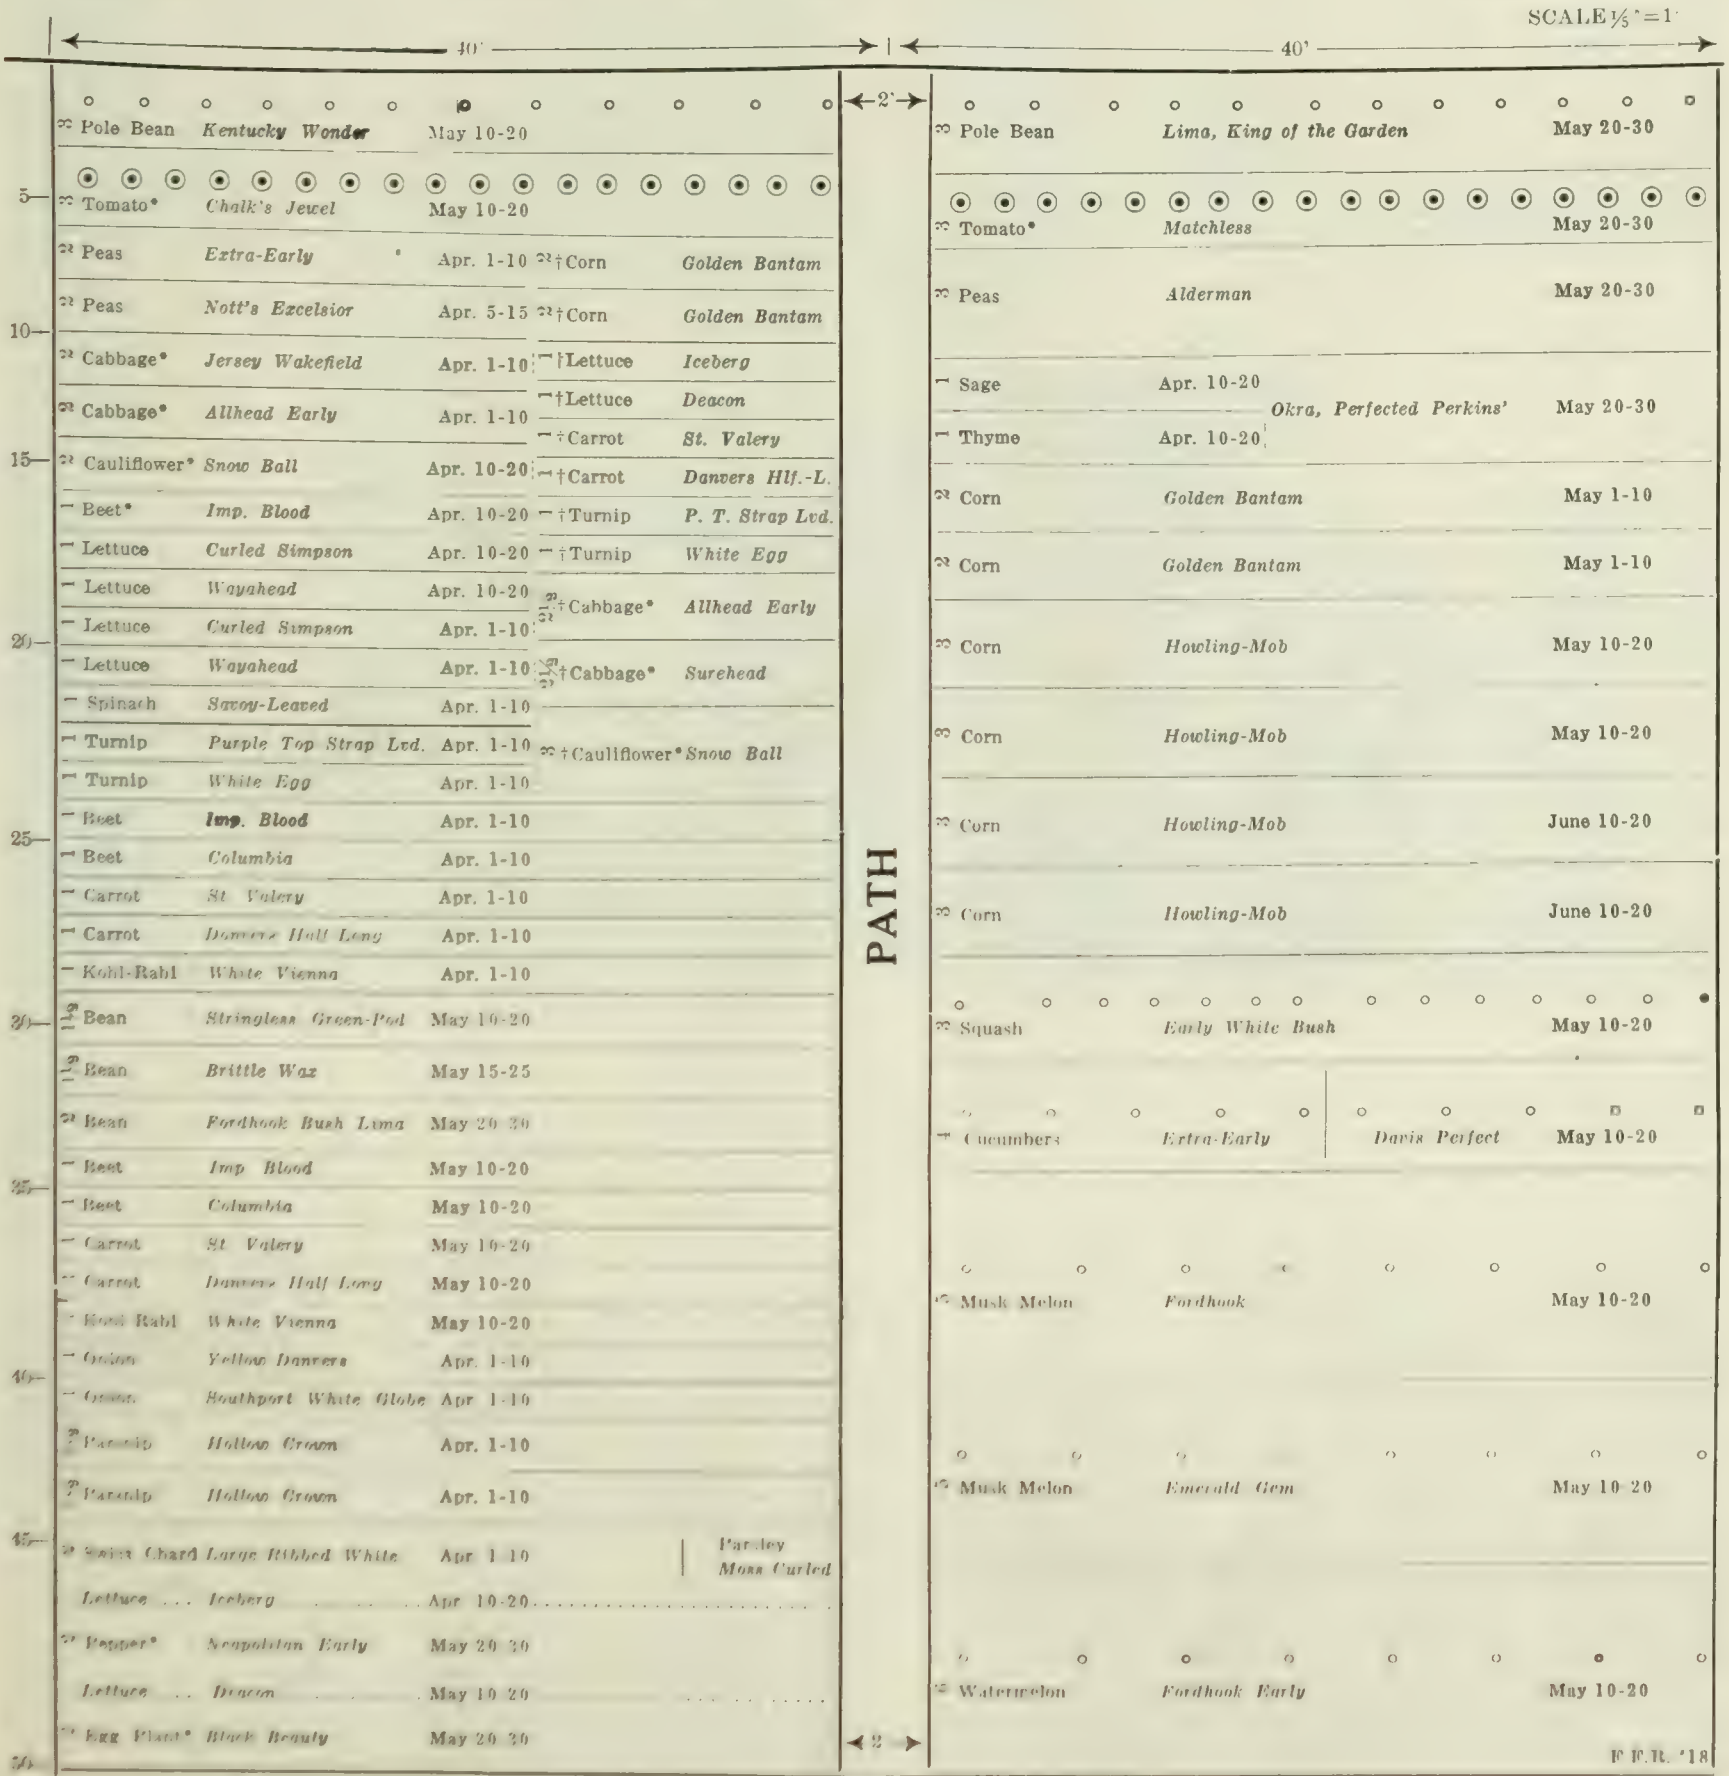

at the end and along the side of the garden plot instead of being left in the position indicated in the grouping of vegetables first suggested. This change has been made to economize space, as beans and tomatoes can be grown against a fence or on poles, at the very edge of the garden, where they will be most sheltered from cold winds and will not shade other things. The garden represented is large enough to supply a family of several persons with fresh vegetables from May until freezing winter, if planted on good soil. In making a garden of this style either larger or smaller, a different plan should be made, as satisfactory results will not be obtained by merely reducing or increasing everything in it in proportion. The vegetables which should be omitted or reduced in quantity for a small-

er garden, are: onions, peas, melons, winter squash, lettuce, peppers, egg-plants and celery. Those to increase or to add for a larger garden are: beans, corn, celery, cabbage, squash, beets, carrots, turnips, and rutabagas for winter use. For a comparatively large garden, where time is limited, the plantings of beans, cabbage, corn, squash, melons, cucumbers, tomatoes, and turnips, or rutabagas, for winter use, may be increased to advantage, while such things as onions, carrots, beets, peas, lettuce, etc., which require a good deal more handwork and time, may be reduced in proportion.

Keep in mind that it is not enough merely to think these things over and decide upon them in a general way. An actual plan should be drawn up, representing the

size and shape of the garden, and showing exactly where each thing is to be planted, and how much space it will occupy. The making of such a plan may take several hours, but it will be time most profitably spent. In the first place the making of such a plan will in itself be a short education in gardening; in the second, it is a very easy matter to make changes as you discover them, on paper, where they would be irrevocably made in actual planting in the soil. And having a plan of this kind to go by, when planting time does come, you save several times as much work as is involved in making it.

With the garden plan made up you will be in a position to order, intelligently, the seeds, fertilizers, etc., which will be required for making [Continued on page 166

# DECORATING WITH NEEDLEWORK

BY CONSTANCE ARMFIELD

PERHAPS the artist seldom has a more direct and effective means of expression than the needlework. To the creative woman all that every object in a room presents a possible surface for her craft, and the modern worker, brimful of ideas and with some art training, should surely not lag behind her culture sister in fancy, nicety of planning or dexterity of workmanship. Instead of painting pictures that stack the walls of studios or attic, it were indeed well if the artworker should view the monotonous extent of upholstered furniture, screens, pillows, hangings, and begin to rescue homes from the stereotyped trail of the herd, and once more dignify and beautify the intimate interiors where we spend most of our time, with truly individual touches. For, after all, one attains but a slight measure of individuality thru the arrangement of fabrics and wallpapers. In embroidery, of all crafts, the ideas of the craftsman are most clearly and individually seen.

Furniture affords a convenient place for the embroiderer's art. To begin with, the backs of chairs or couches are usually ready-framed, offer their needlework pictures engagingly to view, and retire modestly into obscurity at the touch of a hand. They are always being changed around, so that the needlework is placed in different lights and fresh charms present themselves according to the subtleties of stitch and texture thus revealed. For unlike oil canvases and water colors which have a trick of "going dead," embroidery has nothing to lose and everything to gain by every variation of the play of light. A slanting shadow may turn a piece of work from delicacy to rugged magnificence, according as the design is seen with all its pristine severity of outline in a flat light, or, illumined sidewise, presents sudden depths and heights and varied planes. Silk or wool may lie flat, and yet certain lights will show every microscopic rise and fall in their relative surfaces.

Subjects suitable for furniture are legion. Repetition should be avoided, even tho old-fashioned workers were content to embark on six or even twelve complicated replicas in the way of chair-backs. A sense of unity can be preserved by setting one's palette for the set of chairs, and adhering punctiliously to that scheme of color, however varied the individual motif of each chair may be. A certain unity in subject and

Mrs. Armfield, who is a well known and successful interior decorator in New York, gives in the following article many practical suggestions for the use of embroidery where in most homes it is overlooked as a means of ornamentation. Those who realize its decorative qualities do not confine needlework exclusively to centerpieces and pillows

A corner of a room in which embroidery is used unsparingly but judiciously. The designs and colors on curtain, pillows and chair have been selected with a definite purpose

treatment is advisable, and further uniformity may be obtained by embroidering the designs on the same fabric. Yet, of course, one embroidered chair is enough to give piquancy to a room, and if I descant on the possibilities of sets, ambitiously, it is because visions of those Queen Anne and Georgian and Carolean "closets" rise up, and the needless tedium their repetitions involved.

The chair shown is of dull mahogany, and the back worked in cottons on hand-woven Italian linen of deep biscuit, almost pale mahogany hue. Greens, browns and grays are used, the fig pattern glowing into a golden lizard and deepening into purple figs. The central upright boughs are tinged with the mahogany browns, some almost Indian red.

A strip of black runs top and bottom of the embroidery, onto which the linen is buttonholed in mahogany cottons, and the seat of the chair is bright, deep emerald rep.

It stands in a room with golden-biscuit walls, or golden-gray, a cool yet glowing neutral hue that tones with the parquet flooring, hung largely with biscuit-colored fabric slightly patterned in green. All the furniture is mahogany, some of the chairs being partly of white wood and cushioned with deep purplish-rose on which

not to hide the green trees and magnolias. An open net has therefore been embroidered with a young leaf pattern, pendulous stalks with a few stitches blocking in the hanging half-fronted leaves: the design is elemental for while the border of the curtain needs strengthening, the last thing wanted is to distract attention from the view. Therefore the pattern is worked in thick golden-brown wool toning with the deep cream net and floor, and looks like airy hieroglyphics if one notices it at all. But the white window seat itself, while inviting flowers and plants to flourish in the light and air, gives opportunity for gay yet simple embroideries in the form of pillows. I say simple, because they are put in such close juxtaposition with growing plant forms, in and out, that any attempt at realistic imitation would be inharmonious. Therefore the simplest shorthand has been adopted, and a black hill set with checkers of emerald green trees, above bright blue and white checked rapids, on a gray ground with a purple cloud in either corner forms a not too striking design for one. On another the young leaf design is further carried out on a deep blue ground, with points of white couching the lemon-yellow stems and emerald leaves unfurling. The pillows on the windowseat are deliberately kept [Continued on page 170]

a simple leaf applique pattern is embroidered, golden as the flooring. But while embroidery is used here to pull the color scheme together, for the most part the embroidered furniture is graced by definite ideas.

A mahogany screen is a miracle of simplicity and utility in these dusty times. Wooden bars run top and bottom fitting into the frame, easily removable, on which the linen screens are stretched. This means quick and easy cleaning. Nor is a screen a ponderous thing to work, if panelled, with linen appliquéd onto the main fabric after the designs are executed.

But screens have backs and altho the fabric could very well be doubled and carried down the other side, some, instead, are decorated on the reverse side by smaller panels, and the buttonholing of the front panels that show thru is worked over and turned into a border for the insets.

A feature of the room in the illustration is a window running the whole width with a low window seat. It opens onto a park and the curtains must be transparent enough

# AN OLD HOUSE MADE NEW

THE CLAPBOARDED EXTERIOR CLEARED OF SCROLL WORK AND COVERED WITH STUCCO

*There is a shining example to discouraged owners of those ugly, well-constructed houses which we built so plentifully thirty or forty years ago in this actual transformation of a Queen Anne monstrosity into an unusually attractive modern home. The most noticeable change was effected by covering the dingy clapboards with a coat of natural gray stucco, relieved by dark green shutters*

QUEEN ANNE GABLES AND EXCRESCENCES COVERED BY A NEW ROOF OF STRAIGHT LINES

*"The ugly, broken lines of the roof were the chief problem," said Mr. Douglass Fitch, the architect who remodeled this house. "Finally I saw that the thing to do was to build an entire new roof over the old one, thus bringing the whole house into harmonious proportion." The new roof is a plain shingled Colonial type, broken by dormer windows. Built at the level of the highest point of the old roof, it gave space for three more rooms and a bath on the third story, making the total for the whole house fifteen rooms and three baths*

PORTICO, SUN PARLOR AND PORCHES CLEARED AWAY OR SIMPLIFIED

*With the roof and outer walls of the house remodeled there was practically nothing left to do in making this forty year old house "as good as new." The living porch and the veranda at the front were rebuilt to conform to the new architecture. By carrying the stucco around the base they were made to appear integral parts of the house. The chimney tops were relaid and covered with stucco*

# INTRODUCING THE CLINGING VINE

In Maytime, when wisterias hang their gentle drooping blossoms in profusion over favored porches, nearly everybody decides to plant a wisteria, for, flowering early and making a magnificent showing, these clusters of delicate purple excite a responsive feeling and a desire to have a similar content close at hand. Choose the Japanese (*W. floribunda*) as it is one of the best of the hardy kinds. Provide deep rich earth. Be prepared for slow development. Get instructions about training and pruning

Roses that climb the side of the house, nod at chamber windows, clamber along the shingles, caress the chimney, and shed fragrance, brightness and joy freely for all who pass, are surely desirable. They possess an exuberant friendliness to which no one can be wholly indifferent. Choose your colors. The true Rambler Rose is Japanese and has single white flowers. The crimson or pink Rambler came from China. Why not have both? The effect is good for the white blossoms accentuate the color

Another vine of a homely, that is to say a homelike, disposition, is the clematis in its many various species. A very charming variety is montana var. rubens, which has rose colored flowers about three inches across on an attractive vine, but the general favorite and the one most widely used probably is clematis paniculata, which has cheerful green foliage and pure white deliciously scented flowers blooming most profusely in August and September, followed by silvery pods. Succeeds almost anywhere

It is to importations from Japan, from China and beyond that we are indebted for the beginnings of a great number of our flowers of lovely form, striking color and pleasing fragrance. Not all plants, however, are chosen for beauty only. The luffa vines (sometimes called dish-cloth gourds and vegetable stones) are frail annual tendrill-climbing herbs, which carry a curious and interesting fruit amid the close leaves that make an acceptable shade for a back entrance or not-too-prominent window

For the dignified house of stone, whether old or new, the genuine ivy or the more hardy ampelopsis veitchii, have an appropriate personal manner of their own, growing methodically and surely with an evident ambition to cover the structure in good time; and this they generally do if enough vines are planted, and if when set out they are cut down to a height of about six inches so that all growth will at once begin to cling with the disc-like flattened tendrils that insure the vine permanence

But why stop with one vine? They are companionable growers, and associate agreeably. For quick growth where shade or awning-like protection is wanted, plant the kudzu (*pueraria*), whose large leaves and healthy stems make a fine tangle. For fragrance, to bring the bees and the humming birds, plant honeysuckle. Good form and color are found in the trumpet creeper, Dutchman's pipe, cinnamon vine and the climbing hydrangea, whose large white trusses make a grand display in summer

# RESTOCKING THE POULTRY YARD

BY E. I. FARRINGTON

**A**MERICAN poultry keepers are trying to restore the poultry business in this country and in France to its normal basis. Flocks in many sections have become so depleted that more chickens must be hatched this season than ever before. The poultry shortage has been reflected in the unprecedented high prices during the past winter, and by the almost exhausted reserve in the cold storage warehouses. For several weeks only a comparatively small stock of eggs prevented a genuine egg famine. The Government recognizes the gravity of the situation, and is urging poultry keepers everywhere to enlarge their flocks, while its experts in Washington are doing everything they can to help the novice. Poultry clubs are being formed among the school children all over the country for this plan proved practical last year. Altho grain prices have not dropt to the extent expected, there seems to be a more confident feeling among poultry keepers of all classes.

One promising feature of the business is the disposition of poultry raisers to set a higher standard as to the birds and the quality of the eggs they produce, as well as the elimination of wasteful practises. Flocks are being culled more closely than ever, the so-called boarders or non-producing hens being sent to the block. Dealers say that fewer aged eggs are coming to them, which indicates that farmers are exercising much greater care.

One of the most important factors in rehabilitating the poultry industry this spring will be early hatching, for it is the early hatched chicken which makes the early fall layer, and with plenty of pullets laying early next fall, there should be less scarcity than in the past season. This does not mean hatching too early, tho, for chickens got out in January or February are likely to molt the same season. They may lay a few eggs first, but will quickly stop. March and April are the best months for hatching such breeds as the Plymouth Rocks, Rhode Island Reds and Wyandottes. Satisfactory results will be obtained if the smaller breeds, like the Leghorns and Anconas, are hatched in April and May.

Early hatching necessarily involves the use of incubators. There are seldom many broody hens until the weather begins to get warm. It isn't necessary to own an incubator, because the growth of the custom hatching industry has made it possible for amateurs to have their eggs hatched for them at small expense. Beginners often prefer to buy day-old chicks from hatching establishments, an easy method, altho one is seldom sure as to the quality of the stock one gets. All too often the big hatching plants simply buy up all the eggs they can

*Day old chicks are often bought by beginners from hatching establishments*

get from nearby farmers, without much question as to the character of the stock which produced them.

After all, the one way to carry on a poultry business, even with a back yard plant, so as to get the best results, is to hatch one's own chickens, and constantly strive to improve one's flock. Many factors enter into the hatching and rearing of chickens successfully. It is necessary to begin with the breeding pens, as a matter of fact. Experts have learned that it is most important to have a male bird coming from a strain of heavy laying hens. It is best to mate one male to ten or a dozen hens, when Rocks, Wyandottes or Rhode Island Reds are being kept. One male to twelve or fifteen is enough among the smaller breeds. It is desirable, altho not necessary, to have two male birds to each pen, alternating them every few days. This plan usually results in greater fertility. People often ask how long a time must elapse before eggs are fertile after breeding pens are made up. In some experiments made at the Maryland Experiment Station, fertile eggs were obtained within fifty-two hours, while most of the eggs were fertile on the fourth day. Usually, tho, it is best to wait five or six days with Leghorns and eight or ten days with the larger breeds.

It does not always follow that a good hatch will be obtained from successful mating. Unless attention is given to the care of the eggs, they may not hatch well, even tho they are fertile. Only normal eggs should be used anyway. Those that are thin shelled, that have a rough surface, and that are very large or small, should be set aside. Amateurs often hold their eggs too long before setting them. Ten days should be the outside limit. While the eggs are being kept they should be stored in a dry place where the temperature is not below 40 or above 70 degrees, and it is best to turn them daily. If the amateur cannot get enough eggs from his own flock to fill his incubator without waiting two or three weeks, he would be wise to buy a few settings. Even when using hens, much time is saved if two or three of them are set at the same time.

You can't expect to get a good hatch with an incubator unless the machine is given a proper location. The house cellar is usually the most convenient place, and the most satisfactory, too, because an even tempera-

ture is easily maintained. Incubators are supposed to be self-regulating, but this is true only to a limited extent. The direct rays of the sun should not fall upon them, and they should not be close to an open window. At the same time, there must be plenty of ventilation in the cellar. This is an important fact which has often been overlooked with disastrous results. An easy way to ventilate the cellar is to hinge a window so that it will open inward from the bottom. Then a thin muslin curtain may be tacked over the window frame to eliminate air currents.

Pethaps one reason why women are especially successful in the operation of incubators is because they give more painstaking care to the burners than the average man. No incubator will hatch chickens successfully unless the wick is kept clean, and the lamp filled. This is a task which must be made a part of the daily routine. Perhaps the best time to care for the lamp is in the morning, as then there will be less danger from the lamp running up.

It is always best to run the machine for two or three days before the eggs are put into it, even if it is an incubator which has been used before. This precaution may save the loss of a great many eggs.

From the third to the eighteenth day the eggs must be turned, to use the generally accepted term. This practise does not necessarily mean reversing the position of the eggs, as some people seem to think. It is only necessary to move them around with the hands, so that their position will be altered and the contents prevented from adhering to the shell. Cooling will take place at the same time, as a matter of necessity. It is the common theory that the eggs should be cooled for from five to fifteen minutes, but careful experiments seem to show that this is not necessary, just as good hatches are obtained when no cooling is practised except that incidental to the turning of the eggs.

It is best to keep the temperature at exactly 103 degrees all thru the hatching period, and the machine must be watched carefully near the end of the third week, as the temperature is likely to rise then because of the extra heat generated by the chickens. Some latitude can be allowed then, for no harm will be done if the temperature goes up to 104 or half a degree higher. It is best not to try readjusting the regulation of the machine up to this point.

Twice during the hatch eggs should be tested with a lamp or electric light. Testing devices come with most incubators and are easily used. Sometimes a strong electric light bulb is simply held under the tray of eggs. Of course all unfertile eggs should be removed. If [Continued on page 164]

*One popular type of electric incubator*

# What to Do In February

A GARDEN GUIDE BY HUGH FINDLAY

## NORTH

### The Flower Garden

**Planting Plans** Before planting Akebia, Virginia Creeper, Boston Ivy and other vines so that they may cover a fence, pergola, old stump or wall plan to dig a large hole 3 feet square and 3 feet deep and fill this with a rich loam.

Study carefully the color scheme, season of bloom, height of plant, adaptability of plants to climate and soil and the moisture supply before making your garden plans for next year.

Now is the time to order material for a water garden. Such sub-aquatic plants are suited to the water edge, March Marigold, Japanese Iris, Arrow Arum, Reed Mace, etc. Order your water lilies early.

### Fruit and Berries

**Spring Planting** Order your trees and berries this month. It is always safe to buy from a point north rather than south of you. State in order when you wish plants delivered. Notify station agent to let you know when plants arrive. A day in the hot car may mean a large per cent of loss. If the holes are not ready in which to plant, when your trees arrive, heel them in. Never allow the roots to become dry. Order one to two year old apple trees and build the head you desire. Low head is considered the best.

**Spray Material** Get in a supply of Paris green, arsenate of lead, hellebore or slug shot, to keep in check the chewing insects such as tent caterpillars and potato beetles. Concentrated lime sulfur is the best check for San Jose, oyster shell scale and scurvy bark louse. Spray on calm days, when the trees are dormant, with a solution of one part lime sulfur to eight parts of water. Bordeaux or Pyrox may be used to spray peach trees later in the season.

**Disease** Destroy all wild cherry and plum trees along the road or in the fence rows. These trees only harbor disease and insects. Cut out all black-knot from plum or cherry trees; burn. Gather and burn all "mummy" plums. Branches affected with fire blight or New York apple tree canker should be cut out and burned. Disinfect the saw or knife after removing each affected limb.

**Pruning Hints** Have a saw with teeth only on one edge. Have teeth sharp, clean and well set. Prune out dead limbs. Don't leave stumps. Cut out all water-sprouts and suckers. Don't over-prune. Don't pile apple wood near orchard; this is only a harbor for insects. Don't fail to burn all prunings.

### The Vegetable Garden

**Hotbeds** Place in the bottom of the hot-bed about four inches of ashes. Pack in eighteen to twenty-four inches of fresh, heating, horse manure. If the manure does not heat quickly, wet it down with hot water and cover the frame with the sash. Place over the surface four to six inches of clean garden loam. Place a standard thermometer in the manure in the center of the hotbed. Do not plant seed until the thermometer drops to 80° F. Use mats and straw to cover the hotbed during cold nights. Plant the seed of Early Jersey Wakefield cabbage, White Plume or Golden Self-branching celery, Early Snowball cauliflower, Detroit Dark Red beets and Loose Leaf Grand Rapids lettuce. These plants may be transplanted to the cold frames later. Keep the air fresh and close the sash early in the afternoon.

**Onions** The last of the month, sow the seed of Danvers Yellow Globe and Southport White Globe, or Prize-taker onions in flats. Onion seedlings should never be transplanted twice. Sow the seed sparingly so that the plants may not be crowded and easily transplanted from the seed flat to the open garden.

**Seedage** Buy seed from a reliable firm. Keep them away from rats or mice. Do not keep seed in a moist room. Test the seed before planting in the hotbed or garden. Select a few stand and varieties. Plan to keep a notebook of all garden activities throughout the year. Do not start the tender plants such as tomatoes and peppers until March or April. Never mix manure with soil in which seed is to be sown. It is good practise to scatter a little well-decayed manure about the bottom of the flat before filling it with garden loam. Shape all flats until the seed germinates. Water and ventilate with great

care. Seedlings should never suffer from drought. Too much moisture causes damping off.

### The Greenhouse

**Seedage** Celery seed sown now may be transplanted into the garden in the latter part of May and harvested in July.

Start early tomatoes, peppers, eggplant and cucumbers this month.

Perennials such as larkspur and hollyhocks if started this month will bloom by fall.

Sow the seed of ageratum, lobelia, petunia, heliotrope, pansies, verbenia, salvia, primula, begonia and asters, if planted the first of the month, will give an early bloom.

Seed of cyclamens and gloxinia, if planted now, will give a strong bloom by the following spring.

Sow the seed of cuphea llavae the last of the month to be used for spring planting in vases and hanging baskets.

Start roots of cannas, caladiums and dahlias in a rich soil and place them under the benches in a cool greenhouse.

**Bulbs** Easter lily bulbs should be brought forward and gradually forced so as to have a bloom by April.

**Cuttings** Pot all cuttings of chrysanthemums, carnations, coleus and geraniums as soon as they form roots in the propagating bed, then reset a new lot of cuttings. Pinch back all calceus so as to form a branching, stocky plant.

**Roses** Spray the bench and put roses with clear water on bright days.

Do not overwater. Have foliage, walks and bench sides dry before dark. Top dress the surface soil with decayed cow manure and little bone meal.

**Carnations** Keep the dead leaves and the foliage affected with carnation rust cleaned off. Apply a little lime to the surface soil and work this into the first inch. Disbud all single stem flowers. Spray on bright days to keep the red spider in check. Harvest the bloom early in the morning.

## SOUTH

**Upper South** Virginia, North Carolina, North Georgia, North Alabama, Tennessee.

**Middle South** Lower South Carolina, South Georgia, Middle and South Alabama, Mississippi.

**Far South** Southern Louisiana and Florida.

### UPPER SOUTH

**Vegetables** Fill the hotbeds with 18 inches of fresh horse manure, packed tightly, and place from 2 to 4 inches of clean garden loam on this. Place a thermometer so that the base of it is in the manure. The temperature will go up in a few hours, but after it drops to 80° F. sow the seed of cabbage, cauliflower, beets, lettuce, onions, eggplants, peppers, radish and tomatoes. After decreasing the moisture and increasing the ventilation so that the plants are hardened, transplant to the open the last of the month, cabbage and cauliflower plants; also onion seedlings and lettuce plants. Where the soil is well prepared and is not too full of moisture sow in the open the seed of beets, carrots, kale, parsley, radish and celery. Set out onions and plant rhubarb and horse radish roots.

### MIDDLE SOUTH

**Vegetables** One of the best varieties of early potatoes to plant now is the Irish Cobbler. Sow the

## FERTILIZER

**Barnyard Manure (fresh).** A fine manure to apply to a stiff soil if turned under in the fall. Also to mix into a compost heap. Nitrogen, 45 per cent; potash, 52 per cent; phosphoric acid, 21 per cent; lime, 57 per cent.

**Barnyard Manure (decayed).** Good for any garden crop or top dressing. A leaf builder for such crops as lettuce. Nitrogen, 58 per cent; potash, 5 per cent; phosphoric acid, 3 per cent; lime, 88 per cent.

**Hen Manure.** Apply very sparingly. Especially good for onions. Nitrogen, 1.63 per cent; potash, .85 per cent; phosphoric acid, 1.54 per cent; lime, .24 per cent.

**Unleached Wood Ashes.** One source of potash. Apply freely for general crops. Not for potatoes. Potassium oxide, 8.72 per cent; phosphoric acid, .32 per cent; calcium oxide, 28.61 per cent. Stem builder.

**Ground Bone (fine).** This fertilizer is available slowly and gives best returns if mixt with stable manure. Good for shrub borders, perennial beds, fruit trees, grape vines and all garden crops. Nitrogen, 4 per cent; total phosphoric acid, 19.49 per cent; most of this is insoluble.

**Dried Blood.** Especially fine for poinsetta plants. The foliage takes on a dark green color and the bloom lasts a long time if fed dried blood. Good for hastening all leaf crops. Nitrogen, 8.24 per cent.

**Sulfate of Ammonia.** With 20 per cent of nitrogen available it is applied sparingly to leaf crops.

**Nitrate of Soda.** Two pounds is sufficient for one square rod of soil and should be applied just before a rain. If applied in solution, 1½ pounds to 14 gallons of water. Nitrogen, 15 per cent.

**Acid Phosphate.** Available, 16 per cent. Fifty pounds to one-quarter acre. Sources of this fertilizer are ground rock acid phosphate, 5 pounds to one square rod. Dissolved bone, 2 pounds to one square rod. Basic slag, 5 pounds to one square rod. The dissolved bone meal is considered the best. Fruit builder.

**Kainit.** Potassium oxide, 14.04 per cent. Three and one-half pounds is sufficient for one square rod. Stem builder.

Both sulfate and muriate of potash are difficult to secure.

## Beautiful 365 days in the Year—

### Evergreen Bittersweet

With gorgeous red berries against foliage that is green all year round, this vine beautifies the home with a thick shade in the summer, and with glowing fruit and bright leaves when other vines are bare.

Evergreen Bittersweet (*Euonymus laevis*) climbs to a noble height in the severest climates, where English ivy can be used only as a ground cover. Two year old vines fruit freely. Planted in rows and sheared, it makes an incomparable evergreen hedge, solid and erect.

**Strong Pot Plants,**

Etc.**

It contains a great variety of the most dependable and popular favorites in hardy plants, Roses, Peonies, Delphiniums, Evergreens, Rhododendrons. Also seeds of superlative quality. Write today.

**Elliott Nursery  
Company**  
360 FOURTH AVE.  
PITTSBURGH, PA.

smooth varieties of English peas. Sow in the open in a rich deep soil the seeds of carrots, beets, mustard, radish, turnips and beets. Plant out cabbage plants and onion seedlings. Start a few pots or boxes of cucumbers and melons in the hotbeds.

### FAR SOUTH

**Vegetables** Begin to harden the tomatoes, eggplants and peppers. Plant out but protect melons and squash. Plant all of the seed of the hardy vegetables. The last of the month early corn and bush lima and string beans may be planted. Transplant to the open all hardy plants such as cabbage and cauliflower. Plant all varieties of peas and asparagus seed.

### GENERAL INFORMATION

This is a good month to pull stumps. Co-operate with your neighbors and buy the best type of stump puller.

Make plans to select cotton varieties that are resistant to the wilt. Ask for information from your state experiment station.

This is a good month to plant out fruit trees that are still dormant.

Remove all borers by following the burrow and cutting out the wood. A long wire may be used by inserting it in the burrow, and if the tip is wet on drawing the wire out, it is evident that the insect has been punctured.

Scraping the old bark from the apple trees exposes the scale insects so that the lime sulfur may kill them. This spray also kills the spores of fungus.

Cut out decayed branches and all surplus growths. Burn all prunings.

Break the surface soil with a light plow and whenever possible plow under a light coating of stable manure. Form a dust mulch on the surface by harrowing.

Spray the grapes to prevent blackrot before the buds open. Bordeaux, 3 pounds copper sulfate, 4 pounds lime, 50 gallons water.

Plant out young fruit trees. The standard varieties should be planted 40 feet by 40 feet apart. Between the rows of trees plant strawberries.

Plant in the open, bulbs, climbing vines, such as Boston Ivy, Virginia Creeper, climbing rose, etc. Also clumps of perennials and hardy annuals such as carnations, larkspur, pansy and verbenas.

Plan to check the work of the cut worm by mixing 25 parts wheat bran and one-half part Paris green and then add enough molasses to make the mash sweet. Scatter this about the plants and the cut worm will eat this before attacking the plants.

Plan to plow a little deeper each year and do it.

## RESTOCKING THE POULTRY YARD

(Continued from page 161)

broody hens can be obtained, it is an excellent plan to set two or three at the same time the incubator is started. Then the eggs under them can be removed to replace those tested from the machine. Some poultrymen like to reverse the process so that the hens may bring out the chickens.

The matter of moisture is important in sections of the country where the air is very dry and perhaps in furnace heated cellars. Some machines have sand trays, but with others it is necessary to sprinkle the floor under them or to keep a bucket of water on the floor. Sprinkling the eggs twice a day from the seventeenth day on is another plan, the water being about 103 degrees.

One common mistake is opening the incubator before all the chickens are out of the shell. A wet chick is very easily chilled. It is best to keep the machine closed until all the chicks are out and dry, altho this may mean waiting twenty-four to thirty-six hours. Meantime the brooder can be heated up and ready to receive the chickens when they are transferred.

## KEEP THE HEAT IN and the cold out—Use Chamberlin Strips for your new building

Residence of  
Geo. M. Laughlin  
is Chamberlin equipped.

**THE** one weak spot in building construction, so far as keeping the cold out and the heat in is concerned, is at the windows. The space allowed for the free operation of the sash is the spot. This crevice is effectively sealed by equipping your home with Chamberlin.

Architects favor Chamberlin Strips. For they are the simplest, most weather tight and trouble free.

Twice as widely used as all others—this proves them best. Backed by the world's oldest, largest, most experienced weather strip makers. A quarter-century reputation for reliability is behind the 10-year guarantee—but they always outlast the building. Installed ONLY by experts from Chamberlin direct factory branches.

### The Chamberlin'd Window

Keeps in heat, bars out cold, drafts, dust, soot, rain, snow, damp; prevents rattling and "sticking"—for the life of the building. There's nothing to wear out.

### Famous Chamberlin Users include

J. P. Morgan, Elhu Root, Thomas A. Edison, E. H. Gary, Wm. G. McAdoo, W. K. Vanderbilt, Henry Ford, Charles Dana Gibson, Chas. M. Schwab, Chauncey M. Depew, Harry P. Whitney and hosts of others.

## CHAMBERLIN METAL WEATHER STRIPS "THE STANDARD FOR 25 YEARS"

We equip windows, doors, casements or transoms—wood or metal—in new or old buildings.

**WRITE** for illustrated, descriptive book and list of users in your vicinity.

## SHALL WE SINK THE GERMAN FLEET

(Continued from page 150)

pact, were made upon plates bolted to heavy backing and fired upon at short range. One of the first—if not the first of ordnance experts—to propose that tests should be made, not merely of the plates but of the structures to which the armor was affixed, was Rear Admiral William T. Sampson, United States Navy, who while Chief of the Bureau of Ordnance caused to be constructed on land a replica of one of the turrets of the "Massachusetts." Firing upon this, he secured much useful data.

This led to the utilization of old and obsolete ships as targets for the gun fire of their successors, and in this country we have used the "Texas" and one of the monitors for that purpose. The British navy have also likewise got rid of and incidentally utilized several superannuated vessels, and in one instance carried out the test with such attention to detail that the attacked vessel was not only fitted up with every equipment, but wooden men replaced the crew at their stations and even the china and glassware of the wardroom was left in the closets. The "Majestic" steaming past her victim fired for seventeen minutes and all the results were carefully noted and tabulated. Of course there are two chief difficulties in this sort of experimentation, the first being that the target cannot hit back and therefore the attacking ship is not troubled with the somewhat important necessity of protecting herself, which always is disturbing to the ease and comfort of one's gunfire; and the second, that the attacked ship was used up or obsolete and therefore, whatever the effects of the shells or torpedoes might be upon her they were not the same as a modern ship "fit to lie in the line" might be expected to withstand. Naturally, no nation has hitherto shown itself prepared to expend a ten or fifteen million dollar battleship to acquire this sort of information.

The first difficulty cannot well be overcome—but as to the second why not devote the German ships—any one of them far more modern than any vessel hitherto used as a target—to precisely this purpose? It would be of great professional interest to determine exactly what the effects of the "New Mexico's" fire would be upon the lately completed "Bayern." If we are about to adopt 16 inch guns, and rumor says that 18-inch are not far off, might they not be profitably tried out on the German ships? Does any one now certainly know what would actually happen to a modern dreadnaught if such a weight of metal as that delivered at a single broadside by the "Pennsylvania" or the "Hood" should squarely strike her? Or how turrets would behave under such abnormally tremendous blows? There are a host of gunnery problems which are asking for solution and which have never before been soluble under such circumstances as are apparently now at command. The battleship is not a true product of evolution but an aggregation of things put together more or less empirically as need have arisen. The more practical knowledge we can get of its reacting capabilities, the better the chances of eliminating the imperfect and unnecessary, and the greater the progress we make toward reduction of armaments.

The trials should, of course, be international, and the data obtained common property, always assuming the League of Nations comes into existence. The rivalries would then be generous ones, and relative efficiencies demonstrated not against one another but against the targets provided by the common enemy.

ALL the taste expended in the bathroom is useless unless the water closet is quiet of operation. A noisy closet is an annoyance to you, an embarrassment to your guests.

THE TRENTON POTTERIES CO.

### SI-WEL-CLO SILENT CLOSET

incorporates special features to make its operation quiet and thorough. Its sanitary features overcome the danger of clogging and subsequent damage. No effort has been spared to make the Si-wel-clo and its component parts the very best.

The Si-wel-clo is but one item of our complete line of all-clay plumbing fixtures. "Tepeco" Plumbing is china or porcelain, solid and substantial. Dirt does not readily cling to its glistening white surface, nor will that surface be worn away by scouring. A wise investment—a beautiful one.

Before you build or renovate send for our instructive book, "Bathrooms of Character," P-14.

## PLANS FOR THE VICTORY GARDEN

(Continued from page 157)

it. In the table the amount of seed or the number of plants required to sow or set out in a hundred feet of row is given. You can readily tell, therefore, the amount of the different seeds that it will take to plant the garden properly, without either running short or having extensive surpluses left over. In figuring the amounts of seed, allowance should be made, of course, for successive plantings and for late plantings for winter use.

All this preliminary work should be done before one is in position to make really intelligent use of the seed catalogs. To proceed by the other method and sit down with a bunch of new catalogs before you have made up your mind what to grow, is a bewildering task. You will not have looked thru many pages, jotting down the new things you would like to try, before you find that you are getting helplessly mixed insofar as getting the makings of a complete, well-balanced garden is concerned. And, in using your catalogs, keep in mind that most seed catalogs are written more from the point of view of the man who has seeds to sell, than from that of the man who has a garden to plant. Instead of confining your order to the *varieties* which are given most space and colored plates, make your selections according to *types* as suggested in the outline of groupings. The varieties of vegetables named on the plan that is reproduced are representative of these types. If you cannot procure all of them where you happen to be ordering your seeds, you can get varieties which are similar in type.

In selecting the garden site of course it is generally a case of taking such soil as may be obtained, without having any opportunity to pick and choose. Where possible, however, the ground for the garden should be chosen according to its fitness for this particular purpose. The ideal soil for vegetable growing is a sandy loam. If it is possible to obtain soil that has been used for gardening before, that will be a great advantage, as it is very hard work to get ground that is in heavy sod, or that has been lying idle for a number of years, into first class condition for the growing of vegetables. Ideal ground which has been producing big crops of weeds is objectionable because it will be full of weed seeds. Nevertheless, such soil generally is fertile.

In handling ground which is in heavy sod, one of the two following methods should be used to get satisfactory results. If it is not too heavy, and the grass is short, it may, by careful work, be turned under completely enough so as not to interfere with planting and cultivating. If the plot is so small that it has to be turned up by hand, it is often easier to remove the sod before taking up the ground. In doing this simply the top layer, as thin as possible, should be taken up, so as to leave as much as possible of the fiber and roots in the soil to supply humus. The part removed should be carefully stacked up to be allowed to rot and will make an excellent compost for use later on.

When the only soil which may be available is a resistant heavy clay, special treatment will be required. All the wood ashes obtainable should be used, and unless these can be had in large quantity, sifted coal ashes should also be applied. A layer even three or four inches thick will be none too much if thoroughly worked into the soil. This will help greatly in lightening it up—in fact, will practically make a new soil. Lime, also, is very beneficial on such soil. If the lime must be applied only a short

## TOWNSEND'S TRIPLEX

The Public is warned not to purchase mowers infringing the Townsend Patent No. 1,209,519, Dec. 19, 1916.

The Greatest Grass-cutter on Earth. Cuts a Swath 86 inches wide.

S. P. TOWNSEND & CO.  
14 Central Ave., Orange, N. J.

Send for Catalogue

time before planting, it is best to use a raw, ground limestone instead of hydrated lime. If applied in the fall, or some weeks before planting, either kind may be used. Four or five pounds of the hydrated lime, or eight to ten pounds of the ground limestone, per hundred square feet of soil, will make a good application. The value of the lime, of course, is not limited to its useful effect upon the soil. It also corrects any acidity which may exist, thus favoring the growth of the various soil bacteria which are essential to the production of good crops. Sandy soils are less likely than clay soils to be too acid, but lime also helps them by tending to bind the soil particles.

If possible, the ground selected for the garden should be protected from north and west winds. This will make a great difference during the first few weeks when the temperature of the soil is one of the chief factors in the amount of growth. If, in addition to such protection, the garden plot has a slight fall to the south or east, it will be quite ideal in location.

The disadvantages in the way of expense in preparing the soil and buying fertilizers and seeds for a small garden can often be overcome to a very large extent by the co-operation of a number of gardeners in one locality. In many cities and small towns there are now garden clubs, which have become prominent and which have helped tremendously in making the small home garden a practical thing for their members. Thru such a society, or club, arrangements for plowing and harrowing, buying seed, putting on manure and fertilizers, etc., can be made, with very great advantage to the individual, compared to what he would be able to do "on his own hook."

In addition to the making of a detailed plan and procuring the seed, there are a number of other things which should be attended to *early* to make sure that everything will be in readiness for a successful garden when planting time comes. The first and most important of these is providing an abundant supply of plant food.

In former days, when there was no trouble in procuring all the stable manure one might need, this was a much simpler matter than it is now. Not only has the price of animal manure gone up, until, in many cases, it is no longer the most economic form in which to buy plant food, but, frequently, it is impossible to get manure of good quality, at any price. Finding a satisfactory substitute is a very important factor in starting a successful garden.

Most gardeners do not fully realize that the benefits from manure are due not only to the actual plant food it contains, but also to the humus and bacteria it adds to the soil. It is for that reason that merely using the chemical fertilizers that contain the same amount of available plant food as manure, as a substitute for the latter, almost always fail to give satisfactory results, and, if fertilizers alone are used for several succeeding years, the result will be less and less satisfactory each season, as the natural humus or decaying vegetable matter in the soil becomes exhausted.

Some of the disadvantages of using fertilizers can be lessened by taking care to purchase fertilizers from organic sources, such as bone, guano, tankage, dried blood, etc., instead of ready-made commercial fertilizers, made up chiefly from chemical sources. Where no manure at all may be used it is all right to use a complete ready-made fertilizer, but only the *highest grade* should be purchased, both because this is really the *cheapest* form in which to buy the plant food, and because the materials used in making a high-grade mixture are much better for the soil than those employed in low-grade, complete fertilizers.

In every garden it is a good plan to have

## All's well— "YALE" is on guard

THOSE near and dear—are they protected in your absence? Can they snap out the lights, certain of their security? Easy in mind, with no thought of the *creaks and whispers* of a house asleep? Will they have the *confidence* that results from the use of Yale Builders' Locks and Hardware?

Your plans for that cozy home provide for comfort and convenience. Add to these that comforting sense of security and freedom from intrusion by providing for Yale Builders' Locks and Hardware.

You will stimulate a taste for better things with "Yale." In your home you will carry on the influences with which you want to surround yourself and family. For Yale Hardware is correct in design, proportion and finish.

All this and a *restful security* will be yours when you install Yale Builders' Locks and Hardware.

Look for the Yale trade-mark on the product.

The same trade-mark guarantees Yale Night Latches, Yale Padlocks, Yale Door Closers, Yale Cabinet Locks, Yale Bank Locks and Yale Chain Blocks.

a supply of nitrate of soda on hand for special purposes, such as hastening early growth, stimulating warm weather plants, when they first come up, and the weather is still so cold as to make their growth itself dependent upon the process of nitrification in the soil very slow. It is also useful in helping any plants which may be attacked by insects or diseases.

As a further substitute for manure in combination with fertilizers, commercial humus is of great value on soils which have been cropped for a number of years and which are, naturally, too light and sandy for good growth. This humus is decayed vegetable matter, which has been dried and ground, and treated, until it is fairly uniform in analysis and can, therefore, be sold as a standard product. In addition to improving the useful condition of the soil to which it is applied, it is, itself, very spongy and absorbent, and, therefore, helps in large measure to retain the surplus moisture after heavy rains.

While these materials can be used to take the place of manure, at least part of the garden fertility should be supplied in the form of manure, if it is possible to procure it. Spread as much as can be obtained evenly over the entire garden, even if it makes only a thin layer. This should be put on, of course, before the ground is plowed or spaded up. A sufficient quantity of fertilizer should be procured to supply two to four pounds per one hundred square feet, according to the amount of manure and the general condition of the soil. In addition to the amount for this purpose, a small quantity of fine ground bone and of dried blood, or tangake, should be kept on hand for special purposes, such as to use in transplanting plants, top dressing, growing crops, etc. As suggested above, it would be well to make arrangements for all of these things now as materials will be short and transportation still uncertain this spring.

## SMOOTHING THE ROAD OF THE MOTORIST

(Continued from page 155)

zation of \$736,000,000, and employ-  
ing 280,000 workers at an annual  
total wage of \$275,000,000. Manufac-  
turers of bodies, parts, and accessories,  
total 1080, with a capitalization of \$336,-  
000,000, employing 320,000 workers and  
paying annually in wages \$288,800,000.  
In addition there are some 27,000 automo-  
bile dealers with a capital investment of  
\$184,000,000 and employing 230,000 per-  
sons. Controller Travis further estimates  
the present value of motor vehicles in use  
in the United States at \$5,000,000,000.  
The purchase of motor vehicles during  
1918 reached the total of 1,726,194, worth  
\$917,470,938. The production of automo-  
bile tires last year was 18,000,000, valued  
at \$150,000,000. License fees collected by  
the various states during the same period  
totaled \$25,000,000. If it were possible to  
add the money spent during 1918 for acces-  
sories, repairs, gasoline, lubricating oils,  
etc., the grand total spent would approxi-  
mate that of a Liberty Loan. There should  
also be included the wages of chauffeurs.  
There are some 350,000 of these registered  
and licensed in the United States, and at  
an average wage of \$15 per week their  
total annual wage is \$373,000,000.

Dry as the foregoing figures may be to  
the reader, they nevertheless show that  
there is an industrial organization both for  
the manufacture and maintenance of motor  
vehicles of sufficient size and strength to  
insure the development of motor travel and  
motor transportation within any reason-  
able limits.

### CON-SER-TEX

THE IDEAL  
COVERING FOR  
SLEEPING BALCONIES  
PORCH FLOORS  
AND ROOFS

## DECORATING WITH NEEDLEWORK

(Continued from page 158)

finished in color scheme, three or four colors at most being used, and dark blue, dull purple, biscuit, emerald green, black and gray (with a little variation in the hues of the embroidery silks) being adhered to, because all kinds of flowers appear from day to day and every color should be in place and welcome.

The set scheme beloved of the interior decorator too often disdains the modest function of a background, and yet all permanent decoration of a home should be a background. All kinds of gowns, flowers, vases, and infinitely varied objects will come in, sometimes to stay, sometimes to pass them, and so the essentials, the necessities, while forming a united whole, should be hospitably adaptable, and allow of unlimited combinations with the transient visiting hues.

The room described has been, of course, carefully thought out as a whole; but embroidery must not be regarded as a rare exotic, to be employed only in set schemes of decoration. Whatever room one happens to live in, and at whatever state or stage of artistic development one happens to be, embroidery fulfills an honest function. Even the stamped house and table linen described and illustrated in the women's magazines often show some sort of fitness in their monograms and baskets of roses and add comfort and refinement to the homes they dignify.

Period design is an established fact in many people's understanding, and of all crafts embroidery is essentially a craft of periods. What could link the past more amiably with the present than the intelligent use of period tradition in the expression of the embroiderer's individual ideas?

Nor must the combination of framed embroideries and chintz-covered furniture and hangings be overlooked. A small room, with big windows on two sides and two doors, for instance, had little space for pictures, and when the windows had been hung with dark blue and cream flowered chintz and the furniture liberally upholstered, the old-fashioned air of the room seemed too cozy and intimate to spoil with incongruous realistic prints or photographs. But some embroideries of herbs and birds and even one of little figures in a scrolly mesh of flowers, set in narrow black frames, were just the thing to give a livable and interesting air. From a little way off, the needlework became blurred of pattern like the chintz—and yet it had plenty of variety and intelligent idea and fun and fancy hidden away for the inquisitive to find. It also gave that sense of restfulness and leisure we associate with the past, but which is the inheritance of all good and honest craftsmanship, and especially the craftsman-ship of that most sensitive and delicate of tools, the needle.

Finally the exquisite nicety of stitches, the meticulous workmanship of these small embroidery panels, added to the snugness of the little room. One was close to the treasures, and could examine them conveniently and appreciate their qualities with zest. Old samplers have their place in such small rooms, and how charmingly they harmonize with daguerrotypes and miniatures and prints and relics of Colonial days!

But while we enjoy the old embroideries we must not forget that the needle is still with us, and that embroidery is a soothing occupation which many busy workers might profit by in leisure moments—to the enrichment of their homes and their descendants.

# The New Books

## Peace and World Relations

**NATIONAL SELF GOVERNMENT**, by Ramsay Muir. (Henry Holt & Co., \$2.75.) A thoro discussion of the principles involved in the Great War and a history of the national conflicts that led up to it.

**GREAT EUROPEAN TREATIES OF THE NINETEENTH CENTURY**, edited by Sir Augustus Oakes and R. B. Mowat. (Oxford University Press, \$3.40.) Actual text of the treaties which will necessarily be an important factor in all questions before the Peace Conference. Decidedly useful volume for all who want to make up their own minds.

**THE CRADLE OF THE WAR**, by H. Charles Woods. (Little, Brown & Co., \$2.50.) A discussion of the German projects of Mittel-Europa and the Bagdad Railroad, and the intricate relations of the Balkans, which, if not settled right might precipitate another war. The author is among the best informed on this question.

**SERBIA**, by L. F. Waring. (Henry Holt & Co., 60 cents.) One of the Home University Library series, giving in a brief and readable manner exceedingly useful information about a country that has become of great importance.

**RUMANIA'S SACRIFICE**, by Gogu Negulesco. (Century Co., \$1.50.) An important and timely discussion of what Rumania did in the war and what she expects to get out of it. Illustrated with historical maps showing extent of territory at different periods.

**CAMPAIGNING IN THE BALKANS**, by Lieutenant Harold Lake. (Robert M. McBride & Co., \$1.50.) Personal experiences of a young officer, with a descriptive background of the people and the general conditions.

**THE TRAGEDY OF ARMENIA**, by Bertha S. Papazian. (Pilgrim Press, \$1.) A presentation by an Armenian of what will be one of the most difficult questions before the Peace Conference.

**IMPERIAL ENGLAND**, by Cecil Fairfield Lavell and Charles Edward Payne. (Macmillan Co., \$2.) History of the development and rise of England's overseas dominions and their relation to the mother country.

**UNDERSTANDING SOUTH AMERICA**, by Clayton Sedgwick Cooper. (George H. Doran Co., \$2.) An account of the home life and characteristics of our South American neighbors, by a popular lecturer and interesting writer.

**GETTING TOGETHER WITH LATIN AMERICA**, by A. Hyatt Verrill. (E. P. Dutton & Co., \$2.) A compact statement of important facts concerning the South American countries, with an appeal for a better acquaintance with them.

**JAPAN AT FIRST HAND**, by J. L. C. Clarke. (Dodd, Mead & Co., \$2.50.) A very comprehensive description of the life, politics and business of modern Japan, with chapters on Korea and Manchuria. Many illustrations.

**THE END OF THE QUICKSAND**, by D. Thomas Curtin. (George H. Doran Co., \$1.50.) The quicksands into which the Germans have been falling during the four years of the war is the theme of this book. Interesting especially on account of the sidelights on German character.

**THE GUILT OF GERMANY**, (G. P. Putnam's Sons, 75 cents.) Prince Lichnowsky's secret memorandum proves conclusively that Germany and Austria forced the war and that England tried to prevent it. This has just been confirmed by the documents published by Kurt Eisner from the secret archives of Bavaria.

**THE SINS OF THE FATHERS**, by Ralph Adams Cram. (Marshall Jones Co., \$1.) The author finds three sins mainly responsible for the pass to which our civilization has come: Imperialism, The Quantitative Standard (Quantity vs. Quality) and Materialism.

**PRESENT WILSON AND THE MORAL AIMS OF THE WAR**, by Frederick Lynch, D.D. (Fleming H. Revell Co.) A Christian proclamation upon moral facts stressed by President Wilson relative to civilization after the war. Five additional chapters by other divines.

**THE WAR IN DIPLOMACY**, by William Barry. (George H. Doran Co., \$1.50.) An available record of modern European diplomacy with a broad view of the relationship of the temporary peace of the present.

**THE WAR IN PEACE AND AFTER**, by Carl H. George. (A. J. A. Knopf, \$1.) Political and social conditions, and especially original, yet accurate enough to suit working detachments of reference.

# 1919 ATLAS WITH LATE FREE WAR MAPS

To the Readers of *The Independent* who take advantage of this offer now made in connection with

### ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOOK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

#### I. Shall We Sink the German Fleet? By Park Benjamin.

1. Write a properly numbered and lettered brief of the article.
2. In a single short paragraph sum up the thought of the entire article.
3. Explain orally why the problem of the disposal of the German fleet is so great.
4. Present a vigorous argument for or against sinking the German fleet.
5. Write an original story that could be developed into a moving picture scenario giving a possible, tho not necessarily a probable, solution of the problem of disposing of the German fleet.
6. Write a picturesque description of the scene of the surrender of the German fleet. Be careful to select an appropriate point of view. Follow time order and space order. Use as many connotative or suggestive words as possible.
7. Point out the means by which the article has been made coherent.
8. Explain the reason for the use of every comma in column 1.

#### II. The Future of Flying. By Henry Woodhouse.

1. In a few words present the problem suggested by the article.
2. In long complex sentences present possible answers to the three questions that begin the article.
3. Write an original story of adventure in an airplane.

#### III. Decorating with Needlework. By Constance Armfield.

1. It is to be supposed that you understand the English language. With how many of the following words are you familiar? craft, dexterity, stereotyped, fabrics, subtleties, replicas, motif, tedium, ponderous, hieroglyphics, juxtaposition, adhered, disdains, transient, hues, exotic, function, monogram, literally, incongruous, meticulous, daguerreotypes. What is the meaning of every one of the above words? How many words are there in the English language? How many words are used by a person of ordinary education? How can you enlarge your vocabulary?
2. Imagine that you are an agent endeavoring to increase the sale of needlework. Explain as if to the proprietor of a department store what fields are open to needlework.
3. Write a pleasantly suggestive description of the picture presented with the article.
4. Write the autobiography of your great-great-grandmother's sampler.

#### IV. Plans for the Victory Garden. By F. F. Rockwell.

1. What is the value of tabulation, diagram, and illustration as shown in this article?
2. What methods does the author employ to make his thought emphatic?
3. Give brief oral directions for planting a victory garden.

#### V. The Story of the Week.

1. In "Julius Caesar" and in "Macbeth" you read of many tragic events. Write in dramatic form an account of the deaths of Karl Liebknecht and Rosa Luxemburg.
2. Explain in what ways the new constitution of Germany is better, or worse, than the former constitution.
3. Imagine that you are Sherlock Holmes. What reasons lead you to believe that the letter purporting to have been written by the Kaiser is genuine, and what reasons prompt you to think that it is not genuine?
4. Give a clear oral explanation of the present situation in Russia.
5. Read aloud the passages quoted from the addresses at the opening of the Peace Conference. Explain in full the meaning of every quotation.
6. Summarize the problems to be solved by the Peace Congress.
7. A man for whom you work has a business correspondent in Buenos Aires. Write a letter from him concerning business conditions in South America.
8. Write a letter from one of the leaders of the Portuguese monarchical party to former King Manoel, and then write the King's reply.
9. Give a talk summarizing the important news of the week concerning the United States.

### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

#### I. Russia—"The Acid Test of Russia," "Tribulations of Russia."

1. Do you agree with the principles of action enunciated in the two quotations from the President's speeches? What difficulties stand in the way of our acting as the President desires?
2. Analyze as completely as you can the various factions contending for ultimate power in Russia. Should we support any one of them?
3. "These repeated appeals . . . met with no official response," etc. Why not? ". . . but we now learn . . . that the British Government favors receiving delegates of the Soviet Government," etc. Why?
4. Why is M. Pichon opposed to dealing with representatives of the Soviet Government?
5. What is to be the "acid test" of Russia as mentioned in the leading editorial?

#### II. The Peace Congress—"The Opening Addresses," "Program of the Congress."

1. What was the dominant note sounded in the opening meeting of the Congress?
2. What questions have thus far been discussed? How will these questions probably be answered?
3. How would you answer the German delegates if they asked for the things indicated in the news item?

#### III. Germany—"Collapse of the Spartacans," "The New German Constitution."

1. Why was the killing of Liebknecht and Rosa Luxemburg probably the deathblow of the Spartacans?
2. What conclusions do you draw from the evidence of the German elections of January 19?
3. What will be the effect if Germany is rearranged geographically according to the scheme outlined in the last paragraph of the news item on "The New German Constitution" on page 144?

#### IV. Political Unrest in Europe—"Four Cabinets Changed," "Reaction in Portugal," "The New Polish Government," "The Sinn Fein Republic."

1. What caused the cabinet changes referred to in the first news item?
2. Why should there be a monarchical reaction in Portugal at the present time?
3. On what basis did the party of Mr. Paderewski and that of General Pilsudski combine?
4. Contrast the present attitude of the British Government toward the Sinn Fein movement with that of the spring of 1916.

#### V. Problems of Transportation—"Smoothing the Road of the Motorist," "The Future of Flying."

1. "It [highway improvement] has been agitated ever since the birth of the nation." Review the history of road building, canal construction and railroad promotion as a proof of this statement.
2. Test your own locality by Secretary Lane's dictum: "You can judge the civilization of a people . . . by the character of its highways."
3. Discuss the relation of the fuel problem to the problem of motor transportation.
4. How far has aeroplane transportation of the mails proceeded thus far? Can you suggest any probable future development of the uses of the roads of the air?

#### VI. Our Shipping Program—"Ships Borrowed and Returned," "What Are Our Ships Worth?"

1. On what basis did the Allies arrange for taking over German ships now in German ports? What will probably be done with the German ships seized at the outbreak of the war?
2. Why does Chairman Hurley propose "to write off" a third of the cost of the Emergency Fleet Corporation's ships? What do you think of this proposal?
3. What are the alleged handicaps upon American ships in their competition with ships owned abroad? How can these alleged handicaps be overcome?

## POETS OF TODAY

Irene R. McLeod became known first as the author of "Songs to Save a Soul," spontaneous, passionate poems of youth seeking expression. In "Before Dawn," published by B. W. Huebsch, she has left far behind these characteristics of her earlier work. Her poetry is more formal, less vigorous and simple. This sonnet, second of the sequence, shows the trend of her present poetic mood:

Many shall say I do forget the times,  
Turning my eyes from death to sing of love,  
For love is dead, they say, and lover's  
rimes  
No more have grace men's burdened hearts  
to move.  
But I, too long death's constant intimate,  
Making one brief in that vast sisterhood  
Whose only life is still to hope and wait  
Till hope's cause be removed, and whose  
best good  
Snatches from death maimed men all too  
secure—  
Having most weary leisure to survey  
These times, yea, time itself, whose years  
immure  
My chafing spirit from our realms of day,  
Still cry: "Love lives!" Even now he rends  
the gloom  
Which we, forgetting him, once made his  
tomb!

"Growing Pains" is Jean Starr Untermeyer's title for her first volume, published by B. W. Huebsch, of introspective, intense poetry that seems to snatch at pictures and emotions. There is oftentimes a tendency to force each poem to a definite conclusion whether it follows or not. "High Tide" has the quality of an etching:

#### HIGH-TIDE

I edged back against the night.  
The sea growled assault on the wave bitten  
shore.  
And the breakers,  
Like young and impatient hounds,  
Sprang, with rough joy on the shrinking  
sand  
Surging—but were drawn back slowly,  
With a long, relentless pull,  
Whispering, into the dark.  
Then I saw who held them captive;  
And I saw how they were bound  
With a broad and quivering leash of light,  
Held by the moon.  
Ah, calm and unrolling,  
She walked the deep fields of the sky.

"The Leaf on the Water" is a characteristic bit from *Chinese Lyrics*, poems of clear cut images and porcelain-like delicacy, translated by James Whitall, published by B. W. Huebsch:

#### THE LEAF ON THE WATER

The wind tears a leaf from the willow tree;  
it falls lightly upon the water,  
and the waves carry it away.

Time has gradually effaced a memory  
from my heart,  
and I watch the willow leaf drifting away  
on the waves;  
since I have forgotten her  
whom I loved,  
I dream the day thru in sadness,  
lying at the water's edge.

But the willow leaf floated back  
under the tree,  
and it seemed to me  
that the memory could never be effaced  
from my heart.

## REMARKABLE REMARKS

J. G. HUNEKER—The majority of operas depict soul-states in a sanatorium.

E. W. HOWE—Socialism is actually not as popular as generally believed.

NICHOLAI LENINE—The revolutionary phrase is the greatest danger to our party.

HENRI BARBUSSE—Wilson is one of the loftiest figures in this war and in our times, if not the loftiest.

ALBA B. JOHNSON—There is a peculiarly Prussian and offensively Prussian thing about state railways.

HARRY H. MERRICK—Sometimes we of Chicago refer to ourselves in our modest way as the heart of the United States.

CHARLIE CHAPLIN—A young fellow who appears with a cane is very likely to be asked if he isn't afraid of catching cold without it.

PREMIER CLEMENCEAU—After forty-eight years of public life I am satisfied that the larger the committee is the less it accomplishes.

PRESIDENT WILSON—One of the things that has interested me most since I have lived in Washington was that every time I do anything that is perfectly natural it is said to be unprecedented.

VISCOUNT UCHIDA—There can be no League of Nations unless there is among its members as complete unity of confidence and trust, one in the other, as there is of purpose and of counsel.

AGNES M. ELIAS—To take a few hundred women out of their homes and put them in a factory is like taking a couple of hundred mechanics and putting them in entire charge of a baby hospital.

SENATOR HARDING—Instead of saying we were going to war because Germany had violated American rights the President said we were making war for democracy's sake. It has been a lie from the beginning.

H. G. WELLS—This war and all the blood and loss of it is because the new things are entangled among old and dead things—worn out and silly things; and we've not had the vigor to set them free.

J. OGDEN ARMOUR—There is need that the farmers of the nation have at their disposal full and complete information as to what crops are being grown and when the harvest will be on.

SAMUEL GOMPERS—Emerging so gloriously and victoriously from a period of strife, friction and turmoil between nations, we are entering into a period of domestic uncertainty, a time as propitious for good or for evil as that which has just preceded.

SENATOR FRANCE—Was not Russia legally, when we invaded her territory, a neutral country? And if we invaded that neutral country in order to fight the Germans what grievance can we justly urge against Germany because she invaded helpless Belgium to fight the French?

MAXIMILIAN HARDEN—Bolshevism is most emphatically not, as superficial observers think, a system invented by murderers and robbers, but an ideal structure of great state, and already there are growing up around it, amid vast devastated areas, useful plants of a quite new variety.

# THE KEYSTONE OF PEACE

## President Wilson's Address Proposing the League of Nations

Paris, January 25

I consider it a distinguished privilege to be permitted to open the discussion in this conference on the League of Nations. We have assembled for two purposes: to make the present settlements which have been rendered necessary by this war and also to secure the peace of the world, not only by the present settlements but by the arrangements we shall make at this conference for its maintenance.

The League of Nations seems to me to be necessary for both of these purposes. There are many complicated questions connected with the present settlements, which perhaps cannot be successfully worked out to an ultimate issue by the decisions we shall arrive at here. I can easily conceive that many of these settlements will need subsequent consideration; that many of the decisions we make shall need subsequent alteration in some degree, for if I may judge by my own study of some of these questions they are not susceptible for confident judgments at present.

It is therefore necessary that we should set up some machinery by which the work of this conference should be rendered complete.

We have assembled here for the purpose of doing very much more than making the present settlements that are necessary. We are assembled under very peculiar conditions of world opinion. I may say, without straining the point, that we are not the representatives of governments, but representatives of the peoples.

It will not suffice to satisfy governmental circles anywhere. It is necessary that we should satisfy the opinion of mankind.

The burdens of this war have fallen in an unusual degree upon the whole population of the countries involved. I do not need to draw for you the picture of how the burden has been thrown back from the front upon the older men, upon the women, upon the children, upon the homes of the civilized world, and how the real strain of the war has come where the eyes of the government could not reach, but where the heart of humanity beats.

We are bidden by these people to make a peace which will make them secure. We are bidden by these people to see to it that this strain does not come upon them again. And I venture to say that it has been possible for them to bear this strain because they hoped that those who represented them could get together after this war and make such another sacrifice unnecessary. It is a solemn obligation on our part, therefore, to make permanent arrangements that justice shall be rendered and peace maintained.

This is the central object of our meeting. Settlements may be temporary, but the action of the nations in the interest of peace and justice must be permanent. We can set up permanent processes. We may not be able to set up a permanent decision.

Therefore, it seems to me that we must take as far as we can a picture of the world into our minds. Is it not a startling circumstance, for one thing, that the great discoveries of science, that the quiet studies of men in laboratories, that the thoughtful developments which have taken place in quiet lecture rooms have now been turned

to the destruction of civilization? The powers of destruction have not so much multiplied as they have gained facilities.

The enemy, whom we have just overcome, had at his seats of learning some of the principal centers of scientific study and discovery, and he used them in order to make destruction sudden and complete. And only the watchful and continuous cooperation of men can see to it that science, as well as armed men, is kept within the harness of civilization.

In a sense the United States is less interested in this subject than the other nations here assembled. With her great territory and her extensive sea borders, it is less likely that the United States should suffer from the attack of enemies than that other nations should suffer. And the ardor of the United States—for it is a very deep and genuine ardor—for the society of nations is not an ardor springing out of fear or apprehension, but an ardor springing out of the ideals which have come in the consciousness of this war.

In coming into this war the United States never for a moment thought that she was intervening in the politics of Europe, or the politics of Asia, or the politics of any part of the world. Her thought was that all the world had now become conscious that there was a single cause of justice and of liberty for men of every kind and place.

Therefore, the United States should feel that its part in this war should be played in vain if there ensued upon it abortive European settlements. It would feel that it could not take part in guaranteeing those European settlements unless that guarantee involved the continuous superintendence of the peace of the world by the associated nations of the world.

Therefore, it seems to me that we must concern our best judgment in order to make this League of Nations a vital thing—a

pectations of the peoples. This is what their thought centers upon.

I have had the very delightful experience of visiting several nations since I came to this side of the water, and every time the voice of the body of the people reached me, thru any representative, at the front of the plea stood the hope of the League of Nations.

Gentlemen, the select classes of mankind are no longer the governors of mankind. The fortunes of mankind are now in the hands of the plain people of the whole world. Satisfy them, and you have justified their confidence not only, but have established peace. Fail to satisfy them, and no arrangement that you can make will either set up or steady the peace of the world.

You can imagine, I dare say, the sentiments and the purpose with which the representatives of the United States support this great project for a League of Nations. We regard it as the keynote of the whole, which express our purposes and ideals in this war and which the associated nations have accepted as the basis of a settlement.

If we return to the United States without having made every effort in our power to realize this program, we should return to meet the merited scorn of our fellow-citizens. For they are a body that constitute a great democracy. They expect their leaders to speak; their representatives to be their servants.

We have no choice but to obey their mandate. But it is with the greatest enthusiasm and pleasure that we accept that mandate. And because this is the keynote of the whole fabric, we have pledged our every purpose to it, as we have to every item of the fabric. We would not dare abate a single item of the program which constitutes our instructions; we would not dare to compromise upon any matter as the champion of this thing—this peace of the world, this attitude of justice, this principle that we are the masters of no peoples, but are here to see that every people in the world shall choose its own masters and govern its own destinies, not as we wish, but as they wish.

We are here to see, in short, that the very foundations of this war are swept away. Those foundations were the private choice of a small coterie of civil rulers and military staffs. Those foundations were the aggression of great powers upon the small. Those foundations were the holding together of empires of unwilling subjects by the duress of arms. Those foundations were the power of small bodies of men to wield either their will and use mankind as pawns in a game. And nothing less than the emancipation of the world from these things will accomplish peace.

You can see that the representatives of the United States are, therefore, never put to the embarrassment of choosing a way of expediency, because they have had laid down before them the unalterable lines of principles. And, thank God, these lines have been accepted as the lines of settlements by all the high-minded men who have had to do with the beginning of this great business.

I hope, Mr. Chairman, when it is known, as I feel confi- [Continued on page 203]

### THE BASIS OF THE LEAGUE

RESOLUTIONS ADOPTED BY THE PEACE CONFERENCE ON JANUARY 25

*The conference, having considered the proposals for the creation of a League of Nations, resolved that:*

*It is essential to the maintenance of the world settlement which the associated nations are now met to establish that a League of Nations be created to promote international obligations and to provide safeguards against war. This league should be created as an integral part of the general treaty of peace and should be open to every civilized nation which can be relied on to promote its objects.*

*The members of the league should periodically meet in international conference and should have a permanent organization and secretaries to carry on the business of the league in the intervals between the conferences.*

*The conference therefore appoints a committee representative of the associated governments to work out the details of the constitution and the function of the league.*

thing sometimes called into life to meet an exigency—but always functioning in watchful attendance upon the interests of the nations, and that its continuity should be a vital continuity; that its functions are continuing functions that do not permit an intermission of its watchfulness and of its labor; that it should be the eye of the nations, to keep watch upon the common interest—an eye that did not slumber, an eye that was everywhere watchful and attentive.

And if we do not make it vital, what shall we do? We shall disappoint the ex-

## WHAT HAPPENED AT OMSK

**T**HOSE who delight to exercise their detective skill at unraveling a mystery story from such misleading clues as the author introduces will find it interesting to turn their attention toward the drama that is being enacted in the Siberian city of Omsk, for they will find it a fascinating pastime to interpret the various and discordant versions of events found in the newspapers.

At Omsk last October an attempt was made to get together all the remnants of legal authority remaining in Russia and to establish a stable and democratic government which might, with the support of the Allies, serve as a center for an anti-Bolshevik campaign. This All-Russian Provisional Government at Omsk came nearer to being true to its name than any other of the five governments that have been set up in Omsk under the protection of the Allies, for it was composed of members of the old Constituent Assembly that was elected after the revolution but dismissed by the Bolsheviks. It included representatives of all parties except the Bolsheviks and it was supported by the Duma, the zemstvos (provincial assemblies) and municipalities and by the Independent Government of Siberia. It was established by aid of the Czech troops, who defended it against the Bolsheviks and turned over to it the \$175,000,000 that they got in their raid on the Lena gold mines and the \$325,000,000 in gold that they captured at Kazan.

But in November, at the very time when it was asking recognition at Washington as the only legitimate government of Russia, its president and leading members were seized by the military and thrown into prison. Admiral Kolchak, who as Secretary of War in this ministry was nominally in command of the military, declared himself Supreme Governor and rewarded the Cossack officer who carried out the *coup d'état*, Colonel Volkov, by appointing him to the command of the 5th Army Corps in place of General Semenov, who refused to concede Kolchak's authority. An attempt was made to remove Semenov by assassination, but the bomb that was exploded under him in the theater at Chita only shattered his leg without shaking his spirit. He took the offensive and with the favor and, it is rumored, the support of the Japanese he pushed his control of the railroad westward to Verkhne Udinsk near to Lake Baikal and threatened to cut off Kolchak from the outside world.

There was a general protest against Kolchak's seizure of power from members of the Duma, Constituent Assembly, zemstvos and municipalities, but he put down opposition with an iron hand. History proved, he said, that republics needed in such emergencies a military dictator, but he declared his intention of holding elections for a new national assembly when the country was restored to a normal state. Meantime he is ruling like a little Czar. He has revived the laws discriminating against the Jews and is hunting down

the Socialists, even tho these are anti-Bolshevik. He has started up the distilleries and by selling vodka at six rubles (\$3) a pint is getting a large revenue, altho it means that a million bushels of grain will be converted into alcohol while Omsk is overcrowded with starving refugees.

Kolchak was admiral of the Black Sea fleet at the time of the revolution. He took part with General Kornilov in the attempt to overthrow Kerensky. This failed, but it threw the country into the hands of the Bolsheviks, for the Soviets, who had hitherto been anti-Bolsheviks, joined with them when they learned of Kornilov's intention to dissolve the Soviets. After leaving Russia Kolchak came to America and later was attached to the British army in Mesopotamia.

The motto of Kolchak as "Supreme Governor" seems to be "safety first," if we may judge from the following decree issued by him:

Any attempt on the life or health of the Supreme Governor or any forcible endeavor to wrest power from him, will be punished with death; any attempt to destroy the existing Government or to divide the country into parts by force, will be punished with death; an offense against the Supreme Governor by words, writing, or printing, will be punishable with imprisonment; and failure wittingly to execute his orders and decrees will be punished with deprivation of civil rights and penal servitude.

The Czechs, being a democratic people, were highly incensed at the Kolchak régime and were disposed at first to withdraw and leave Omsk to be captured by the Bolsheviks from the other side of the Urals. General Syrov, commander-in-chief of the Czech army, said in November:

The change of Government has killed our soldiers. They say that for four years they have been fighting for democracy, and that now that a dictator ruled in Omsk they are no longer fighting for democracy. Since the armistice all the soldiers want to go home to fight the Germans and Magyars in their own country and not fight the Russians.

But Syrov was removed by Kolchak, and a Russian, General Hanchin, put in command of the Czechs, much to their disgust. General Diterichs, another Czech officer who had done valiant service against the Bolsheviks, was also deposed for refusal to submit to Kolchak. The Czech General Gaida obeyed Kolchak's orders to arrest President Tchernov and other members of the All-Russian Constitutional Assembly, but they sought sanctuary at the headquarters of the Czech National Council at Ekaterinburg and were there protected by the Czechs, even when a hundred Russian officers tried to assassinate them with bombs. Later these survivors of the last legal government of Russia fled to Ufa, on the European side of the Urals, but here they were captured by Kolchak's troops and taken to Omsk for imprisonment. Of these twenty-seven men, thirteen were members of the Assembly. But Tcher-

now, who was at first reported taken in the raid, appears to have escaped. An attempt was made one night to release them from jail by a crowd of workmen and soldiers who are called "Bolsheviki," the how the Bolsheviki could be in such force in Kolchak's own capital and why they should want to release their enemies is one of the minor mysteries. The prisoners, naturally fearing a trap, refused at first to leave and some came back voluntarily next day. Others were put down in the street, and forty-seven persons concerned in the jail delivery were shot. A simultaneous rising of the railroad men was also put down, with seventy executed and sixty killed. Kolchak had thirteen of the prison guards shot for failure to keep their prisoners, but the soldiers he put in their place seem to have been no better, for a few nights later a military raid was made on the jail and eight of the members of the Assembly taken out and shot.

Readers will remember that the Washington correspondents gave out the impression that the American Government was glad to hear of Kolchak's dictatorship and wished him success. When this was telegraphed to Omsk it naturally caused great disappointment to those Russians who were struggling to maintain some sort of a popular government. The Czechs were induced to remain on the front by urgent messages from President Masaryk and the hope of speedy reinforcement of Allied and American troops. American Ambassador Francis, American Consul Poole and American Consul Harris are all quoted as having given assurances of support. The Omsk papers are not allowed to publish anything contradictory of this expectation of military aid.

On the other side of the Urals the Bolsheviki are collecting what is said by their enemies to be a large and well managed army. They have regained Ufa and Orenburg and threaten Ekaterinburg. But they have met with one severe setback. General Gaida, with his Czechs and some Siberian troops, crossed the Urals and attacked Perm, where he took some 30,000 Bolsheviki prisoners with an immense amount of supplies and railroad stock. That is one story. The other is that this victory was won solely by Kolchak's new army under Russian command, and that there was only one Czech regiment in the movement, and this did not get within seventy miles of Perm. At any rate, Gaida was removed by Kolchak for doing whatever he did or did not do contrary to orders.

The latest and most reliable information we have from Omsk is a despatch to the *New York Times* from Carl W. Ackerman, an American journalist, who has shown peculiar ability in keeping a level head in perplexing situations, so what he says is worth quoting, tho it rather adds to the mystery than clears it up:

When I first visited Omsk the All-Russian Government was in control of that part of Russia free from the Bolsheviki, and gave promise of being a real Russian Government which might ultimately be powerful enough to move into Moscow and Petrograd to dislodge the Bolsheviki. But between my first and second visits to the temporary capital the All-Russian Directory was overthrown, a Dictator was named, the National Assembly was dissolved, and the members escorted to another city under protection of the Czech Army. The complete story of this coup d'état cannot be told at this time because of the part played in it by certain important powers, but this much can be truthfully said: When the All-Russian Government was overthrown, the Liberal or Democratic forces of Russia, as distinguished between the Bolsheviki and the reactionary or monarchistic party, suffered a defeat the extent of which cannot be estimated.

It may be stated now and proved later, when all the facts can be published, that the foreigners in Russia had more to do with the collapse of the All-Russian Government than the Russians, and that if several foreign powers thru their official representatives had not been interfering with Russia's internal affairs the Government would very likely still be in Omsk. Secondly, after once announcing military intervention in Siberia and Archangel the Allies made a fatal mistake in not keeping their promise. Thirdly, by refusing to pay serious attention to the struggle of the Liberal forces of Russia to establish a representative government in Omsk, by delaying recognition of the All-Russian Gov-

ernment and by not working in harmony with each other, the Allies contributed to the establishment of the present Kolchak dictatorship.

These, then, are the main points of this mystery story, which we respectfully submit to our puzzle-loving readers. We don't give the answer because we don't know it. The title of this editorial should be printed with an interrogation point. The question "What happened at Omsk?" and the further question "What does it all mean?" need to be answered, for Kolchak is the chief claimant for recognition as the true Russian Government before the Paris Conference. There are 8000 American boys in Siberia and 5000 in Archangel, and Americans are entitled to know what they are fighting for.

## THE CAPRICES OF DORA

THE Defense of the Realm Act, which the English according to their custom compress into "Dora," is a source of amusement as well as of annoyance. On another page of this issue we show what she—or he or it—did with a Sinn Fein electioneering poster in the late election. But the Irish seem to have read between the lines, for the Sinn Fein candidates were elected. We might suppose that the operation of the Act would be limited to the Realm, but it appears that Dora, like the Pope, has the keys to heaven and hell. In a book called "The Glamour of Dublin," recently published in Ireland, the author referred to the leaders of the Irish revolt, Pearce and Connolly, as "now in heaven," but the censor deleted these three words, doubtless because he did not think it was true.

The British police in their raids on the pacifist centers confiscated an edition of Mill's essay on "Liberty" and a leaflet composed entirely of New Testament texts. The sinking of the British battleship "Audacious" by a German mine off the Irish coast on October 27, 1914, was not allowed to be printed in England until November 13, 1918, altho the American papers published accounts of eye-witnesses with photographs. Previous to 1917 nothing bad about the Czar could be said and since then nothing good about the Bolsheviki. The peace conferences may be public, but the reports of them are intercepted. The powers of Dora even extend to America, for most of our foreign news passes thru London, as it always has.

## WAR AND PESTILENCE

IN the good old days of the lyceum when the American people took pleasure in endless discussion of indeterminate problems one of the favorite questions was: "Resolved, that war is a greater scourge of humanity than pestilence." If such debates were still in vogue the negative could get some useful data from the present, when the two scourges have, as often before, afflicted mankind simultaneously. The British medical authorities estimate that the combined influenza and pneumonia epidemic has caused the death of 6,000,000 persons in twelve weeks. This covers the whole world and half of the number are ascribed to India. Now the number of men reported as killed or died from wounds in the armies of France, Russia, Great Britain, Italy, Germany and Austria totals 6,500,000. When the minor belligerents are reported and those counted as missing but actually killed are included, this total will doubtless be raised to 7,000,000 or more for the four and a quarter years of war. Considering then the different lengths of time these two destructive forces have been active the pestilence has proved more than ten times as deadly as war.

The fatalities in the American army during the year of fighting were 36,154. The fatalities in the United States during the months of October, November and December due to the Spanish flu were about 350,000, nearly ten times as many, or forty times as deadly. The war is over, but the plague still rages around the world. The sunny islands of

the Pacific, sheltered from the war, have not escaped the pestilence. The natives of Tahiti and Samoa, not having been immunized by previous epidemics, have been more than decimated by this new disease. The interior of Africa, Asia and South America have been invaded. The number of those who have survived the attack but have suffered permanent injury from it are probably as numerous in proportion to the fatalities as are the wounded who can never entirely recover.

We heard a great deal in our newspapers about the air raids on England but very little about the influenza there. Yet the victims of the Zeppelins and airplanes numbered only 554, while more than 10,000 equally innocent men, women and children were killed by the epidemic. It is evident that war attracts attention and arouses terror far out of proportion to its real danger. We rightly honor those who imperil their lives on the field of battle, but we ignore the physicians, nurses and relatives who have run as much risk at the bedside. The difference in attitude seems to be due to the erroneous idea that deaths from any disease are natural and inevitable. Yet it would probably be no more difficult to abolish influenza than to abolish war, easier in fact, because nobody believes in influenza while unfortunately some people do believe in war. Smallpox and typhoid, the pestilences that accompanied former wars and often claimed more victims, have now been brought under control. If there were as many societies for combating the grip as there are for preventing war and as much money spent in studying its causes and prevention as has been expended so far without effect on peace propaganda and peace conferences, could we not expect that its ravages would be greatly reduced if not altogether eliminated?

## LEST WE FORGET

**I**N every community touched by the war there will be for the next half-century men fighting against the handicaps given them on the battlefields where they defended the cause of all humanity. Blinded, crippled, sapped of nerve vigor, they have paid this price that the rest of us might live more abundantly. A debt that never can be paid, a responsibility ever to be met, is thereby ours. John Galsworthy puts its lesson squarely in "The Sacred Work":

The great public of our countries do not yet, I think, see that they have their part in the sacred work. So far they only seem to feel: "Here's a wounded hero; let's take him to the movies, and give him tea." Instead of choking him with cheap kindness each member of the public should seek to reinspire the disabled man with the feeling that he is no more out of the main stream of life than they are themselves; and each, according to his or her private chances, should help him to find that special niche which he can best, most cheerfully, and most usefully fill in the long future.

To lift up the man who has been stricken on the battlefield, restore him to the utmost of health and agility, give him an adequate pension, and reëquip him with an occupation suited to the forces left him—that is a process which does not cease till the sufferer fronts the future keen, hopeful and secure.

## THE LABOR SITUATION

**T**HE labor cauldron is no longer simmering; it is boiling, and the witches' broth is throwing off steam.

Mr. Samuel Gompers has left London for Paris, and will presently go on to Berne, not to participate in the International Congress of Socialists, but to help organize an International Trade Union Congress. Mr. Gompers and his followers are at odds with Mr. Arthur Henderson and his followers, and a merry time is anticipated.

Meanwhile an American Labor Party has been organized and while the various trade unions are flocking into it the Socialist Party has issued a manifesto announcing that it will fight the newly formed party wherever that organization is dominated by "old party influences." The Socialist manifesto reminds "every Socialist member" that the state

and national constitutions of the Socialist Party demand an undivided allegiance. No member may join any other political organization or indorse or support it. The American Socialist Party will be represented at the Pan-American Socialist and Labor Conference to be held in April.

All in all, American wage earners are to be conservative supporters of plain old fashioned trade unionism. Apparently British wage earners also for the most part are non-socialistic trade-unionists, but the Socialists are talking more and are more energetically active. Undoubtedly they are gaining ground, and it would be incautious to assume that the Socialist cause thruout the English speaking countries will not recover from the set-back which the war gave it.

This seems to be the belief of Mr. Gompers, altho he does not admit it. He has, however, in an interview given to the *Pall Mall Gazette*, warned the public that inadequate pay and depressing surroundings are forces which degenerate wage earners and drive them toward Bolshevism. He asserts that Bolshevism is a German device to divert the minds of the people, and that capital and labor must coöperate "to escape the cataclysm of horror which German agents are trying to bring about."

Bolshevism has many more roots than Mr. Gompers perceives, but economic distress, wherever it exists, is undoubtedly one of them. In fact, this influence works more certainly to make Bolsheviks than to make constructive Socialists. It is therefore a serious matter that idleness is now rapidly increasing in the United States. Frank Morrison, secretary of the American Federation of Labor, has submitted to the Immigration Committee of the House of Representatives a report showing more than 125,000 men now unemployed in twenty American cities. He urges Congress to stop immigration until normal times return, and to provide for the employment of returning soldiers.

Secretary Lane, as is well known, believes that emergency measures to provide employment are demanded, and he would make this occasion an opportunity to develop our unproductive lands. Senator Kenyon of Iowa has introduced a bill to expend \$100,000,000 on public works to prevent unemployment.

Plainly the situation is not reassuring. Every business concern should feel responsibility to provide and maintain employment to the utmost of its ability. Every citizen should constitute himself a committee of one to help discharged soldiers to obtain remunerative occupation. Everybody should avoid excited speech and action and try to contribute his bit to constructive effort instead of to turmoil and discontent.

The last appeal of the despairing rummies—spread as a half-page advertisement in the dailies—is that Bolshevism and prohibition are much the same. That is queer when we read in the same papers about the drunken orgies of the Bolsheviks and remember that it was the Czar who abolished vodka.

Before the war Russia used to export \$50,000,000 worth of eggs. Now according to Prince Lvov, "people in Russia are sometimes lucky enough to buy an egg for \$17." The Bolsheviks seem to have killed the goose that laid the golden egg.

Jean Paul Richter said: "In the longest period of peace, man does not tell so many lies or talk so much nonsense as in the shortest war." This has been a long war and is it over yet?

On account of their hatred of German the Chicago Board of Education has prohibited the teaching of French in the city schools.

Have we got to go and learn Dail Eireann in addition to Duma, Soviet, Rada, Skupshtina, Sobranje, Majlis, Rigsdag and Storting?

The Allies have asked the Bolsheviks to go to—well, they call it the Princes' Islands, but they have been longer known under the name of Insulae Demeonesi.

# THE STORY OF THE WEEK

## Peace Congress Resolutions

Five important resolutions were adopted by the Peace Congress at its second plenary session, on January 25. The first of these, introduced by President Wilson in an impressive address (both given fully elsewhere in these pages), provided for the appointment of a commission to consider and formulate a plan for a League of Nations.

A second provided for a commission to investigate and report upon responsibility for the war and for the crimes against international law which were committed in the waging of it, including the personal responsibility of individuals of no matter how high position.

The third provided for a commission to investigate and report upon the amount of indemnity due for reparation of war damages, the amount that the enemy nations will be able to pay, and the method and time of collection of it.

The fourth provided a commission on international labor legislation, with a view to ameliorating the conditions of labor, so far as possible, without interfering with local rights. The fifth similarly dealt with the subject of international control of ports, waterways and railroads.

The five principal powers were all to be fully represented on all of these commissions, with much less representation for the nineteen minor powers. This arrangement at first caused some expressions of dissatisfaction on the part of the latter, but this feeling was tactfully allayed, and on January 27 the appointment of the five commissions was practically completed to general satisfaction.

## THE GREAT WAR

*January 23*—Supreme Council of Peace Congress agrees on principle of League of Nations. Siberian government declines to enter conference with Bolsheviks.

*January 24*—Supreme Council issues warning against land-grabbing. Lithuanians defeat Bolsheviks near Vilna.

*January 25*—Peace Congress votes to appoint commissions on League of Nations, responsibility for war, reparation, international labor laws, and control of ports, waterways and railroads.

*January 26*—M. Clemenceau, president of Peace Congress, appoints commissions. Great strikes in Great Britain and Ireland.

*January 27*—Supreme Council discusses freedom of seas and disposition of German colonies. Fighting in Northern Russia. Revolt in Rumania.

*January 28*—Supreme Council discusses disposition of German colonies. Allies repulse Bolsheviks in Northern Russia.

*January 29*—Allied governments receive memorial from Russian ambassadors and business men concerning rehabilitation of that country.

tional labor questions. It shall benevolently aid and guide the new states that are being formed, so far as they shall need it. It shall exclude from membership the Central Powers of Europe until such time as it shall be convinced of their fitness for membership. It shall look to public opinion rather than to military force for the enforcements of the edicts of the League. All existing treaties between powers which would be incompatible with the principles and operation of the League shall be canceled. Finally, the League shall provide a solution of the problem of general disarmament.

## Warning Against Land Grabbing

The Peace Congress on January 24 sent out by wireless telegraphy a solemn warning to all whom it might concern against the forcible seizure of territory, the rightful title to which the Congress is to be asked to determine. Possession thus gained by force, it was said, would seriously prejudice the claims of those who used this means. No mention of specific cases or nations was made, but it was notorious that in several parts of Europe such efforts at seizure of territory were being made.

**British Plan for League of Nations** No intimation has yet been given of the plan for a League of Nations which the commission appointed by the Peace Congress will recommend. A belief seems to prevail, however, that it will not differ widely from the plan which the British delegates are said to have agreed upon and to intend urging upon the commission. This British plan provides that the League shall create an international court for the settlement of disputes among nations, and a board to consider and determine all interna-

## The German Colonies

The Supreme Council of the Peace Congress, comprising the representatives of the five great powers, devoted January 27 chiefly to an exchange of views concerning the disposition of the former German colonies in Africa, Asia and the Pacific Ocean. President Wilson is understood to have favored some method of international control for most of them, while France and Great Britain were resolutely opposed to the return of any portion of them to Germany. The British attitude was

## THE COMMITTEE ON GERMAN REPARATION

Bernard M. Baruch, Vance McCormick and John W. Davis (left to right) are the three United States representatives on the peace conference committee appointed by Premier Clemenceau to consider the terms of German reparation for war damage. On the committee are also representatives of Great Britain, France, Italy and Japan.

Darling in New York Tribune

IT IS SURPRIZING HOW MANY GREAT MEN OF HISTORY HAVE COME FROM MISSOURI

largely determined by the demands of Australia, New Zealand and South Africa, those self-governing Dominions insisting that the German territories adjacent to them shall be given to them. No final plan was agreed upon, but the impression prevailed that ultimately the Kamerouns and part of Togoland would be given to France, the rest of Togoland and most of East Africa to Great Britain, part of East Africa to Belgium, Southwest Africa to the Union of South Africa, New Guinea and other islands to Australia, Samoa to New Zealand, the Caroline and Marshall Islands to Great Britain and Japan, and Kiao-chau back to China.

Such distribution, excepting of Kiao-chau, may, however, be made under the principle suggested by General Smuts and advocated by President Wilson, to which the other powers are said to have agreed. That is, that the various powers shall thus take former German territory not absolutely but for a prescribed period and in trust as the mandatories of the League of Nations, thus assuring that an open commercial door and equality of opportunity will be maintained in all. Such an arrangement shall, it is proposed, be made for ten years, at the end of which time the League of Nations shall determine the further disposition of the territory.

Czecho-Slovaks and Poles

The Supreme Council of the Peace Congress devoted January 29 largely to consideration of the interests of the Czecho-Slovaks and Poles, and the establishment of the new order of affairs in their countries. It formulated the instructions which are to be given to the Allied Mission to those countries, which was recently created and which will soon go on its errand. Representatives of Poland and Czecho-Slovakia were invited before the council to present their views.

The Parley with Russia

The invitation of the Peace Congress to the various Russian factions to cease their strife and to send representatives to a friendly conference on Princes' Island in the Sea of Marmora, has not yet been accepted. The anti Bolshevik leaders, at Archang-

gel, Omsk and elsewhere, object to entering into conference with those whom they regard as traitors and criminals, while the Bolshevik Government objects to the place of meeting as too remote, and demands that before any such conference is held the Allies shall withdraw all their forces from Russian territory.

The President at Rheims

The President, accompanied by Mrs. Wilson and a few others, on January 26 visited Rheims and other places which had been devastated by the war, including the Chateau Thierry region, in which the American troops did some of their first heavy fighting. At Rheims the party was conducted thru the ruins of the cathedral by Cardinal Lucon. On his return the President's comment was: "No one can put into words the impressions I have received among such scenes of desolation and ruin."

Great Strikes in Britain

Labor troubles in the United Kingdom culminated in widespread strikes in shipyards, mines and elsewhere. On January 27 it was reported that the strikers who had ceased work comprized 100,000 shipyard employees

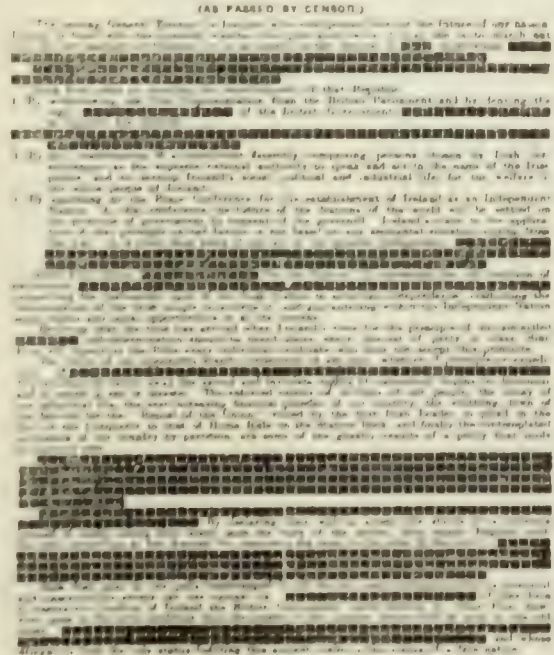

and electricians at Belfast, 15,000 dry-dock and shipyard workmen in London, 20,000 on the Clyde, 4000 at Manchester, 5000 at Edinburgh and Leith, and 24,000 miners in Fifeshire and 6000 in South Wales. There is no general reason for the strike, each locality having its special cause. In London it is for higher wages; at Manchester, because one foreman is a non-unionist; in South Wales, to compel the reinstatement of discharged soldiers; in Fifeshire, Edinburgh and Leith, over hours of labor. Some of the strikes are not sanctioned by the officials of the labor unions.

The Irish Problem

The meeting of the Sinn Fein Congress at Dublin, with its Declaration of Irish Independence, was permitted to pass without disturbance, and without official notice of any perceptible kind. It was followed on January 23 by a meeting of Moderate Home Rulers, which proposed a scheme of Home Rule with three Parliaments, one for Ulster, one for Munster, and one for Leinster and Connaught. The next day the council of the Irish Unionist Alliance met, also in Dublin, and adopted resolutions reaffirming "unalterable opposition to Home Rule for the whole or any part of Ireland."

Portuguese Revolution

While elsewhere monarchies are becoming republics, a determined effort seems to be making to turn the Portuguese republic back into a monarchy. Serious fighting occurred at Oporto on January 23, the monarchists defending the place against the Government fleet. The next day a part of the Lisbon garrison went over to the revolutionists, the royal flag was raised at Santarem, and nearly all of northern Portugal was in revolt against the republic. On January 27 the monarchists were said to be in complete control of two provinces in the north, and to be expecting the arrival of the former King, Manoel, to resume his throne. The republican Government, however, was putting forth all possible force against the rebels, and exprest entire confidence in its ability to suppress them.

ELECTIONEERING UNDER DIFFICULTIES This is what the British Censor did to a Sinn Fein poster in the last election

### Famine Mortality in Germany

The German Government announces, as the result of elaborate official investigations, that during the last two years of the war there were more than 500,000 deaths of civilians in the empire caused by lack of proper food and thus "due to the blockade." These statistics are assumed to be put forward at this time in an attempt to counterbalance the Allied charges of cruelty and inhumanity against Germany, tho the German Government takes pains to explain that it publishes them not as propaganda but strictly for the sake of establishing the truth.

### The German Elections

Complete returns from the general elections in Germany show the choice of 166 Majority Socialists, against 89 in the last Reichstag; 93 of the Christian People's party, composed of the old Centrum and some Protestants, against 91; 75 Democrats, formerly Progressives and National Liberals, against 90; 60 National People's and People's party, formerly Conservatives and Free Conservatives or Junkers, against 71; 22 Minority Socialists against 19; and five "wild ones." There were elected 34 women delegates, including some from every party save the former National Liberal. It is expected that the Majority Socialists will form an alliance with the Democrats, making a majority of 241 out of 421. Preparations are being made for the sessions of the National Assembly at Weimar.

### Germans Protest "French Cruelty"

Many official and public complaints are made in Germany of the terms exacted by Generalissimo Foch for the extension of the armistice, which are described as "unnatural French cruelty exerted in demands not justified by the terms of the armistice." As a protest against such "cruelty" General von Winterfeldt has resigned from the German Armistice

Winous in New York Times

### WHY THE PEACE CONFERENCE NEEDS PUBLICITY

"If we could only put out that light we could sneak in," say the "powers of darkness" hanging on the outskirts of peace negotiations

Commission. This "cruelty" on the part of France appears chiefly to consist in requiring Germany to surrender or to replace machinery and goods stolen from France and Belgium.

### "Hoch, der Kaiser!"

The anniversary of the birth of the former German Emperor was generally observed in Germany, with articles in many leading papers eulogizing William Hohenzollern and expressing loyalty to him. Some of them openly urged the reestablishment of the empire, with him on the throne. The German National Party, composed of Junkers and Pan-Germans, sent him a message avowing their undiminished loyalty to him.

### German Captives Set to Work

The French Cabinet has decided to employ German prisoners of war on reconstruction works in those parts of France which were ravaged by the war. A minimum of 200,000 will, it is an-

nounced, thus be at work by March 20. It will be recalled that under the terms of the armistice all Allied prisoners in Germany were to be released, without any reciprocal release of German prisoners by the Allies. It is thus that the French Government will be able to utilize the labor of hundreds of thousands of Germans in repairing the damage which they themselves and their comrades did to France.

### Disturbances in Russia

Fighting continues at various points in Russia, with varying results. It was reported on January 23 that the Bolsheviki forces were evacuating Petrograd and that the Government was removing to Nijni Novgorod. Four days later the Bolsheviki sent four strong columns against the American and Allied troops at the north and compelled them to evacuate Shenskursk. They were also reported to have captured Libau and other places on the Baltic coast.

At the south, British forces on January 26 advanced from Baku and occupied the Trans-Caucasian railway, and also Petrovsk and Astrakhan, at the mouth of the Volga River. This was supposed to offer possibility of water communication between the British at the south and the Allies, Czechoslovaks and friendly Russians at the north, who are on the upper reaches of the Volga.

French and Rumanian forces were reported on January 27 to have entered Kiev, the capital of Ukrainia, which was lately reported to be in the hands of the Bolsheviki.

The government at Omsk, under Admiral Kolchak, has suffered a setback in the loss of Orenburg. Reinforcements could not reach General Dutov and he was obliged to surrender this important junction to the Bolsheviki.

### Memorial from Russians

What was called a "conference of Russian Ambassadors and business men in Paris" on January 29 presented to the Allied Governments a detailed memorial concerning the state

© Underwood & Underwood

### THE SEAT OF THE NEW GERMAN GOVERNMENT

The recently elected government of the German republic has chosen this theater at Weimar as the seat of power

of Russia and plans for its rehabilitation. This document declared that the old order of Czarism could not be restored. There must be a new order, founded upon the sovereignty of the people, without special privileges or class distinctions and with equality for all in the sight of the law. Agrarian and industrial reforms were demanded; Polish independence must be recognized, and the Baltic provinces must have autonomy.

The signers of this memorial were representatives of the first revolution in Russia, which overthrew Czarism, but was itself overthrown by the Bolsheviks.

**Revolt in Rumania** A peasant revolt occurred on January 28 in Rumania, according to dispatches from Budapest, extending generally thruout the country, including the capital, Bucharest. It appeared to have been planned in advance and to have started simultaneously in all places at a given hour. Soldiers returning from the war were said to have been among the leaders.

**Crimes Charged to Soldiers** The *Matin* newspaper of Paris quotes statistics showing that during the month of December there occurred in the Department of the Seine, comprizing the city of Paris, no fewer than thirty-four cases of manslaughter, 220 assaults and nearly 500 serious fights or brawls, all due to American soldiers. At that time, it is pointed out, the American police in Paris, charged with control of the soldiery, consisted chiefly of officers and men who had been wounded and who were unable to deal with serious disorders and crimes. Since then the force has been much strengthened and a decided improvement is noticed.

**Prohibition Proclaimed** The State Department made a formal proclamation on January 29 that the national prohibition amendment had become a valid part of the United States Constitution. The date upon which it will become operative, however, will probably be January 16, 1920, one year from the date of its ratification by the thirty-sixth state.

Forty-four states now have ratified the prohibition amendment, and the dry forces contend that not a single state in the Union will go on record against it.

**\$100,000,000 for Food** The Senate passed on January 24, by a vote of 53 to 18, the food relief bill asked for by President Wilson to relieve famine in Europe and in the Near East. The bill provides that the money shall not be used in Germany, German Austria, Hungary, Bulgaria and Turkey. Provision is made, however, for including Armenians, Syrians, Greek and other Christian and Jewish populations of Asia Minor, now or formerly subject to Turkey, among the peoples to receive relief.

The \$100,000,000 voted by the United States is to be part of a food relief fund of \$300,000,000, the other two-thirds

contributed by the Allies, and it is to be expended by the Interallied Food Commission, of which Herbert Hoover is chairman. Advices from Europe state that this fund will hardly be sufficient to avert the danger of widespread starvation until the next harvest.

The bill passed by the Congress of the United States requires that its appropriation of \$100,000,000 be spent, as far as is possible, in this country in order to distribute our increasing surplus of pork and wheat.

**Wheat at War Prices** To carry out its promise to pay the farmers \$2.20 a bushel for the wheat crop of 1919 the Administration sent to Congress on January 28 a bill calling for an appropriation of \$1,250,000,000. This money, according to the terms recommended by the Federal Food Administration, is to be at the disposal of the President of the United States to enable him to "carry out the guarantees for 1918 and 1919 wheat with such agents or agencies as he may desire to create. He is furthermore authorized to buy and sell not only wheat and wheat products, but foods and foodstuffs," and is given power to assume "absolute control over dealers, millers, elevators, exchanges and all others having anything to do with the distribution," by means of a license system. The President is given complete control of all exports and imports of "wheat, wheat products and other foodstuffs and feeds," and to dispose of the American surplus of wheat he is empowered to enter foreign markets.

That the bill will pass Congress in its present form is considered extremely unlikely. The general opinion seems to be that there can be no question of anything but "strict accountability" on the Government's promise to the farmers of \$2.20 a bushel for wheat, but that the sweeping powers delegated by an appropriation of \$1,250,000,000,

with complete control of its expenditure, will have to be curtailed, or at least much more explicitly defined, before Congress will approve the measure.

#### The Next National Amendment

There are now seventeen state legislatures which have passed resolutions favoring woman suffrage and calling upon the United States Senate to take immediate action for a national woman suffrage amendment.

New York comes first in chronological order, then California, Michigan, North Dakota, Colorado, Indiana, South Dakota, Arizona, Idaho and Minnesota. Oregon, Washington, Nebraska, Arkansas, Wisconsin, Utah and Texas added their appeals to the list during the week of January 20.

The national amendment for woman suffrage was passed by the House of Representatives in January, 1918, by a vote of 274 to 136, but failed by a very narrow margin to pass the Senate.

**Soldiers and Jobs** There are many reasons that combine to make the unemployment problem of the returning soldiers a serious one just now. It is the dullest season of the year for getting jobs. Enterprizes requiring outdoor work will not begin till spring. Manufacturers and business men are wary of expanding peacetime industries until the question of taxation is finally settled for 1919. Money with which to back new enterprizes is particularly "tight." The soldiers themselves are restless, often far from desirous of fitting back into the grooves of work for which their pre-war experience fitted them.

The result is summed up in the figures given recently by the secretary of the American Federation of Labor to a committee of the House of Representatives. According to Mr. Morrison's statement there are more than 125,000 men unemployed in twenty-

#### TO DRAW UP INTERNATIONAL LABOR LEGISLATION

The representatives of the United States on the committee of the peace conference appointed by Premier Clemenceau to consider international labor legislation are Samuel Gompers (left) and Edward N. Hurley. Mr. Gompers is President of the American Federation of Labor and delegate from the United States to the International Labor Conference in Paris. Mr. Hurley is head of the United States Shipping Board and Emergency Fleet Corporation. He was chairman of the Federal Trade Commission previous to 1917.

#### THE INCREASE OF OUR FOREIGN TRADE

This record of the trade from 1890 to 1918 shows, with the exception of the first five years, a continued increase in both our imports and exports. Since the beginning of the war, exports, of course, have made an enormous gain, reaching in 1918 more than six billion dollars.

one cities of the United States, New York excluded. Because it is the demobilization point of the largest number of returning troops New York presents abnormal conditions of unemployment. Forty thousand men discharged from service were looking for work in New York at the end of January, according to a statement made by the American Soldiers' and Sailors' Protective Association in that city.

The War Department has taken a step to relieve the immediate difficulties of the situation by ordering that any man in the army may remain temporarily in service until he can find civilian employment, and will then be given his discharge at his own request. This order has a further advantage in continuing the soldier's allotments to his dependents as long as he is in the army.

Congress has passed a bill authorizing the payment of thirty days' pay and five cents a mile traveling expenses home to discharged officers and enlisted men, and permitting soldiers to retain their uniforms.

**The Workers Win** Fifty-five thousand garment workers in New York City went back to work again last week when their strike was settled by the employers' grant of a forty-four hour week to all workers. The strikers' demand for a forty-four hour week was due not only to the desire for shorter hours but to the fact that a shorter week will serve to spread their work thruout the year and prevent it from being unduly heavy in season and slack between times.

A chief difficulty in settling disputes in the clothing trades has always been the seasonal nature of the work. The advisory board, headed by Felix Frankfurter, which brought the present

strike to an adjustment made the following recommendation on this point:

The hope is earnestly expressed that the forty-four-hour week will be recognized thruout the industry, in view of the desirability of bringing about proper standardization. It would be unfortunate if the hours of labor should vary in this industry in the several important centers where it is extensively conducted.

Movements urging the adoption of the shorter hours of work are already in progress in Boston, Rochester, Philadelphia and Baltimore.

On the question of wages, in which the strikers asked an increase of 15 to 20 per cent, the board postponed decision pending a further investigation of the cost of living and the existing basis of compensation.

**The I. W. W. Found Guilty** Forty-six men and women members of the Industrial Workers of the World under trial for conspiracy to violate the conscription act of the United States, were found guilty in the Federal District Court of Sacramento, California. The charge was based upon the dynamiting of the home of Governor William D. Stephens on December 17, 1917. Thirty alleged members of the I. W. W. were arrested within five days after the explosion.

The general charge in all the indictments was a conspiracy to violate the Constitution of the United States and the Espionage Act. The indictments also charged that the defendants sought to accomplish the object of the organization by threats, assaults, injuries, intimidations and murders of persons, and the injury and destruction of property by sabotage, the forcible resistance to the execution of all laws, and finally the forcible revolutionary overthrow of all existing governmental authority in the United States.

#### A Meaty Discussion

The testimony of the packers before the Interstate Commerce Committee of the House of Representatives continues to focus attention on the after-war problems of the meat industry. During the war, of course, production and trade were enormously stimulated. In the case of fats, for example, our exports increased from 25,000 tons a month in the summer of 1917 to 200,000 tons in January, 1919. Now, with the after-war demand for lower prices, the packers face the difficulty of getting rid of their huge surplus without losing all their profits.

In the course of the investigation by the Interstate Commerce Commission, J. Ogden Armour, head of Armour & Co., testified that a monopoly of the entire meat industry of the country under Government supervision seemed to him the only plan which would enable the producers to make fair profits and at the same time cut down the cost of meat to the consumer. Louis F. Swift, president of Swift & Co., also urged a continuance of Federal supervision over the meat industry in order to control prices and to arrange shipments abroad.

The problem is one of far more serious concern than packers' profits, as Food Administrator Hoover pointed out in a statement issued from Paris on January 26:

The dominating food problem is the problem of the American farmer. If the packer's profit of 2 or 3 per cent on his turnover is too high, it is the duty of Congress to tax it out of him. If the farmer's prices threaten to fall below the level of a fair return, it behooves the country to do some quick, clear thinking.

Taking it broadly, before the European war began we exported about five million tons of food a year. This year we are prepared to export at the rate of from fifteen to twenty millions of tons. The increase represents the patriotic service of the American farmer, plus the voluntary sacrifice of the average American.

The submarine had so shortened the world's shipping that the Allies were unable to reach the distant markets of the Southern Hemisphere, and we were bound

#### A "Y" WORKER WITH THE A. E. F.

No critic of the Y. M. C. A., however harsh, has had any complaint to make of Mutt, the soldiers' dog. During the fighting it was his job to carry cigarets from the supply depot to the men in the trenches.

Harding in Brooklyn Daily Eagle

## THE A. E. F. IN RUSSIA

A case of sending a boy to do a man's work to create in America sufficient food to carry Europe.

The armistice came suddenly, freeing shipping from military use and reopening to the Allies the cheaper Southern Hemisphere and the colonial markets.

We are thus faced with a serious problem with respect to our own great supplies, patriotically accumulated. If an early peace is signed and the markets of Europe are opened freely to trade there will be a greater demand for food from the new mouths than ever this surplus could supply. But in the period between the armistice and peace we have a very difficult situation.

We have found it possible to protect the American farmer in the two and one-half months since the armistice. This we have done by cooperating with the Allies, in opening wider markets to neutral countries and by relief shipments into the liberated territories.

By next May, if we have peace and freedom, any surplus that accumulates now will be turned into another world shortage of fats. Indeed, if the entire consuming populations of the world were able to obtain fats today there would be a shortage at this moment, even with our great surplus production.

The real solution lies in the hope of early peace and, in the meantime, the steady demobilization for all restrictions on free marketing of surplus foods, except in enemy territory, thus reestablishing the law of supply and demand.

## Losing Money on Railroads

Three-quarters of a billion is the sum asked for by Director General Hines to keep the railroads running under Government control in 1919.

This appropriation is sought from Congress in addition to the \$500,000,000 which was granted in the Railroad Control Act, and which was called the revolving fund.

Director General Hines, in his letter to Secretary Glass, shows that it will take \$221,206,904 for the Railroad Administration to settle its accounts for 1918. After applying the original appropriation of \$500,000,000 made by Congress in the revolving fund toward this settlement, there will still be needed \$221,206,904.

From the appropriation of \$750,000,000 asked Mr. Hines proposes to meet the requirement of \$221,206,904, which will leave a balance of \$368,183,096

toward meeting the capital expenditures for 1919.

That this sum is the minimum amount necessary to continue the administration of the railroads and to protect the Government's own financial interest in them, and that the money will eventually be repaid, is Mr. Hines's contention. He says in conclusion:

It is highly important that adequate funds for these purposes should be provided so as to give the Railroad Administration a reasonable margin for encouraging the making of such railroad improvements as may seem justifiable from the railroad standpoint, especially since such improvements will aid in stabilizing the general industrial situation.

Whether Government control shall continue until the end of the twenty-one months period or shall be terminated in the next few months, it is equally necessary that the appropriation above recommended be made.

If the control continues to the end of the twenty-one months period, it is my belief and the belief of my associates in the Railroad Administration that we cannot count upon the railroad companies financing during the calendar year 1919 any greater portion of their capital expenditures than it is above assumed they will finance.

On the other hand, if control should be terminated in the next few months, it will still be true that a very large part of the capital expenditures for 1919 will have been made, and, besides, the possession of an adequate fund to facilitate the transfer back to private control and to give temporary aid in financing will be highly desirable.

The request that Congress appropriate a large additional sum to be expended on the railroads has been for some time prophesied as the only alternative to a considerable increase in railroad rates.

## Bringing Home the Men

Return home and demobilization of all the remaining 1,800,000 troops overseas will be accomplished before the 1st of August under plans worked out by the War Department and laid before the Senate Military Affairs Committee by General March, Chief of Staff.

Leads in Baltimore American

WILL SOME ONE TELL HIM WHERE HE GETS OFF?

This achievement will require the transportation of 300,000 men a month and it is made possible by the use of ships allotted by the Allies and by the German passenger tonnage to be placed in service soon under terms of the armistice and later agreements made by Chairman Hurley of the United States Shipping Board.

The 785,000 men still in training camps in this country are all to be demobilized before the 1st of March, with the exception of a small number retained for "overhead duty."

The length of the period during which an army of occupation must be maintained in Germany is of course another question, depending entirely on decisions reached by the associated governments at the Peace Conference and upon conditions in Germany. The army of occupation is made up chiefly of regular army units and experienced divisions.

Underwood &amp; Underwood

## AN AEROPLANE OF TIN

Canadian soldiers in northern France are inspecting this fallen German plane, which is unusual, being made entirely of metal. The wings are proof against gunfire.

*Day after day in war-torn Palestine where they play Ring a Ring a Rosie and eat bread and milk each morning are part of America's job*

**I**F you stood in the middle of Germany today and surveyed all of Europe, you would see that virtually all its population of four hundred million human beings is short of food. Not all, but many, are starving. Wherever—except in France—the hand of Germany has reached out over its borders, there starvation is the threat—starvation and disorder. And England, even, is suffering discomfort, more than France! And the French, British and Italians still have one hundred and twenty million persons on rations, a condition that has less disastrous results in war than in peace, when victory is over the horizon. Then, too, there are forty millions of people in the neutral nations. And, in addition, a hundred millions in the enemy nations. In fact, of all the areas of Europe there are only three considerable ones which need not import a great deal of food before the next harvest—southern Russia, Hungary and Denmark.

In Poland, Finland, Serbia, Armenia and central and northern Russia people are actually dying of starvation—which is an easier thing than might be imagined, for those who, thru four long years, have suffered undernutrition. But starvation is, in its physical and political consequences, a relative matter. That is, whereas thousands in starvation areas die from the sheer need of food, many thousands more die from attendant ills which make bitter progression when all physical resistance is down, when the tissues and bones of children, even, seem like dead little birches in a wind, to give way. And by the same rule, so the history of Europe is demonstrating, starvation may directly claim five or fifty thousand, and attendant ills five times as many. The impress of the fifty who die last, perhaps, may be greater far, in its enduring quality, than the shallow impress of all the thousands of graves that were dug before. In Belgium and northern France, for instance, Mr. Hoover has said ten millions of persons would have died from starvation but for the pitiable bread-line help afforded. We know what the consequences of the violation of the rights of the Belgians have been; we can imagine what, if ten millions had died, they would have been.

Now it is east of the Rhine that trouble is brewing, and brewing by no means quickest in Germany.

"Our first and deepest concern," adds Mr. Hoover, "must be for the little Allies, who were under the German yoke—the Belgians, Serbians, Rumanians, Greeks, Czechs, Jugo-Slavs," and the odds and ends of those new, embryonic republics fringing what was Russia, which, with the nationalities mentioned by Mr. Hoover, have about seventy-five millions of hungry or starving persons. "If we do not feed these nationalities Heaven only knows what the consequences will be," said one of Mr. Hoover's associates.

"Our next concern," Mr. Hoover went on, "must be to relax blockade measures to the end that the neutral states of Europe which are now on short rations shall be able to take care of their people and prevent the growth of anarchy. This group constitutes about forty millions. Another problem lies in the fifty million people of northern Russia, a large part of whom are inaccessible owing to the breakdown of transportation, and thru sheer anarchy. Millions of these are beyond all help this winter. At this moment Germany has not alone sucked the food and animals from those masses she has dominated and left starving, but she has left behind her a total wreckage of social institutions, and these people are now confronted with engulfment in absolute anarchy."

The President has insisted on substantially the same points in his appeal to Congress. "Food relief," he said, "is now the key to the whole European situation and to the solution of peace." The \$100,000,000—about a fourth of the total required in Europe—which Congress promptly voted, "will not be spent for Germany itself, because Germany can buy its food, but it will be spent for financing the movement of food to our real friends in Poland and to the people of the liberated units of the Austro-Hungarian empire, and to our associates in the Balkans."

One hundred million dollars—twenty-five cents for each of four hundred million hungry persons—is nothing—nothing for America with its full hands and mouths, while over there men and women and children are starving; less than nothing when it is remembered that about the only way in which we are likely to get our loans back from some of our debtor nations is by helping them to their feet now, when, more

# FEEDING A STARVING WORLD

BY DONALD WILHELM

than ever they need help; less than nothing when we remember that the Government guaranteed the farmers more than \$2 a bushel for their wheat crops until May 31, 1920, and the only way in the world that Congress can hope to get its money back is to make a market for that wheat, for it is clear now that the natural laws of international demand and supply will not make sufficient market for it. It is the stuff that tragedy is made of, in fact, this spectacle of one side of the world enjoying a plenty while over there, almost within the handclasp of modern transportation ingenuities, people by the thousand are starving.

War is bad enough, of course. When war is over such conditions seem vastly more deplorable, especially when we remember, as Frederic Wolcott of the Food Administration, who has just left for Poland to direct the work of relief there, says, "the loss from starvation includes among its victims a large percentage of children and women of the next generation and the mothers of a nation. In consequence of the lowered vitality of all the working classes, the decreased resistance to disease and the decline of the birth rate, the losses suffered in this war by the nations short of food is actually far greater than the losses of those called into battle."

"I went to Poland, which is typical of the worst," explained one of Mr. Hoover's associates. "The country had been twice devastated. First the Russian army swept thru it, and then the Germans. Along the roadside from Warsaw to Pinsk, near half a million people had died of hunger and cold. The way was strewn with their bones picked clean by the crows. With their usual thrift, the Germans were collecting the larger bones to be milled into fertilizer, but finger and toe bones lay on the ground with the mud covered and rain soaked clothing. Wicker baskets were scattered along the way—the basket in which the baby swings from the rafter in every peasant home. Every mile there were scores of them. I started to count. That road was more than 200 miles. I gave it up, there were so many."

Four hundred thousand people died in Poland, following the German invasion, Dr. Wolcott avers. Altogether a fourth of Poland's millions have died, cables Mr. Hoover. In Serbia, other experts say, a million people out of three millions have perished in the last four years—and Mr. Hoover estimates at least a fourth have died. And now other nations are in the procession.

But what strikes hardest in all this situation is that the world has food enough for all. Then why are people

starving? Because transportation facilities, including ships, 40 per cent of all, were destroyed, and some regions, as a result, cannot be reached; because other regions have not the money, even Italy has not sufficient, and must have credit; because other regions are as No Man's Lands in which thousands of families are starving, beyond which, along yonder bulwarks, the Red Flag flies, forbidding relief, "which relief," said one of the associates of Mr. Hoover, "we have to take in baskets, as it were, to make sure that the people get it who should. Then we must stand by to watch them eat it, to make sure that they are permitted to eat it."

No one knows precisely how much food is needed in the world. All during the war there has been only one European nation, England, which has kept its statistical order and acumen in regard to food. All the others have been more or less victims of circumstances, with the result that even when France was called upon for estimates, those estimates usually were found hurried and inexact. And if such disorder has been the rule in nations as staunch as France and Italy, the condition in some of the other nations of Europe can be guessed—in the Balkan countries, for instance, in Poland, in other areas large and small which were nations and now are not, or were not and now are.

The Food Administration states that there is food enough for all if it can be allocated, and some of the authoritative agencies of the Agricultural Department helped the writer to draw the following conclusions: That, getting up in the morning, the world discovers promptly, perhaps, that there is an ample supply of coffee in the world, thanks to the fact that the Central Powers, which were among the world's greatest coffee users, have been cut off from the supply in Brazil and the other coffee centers, and coffee hence has accumulated. Bread, likewise, exists and will continue to exist, in plenty; that is, our wheat crop promises to approximate, in 1919, something like a billion bushels, and the accumulated supply in the Argentine and in Australia is tremendous. The Argentine is figuring on an exportable surplus of 185,000,000 (which is a trade opinion, by the way) and some of it is already in transit, and the Australian Wheat Pool estimates that, when the crop now being gathered is in, Australia will have an exportable surplus of about 210,000,000 bushels. And India, with about 50,000,000 exportable surplus, and Canada, with about 100,000,000 exportable surplus, and the Ukraine, are also in the running. Sugar exists in sufficient quantity—the half the sugar beet industry of Europe has been out of commission the rest of the world has tremendously increased its production. And likewise rice: British India had a bumper crop, and tho the acreage this year is about 11 per cent less, still another goodly crop is in order, and the Japanese (this, again, is not an official figure, but a trade estimate) put their hulled rice at 226,000,000 bushels, an increase of 9,000,000 over last year, so that about

an average world crop is promised. Then people have learned to eat rye, with the result that we in the United States have a rye crop on hand which is just about double that of the average of the years 1912-1916. And estimates indicate that there is about a 9.5 per cent increase in the total barley crop of the Northern Hemisphere over last year, and 12¼ per cent over the average for the years 1912-1916; and that the oats crop is 1.8 per cent greater, in the Northern Hemisphere, than last year and 17.3 per cent greater than the average for the years 1912-1916. Corn, for the Northern Hemisphere, is 13 per cent less than last year's crop, but about equal to an average crop.

Now, if we supplement our lunch with salad, made from garden products which exist rather generally in quantity, we shall find an ample supply of cottonseed oil. Out of the 1917 crop of cotton they made 1,188,000,000 pounds, with olive oil on the way. And if we supplement our lunch with dinner, which is something inconceivable to millions of people in Europe these days, we find that the authorities are fairly well agreed on the world meat situation; that is, Europe will need, in the coming year, about 25,000,000,000 pounds, and so far as surveys now indicate Europe can supply about 7½ billions of pounds, and the rest of the world can supply Europe about an equal amount, 4½ billions of pounds of which are due from America. But this estimate may be low; at any rate the reports coming back from Europe from the Allied investigators indicate that meats, fats—notably butter—and milk are so scarce that in all the famine regions they are sorely missed, especially by children, who need fats in large quantity normally, and need them especially after four years of fasting.

The countries along the western

fringe of Europe—Norway, Sweden, England, France, Denmark, Belgium and Holland—can get by until the new harvests with our help. Among the countries in the west of Europe the worst off, of course, is Belgium.

Belgium was an intense little country of only about 11,000 square miles—about as large as the State of New Jersey, one-fourth as large as the State of Pennsylvania. It had more miles of canals and railroads for its size than any other similar area in the world, with a population of 654 to the square mile—nearly twice that of Great Britain and twice that of Germany, three times that of France and twenty-three times that of the United States; with exports twice as great as those of Great Britain, three times those of Germany or France, and imports twice those of Great Britain, three times of Germany, seven times those of the United States. It was, it may be seen, a land in which everything, industrial, agricultural and otherwise, was closely interrelated and interdependent. There for four years the people have lived on the bread and soup of the Commission for Relief in Belgium, if indeed they were that fortunate. Many of them have been in slavery behind the German lines and are now being returned in hundreds of thousands, depleted in physical strength to an extent that Americans, apparently, hardly can understand. But Belgium is happily off when it is compared with some of the small, new nations around the other fringes of the land that perpetrated all the wo.

The whole black problem of starvation in Europe is illustrated, not by Italy with its 35,000,000 in population and 110,000 square miles of territory, which is in intermediate position and condition, but rather by the poor and overcrowded door-mat for the mighty —Poland. [Continued on page 200]

# PUTTING PRICES ON A PEACE BASIS

BY ARCHER WALL DOUGLAS

*Mr. Douglas, who heads the Committee on Statistics and Standards of the United States Chamber of Commerce, has recently completed an investigation of general business and crop conditions for the Government. In the following article he gives the gist of his findings, pointing out the necessity of a readjustment of prices to bring them to a lower level gradually*

THE coming of peace found this country in the midst of unexampled prosperity. The harvest for 1918 was one of abundant crops, save in some sections of the Northwest and Southwest, where the heat and drought of the previous summer practically destroyed all growing vegetation. Farm products were selling at high figures, unknown since the ending of our Civil War. Live stock of all kinds was increasing throughout the country, especially in the southern states, which are fast becoming one of the great cattle and hog raising regions of the world, as the Texas cattle tick is becoming exterminated. Meat, as well as grain and cotton, was at record breaking prices, so that the farmers enjoyed a welfare and prosperity beyond all previous experience. The European conflict gave definite evidence of both the willingness and ability of the American farmer to render possible the winning of the war by an unparalleled food production under most trying and difficult conditions.

Every important industry was running full time and still unable to take care of its orders, so great was the combined Government and domestic demand. Labor was fully employed at the largest wages ever paid. So scarce was man power in industrial centers that women were called in to make good the deficiency in almost every phase of activity.

General business was inevitably in large volume under these conditions, so widespread and high was the general purchasing power among the many. If we were spending much we were also saving much, despite foolish and unknowing talk to the contrary in economic and financial circles.

Even the enormous and unprecedented buying of Liberty Bonds and War Savings Stamps exercised only a very slight depressing and temporary effect upon the general volume of business.

Practically the only speculation was the buying of merchandise far in advance of actual needs. But the unhealthy speculative side of this was practically rendered of no effect by the extreme difficulty in getting goods promptly and the fact that the goods were sold to the consuming trade as soon as received, so that there was no undue accumulation of high priced stocks of merchandise in any section.

There was little of that demoralization in some directions that we have regarded as the inevitable accompaniment of war. Instead there was a widespread and constantly growing patri-

otism which realized the potential dangers of the situation and sought to avoid them by the exercise of ceaseless vigilance, self-restraint and self-denial.

The most unhealthy feature of the situation were the excessive profits which were common to every phase of business endeavor and which consequently added much to a cost of living already unduly high. The prices of commodities advanced faster than wages and salaries, as is always the case under such circumstances. The result bore heavily upon the many thus affected, and only very general employment proved a saving grace to the situation. There were more people working in each family than ever before and consequently more bread winners and fewer dependents.

The war was so prolonged that, with the aptitude and ease of human nature to adjust itself even to untoward and artificial conditions, there arose a tendency among those earning unprecedented high wages to consider the passing circumstances as things of permanence and to adjust their mode of living accordingly.

More than two months have elapsed since the armistice was signed, and outwardly there is little change in the situation. The volume of business is somewhat less. There are some declines in prices where previously only advances occurred. Labor is somewhat more plentiful, for the Government is fast canceling its contracts and releasing those whom it formerly employed. In truth, however, the change is profound and far reaching. The former enthusiasm for winning the war has given place to a sober, serious consideration of the problems of peace. In the beginning these problems center

around the question of falling prices as a natural reaction from

the unreasonably high figures which prevailed during the war and as a necessary result of the lessening demand occasioned largely by the Government withdrawal from the markets in such great measure.

Because of the prospective decline in prices, in fact, it has already commenced, there follows naturally that caution and conservatism in purchases which always accompanies a falling market.

The operation of all these causes means a reduced production to accommodate itself to a lessened demand—which in turn brings up the portentous question of the employment of labor. So that whatever may be our portion in the somewhat removed future in the way of great expansion of trade, both at home and abroad, it is very certain that the things which lie immediately ahead of us are in the sequence I have recited, and so our chief concern must be for them.

The very first step must be a return to a lower and more natural level of prices, for we shall not get anywhere in the problem of readjustment without that as a starting point. Not only is there no real warrant for the present level of prices in most lines of commodities, but they constitute a very serious menace to both social and economic life. They were a part of the abnormal atmosphere of war, and both the cause and reason for their being have passed away. If let alone, untrammelled and unregulated either by Government fiat or trade combinations, prices will soon find the natural levels always established for them by competition and the law of supply and demand. Today, for instance, were it not for Government regulation, the price of wheat would be a little more than half its present figures, and the cost of hogs about 25 per cent less.

We have been on a war basis of prices and we shall have to get back to a peace basis, despite much optimistic prophecy to the contrary. Just what that basis will be is beyond human ken, but there is no expectation of a return to the level of pre-war prices, nor any apprehension among the many that the fall in prices will either be so precipitate or so widespread as to bring about one of those commercial cataclysms which marked the business depressions of 1893-96 and 1907-08. This recession in prices promises to be rather an orderly retreat than the disastrous rout which characterized our former business panics. The talk of high prices continuing after war does not get far with the great mass of people who are accustomed to face facts and are not given to fooling themselves.

The problem of labor hangs largely upon the prices of commodities. The demand for higher wages and salaries during the war arose largely from the increased cost of living. For wages and salaries have [Continued on page 201]

# WHAT WE CAN DO FOR RUSSIA

BY JEROME DAVIS

An anti-Bolshevik demonstration of students in front of the University of Moscow on December 16, 1917. These photographs were all taken by the author

*The great need of the hour is more first hand information about Russia, since most of what we hear is bitterly partisan on one side or the other. But Mr. Davis has recently returned from Russia, where he has served for nearly three years as secretary of the International Committee of the Young Men's Christian Association, and he has seen the revolution from the inside. No one of the American Red Cross and Y. M. C. A. workers has been in closer contact with the men and events of revolutionary Russia, both at the center in Moscow and at the periphery in Turkestan. Altho he is opposed to the theories of the Bolsheviks and condemns their crimes, he makes a fair-minded effort to interpret the feeling of the common man in Russia and to understand the aim of the soviet governments*

**S**HORTLY before leaving Russia, I called on Mr. Shidlofsky, a member of the Revolutionary Committee of the Duma. He said, with just a trace of bitterness, that he didn't understand the policy of the United States toward Russia. Today Mrs. Shidlofsky is working for the Bolsheviks to keep starvation from the door, while their son is dying of tuberculosis. Only a week before I left, I

saw General Brusiloff, who until the revolution had taken more prisoners from the Central Powers than any other Allied general. He told me the policy of the Allies was a mystery to him, but he supposed that eventually they wished to create another front in Russia. A few days later his wife came asking my help for the general, who was imprisoned by the Bolsheviks.

The day I left Moscow for America, I went to Bonch Bruevitch, a close friend of Lenine and a member of the People's Commissioners. I asked him to release General Brusiloff and promised that if he did, we would tell all America that the Bolsheviks had released the general who had done the most against Germany and Austria. Bonch Bruevitch refused, but said, "You can tell America that the reason we don't is that we fail to understand America's policy toward Russia. We have released numbers of men like Tereschenko, former Foreign Minister, and the minute they get abroad they urge that our Workers' Republic be crushed. What is your American policy? We do not know."

On the way back from Russia in November I saw Kerensky in London. He was unable to get permission from the

English Government to go either to America or back to Russia. He felt he was virtually a prisoner and, of course, he didn't understand our policy. Since coming to America I have yet to find a government official or any other American who would tell me clearly just what our Russian policy is. People say we must wait until after the Peace Conference, but it is not today only that we haven't understood American policy in Russia. Ever since the Bolsheviks took the power, none of the classes in Soviet Russia, from the workingmen to the landlords, have understood our policy. I believe all classes of Russians have gradually become embittered against our action or lack of action.

The American people everywhere are asking for the facts about Russia. President Wilson on December 4, 1917, called for the truth about Russia. "It cannot be uttered too plainly or too often." Senator Johnson called for it on December 12, 1918, and his request must win the support of every friend of Russia. What was the real cause of the Russian revolution? Who are the Bolsheviks? How many of the horrible stories that we read about the Russians are true? What will be the ultimate outcome of the Russian situation? These are a few of the oft-repeated questions which are thrust at one every day in America. Perhaps a brief review of some of the incidents as I saw them will help toward an understanding of the Russian situation.

Long before the revolution came in 1917 there were loud rumblings on the political horizon. A child could have seen that Russia was coming to the crossroads. In Turkestan one could hear the soldiers grumbling at the incompetence and cruelty of their officers and at the Czar's autocratic regime. My soldier orderly, for example, told me that if the revolution did not come until after the war, and he hoped it would not, he was going to be the first to raise his bayonet against the Czar.

During the last months before the revolution the white spaces in the Russian newspapers of articles censored became more frequent. Even in spite of the most rigid inspection some radical statements crept into print. I remember reading an editorial from the *Ruski Vyedemost* just after the Czar had made sweeping reactionary changes in the ministry. It said that now the Czar could make any cabinet changes, but he would not have the opportunity very much longer.

Occasionally one heard of how the people had been cruelly betrayed by the Czar in the revolution of 1905. You remember the Czar, terrified, had prom-

The committee of soldiers appointed by the Bolsheviks to command the Black Sea fleet. Photographed on the "Almaza," formerly the governor-general's boat

ised the people liberty of speech, education, and a Duma elected by all the people. When the Duma was elected it proved so radical that the Czar clamped down the lid, disbanded it, and took away practically all the privileges that he had previously granted. Just beforehand he had been able to secure further loans from France to carry on his autocratic government. One could hear almost everywhere that in the next revolution it would be impossible for the Czar to break faith with the people.

While I was still in Turkestan the revolution came, and I never in my life saw a people so happy. Soldiers and common folk marched down the street bearing huge banners inscribed, "Liberty, Equality, Education," and singing the revolutionary hymn. Nowhere could one find a regret, except possibly from an old aristocratic general, or from an officer in the censor committee or secret police.

It was marvelous how quickly the organizations of soldiers and workingmen sprang into existence. In nearly every region there were men who had been connected with the soviets of soldiers and workingmen in 1905. At that time Leon Trotzky, who is now Commissioner of War for the Bolsheviks, had been president of the Petrograd soviet.

It was perfectly natural that many Jews stepped into positions of leadership. Under the Czar's regime no matter how capable a Jew, he could not receive a rank higher than a common soldier. Therefore, when the revolution came thousands of educated Jews, doctors, lawyers and merchants, were serving under the terribly hard conditions of a common soldier. Is it any wonder that these men, smarting under their injustices and indignities, leaped to the front in the organization of the soldiers' and workingmen's councils?

There was one such Jew, Broidi, in Turkestan when the revolution started. He immediately called the soldiers together and said, "The glorious revolution which you have dreamed of and waited for so many, many years has come. The Czar betrayed you in the revolution of 1905. Organize immediately before it is put down again."

The soldiers were wild with enthusiasm. They immediately elected Broidi chairman of their committee. It mattered little to them that he did not even belong to their regiment. Broidi told the commander in charge that he had 2000 bayonets behind him and requested his transfer. The commander did not dare refuse, and Broidi became the most important and powerful man in Turkestan.

Generals who could previously order him shot or sent to the front, were now waiting in line to see Mr. Broidi. I remember once when I called that one general said he had been waiting for two hours already. It was only a few weeks before Broidi arrested and sent to Petrograd General Kuropatkin, famous as commander-in-chief in the Russo-Japanese war and during the present conflict in charge of the northern front against the Germans.

The soviet was the power behind the

*A passenger train of the Soviet Government of Russia in May, 1918. Notice that it is made up of freight cars and so crowded that soldiers even ride on the roof*

temporary government leaders everywhere. Now just what is a soviet? In the country a soviet is the old fashioned "mir" or town council where all the community has a right to come and elect its executive committee. The only difference is that if the people wish they may elect a non-resident to the committee. In the city the laborers from every factory, the unions and kindred organizations elect representatives in the shops and working places instead of at the polls. In the army each company has a right to elect its soldier representative. The people who are disfranchised are those who do not belong to the army, who are not peasants and those who belong to no union or factory. This disfranchises from 5 to 10 per cent of the people.

The two things which were imprest on the Russian officer thruout his military training were first, loyalty to the Czar, and second, loyalty to the nation. Always the great emphasis was placed on loyalty to the Czar, so that the officers could with difficulty adjust themselves to government without one. The clause "loyalty to the nation" seldom implied to the Russian officer loyalty to the people—the thought had never entered his mind.

Many officers adapted themselves to the new conditions splendidly, but not the colonel in charge of the regiment I was working with in Tashkent. Among other things the soldiers no longer had to prefix the title "Your noble highness." This particular colonel was informed by his adjutant that hereafter the soldiers would address him as plain colonel, as we do in America. This apparently half crazed the colonel, who jumped up in a terrible rage, crashed his chair into pieces on the floor and left the staff never to return.

Working in intimate contact with the Russian soldiers and for their welfare, I found few old-line officers who would give me active coöperation at first. The soldiers, on the other hand, were wildly enthusiastic and appreciative of everything that could be done.

For the first six months of the revolution the Bolsheviks were in the minority. The soldiers, however, did believe in their soviets. They were confident that these councils prevented a counter-revolution. In order to keep Russia in the war, the only hope for the Allies was to make her revolution a success. If that could not be done, peace was inevitable. The soldiers and workingmen [Continued on page 196]

# THE PENALTY OF SERVICE

BY A VETERAN OF KITCHENER'S ARMY

I may not make pleasant reading, this story of an ex-soldier's failure to reestablish himself in civilian life, yet I think you will see that it has been even less pleasant to write.

For the ex-soldier is myself, and every word set down is a jab to my wounded pride.

I will admit at the outset that I have shown lack of judgment and forethought, and have probably overlooked promising opportunities; but in any case I feel that a frank analysis of my difficulties may make things a trifle easier for those of my comrades who are in like plight.

Here, then, is my story in brief:

I was in tolerably easy circumstances when the war broke out, and my sympathies were entirely with the Entente Allies. And as the horizon darkened and the menace spread, the thought of sitting in comfort and uttering platitudes became more and more distasteful. There, not so far away, the greatest Crusade of all time was being launched by people of my own blood and speech—was I to sit idle and witness their downfall? No, by the eternal, I would enlist. This was in the autumn of 1914.

As my family boasts of a Canadian branch, I had naturally thought of joining the Canadian Expeditionary Force, but the British military representative in New York desired me to "proceed to England" and enlist in Kitchen-er's Army. So to England I went.

The matter of pay had at that time scarcely crossed my mind, but I have since had leisure to make a few calculations.

By this choice, I find, I lost during my three years' service just one thousand dollars, that amount representing the difference between the English pay that I received and the amount I should have received had I joined the Canadians—and survived. But we Americans and Colonials in the British (Home) Army lost out in many other ways as well, so that there are probably few of us on discharge who are not penniless or in debt—quarter-master sergeants, of course, excepted!

"Of course you brought all this trouble upon yourself by enlisting

thirty months before America entered the war," a friend has consolingly remarked. True, I did. Yet I was but one of thousands—I wonder if the exact number will ever be known—who thus anticipated their country's action. And while some of my friends have expressed an amused sort of wonder, only the one above quoted has actually censured me. Some, indeed, have been gracious enough to refer to my adventure in terms of marked approval.

I make this point to forestall the argument that America's gratitude is reserved for those of her sons who fought under their own flag at the appointed time. I have no reason to think that we "irregulars" are being discriminated again. On the contrary, I dare say those of us who returned before discharges began to take place on a large scale from the United States Army, have received much more attention than we deserved.

Yet the fact remains that some of us

officers and men, are unknown. The same is true

to a large extent of the French and Belgian civilians in what were the invaded districts, and a like spirit pervades the whole of England. Life has gone back to the simple-heartedness of pioneer days. The democracy that we preach, they live. What seems more a tradition than a reality here is over there an all-embracing element like the very atmosphere.

This state of things, no doubt, is all wrong, inasmuch as it resurrects the obsolete ideal of "live and let live"; yet it will be found that every soldier who has been long on active service has unconsciously altered his social point of view, and is, to a corresponding degree, unfitted for the stern realities that await him on discharge.

This is the kind of thing I mean:

A few months ago I ran into a vacancy that I was peculiarly well fitted to fill. I learned that the position should pay as high as \$60 a week, but, anxious to settle down I offered to "start in" at

\$40. How it came about I don't know, but after two interviews the amount was reduced to \$30 and a vague commission. Also I learned that my duties had gradually expanded until much night work was hinted at. In short, I was expected to overtax my strength for about half pay. Why? The man with whom I was dealing found me yielding and trustful, and suspecting me to be semi-destitute, decided to drive the sharpest bargain possible. In disgust I finally declined the position altogether, declaring that I would rather starve than work for that firm. Well, I nearly did starve.

But I am afraid I am not telling a very connected story—let me go

back a bit: I arrived in New York exactly a year ago, bringing with me a meager outfit of clothes, a variety of trophies from the front, and in my pocket just \$100. To be perfectly candid, my financial outlook had so narrowed that this seemed to me quite a substantial sum. Today it would seem a fortune!

This money was what remained of 30 pounds, sterling, the bonus awarded me by the British Government upon

© Western Newspaper Union

"What next" is the question returned soldiers face as soon as they debark at a home port. And they are coming back at the rate of thousands every week. Will waiting jobs solve the problem or must the men set out on a weary round of job hunting?

have endured very hard knocks in readjusting ourselves to the new civilian life, and that in my case, after exactly a year, I'm not adjusted at all.

Perhaps my greatest disillusionment has been the lack of comradeship that I sense wherever I go. In the army it was all so different.

There every one in khaki is a potential friend. Introductions are superfluous. To want a thing is to ask for it. Social distinctions, except between of-

my signing away all pension rights. I had been discharged because of a synovitic knee and a neurasthenic condition bordering on shell shock. My pension of 30 shillings a week was forfeitable as soon as I settled down to steady employment, so that I did not lose much by cashing in. Indeed, I felt so well during the voyage across that I began to think the British Army had made a mistake in dispensing with my services. Ellis Island, however, set me right on that point, informing me that had I been an alien I would have been deported promptly. That rather jarred me, I'll admit.

And I was soon to learn other disconcerting facts. My little wife, who had pluckily "carried on" in my absence, had about reached the end of her tether. She had, I discovered, suppress all disagreeable news, but now had to admit that our resources had been exhausted some time, and that my life insurance had been kept up on borrowed money. Another jolt.

She had certainly done her bit, nobly and uncomplainingly, and I insisted on her immediately giving up her employment and allowing me to resume the helm. She yielded, against her better judgment; we secured modest but comfortable rooms, and blithely I set out to remake my fortune. But within a week I was on my back with my old neurasthenic pains—neuritis, the doctor diagnosed it, with certain complications due to exposure—and for six weeks employment was out of the question.

But even in bed I was not idle, and answered perhaps a score of advertisements setting forth my qualifications as alluringly as possible. Result, two replies, one offering work at \$20 a week that I could not possibly perform, the other a canvassing uncertainty.

What was the matter—was I asking too high a salary, or was my war service against me? I could not guess.

Since then I have learned that the business man regards the returned soldier with distrustful eye. A long absence from commercial routine, he argues, may quite unfit him for holding a position of trust. And what if he were to be employed and did not "make good"? To reduce his salary or to drop him altogether might bring reproach upon the firm. Better take no chances. . . .

There you have the whole problem in a nutshell. The high salaried vacancies are being filled from the ranks beneath, and the man who has been away soldiering is regarded just as much an outsider as any one in search of a job at any time.

I had, perhaps, been unreasonable in my expectations. I had imagined my prospective employer greeting me with a hearty "Well, well—back from the war, eh? Now let's see if we have anything good to offer you." If any one were to say that to me now, I

should collapse. When a man returns to his home town or the firm that previously employed him, such a reception may await him, but not otherwise.

The discharged soldier's attitude, conscious or unconscious, is that other things being equal, his loss of time and money, and the hardships he has endured, to say nothing of the risks, should weigh at least slightly in his favor with the business world. But the latter, I find, has decided that other things are not equal. If a soldier invalided out of the army thinks himself as good as he ever was let him prove his worth in the usual way. In other words, having left his position in the line of advancement, let him "fall in" at the bottom.

In my case this is precisely what I am not physically able to do. When I got about after the illness referred to, I found that it would be an effort to work more than three or four hours at a stretch, or, perhaps, eight hours a day, with a liberal break in the middle. But on the other hand my brain was never so clear, and could I have secured one of the executive positions I was in search of I could easily have shown my worth. Of this I hadn't the least doubt. And presently I was able to prove it.

By perseveringly answering the Help Wanted advertisements I had by now begun to get more favorable replies. One was a position that carried with it a fair salary and "prospects," but the hours, I learned to my dismay, were from half past eight to six, with half an hour for lunch.

"I should very much like to take this position," I told the proprietor, "but I'm afraid that I cannot stand such long hours." And I explained my case. "Now, if I do the work to your entire satisfaction in less time, would you not be willing to shorten the hours for me?"

"No," he replied; "I do not see how I can make any exception to our rule. I can understand that the hours would seem long to a man in your condition, and I haven't any doubt that you could do your work satisfactorily in much less time. But, you see, it would be a bad precedent—a bad precedent!"

What could I say to that? Nothing.

That week another position, even more promising, seemed almost within my grasp. The salary was excellent and the work congenial. Altho there were

forty applicants, I evidently stood high on the list.

"Now I'll tell you frankly," said the gentleman whom I interviewed, "I don't want our Mr. X. to leave us. But he insists on joining the Y. M. C. A. for overseas work. If I can prevail on him to give up the notion, there naturally won't be an opening, but I fear he's going all right."

He then discussed my qualifications. A wide experience in research work was demanded—had I that experience? I assured him that I had. Could I submit samples of my work? Well, that would be difficult as my effects were all in storage. But I named a number of prominent technical journals in which my investigations had appeared. "That will do," he replied briskly; "get me all those back numbers that you can, and please do so as quickly as possible, as I should like to make my arrangement at once."

Good Lord! There I stood with the price of a ham sandwich and a couple of car rides in my pocket, and was expected to procure the back numbers of various publications, a quest that might take me to every part of the city and entail no end of expense.

"I'm afraid you're setting me a difficult task," I parried; "I happen to know from experience that it's hard to get back numbers from many of the publishers, and the dealers charge exorbitant prices." Then a brilliant idea struck me, and I added: "Could you not arrange to join me at the Public Library—or send one of your staff—if I had the journals out ready for your inspection?"

"No, no," he replied impatiently, "I haven't time to do things like that. You look up what you can and bring them in."

So again I lost out.

The following week, by the way, the firm in question occupied a full page in a number of New York dailies in order to advertise their patriotism. But they forgot to mention the member of their staff whose enlistment they opposed, and the applicant for his position who, in dire need, asked, but was denied, such a slight concession at their hands.

In all this time I secured just one good position, and that was early last summer. It was not what I had been looking for, but quite ideal in everything but salary. I was to manage the business end of a sanitarium not far from New York, and my wife and I were to have free rooms and board. And excellent board it proved, too—as superior to dairy lunch fare as dairy lunch fare is superior to the tack they gave us in France. My duties consisted of a little of everything from banking to superintending the help, and as I showed both initiative and energy I soon received a free hand.

## ALMONDS

BY WILFRID WILSON GIBSON

He stood against the trunk to light his pipe,  
And, glancing at the green boughs overhead,  
"We'll pinch those almonds when they're ripe," he said.

But, now the almond hulls are brown and ripe,  
Somewhere in No-man's-land he's lying dead,  
And other lads are pinching them instead.

I've half-a-mind to save him one or two,  
In case his ghost comes back to fetch a few  
And do the other things he meant to do.

# THE NEW BOOKS

## The Red Side of Russia

To help Russia, says the President, is our primary duty. But to help Russia we must first understand her and this seems next to impossible. Apparently we have to unlearn what we thought we knew about the Russian character for part of it wasn't so and the rest of it isn't so any longer. The new Russia is the political antithesis of the old. The old humble devout superstitious conservative peasant, cowering under the knout, worshipping the icon and the Great White Czar, has vanished from the scene and in his place we see a fiery and fantastic creature, the Bolshevik, threatening to overthrow all existing institutions and moral codes thruout the world. Him we must understand if we are to help—or suppress—him.

Here are six new books throwing light on the Russia of the revolution. The first, *Unchained Russia*, is by Charles Edward Russell, who as a Socialist was made a member of the American Commission in order to balance Mr. Root on the other extreme, the idea being presumably, that if Russia were observed from viewpoints so far apart the American people would get a stereoscopic view of the situation. Mr. Russell was from his Socialist position the better fitted to appreciate the new forces at work and he gives us for instance the following clear statement of what the Bolsheviks believe and intend:

1. In common with Mensheviks, Minimalists, Trudeviks, and practically everybody else in Russia, the Bolsheviks accepted the general outlines of the Socialist philosophy. They believed that all wealth is created by labor and that labor is entitled to the wealth it creates. They believed, that is to say, in industrial democracy. They believed that to bring about industrial democracy, all industries should be owned by and operated for the benefit of the community.

2. But they went much further than this by believing that these changes could be and should be wrought at once and that instantly there should be instituted likewise these essential principles:

- A. All men and women should work.
- B. All men and women that work should be organized into unions.
- C. Each union should have its central governing council.

D. These central councils should constitute all the government there is in this world. No congresses, no presidents, no parliaments, no prime ministers, no cabinets, no legislatures, no governments, nothing but the councils of the unions.

With the utmost sincerity they could see nothing about these changes more difficult than the issuing of a proclamation or two.

Mr. Russell is a keen observer and a good writer, but as his visit was brief and formal and he did not understand the language he could not get an intimate insight into the confused events of the period. Miss Bessie Beatty was most fortunate in getting at what she calls *The Red Heart of Russia*. She was an eye witness, even a participant, of some of the most exciting scenes of the revolution, and she has the full sense of the dramatic nature of the part she played. For instance, she was waked up out of bed to translate the historic appeal for "peace without annexations and contributions and self-definition of nations," sent out by the All-Russian Congress of Soviets a year ago. No wonder its grammar was confused, for it had to be translated from Russian into Lettish and thence into English:

Here was this new government of the People's Commissaries preparing a document that they confidently hoped would revolutionize the status of a struggling world and there was nobody to translate it but a Lett who had not been to bed for three days, and an American war correspondent.

Miss Beatty lived for a week in the barracks of the Amazonian Battalion of Death. She was on board the mutinous Baltic fleet. She was in the convention when Trotzky and Lenine won their victory. She saw the street fighting on November 11. She visited the deposed ministers of the Kerensky Cabinet in the dungeons of St. Peter and Paul. Her vivid descriptions of these epoch-making scenes will be of permanent historic interest whatever may be the outcome and they will rank in value with such few contemporary sketches as we have of the French Revolution.

Ernest Poole chose a different line of approach, the "case system" of sociology, the "close-up" study of representative individuals. Knowing that 90 per cent

of the Russian people were peasants and villagers he left Petrograd and buried himself in a country community in order to get personally acquainted with the people who lived there. We get, then, character sketches, not of the Czar and Rasputin or of Lenine and Trotzky, but of the priest, the teacher, the sorcerer, the peasant, the doctor, the storekeeper and the vagabond. Much of the volume consists of conversation, the opinions and experiences of the people he met as translated by his interpreter. For instance, here is one man's view of the revolution:

It was in Petrograd, the lack of organizing force—or rather, the way such force was spoiled and hindered by the theoreticians scattered about all over the town. In our apartment building, where there were thirty-four families, I said, "Let us stop sending thirty-four servant girls out each day to the bread lines. Let us combine and send two or three to get the bread for all of us." But one tall solemn fellow replied, "In this time of our new-found liberty, each should be free to follow his taste. Some like one bread shop more than another." And to defend such liberty, he went about the building, talking against my little idea, until the people turned it down. Then I made another suggestion. We were afraid robbers might break in, for we knew that many jails had been opened. "Let's organize our defense," I proposed. "Let all the men in the building take turns in standing guard below." But the Solemn One argued against this, too, as a sacrilege to the revolution. "Why should we guard our belongings," he asked, "when Russia is one great brotherhood now? Any man can have my property." It happened that the very next night a sneak thief got up to the attic and stole a shirt which was hanging to dry. And it belonged to the Solemn One. When he heard of his loss, he said pompously, "Plainly some brother is more in need of clean linen than I." I looked at him and doubted it.

Mr. Poole points out very concretely what America can do to help Russia or rather his village—by sending over teachers and money for schools, agricultural machinery and practical experts.

Dr. E. J. Dillon is a living proof of the Russian's delight in self-depreciation. He has lived for years in Russia, he has been honored by the friendship of some of the most prominent Russian statesmen, he has taught in the University of Kharkoff. The result of his life among the Russians has been embodied in books and articles which are without exception the most searching, merciless, scornful indictments of Russian life and character ever printed in the English language. And yet Professor Milyukoff has characterized Dr. Dillon's "Russian Characteristics" (published under the pen name of E. B. Lanin) as the best analysis of Russia available to English readers. Instead of such a roar of wrath as once greeted Dickens's "American Notes" the Russian public has purred its approval of Dr. Dillon's writings and even *The Eclipse of Russia* will not eclipse his popularity.

To Dr. Dillon the "eclipse of Russia" and all the horrors of the Red Terror are the almost inevitable fruit of a national character rotted to the core by ages of unimaginable misgovernment.

For Russia never ceased to be what its founders had made it, a predatory state, without, like Prussia, and a predatory state within, unlike any other out of Asia.

The people had for ages seen robbery, murder, in a word, all kinds of crime, political, private, and absolutely wanton outrages perpetrated in the name of God, the Tsar, and the fatherland by their own educated and spiritual guides. Is it to be wondered at that whenever they had the chance in turn to rob and burn and torture and kill they used it to the full relentlessly?

The excellent brief studies of *The Rus-*

Ernest Poole (center) with some of the Russian peasants he describes in "The Village"

*Asian Revolution*, by Alexander Petrunkevitch, Samuel N. Harper and Frank A. Golder, deepen the impression of Russia as the land of nightmare conveyed so vividly by Dr. Dillon. Mr. Petrunkevitch depicts the

sad spectacle of an almost complete failure of the majority of intellectuals to understand the spirit of the times and to guide the masses through the labyrinth of error.

Mr. Harper gives an illuminating chronicle of the political side of the Russian revolution; the attempts on the part of various parties and organizations to establish a stable government and the more successful attempts of other groups to wreck it. Mr. Golder describes vividly the eve of the revolution and its outbreak. The weight of an immemorial tyranny in unfitting the people for self-government is effectively illustrated:

Strange to say, as evening came a kind of fear seized the population, particularly the more ignorant. It was difficult for them to shake off the terror of the old police; all the time that they were talking against the Tsar they had a feeling that they were doing wrong, and that some one was denouncing them. It was hard for them to believe that all that they saw and heard during the day was real and that the old regime was powerless.

No sounder study of the Russian revolution has been published than that of *Russia in Upheaval*, by Edward Alsworth Ross. In the first place the book is made up of the author's own observations and experiences, collected during a journey of 15,000 miles from Petrograd thru Russia and Siberia during a good part of 1917. In the second place the facts are weighed with the accustomed care and keen judgment of a trained sociologist and the conclusions are arrived at without regard to superficial prejudice.

Dr. Ross, who is professor of sociology in the University of Wisconsin, was sent to Russia by the United States on a mission to investigate social and economic conditions. His findings, therefore, deal not so much with sporadic riots as with the questions of the actual condition of the people, the food supply, the state of agriculture, whether or not the factories and sawmills are busy, what the peasants in outlying villages think. Several articles by Dr. Ross were first published in *The Independent* after his return from Russia and are now incorporated in this book.

### Foch, the Man

"MY center gives way. My right recedes—I shall attack." was the historic decision at the battle of the Marne in 1914 that first brought into prominence General Foch, four years later appointed commander in chief of the Allied armies. When the war began General Foch was in command of the Twentieth Corps of the French army in Lorraine; on August 28 he had been called to command the Ninth army, which was to hold the center at the battle of the Marne; and on October 4 he was appointed first in command under Joffre to coordinate the French, English and Belgian forces in the north.

The story of his triumphant military career and of the experiences that made it possible is told graphically and simply by Clara E. Laughlin in a short biography of *Foch, the Man*. Miss Laughlin wrote the book at the request of members of the French High Commission.

*Foch, The Man*, by Clara E. Laughlin. Fleming H. Revell Co. \$1.

## McCutcheon's Dress Linens and Cottons for Spring, 1919

Notwithstanding the difficulty in procuring Linen fabrics, we are in a position to offer for the coming season a most comprehensive range of weaves and colors suitable for all purposes.

**"Non-Krush Linen"** comes in White, Cream and upwards of thirty of the most fashionable plain shades. It will not crush or crease, and is by far the most satisfactory Linen fabric for all round use. 36 inches wide . . . . . **\$1.50 yard**

**French Finish Linen**, White and all the plain shades. 36 inches wide, \$1.25 yard; 45 inches wide, **\$1.50 yard**

**Linen Eponge**, a heavy Linen in plain and heather mixture, checks, etc. 45 inches wide, **\$1.25 yard**

**Ramie Linen**, a medium weight in White and colors. 45 inches wide . . . . . **\$1.25 yard**

**White Linens**, sheer, medium and heavy weights carried in stock at all times at moderate prices.

**"French Eponge,"** a soft cotton fabric in all the new and fashionable colors; very popular for sport wear, smocks, etc. 45 inches wide, special . **95c yard**

**Crepe or Momie Linen**, White, Cream and a full color assortment. 36 inches wide, special **85c yard**

**Japanese Crepe**, White and plain shades; every color represented; two qualities . . . **50 and 85c yard**

**Mercerized Poplin**, White, Black and all the wanted colors. 36 inches wide . . . . . **50c yard**

**Devonshire Cloth**, White, Pink, Blue, Tan, Brown; also neat stripes and checks. The best fabric for children's garments . . . . . **50c yard**

**Handkerchief Linens**, White and a complete range of the new plain shades; fine sheer quality and soft finish. 36 inches wide . . . . . **\$1.25 yard**

**Handkerchief Linens** in a variety of new printed designs, White or colored grounds; very popular this season for dresses and waists. 36 inches wide, **\$1.00 yard**

## WHAT WE CAN DO FOR RUSSIA

(Continued from page 191)

were still in favor of war. They were calling repeatedly for peace terms and the Allies were slow to respond. Revolutionary Russia, represented by her soldiers and workmen, was willing to continue to fight for a just peace, but she wanted assurance that the Allies were not forcing her to fight for any unworthy financial or territorial aims.

During the elections the Bolsheviks had a very appealing slogan for the ignorant Russian masses. It was "Land, Peace and Bread." The Russian peasants believed that all the land belonged to God and God gave it for all the people. For two hundred years their forefathers had been working this land, but the money from their toil was used by the landowners for beautiful palaces, luxury, or even for dissipation. It was natural, therefore, that the peasants should feel that the beautiful palaces and property of the landlords should all be theirs. People everywhere wanted bread. The Bolsheviks promised abundance by an equal distribution, without allowing the wealthy to have an undue share.

The Russian soldier was tired of war. For three years he had been undergoing untold horrors, sometimes going into battle with a stick instead of a rifle, oftentimes being forced to defend positions with two rounds of ammunition a day. The Russian soldiers, after suffering so much for three years, now liberty was theirs, wanted to know why they continued to fight. The Germans told them they had not quarreled with revolutionary Russia, but with the terrible Czar. They promised the Russian soldiers not to fight unless Russia attacked first. The Russian soldiers did not want any more land, they were even willing to give up some of what Russia had, if they could only get peace. They demanded and demanded incessantly to know what the Allies were fighting for. Would the Allies agree to a peace with no territorial gains? It was not until long after the Bolsheviks came into power, and President Wilson issued his wonderful and inspiring message of January 8, that Russia received anything like a clear-cut answer to her request. Naturally the Bolsheviks with this program of peace, land and bread were gaining supporters by the thousands among the poor and ignorant. Some of the officers told me they believed Russia ought to have peace, even if a separate one, and this was before the Bolsheviks had taken the power.

When the Bolsheviks finally took control they had little opposition. In Moscow, to be sure, there were six days of fighting, but nobody came to the help of the government. If Kerensky had been supported by the Allies wholeheartedly and if the Russian people had all thrown their strength back of his party, the temporary government might have pulled thru till the end of the war. This was not done and Kerensky failed. The rise of the soviet power from the first day of the revolution had been steady and complete. From the acceptance of order number one to the overthrow of Korniloff, step by step the temporary government had yielded to their demands. The simple platform of land, peace and bread, coupled with the failure of the Allies to give definite peace terms capable of being understood by the soviet soldier, was irresistible. It is true that the victory of the Bolsheviks was helped by German propaganda. There were undoubtedly many German agents in Russia, but it must not be forgotten that in the Czar's regime there were also men high in government circles who were working for Germany.

General Brusiloff has intimated that it was intentional failures of certain men high in the Government confidence which prevented him from having the necessary supplies and ammunition to carry still further his drive of 1917. The Empire of all Russia herself was a German and was carrying on active intrigue in behalf of Germany. Rasputin was reputed to have been bought by Germany. If the Bolsheviks accepted money from Germany, they did so with much the same feeling that a church in America might accept money from a saloon. Their attitude was that the source of the money makes less difference than what it is used for.

From personal observation of the higher leaders in the Soviet Government, I am thoroly convinced that they are sincere fanatics whose sole aim is to see the workers of Russia control and operate the Government according to their radical socialistic viewpoint. It is needless to say that I am absolutely opposed to the Bolshevik point of view and believe that their economic theories are bound to fail in practice. I would even go further and say that their stimulation of class hatred as well as their occasional policy of killing men is entirely wrong morally. However, any one who was in Russia thruout the revolution and has watched them carefully must realize that they have pursued a perfectly straight course.

When Lenine first reached Petrograd he recommended before the Soviet Congress absolutely no compromise with capital, and the immediate taking over of factories and banks. At this meeting he was hooted off the platform. Later his arrest was ordered, but he continued to preach exactly the same program and policy. When he came into power he took over the factories and the banks. He immediately began negotiations for peace. In other words, he tried to do exactly what he said he would when he first came to Russia. Lenine has always claimed that he did not want to make a separate peace with Germany unless forced to do so by the Allied policy. The fact that he was willing to refuse to ratify the Brest Litovsk peace if America would give any assurance of help to the Soviet Government, would seem to indicate that he was not entirely playing the German game. When America made no reply to this request, he felt that their wisest policy was to sign a truce which he declared to be only a breathing spell to enable the soviet to revolutionize Germany. During the entire period that the soviets were in power, they carried on a large propaganda work among the German soldiers and thruout Germany. It is too early to say how large a factor this was in the revolution in Germany and Austria. One thing is certain—that the prophecies of the Bolsheviks that a revolution was bound to occur in Germany very soon are now vindicated.

The attitude of the Russian soldier is well illustrated by a conversation I had with one as we were traveling back from the front together, just before the Brest Litovsk Peace. I asked him if the absence of soldiers at the front and the demoralization on the railroads was not rather dangerous in view of the fact that Germany might advance at any minute. He replied that he and millions of other Russian soldiers and peasants had never had anything in their lives before. They had fought, been killed and wounded for three years. For what? For nothing as far as they could understand. They were not fighting for their land, because if the Germans should come in they would have just as much land

C. E. BROOKS, 490F State St., Marshall, Mich.

as they had before. They had to work and slave for the Russian landlords and the Czar, and it could not be any worse under German control. "At the present time under the Bolsheviks, however, we, the Russian soldiers and peasants, are really ruling the country. I am now the owner of this railroad train. I can ride in a first-class carriage, and even tho we are making colossal blunders and destroying one-half the railroad system of Russia, we will learn in the long run and eventually our position will be better than it was before. It can never be any worse." In other words, many of the politically active Russian soldiers felt that they had everything to gain by a Bolshevik Government and nothing to lose.

Gradually after the Allies began fighting on Russian soil and counter-revolutionary movements became more frequent, culminating in the killing of Commissioner Uritsky in Petrograd and the shooting of Lenine in Moscow, a policy of red terror was for a time adopted by some of the soviets. It is now reported that this is over, and that on the anniversary of the Bolshevik revolution there was a general amnesty. For over a year during the period the Bolsheviks have been in power America has seemed to have no clear decisive Russian policy. However much we are opposed to Bolshevik policy and methods, the question before America is which policy we should adopt in order to assist Russia to the utmost in our power. There are three possibilities that are receiving some consideration or comment in America.

First—Wipe out the soviets by a combined active allied military intervention.

Second—Hold our forces that are at present in Russia and give arms, ammunition and economic help to all the forces that are opposing the soviets.

Third—The conclusion of a truce between the Soviets and allied forces with peaceful intervention in Russia. In this case we must work in contact with the Soviet Government as well as in contact with any other governments in Russia.

We must admit that after one hundred years of exploitation the Bolshevik revolution was perfectly natural and understandable. Since the Bolsheviks came into power they have been learning and trying to put their theories into practise. Consequently, today, Lenine is reported to be growing more and more conservative. Even if this were not true, in the long run the Soviet Government must change so as to better serve the interests of all the Russian people.

If we adopt the first plan of active allied intervention, we must send more American boys to be killed in Russia. It might require several million soldiers and it is now generally conceded that the first policy should not be carried out by the Allies.

The second policy of holding our present Allied force in Russia and giving Allied arms, supplies and economic assistance to all forces opposed to the Bolsheviks is actively under consideration. Under this plan we would create a ring of steel around the Bolsheviks. We would try thru starvation to blockade Bolshevik territory from all grain producing areas and force them into submission. This policy would involve the starvation of thousands. It would mean the death of countless babies in the cities of Russia and it would mean that the educated and cultured Russians in Soviet territory would suffer most. It is impossible to think of the Bolsheviks, surrounded on all sides by armed forces who were being helped by the Allies with guns and munitions, and not believe that a red terror would inevitably follow. Moreover, if the action of the white guard in Finland is an

## An Invitation Which Mothers Should Accept

Nearly every magazine you read invites you to serve Puffed Grains—for the children's sake.

That is, Puffed Wheat, Puffed Rice and Corn Puffs—all bubble grains, flavory and flaky.

And it pictures ways of serving which millions now enjoy.

### 500 Million Dishes

Last year mothers served in these ways over 500 million dishes. And these three Puffed Grains have become the favorite grain dainties.

Millions of children are getting whole wheat with every food cell exploded—whole wheat made wholly digestible.

They are getting whole rice puffed to flimsy, airy morsels, eight times normal size.

They are getting corn hearts puffed in like way—delightful food confections.

They are getting all these grains fitted for digestion as they never were before.

All are steam-exploded—all are shot from guns. All are prepared by Prof. Anderson's process to make them hygienic foods.

And all are fragile, flavory tidbits with a taste like toasted nuts. All are the most enticing grain foods in existence.

If you now serve one of them try the other two. Each has its own fascinations.

And try serving them in more ways. They are ideal all-hour foods.

The Independent Magazine through its Efficiency Service offers its assistance to any business man or woman who needs information on modern methods of office management or equipment. This service also includes advice and assistance in the planning and purchasing of all kinds of building materials.

The Independent's Efficiency Service is maintained for the benefit of Independent readers. A request by letter or by telephone for our copyrighted Check List, showing more than a thousand items on which we are prepared to give helpful advice, will be given prompt attention.

## HOW IT WORKS

A Cost Accountant at Dayton desired to know about all of the best and latest improved devices and appliances in order that he might recommend them to his clients. Specifically he asked information on—

Addressing Machines  
Adding Machines  
Bookkeeping Machines  
Building Engineers  
Business Stationery  
Card Index Systems  
Check Writers  
Check Protectors  
Consulting Engineers  
Conveyor Systems  
Cost Calculators  
Cost Keeping Machines  
Counting Machines  
Dictating Index  
Drawing Boards  
Drawing Instruments  
Duplicating Machines  
Electric Fixtures  
Envelope Openers  
Filing Cabinets  
Filing Desks  
Handwriting Recorders  
Hollow Tile  
Ink  
Interest Computers  
Interphone Systems  
Lavatory Equipment  
Ledger Typewriters  
Letter Trays  
Lighting Systems  
Mimeograph Machines  
Multigraphing Machines  
Office Clocks  
Office Desks  
Patent Mailing Envelope  
Pencils  
Safes  
Sectional Bookcases  
Stamping Machines  
Stamp Moisteners  
Stapling Machines  
Steel Shelving  
Time Clocks  
Time Recorders  
Typewriter Stands  
Vacuum Cleaners  
Waste Paper Balers  
Watchman's Clocks  
Window Ventilators

Detailed information on all those subjects was sent at once. He learned the name of the manufacturer, the article, the price and how it could be purchased.

This report filled seventeen closely typed sheets.

After its receipt, he came back for more.

A Chief Engineer of a lighting company in Alabama wished to know more than he did about cement roofs. He also asked about—

Cement Floor Paint  
Cement Waterproofing  
Concrete Construction  
Concrete Reinforcement  
Temperature Controllers

Belt, Bucket, Chain and Overhead  
Conveyor Systems  
Non-climbable Fencing  
Fire Brick  
Fire Detectors  
Cement Flooring  
Wood Block Flooring  
Gas Furnaces  
Machinery Guards  
Cellar and Ash Hoists  
Ice Making Machines  
Hydrated Lime  
Pipe Railing  
Concrete Siding  
Reinforced Concrete Treads  
Cement Waterproofing

In two days our Efficiency Service had mailed him an eleven-page report.

All kinds of requests come to our Efficiency Service. For instance, a big manufacturer of steel tools at New Castle, Ind., asked for the names and addresses of the manufacturers whose products were illustrated in one of our efficiency pages in The Independent.

In the same mail came a request from a brick concern in St. Louis asking for the name of a Pay Roll Calculator which had been used for illustrative purposes in the magazine.

With the two letters above came one from a contracting and building concern in Duluth, asking the name of the manufacturers of a machine which automatically prints the starting, finishing and elapsed time on time cards.

A well-known collar manufacturer of Troy asked us where he could find a firm making wooden or wire boxes similar to those used in post offices, but of different size.

An architect in North Dakota asked for information on hollow tile.

A fruit grower in Florida wished to know where he could buy floor paint cement and ornamental brick. A civil engineer at Worland, Wyoming, wished to get in touch with Industrial Engineers.

A confectioner at Chicago wanted full information on Refrigerating Machines.

A publisher at Aberdeen, South Dakota, asked us to tell him about fireproof doors, drop lights and lighting systems.

A man from Connecticut who is on a Committee of Food Supply asked us about milk goats.

Several newspaper publishers have asked us about a cost system.

Many requests have been received asking information on Community Betterment.

The Efficiency Service has given

information on Emergency Hospital equipment, Horse Abattoirs, Platinum, Mining, Health of Children.

In every case, Mr. Charles Dexter Allen, the Manager of the Independent's Efficiency Service, either has the ready information in his files or he knows where to go to get it. Back of this knowledge is the desire which is everywhere prevalent throughout The Independent to be of maximum service to Independent readers.

For over four years this Efficiency Service has been adding to its stores of catalogued information so as to be prepared for practically any demand made upon it.

Just a few days ago a comptroller of a trans-Atlantic Steamship Company requested personal help from our Efficiency Service, and stated specifically many problems which he asked us to solve. Let me quote a part of his letter after receiving the report—

"I wish to acknowledge with sincere thanks your careful and very complete report on the many items I marked on your Check List. Your thoroughness in the matter was most unusual and agreeably surprising."

Many of our readers do not yet appreciate thoroughly the help which The Independent's Efficiency Service is equipped to render. Why not take advantage of this service, which is yours for the asking? Write your name and address on the coupon, mail to us and see if we can not be of some assistance.

Our reason for this Service lies in the fact that the fundamental purpose of The Independent Magazine and all its related businesses is to make more efficient every man or woman who reads its pages, to make them bigger and better people, to help them improve their own business, their own homes, their community and their country.

KARL V. S. HOWLAND,  
Publisher.

example of the policy which would be pursued by the armies fighting the Bolsheviks, it would mean that thousands and thousands of ignorant soldier peasants who are fighting for the Bolsheviks would be slaughtered by the opposition. The so-called red terror which has been made so much of by our papers would be mild compared with the general executions which would inevitably result from the second policy. Furthermore, the Socialists of the world would say we had directly prevented the success of the soviets.

The Allies have now officially adopted the third policy. Their wise recommendation of an immediate truce with the Bolsheviks and their representation at a joint conference should win the support of all democratic and peace loving American people. If we make a truce with the Bolsheviks, and they have already requested time after time that such a truce be made, we could send in educational help to Russia. We could work under any and all governments which exist in all the different parts of that large country. It is possible to work under the Soviet Government. All three successive commanders of the American Red Cross in Russia believe that it would be perfectly possible to work in educational and relief lines even under the Bolsheviks, and the Red Cross did so even after American soldiers landed on Russian soil and began actively fighting the Bolsheviks. The Y. M. C. A. found it perfectly possible to work in Russia. The Bolsheviks even donated a large steamer on the Volga River and paid the salaries of the crew besides giving all the fuel. They allowed the Y. M. C. A. complete control of this boat for agricultural exhibition purposes, and on it went one Russian priest and representatives of coöperative societies who were opposed to the Bolshevik Government.

Prince Oldenburg in Petrograd on August 28 of last year, begged that the association stay in Soviet Russia and continue educational work. He is a prominent cadet and was Minister of Education under the Kerensky Government. He said that he found it perfectly possible to continue his educational work under the Bolsheviks. He gladly gave me a letter to Lenin's secretary, asking further coöperation for the Y. M. C. A.

Mr. Chertkoff, the closest personal friend of Leo Tolstoy, the famous author, is already in educational work under the Bolsheviks altho he is opposed to them. He has been granted a fund of 15,000,000 rubles which is to be used entirely at his discretion to print and distribute the works of Tolstoy. Even if you believe the Bolsheviks are immoral and have a wrong economic program, why does that mean that it is impossible for any one to try and help the people? In America we sometimes find bad men in positions of leadership, but this doesn't mean that no one will teach in the state where such a man may be the chairman of the Board of Education. It merely means that we try and do as much to help as is possible under the existing conditions. Would it not be possible that if a truce was made with the Bolshevik Government and America sent in educational experts and gave economic help to all parts of Russia, that eventually Russia would have the kind of a government she ought to have, and this would have been accomplished without the enormous bloodshed incident to the policy of isolating the Bolsheviks? Every day it seems to be getting clearer that in Russia it is a question of our working in contact with the Bolshevik Government, or eventually having a new autocratic Czar's Government to deal with. If it comes to a choice between these two forms of government, most Americans would choose the soviet.

## For Immediate Delivery

All Restrictions Now Removed

"Y and E" "Fire-Wall" Steel Cabinets not only offer *the unequalled protection* of double walls filled with asbestos sheeting, an exclusive "Y and E" feature—

and automatic safety drawer latches, another exclusive "Y and E" feature—

and (free) system service that makes it *as easy to find* the papers as it is to file them—

but also the convenience of immediate delivery from stock, in both letter and cap sizes.

Ask any "Y and E" branch or agency store. There is one in each city. Booklet on request.

## The New School for Social Research

offers lectures on pressing problems of modern life with opportunity for their practical investigation. Its object is to prepare students who show promise of becoming high class journalists, original teachers, public administrators, or capacity for dealing with problems of labor, industry and government. Those who desire to be merely auditors may register for lectures.

The school will open with an enlarged staff and full program in October, 1919. Meantime it offers preliminary lectures from **Monday, February Tenth to Friday, May Third**, by Thorstein Veblen, James Harvey Robinson, Emily James Putnam, Harold J. Laski, Wesley Clair Mitchell, Frederick W. Ellis; also lectures by Charles A. Beard at the Bureau of Municipal Research, 261 Broadway, with courses and field work in Employment Administration and Industrial Relations by Robert W. Bruere, Ordway Tead, H. C. Metcalf and W. E. Mosher.

Address all applications and inquiries to the Executive Secretary,

**Emma Peters Smith**

## FEEDING A STARVING WORLD

(Continued from page 185)

The damage of Poland is illustrative. The transportation facilities of Poland are ruined. The Russians invaded this country and withdrew or destroyed all the rolling stock of the country when they were driven out. Then the Germans changed the gage of all the lines from the Russian to the German standard, and in turn, when they retreated they took with them or destroyed all the rolling stock. Nevertheless the only way to help the country is to get the food into Danzig by such rolling stock that may yet be found in Poland and commandeered. The most pressing problem exists in and around the two cities of Warsaw and Lodz.

Poland is illustrative of much of the vast problem of feeding Europe. It was a country about twice as large as the State of New York, with a population of twenty million people—a flat, alluvial plain, well watered, with large and, formerly, wonderful cities of happy and contented people.

Frederic P. Wolcott, of the Food Administration, who is in charge of the relief in Poland, said:

Take from that country practically all the live stock, cattle, horses, pigs, geese, all sources of meat and dairy products, and then requisition (the German word for steal) all the cereals and vegetables for an army of two and a half million men, returning to the natives only what is left after feeding the army and the constabulary, make it a crime by proclamation for any Pole to feed any other Pole who has refused to go into Germany and work—depopulation by starvation—keep all this up for four and a half years, and what is left?

In spite of all this, Poland has hung on struggling for liberty, and now that we have access to her she is threatened by another force more terrible than the first, Bolshevik revolution, differing little from the Prussian system. Bolshevism feeds on starvation and famine. It is working upon a population there which has lost nearly all of its young children, while those remaining are so undernourished that their bones are soft and break from the slightest strain.

No relief has reached these famine stricken people for four and a half years except some condensed milk sent in by the Rockefeller Foundation for a few months just previous to our entering the war, to keep alive a few thousand children in the industrial centers of Warsaw and Lodz. Now Mr. Hoover is cabling for relief and the funds which have been ready and waiting to relieve are at last going into Poland in the form of food to save the relatives of American Poles and American Jews.

The story of Poland's twenty millions, waiting, struggling, pleading for help from the outside world for four and a half years of destitution and finally of famine can never fully be told. No human catastrophe in the world's history compares with it.

But Poland's story is different only in kind from that of the vast industrial section of Russia lying about Moscow, Petrograd and Kiev, where forty millions of human beings are between the "devil and the deep sea's transportation," to quote a Russian. In that region, which is down black, on Mr. Hoover's starvation map, things political are running rough. Despair of helping this region at all, is, indeed, the order of the day.

The world knows more about Serbia's dread conditions. A fourth of her four millions are dead, the rest are in a most deplorable condition. Bread, for those who can buy it, ranged between twenty-five and forty cents a pound, when the last cables from Mr. Hoover's organization arrived. But such bread is not for the poor, who, especially in the cities, are suffering deplorably, and to such an extent that no nation in the world is extensive enough and rich enough to lend relief except America, and from America already the first cargoes have arrived at Trieste and Cattaro and other points on the Adriatic Sea, intended

for Serbia and the territory recently amalgamated with Serbia in Bosnia and Montenegro, where, Mr. Hoover cables, the distress is very acute, and to which the only connection is by railroad from the Adriatic, since the Bulgars destroyed the railroad from Salonica.

"Armenia," Mr. Hoover cables, "is starving."

The American Committee for Armenian and Syrian Relief estimates that there are 350,000 Armenian refugees, of whom only 180,000 are accessible, and nearly four million refugees in all of Asia Minor, in the Caucasus, in Syria and Mesopotamia, of whom only 935,000 are accessible, and of whom half of these accessible destitute are children.

Jugo Slavia, like virtually all of eastern Europe, is short of meats, fats, milk—"so short in many regions," Mr. Hoover cabled, "that the health of the people is very much impaired, mortality among children is appalling, and there is a constant menace thru the threatened spread of Bolshevism, especially in the cities." And "Czechoslovakia also," Mr. Hoover reports, "is suffering much from lack of fats and milk."

In the north of Europe, hard by that great black puzzle called Northern Russia, where, all along the line, one hears it calmly stated, millions of people will starve this winter, out of reach of help, Finland has exhausted all the food in the cities, tho the peasants still have bread.

Rumania's last harvest was 60 per cent a failure. The bread supply for the people is estimated to last another thirty days. And in Bulgaria, likewise, the harvest was a failure and there is food for only one or two months.

Little is known about the conditions in the enemy countries, and few believe the reports emanating therefrom. It is reported by Mr. Hoover's organization abroad, however, that in Vienna, where the people are living as in the lull before another storm, listless, broken, "except for supplies furnished by the Italians and Swiss, the present bread ration of six ounces per diem would disappear. There is much illness from shortage of fats, the ration being one and one-half ounces"—about as much as a waiter hands one, to begin with, in an American restaurant—"and there are no coffee, sugar or eggs and practically no meat."

All this may give something of the picture. It is a grim picture but a temporary one. Europe will not need relief of the kind now required when the next harvests are ready. The stress then will be over, tho not for generations can Europe recover from the period it is now going thru. In another year there will be no four million British troops quitting their "watch on the Rhine," and no troopships moving from Mesopotamia to Bombay, from Egypt and the Balkans to Australia and Singapore, from France to Canada and the United States. But meanwhile, in the coming months, an amount of food almost as great as the huge amount which has been poured into Belgium during the last four and one-half years, must now be got to Europe. It will cost not so much as it cost to feed Belgium, if we are able to judge by the quick but necessarily rather casual estimates now being cabled to America. This is the last lap in the dire race against world starvation. If the world wins now, doubtless Mr. Hoover will find its esteem even "worse" than that of Belgium, which he describes as "embarrassing."

Washington, D. C.

## PUTTING PRICES ON A PEACE BASIS

(Continued from page 186)

always to be considered proportionally in relation to their purchasing power of both the necessities and comforts of life. There cannot well be any readjustment of wages and salaries unless the cost of living comes down. But there is a very profound difference of opinion as to ratio of fall in prices and in wages and salaries. And for a good many reasons. One of the most potent is that there is a general recognition of the certainty that labor will share more largely in the future in the results of its work. Likewise that this fact will prove one of the surest and most sustaining factors in business welfare and prosperity by largely increasing the purchasing power among the many.

Some forms of labor, notably those engaged directly or indirectly in Government work, were paid, in many instances, wages and salaries that were the result only of the emergency. What is generally looked for is a readjustment rather than an extended or general decline in wages and salaries. And that is a very far reaching proposition. It means, of course, continued high prices in some commodities because of the permanently increased cost of production of such commodities. It means a higher scale of living and a greater spending power among the many, and business activities depend upon spending and not upon saving. It also means that our competition in some lines with the pauper labor of other countries, of which we once heard so much, must depend finally upon the efficiency and productive power of our labor rather than upon an internationally comparative scale of wages. It also should mean a higher type of intelligent citizens, for after all the business of democracy is to produce fitting men and women rather than merely cheap goods. Such a condition will affect profoundly our social and political as well as our economic life. The problem, therefore, which lies immediately ahead of us is purely the construction of maintaining domestic demand until we have bridged the readjustment period and stand upon that firm ground where we shall probably be the greatest commercial nation of all time.

How much business we shall get from the rehabilitation of devastated Europe is still a mooted question concerning which there appears to be but little genuine, definite information. The proposition must first be financed and that takes time. The process will be slow and the nature and extent of our share in it is still problematical.

Meanwhile we have a steadily growing foreign trade whose possibilities we have not sounded and which will take more and more of our productions as we improve our methods of dealing with it and increase our banking and transportation facilities. But the matter of greatest moment is the development of our own resources. Already the war born enthusiasm of national unity has shifted its interest to constructive thought for greater accomplishments at home. One form is the employment of our abundant capital in building good roads. They not only afford much employment and cheapen the processes of distribution, but are direct factors in the education and cosmopolitan life of the people because of increased ready means of communication.

Everywhere there is the growing realization that the solution of the momentous problems which lie ahead is to be found in that productive and constructive spirit which will open new mines, build new railroads, start more manufactures, and drain more swamp lands, with capital which the war poured into our laps.

## Multiplexing the Telephone

Marvel has followed marvel since Alexander Graham Bell invented his first simple telephone, the forerunner of the millions in use today.

In these last four decades thousands of Bell engineers have developed a system of telephonic communication, so highly perfected, that the same crude instrument which at the beginning could hardly carry speech from one room to another can now actually be heard across the continent. This is because of the many inventions and discoveries which have been applied to intervening switchboard, circuits and other transmitting mechanism.

The vision of the engineers has foreseen requirements for increased communication, and step by step the structure of the art has been ad-

vanced—each advance utilizing all previous accomplishments.

No one step in advance, since the original invention, is of greater importance, perhaps, than that which has provided the multiplex system by which five telephone conversations are carried on today simultaneously over one toll line circuit, or by which forty telegraphic messages can be sent over the one pair of wires. As in a composite photograph the pictures are combined, so the several voice waves mingle on the circuit to be again separated for their various destinations.

By this wonderful development the Bell System obtains for the public a multiplied usefulness from its long distance plant and can more speedily and completely meet the needs of a nation of telephone users.

## THE PENALTY OF SERVICE

(Continued from page 193)

I certainly "made good" if my employer's word is to be taken as conclusive.

That position, however, was just a little too good to be true; for within a few weeks my employer accepted a war commission taking him to a distant city, and finding it impossible to spare even a fraction of his time to the sanitarium, he decided to close it.

So back we trekked to New York, arriving just in time for the influenza epidemic. Of course that caught me and pulled me down, but I am hard to kill, and was soon back on my old quest. And I'm on the trail yet, looking for work such as I am fitted for, with short or elastic hours, and sufficient remuneration to meet our modest needs.

My wife, with pluck unabated, lost no time in securing a position herself, and on her wages, plus what I have been able to earn at odd jobs and assignments, we have managed to exist.

I know that a certain class of advertisement would bring, immediately, a certain kind of employment—charity employment, it might be called—were I to yield to the temptation.

But, like hundreds of discharged soldiers I have met and compared notes with, I want no subsidized pay envelope, no institutional control, no inquisitorial busybodies assuming the direction of my meager affairs—I simply want congenial work where I am neither exploited, penalized nor pampered, and this, despite all handicaps, I will yet find. The British army has its faults, but it doesn't breed quitters.

I wonder if I have made my position plain, speaking not only for myself but on behalf of the boys who saw service with the Allies, that we ask no charity, but do crave your consideration. There is such a thing as helping a lame dog over a stile, when further assistance would be both unnecessary, and, from the dog's standpoint, extremely distasteful.

It has become the universal custom to offer one's seat in a public conveyance to the man in hospital garb. This greatly embarrasses the boys, at times, but their hearts warm with gratitude. But let them beware of the deduction, logical or illogical, that the well-paid positions occupied by their civilian friends, will be tendered to them with equal good grace. To have fought and suffered and survived entitles the returned veterans to all the graceful acknowledgements that can be rendered without self-sacrifice on the part of the American civilian, beyond such a point his very imagination refuses to venture.

Heretofore I have been referring particularly to the experience of men, like myself, who have no right to expect any official recognition for services performed under another flag. As to my comrades of the American Army, it would seem as if their reward and well-being were to be the supreme concern of the nation. But do you blame me if I remain skeptical? One has only to glance behind the scenes to learn that all is not going well. The Federal Board for Vocational Education has already issued a warning in this matter, and a prophecy uttered less than two months ago by Mr. Gerrard Harris, one of its members, has already been abundantly verified. Mr. Harris wrote in the *Outlook*:

The average citizen would indignantly deny the assertion that he will abate his interest in the welfare of the disabled soldiers, or fail to be at all times the advocate and champion of these men. Yet it is hardly a matter of controversy that he will unconsciously allow his interest to become dormant in course of time.

In further proof of the reemployment muddle, there are the many letters appearing in the daily press from men more or less circumstanced like myself. One man states that he has applied to every labor bureau in the city, only to have hard manual labor offered him, work that he is absolutely unfitted to perform. And if these are the conditions when but a few hundred thousand have returned from abroad, what will be the plight of the last half million, and of that silent stream from the hospitals that may continue for years?

One thing, fortunately, this war has taught many of us, and that is, when things seem blackest—to laugh. Such a moment came to me during the great War Funds Drive on Fifth Avenue—the Avenue of the Allies! I had been beset by several fair collectors, one of whom was determined to get my contribution. Not wishing to confess to the exact state of my exchequer, nor, on the other hand, to appear unsympathetic, I said:

"Madam, I simply cannot spare anything today. If you must know it, I am an ex-soldier myself, and have earned practically nothing in four years."

"Oh, were you at the front?" she demanded.

"I was."

"Then," she retorted, "you know what conditions are over there, so that's all the more reason why you should help."

And then I began to laugh, and I laughed and chuckled until, happening to stop before a shop window I noticed a particular garment that my poor, unlucky little wife both desires and requires. And then, for a moment, I saw red.

But just for one brief moment.

## THE KEYSTONE OF PEACE

(Continued from page 174)

dent it will be known, that we have adopted the principle of the League of Nations and mean to work out that principle in effective action, we shall by that single thing have lifted a great part of the load of anxiety from the hearts of men everywhere.

We stand in a peculiar cause. As I go about the streets here I see everywhere the American uniform. Those men came into the war after we had uttered our purpose. They came as crusaders, not merely to win a war, but to win a cause. And I am responsible to them, for it falls to me to formulate the purpose for which I asked them to fight, and I, like them, must be a crusader for these things, whatever it costs and whatever it may be necessary to do in honor to accomplish the object for which they fought.

I have been glad to find from day to day that there is no question of our standing alone in this matter, for there are champions of this cause upon every hand. I am merely avowing this in order that you may understand why, perhaps, it fell to us, who are disengaged from the politics of this great continent and of the Orient, to suggest that this was the keystone of the arch, and why it occurred to the generous mind of your president to call upon me to open this debate. It is not because we alone represent this idea, but because it is our privilege to associate ourselves with you in representing it.

I have only tried in what I have said to give you the fountain of the enthusiasm which is within us for this thing, for those fountains spring, it seems to me, from all the ancient wrongs and sympathies of mankind, and the very pulse of the world seems to beat to the fullest in this enterprise.

## A father's pledge to his son:

IN this "Fathers and Sons Week" I pledge myself to you, my son, that I shall not forget you in my devotion to business, that I shall interest myself more than before in the things that interest you, that I shall be in truth your best chum; that, as such, I shall seek in every way to bring joy into your life and shield you from false friends who bring but sorrow; that in their place I shall strive to bring you new friends, true friends; that I shall, in particular, and right NOW, bring into our home a friend that will bring you, on each visit, *the entertainment you are entitled to, the information you should have and the inspiration you need*—this dependable, clean friend of half a million other boys, The American Boy magazine. I want you to grow up knowing what these other boys know in this world's reconstruction period—these other boys who are finding out in this magazine, in their spare time as boys, things of importance which they never will have time to find out when they become men and are rushed with their work, as Dad is now.

Subscribed to this  
day by

*Dad*

The American Boy costs only \$2.00 a year (though the material it contains would fill twenty-five average books). Order it now for your son, or for some other boy you want to help. Single copies can be bought at stands for 20c.

## A LINCOLN ANTHOLOGY

All the scattered bits of information about Lincoln that you have wanted from time to time at a moment's notice are now most conveniently collected in a Lincoln anthology. Mary Wright-Davis has compiled *A Book of Lincoln*, which is published by George H. Doran Co., and which contains not only the best known of the great President's writings and addresses, but also the most beautiful of the many tributes paid to him by poets, sculptors and orators from his day to ours.

The two following poems reflect the feeling of the country today toward the man who was "more honored than any other man while living, more revered when dying and destined to be loved to the last syllable of recorded time."

### ABRAHAM LINCOLN WALKS AT MIDNIGHT

By NICHOLAS VACHEL LINDSAY

It is portentous, and a thing of state  
That here at midnight, in our little town  
A mourning figure walks, and will not rest,  
Near the old court-house pacing up and down.

Or, by his homestead, or in shadowed yards  
He lingers where his children used to play,

Or thru the market, on the well-worn stones  
He stalks until the dawn-stars burn away.

A bronzed, lank man! His suit of ancient black,  
A famous high top hat and a plain worn shawl

Make him the quaint great figure that men love,  
The prairie-lawyer, master of us all.

He cannot sleep upon his hillside now.  
He is among us—as in times before!

And we who toss and lie awake for long  
Breathe deep, and start, to see him pass the door.

His head is bowed. He thinks on men and kings.  
You, when the sick world cries, how can he sleep?

Too many peasants fight, they know not why.  
Too many homesteads in black terror sleep.

The sins of all the warlords burn his heart.  
He sees the dead-oughts scouring every part.

He carries on his shawl-wrapped shoulders  
The utterance the folk and the pain

He cannot rest until a spirit dawn  
Shall come—the shining hope of Europe free

The league of sober folk, the Worker's Earth,

Bringing long peace to Cornland, Alp and Sea.

It breaks his heart that kings must murder still,

That all his hours of travail here for men

Seem yet in vain. And who will bring white peace

That he may sleep upon his hill again?

### HE LEADS US STILL

By ARTHUR GUITERMAN

Dare we despair? Thru all the nights and days

Of lagging war he kept his courage true. Shall doubt befog our eyes? A darker haze

But proved the faith of him who ever knew

That right must conquer. May we cherish hate

For our poor griefs, when never word nor deed

Of rancour, malice, spite of low or great. In his large soul one poison-drop could breed?

He leads us still! O'er chasms yet unspanned

Our pathway lies; the work is but begun;

But we shall do our part and leave our land

The mightier for noble battles won.

Here truth must triumph, honor must prevail:

The nation Lincoln died for cannot fail.

## REMARKABLE REMARKS

CORRA HARRIS—Facts frequently belie the truth.

WILLIAM H. TAFT—Do I look like a Bolshevik?

KURT EISNER—We have become new men in Germany.

SENATOR REED—We may be guilty of auto-intoxication as a nation.

WALKER D. HINES—I am only the veriest tyro in legislative matters.

E. W. HOWE—When it is possible to overdo a thing, Americans rarely fail to do it.

WILLIAM CHURCH OSBORN—I think it was the old-fashioned sin of pride that led Germany to start the present war.

PREMIER HUGHES OF AUSTRALIA—Belgium and France get all they want while Australia gets nothing for her sacrifice.

MR. R. YAMASHINA—The reconstruction of China's monetary system should be the first step in any program to help that republic.

REPRESENTATIVE ROYAL JOHNSON—The European peoples see in America a land of endless resources and boundless riches to be had for the taking.

ALBA B. JOHNSON—There is only one time when the optimist looks more foolish than when he is predicting, and that is when his prediction has come out wrong.

WOODROW WILSON—It is essential for the future of the world that there should be the frankest cooperation and most generous understanding between the two English-speaking democracies.

*Time-thrift!* Speed is man's means of saving that most precious of all commodities—*time*. Because Mimeographing is the speediest method of duplicating all kinds of letters and forms it has taken its place among the *great economies* of modern business life. Dictate a letter and within the hour the Mimeograph will deliver thousands of completed copies ready for distribution. Its steady grist is nearly a hundred duplications a minute—exact and well printed facsimiles of the original typewritten or handwritten sheet. Drawings too may easily be included thereon. With the least possible delay the Mimeograph bridges the distance from your thought to the many who should receive it. Real time-thrift, that! Our booklet "E" is now ready for you. A. B. Dick Company, Chicago—and New York.

HARPER'S WEEKLY

## THE ADRIATIC PROBLEM AND THE SECRET TREATIES

THE Great War arose out of the efforts of Southern Slavs inside and outside Austria-Hungary to unite. Archduke Francis Ferdinand was shot at Serajevo, in the disputed territory, on June 28, 1914, by a young Bosnian aided by certain Serbs. The Southern or Jugo-Slavs (pronounced and better spelled Yugo-Slavs) comprise the Serbs and Montenegrins outside the Austro-Hungarian monarchy and the Croats, Slovenes, Dalmatians and Bosnians who were inside, altogether some twelve millions, of essentially the same race and much the same language. The question was not settled by the Great War; it was merely opened for settlement by the abolition of Austria-Hungary, for all the boundaries of Jugo-Slavia are in dispute and its internal conflicts are serious.

The world can now realize why Woodrow Wilson was so dead set against secret treaties, for they are obviously the chief obstacle to the settlement of the disputed questions on equitable and sensible principles. It was not nice of the Bolsheviki to let the cats out of the bag of the Russian Foreign Office. But it did let the people of the various belligerents know what they were fighting for more definitely than the declared aims of their governments. It showed that while the Allied Powers were ostensibly fighting in a common cause they were secretly intriguing against one another. For instance, France, England and Russia, without the knowledge of Italy, disposed of the Anatolian territory claimed by Italy. France and Russia, without the knowledge of England and against her wishes, concluded an agreement by which all Poland was delivered over to the tender mercies of the Czar and in exchange France was to gain control of all the German territory to the left of the Rhine. Russia and Japan signed a secret treaty virtually giving Japan a free hand in China. Russia and Germany conspired to betray Rumania. France, Italy, England and Russia, without the knowledge of Serbia, signed away to Rumania and Italy part of the country for which Serbia was fighting.

Serbia made war with the single aim of freeing those of the Serbian race who lived under Austro-Hungarian rule. Now that the war is won she finds that 700,000 of them are not to be allowed to join the rest of their race but are to be transferred to Italy. Naturally she refuses to regard the war as over. Dr. Vesnitch, the Serbian Minister to France, declares in frank and undiplomatic language that:

*Should the treaty, secretly signed by England, France, Russia and Italy in 1915, whereby Italy was to come into possession of the eastern coast of the Adriatic after the war, be confirmed by the coming peace conference, then Serbia would fight again, and fight to the finish. Serbia did not enter this war to become the vassal of any nation. She cannot agree to have Italy control the territory in question.*

On the other hand the Italian claim is from a legal stand-

point quite unimpeachable. Italy consented to enter the war on certain definite conditions which she insisted should be expressly guaranteed to her in advance. The British and French negotiators protested at the time that Italy was driving too hard a bargain, but Italy insisted upon her terms and they were obliged to concede them. Now that they have won the war with the aid of Italy, can England and France go back on their bargain and refuse to pay the price they agreed to? This question was asked in the House of Commons and the British Government made the proud reply that to England a treaty was not "a scrap of paper" and that all the secret treaties were sacred obligations and would never be repudiated. The French Foreign Minister, M. Pichon, has made a similar declaration. Yet the secret treaties in various ways conflict with the President's fourteen points, to which all the belligerents later agreed.

According to the secret treaty of April 26, 1915, Italy demanded and was promised Tirolean districts, mostly German, Dalmatian territory mostly Slavic, the Dodecanese islands, where there are few Italians, the Albanian coasts, where there are fewer, and African lands, where there are none. Obviously it would not suit Italy to apply the principle of self-determination in such cases. In fact, if the boundary line is to be drawn according to race and language the Jugo-Slavs would have a counter-claim on the Isonzo side, for the Slovenes extend over the Italian boundary a distance of a dozen miles at one point.

The armistice line was drawn along the limit of the territory conceded to Italy in the secret treaty of March, 1916, and the Austro-Hungarian forces were required to retire behind this boundary. But the Italians were not content with this. Their troops promptly pushed beyond the line as far as Laibach, the Slovene capital, and occupied Fiume, the chief Croatian port. An Italian military governor, previously selected, was installed at Fiume and the Austrian fleet, which has been surrendered to the Jugo-Slavs, was taken from them. The Jugo-Slavs assert that the fleet would have been in their possession three weeks earlier if the Italian Government had not held up their emissaries.

The Italian imperialists say that Italy was forced to reduce her just claims at the time when the secret treaty was negotiated on account of the opposition of Russia, who favored the Slavs, but that since Russia is out of the game Italy should insist upon an extension of territory east of the Adriatic. They claim "exclusive Italian domination of the Adriatic, the annexation of the ports of Fiume, Zara and Valona, the possession of the whole of Dalmatia and a protectorate over Albania."

Signor Bissolati, the Socialist Minister of Military Aid and Pensions, who opposed the demands of the imperialists and was willing to relinquish Dalmatia, the German part

of Thiol and the Greek Dodecanese, was howled down at public meetings and forced out of the cabinet.

The boundary question is ably argued in this issue by moderate-minded advocates of the Italian and Jugo-Slav claims and we shall not discuss it further except to point out that from an American point of view many of the presumed difficulties in the way of settlement seem purely imaginary and many of the arguments on both sides appear quite irrelevant. Whether the territory in question was under the Eastern or Western Roman Empire, whether it was ruled by the Sultan of Turkey or the Republic of Venice, are idle questions to an American living in a land which belonged to Spain, France or England less than 150 years ago but which he does not propose to give back to either. An American cannot keep from grinning when he hears a hot discussion as to whether the Slavs arrived at the Adriatic in 700 or 800 A. D., for he admits to full citizenship both Slav and Italian immigrants after five years on the same level as the descendant of the Pilgrim Fathers.

Both sides seem to assume that the various peoples of southeastern Europe have to be sorted out and penned up because they do not mix well, that they are so divided by religion, race, language and tradition that they cannot live together. This we know to be false, for we see them daily working in the same shops and going to the same schools, and they get along as peaceably as if they were all Methodists or all Jews, or all Poles, or all Indians, or all Irishmen.

We also hear that these peoples are so deeply rooted in the soil and so attached to their ancient customs that they cannot be shaken loose. That also we all know to be nonsense. There are no more mobile or adaptable people on the face of the earth than the Slavs and Italians. We have millions of them in America. They came without reluctance and they go with hesitation. A third of the Dalmatians and a third of the Slovaks had emigrated to America before the war, and if the other two-thirds had been able to raise the steamer fare the Peace Conference would not have been bothered with a question of Dalmatia or Slovakia. The people would have settled it for themselves by their inalienable right of individual self-determination, and there would have remained merely the land to be disposed of to the best advantage of the world. Once admit the American principle of migration and naturalization, and the causes that brought on the Great War and may bring on others will vanish utterly. People naturally want to move about and mingle, and they can only be kept separate and stationary by force. The more countries we make the more wars we shall have.

## SECESSION IN SPAIN

THE Spanish, like the British Government, has to deal with a serious separatist movement. The twenty-six Catalan members have withdrawn from the Cortes as the Sinn Fein members have from Parliament with the intention of setting up an independent government. A few years ago the Catalans like the Irish would have been satisfied with a liberal measure of Home Rule like that of the United States, but being denied this their demands increased from federalism to regionalism and from this to nationalism, and now the extremists are talking of an independent republic. But Premier Romanones, like Premier Lloyd George, is trying to devise some scheme of local autonomy that will satisfy the malcontents and keep them from breaking with king and country. Meanwhile the Catalans, like the Irish, have sent emissaries to Paris beseeching President Wilson to apply his principle of the self-determination of small nationalities to them as well as to the Czecho-Slovaks and Jugo-Slavs. In Catalonia as in Ireland the revival of an obsolescing language has been made the basis of the nationalist movement. One of the

demands of Barcelona is that Catalan instead of Castilian Spanish be taught exclusively in the schools and used in all official affairs. But Catalan never came so nearly to extinction as did Gaelic before the effort to revive it began. The Catalan, like the Castilian, originated in the vulgar Latin, but since the latter came from the French side of the Pyrenees it is related to the Provençal of southern France, which likewise had a literary rebirth in the later nineteenth century.

The Catalonians feel themselves more in sympathy with republican and anti-clerical France than with monarchical and Catholic Spain, and they threaten to ask annexation to the French republic along with Alsace-Lorraine if their demands for local self-government are not complied with. The breach has been growing for many years, but the war has widened it, for the ruling classes of Spain, including the military, the clergy and the court, tho not the King, were inclined toward pro-Germanism and this influence kept Spain neutral and permitted it to become an active center of German propaganda. But the Catalonians, who favored the Allies, are not now in a mood to stand dictation from the beaten and discredited party. They were under French rule from 1808 to 1813 and some of them wish the district had never been turned back to Spain.

Catalonia comprizes the four provinces of Barcelona, Tarragona, Gerona and Lerida, altogether an area about the size of Holland and a population of over two millions. From the point of view of economics, religion and temperament Catalonia occupies somewhat the same relation to the south of Spain as Ulster does to the south of Ireland, for Catalonia is the industrial section of an agricultural country. In wealth, density of population, manufactures and education Catalonia has the advantage. Barcelona has now gone ahead of Madrid. Its working class population is quick to take up with new political fads and it has become in turn a center for socialism, anarchism, Ferrerism, syndicalism and Bolshevism. Strikes and riots have been frequent and attempts on the part of the Spanish Government to repress them by force have made matters worse. It therefore would be something of a relief to Spain if Catalonia did secede and there are some hidalgos who say, as did certain Northerners of America in 1861, "Let the erring sisters go in peace."

## TIPLESS RESTAURANTS

IF the striking waiters in New York carry out their plan to open a string of restaurants where tipping will not be permitted they will do more to elevate their occupation than they could by higher wages or shorter hours. The one price system and the principle of equal pay for equal work ought to be extended to those personal services such as handling clothing and food which still bear the brand of former servitude. We do not know whether it is degrading to receive a tip because we never tried it. We do know that it is degrading to bestow a tip because we have tried it.

## FREE PEWS IN TRINITY

THE action of the vestry of Trinity Parish in New York in abolishing the renting of pews in that parish after the first of next May is an interesting sign of the times. It is significant because of the prominence of the church which has taken this action, and also because of the unanimity with which it was done. It was a unanimous vote of the vestry and apparently cast with great heartiness and enthusiasm. It is not an act of faith or heroism for Trinity Parish to take such a step, because its wealth is great and it can readily support its work without depending on pew rentals. As a matter of fact its income from pew rentals in the immediate past has been surprisingly small. It runs no risks therefore of curtailing or crippling its work in

making this new departure. But it is nevertheless an act of Christian wisdom and courage which has in it inspiration for all friends of organized Christianity and all lovers of progress. Great ecclesiastical corporations, heavily endowed, have been noted for their conservatism, and their reluctance to step aside from the beaten path. But here is a corporation which with alacrity tosses aside a venerable tradition and breaks down in a day a custom which had been faithfully followed thru 221 years. It shows that the church in the twentieth century is not hopelessly conservative, or averse to everything which seems to disparage the ways of the past.

But the deepest significance in the action of Trinity is the indication it furnishes that there is in the hearts of the men in charge of our large and wealthy churches a deepening desire to get rid of the social discriminations which are so foreign to the religion of Jesus, and to bring the church into closer contact with the life of all classes of the people. The ground for the action and the reason for taking it at this particular time were exprest by the vestry in the following words:

Resolved, that this action be taken as an expression of thanksgiving to Almighty God for the victory which He has granted us, and as an evidence of our desire to do all that we can at this great moment in the world's history to make the church the central place of human fellowship which it should be.

## ANOTHER GERMAN DEFEAT

THE overwhelming victory of prohibition in the United States is not surprizing, for it is a natural sequence of our victory over Germany. Everybody who has been interested in the temperance movement knows that the chief obstacle to its progress has always been the German element. The German immigrants, altho in some respects making excellent citizens, refused on this point to conform to American ideals of morality. With curious inconsistency they denounced prohibition as an invasion of personal liberty while at the same time eulogizing the Vaterland for its regulation of private life to a degree intolerable to an American. The anti-prohibition movement was financed chiefly by German brewing and distilling interests, the German saloon was its agency and the German vote paralyzed the political parties that otherwise would have espoused the temperance cause. Our professors who went to study in German universities came back with the belief that beer and high scholarship were inseparably associated.

But just as soon as Germanism in general fell into discredit in this country on account of the war, and the political power of the Teutonic element was abolished, prohibition began to boom and now has carried the country.

## A BUSINESS PROPOSITION

WHILE we were fighting to defeat Germany the people of the United States answered the Government's call for emergency funds by four successive Liberty Loans, aggregating approximately nineteen billion dollars. Rates of interest, length of term, liability to taxation—in short the investment value of the loans received little or no consideration in comparison with the patriotic will to stint nothing in support of our soldiers who were giving their lives at the front.

But now the war is won. And victory found most of us with our resources much depleted by the war demands.

Wherefore the launching of the Fifth Liberty Loan next April demands, it seems, consideration as a business proposition rather than as a sentimental appeal, for, frankly, with our soldiers safe the driving power of previous urgings to Liberty Loans is inevitably diminished. The enormous advertising display of the Fourth Liberty Loan reached practically the climax of publicity appeal. Is it wise to spend even bigger sums of money in an attempt to

duplicate it now without the quickening force of actual war? Why not transfer the cost of another such publicity campaign to an increased rate of interest on the Liberty bonds themselves?

Make the Fifth Liberty Loan a fair claim to sound judgment on its merits as an investment. Then its subscription will be assured by its appeal to business interests as a stable security and the last Liberty Loan will sell itself.

## LOADING THE COSTS ON THE FUTURE

THE *Bulletin* of Sydney, Australia, rejoices that our ancestors were ignorant of modern financial methods so they had to pay their own expenses. If they had known of the scheme of perpetual loans by which our public works are "paid for" the British taxpayer would today be paying interest on some such debts as the following:

Roman Walls (Forth-Clyde and Tyne-Solway) . . . .	£10,000,000
Roman Fortifications of London . . . . .	4,327,915
Establishment of Christianity . . . . .	7,141,816
Pagan Temples (dismantled) . . . . .	1,902,173
Maintenance of Catholic State Church . . . . .	479,162,390
Upsetting of same (Reformation) . . . . .	64,309,070
Tower of London . . . . .	1,947,637
Unsuccessful Reclamation Works (Goodwin Sands A. D. 1006) . . . . .	309,003
Administration of French Provinces (since abandoned) . . . . .	187,333,111
Administration of American Provinces (since abandoned) . . . . .	160,928,443
Loans for abolition of witchcraft and other noxious plants and heresies . . . . .	222,110,792
Fire of London (1666) . . . . .	240,300
Abolition of wolves in Wales . . . . .	63,620

£1,139,776,270

There ought to be some way of limiting payments to the period of usefulness of the object of the expenditure. But as an improvident purchaser pays installments on a carpet or a suit of clothes long after it is worn out, so communities are paying for turnpikes or canals or inadequate water-works or obsolete gas plants or unusable markets for generations after they have ceased to be profitable. Railroad bonds have come to be regarded as permanent investments and government bonds are much the same. The United States by some miracle did succeed in paying off the debt of the Revolutionary War, but Great Britain, which has the next best record, had only paid a quarter of the expenses incurred by the Napoleonic War, some four and a half billion dollars, when the Great War broke out a hundred years later and multiplied the national debt by ten.

## THE Y. M. C. A.

ONE must not allow himself to be too much disturbed by the deluge of criticism to which the Y. M. C. A. is just now subjected. Such criticism, while regrettable, is only what might have been expected. Much of the criticism is utterly unfounded. In a world so filled with rumor and gossip as our world is filled, how could the Y. M. C. A. escape? Its very success aroused the envy and increased the malignity of its foes. Some of the criticism, however, has ample justification, striking at evils which are admitted. The Y. M. C. A., like the United States Government, attempted to do a thing which was beyond its immediate strength, and its machinery consequently creaked and here and there broke down. The needs were colossal and urgent, and there was no time to give every detail the attention it deserved. A huge army of workers had to be mobilized at once. Volunteers were called for from all parts of the country. These volunteers were examined with care, but an occasional man slipped thru who might better have stayed at home. Millions of money were handled, and a little of it was stolen, but the amount stolen is so small that it is negligible. No stupendous piece of work can be accomplished in a world like this without many a blunder. The

number of unworthy men engaged in Y. M. C. A. work has been surprisingly small. When comparisons are made between the Y. M. C. A. and some other body engaged in welfare work, such as the Salvation Army or the Red Cross, to the disparagement of the Y. M. C. A., such comparisons are unfair. The Red Cross set out to do one thing and the Y. M. C. A. set out to do a different thing, and the latter is not to be condemned because it did not do the thing which the former accomplished. The Red Cross because of the nature of its mission—looking after the sick and the wounded and the dying—had to undergo perils to which the Y. M. C. A. was not normally subjected. The fact that nine Y. M. C. A. workers have been killed by shell fire while on duty, and that twenty-nine have been severely mangled or wounded, and that thirty-one have died in the service from exposure and overwork, is proof that Y. M. C. A. workers have not been cowards or shirks. When the Salvation Army is extolled at the expense of the Y. M. C. A. it should be remembered that the work of the former was on an exceedingly small scale compared with the work to

which the Y. M. C. A. put its hand. A small task can be done with an ease and perfection that are not attainable in the performance of a task so gigantic that it taxes to the utmost all the human powers.

The cardinal blunder of the Y. M. C. A. was made when it took up the work of running canteens. This was a business proposition for which its workers had not been trained. No wonder that the work in numerous instances was botched and mismanaged. If the Y. M. C. A. had been content to devote itself exclusively to the work for which it exists, its record would have fewer blots upon it than it has today. If it had attempted to do less, it would have accomplished more. The charge that the Y. M. C. A. made money out of its canteens is, in the judgment of experts appointed to investigate the matter, "absolutely without foundation." But after one admits numerous blunders and failures, it still remains true that no other religious organization has ever, within the same length of time and with equal efficiency, performed a task so colossal as that which the Y. M. C. A. has achieved within the last four years.

## THE NEW MAP OF GERMANY

Now that the Hohenzollerns have been deposed and the power of Prussia reduced it is expected that the German Empire will break up into a number of autonomous states united into a federal system something like the United States of America. One of the several proposed schemes of reorganization is given above. The Poles claim Posen and part of West Prussia including Danzig. The Danes claim northern Schleswig. The French claim Alsace-Lorraine and desire control of the whole western side of the Rhine. To compensate for these subtractions Germany may gain whatever is left of Austria-Hungary after the Poles, Czechoslovaks, Rumanians, Jugoslavs and Italians have taken what they want.

# THE STORY OF THE WEEK

## The League of Nations

The President is making the promotion of the League of Nations his chief concern, intent upon having the essential principles agreed upon before he returns to this country. The representatives of the other powers are likewise desirous of expediting the scheme, recognizing it to be a prerequisite of a satisfactory peace. A meeting of the Commission on League of Nations was held on February 3 at the apartments of Colonel House, at which there were present, for the United States, President Wilson, Colonel House and Mr. Miller, a technical expert; for Great Britain, Lord Robert Cecil and General Smuts; for France, Leon Bourgeois and Ferdinand Larnaude; for Italy, Premier Orlando; for Japan, Baron Chinda; and delegates from Belgium, Serbia, Brazil, Portugal and China.

The tentative plan as discussed and as favorably regarded by the delegates provided that a league of nations should be formed, pledged to seek peaceful settlement of all disputes by one of three means: Direct negotiations, arbitration, or reference to the international tribunal at The Hague. It should be optional with nations to choose any of these methods. But any nation refusing them all and threatening to resort to force should be placed under compulsion by the entire league. Each member of the league should have the option of using or not using force, but all should be bound to exert economic pressure upon the recalcitrant state. Land and naval armaments were to be reduced, and the use of submarines was to be prohibited. Meetings of plenipotentiaries of the league were to be held at an appointed place at stated times, and there was to be a permanent secretariat always on duty to facilitate communication among the powers.

At the meeting of the commission appointed by the Peace Congress to consider this subject, on February 4, two principal plans for organization were discussed. One provided for a legislative department of the league, in which the large and small nations were equally represented, each as a unit; and an executive department, consisting of two members from each of the five great powers and nine from all the other powers, so that the total membership of nineteen would be divided into ten from the great and nine from the small powers. Arbitration was provided for the determination of international issues. In case of a dispute between two nations, each nation named arbitrators, and these two selected a third arbitrator. The three arbitrators thus chosen constituted a tribunal for determining the issues.

This plan met with much favor from the smaller nations. The other plan, which was put forward on February 4

Harding in Brooklyn Daily Eagle

## BREAKING THRU THE CLOUDS

provided for a similar legislative department, but made the executive consist solely of two representatives of each of the five great powers, save as others from the smaller powers might be specially called in when interests of those powers were under consideration. The scheme of arbitrators was eliminated, and in its place was put an executive council of the great powers which should judge all international issues.

## The President's Paris Address

President Wilson made another notable address in Paris on February 3, in the hall of the Chamber of Deputies, his audience including the President of the French Republic, the members of the Cabinet, and the presidents and most of the members of the two chambers of Parliament. The

President spoke from the tribune, being the first foreigner to do so in many years, and all his hearers, including Messrs. Poincaré and Clemenceau, insisted upon paying him the honor of standing during his address. That portion of the President's address relating most directly to the state of Europe and of the world, and to the work of the Peace Congress, was in part as follows:

I do not need to point out to you that east of you in Europe the future is full of question. Beyond the Rhine, across Germany, across Poland, across Russia, across Asia, there are questions, unanswered, and they must be for the present unanswerable.

France still stands at the frontier. France still stands in the presence of those threatening and unanswered questions—threatening because unanswered; stands waiting for the solution of matters which touch her directly and intimately and constantly, and if she must stand alone what must she do? She must put upon her people a constant burden of taxation. She must undergo sacrifice that may become intolerable.

And not only she but the other nations of the world must do the like. They must be ready for any terrible incident of injustice.

It is for that reason, I take it, that I find such an intelligent enthusiasm in France for the society of nations—France with her keen vision, France with her prophetic vision.

It seems to be not only the need of France, but the need of mankind. And France sees the sacrifices which are necessary for the establishment of the society of nations are not to be compared with the constant dread of another catastrophe falling on the fair cities and areas of France.

The nations of the world are about to consummate a brotherhood which will make it unnecessary in the future to maintain those crushing armaments which make the peoples suffer almost as much in peace as they suffered in war.

## "Freedom of the Seas"

The American delegation to the Peace Congress was reported on February 1 to have formulated its interpretation of the practical meaning of "freedom of the seas" as called for in the President's prescription of terms of peace. The chief points were: That no nation should have a fleet so large as to be able alone to control the seas; that sea rules made in peace should not be changed during war; that every nation, belligerent or neutral, should be accountable to the League of Nations for its observance of sea rules; that "contraband of war" should be defined in time of peace, and that no neutral should ship contraband to a belligerent or try to evade a blockade; and that the use of submarines should be prohibited, or greatly restricted.

The first of these principles was regarded by many as likely to meet with opposition in Great Britain, which is the only power whose fleet approximates the forbidden degree of strength. In that connection it was observed that the President was urging the enactment by Congress of a bill providing for the

## THE GREAT WAR

January 30—Supreme Council accepts President's plan for disposing of former German colonies and other conquered lands.

January 31—Supreme Council settles Polish-Czecho-Slovak dispute. Allies driven back by Bolshevik army in Northern Russia.

February 1—British strikes show revolutionary symptoms. Berlin Soviets vote for Socialist National Assembly.

February 2—Bolshevik attack repulsed by Allied forces. Czechs suppress riots in Silesia.

February 3—London almost paralyzed by strikes. Claims of Greece presented to Peace Congress.

February 4—Franco-German war of words in Berne Labor and Socialist Conference. Bolsheviks mobilize all men from 20 to 45.

February 5—Bolshevik invasion of Hungary. Spartacist disturbances at Bremen and elsewhere.

One in Chicago Tribune

## HANDLE IT WITH GLOVES

great increase of our navy, unless the powers should agree to the formation of a League of Nations making great armaments unnecessary, in which latter case the increase was to be indefinitely suspended. The fourth principle, relating to contraband of war, if adopted would prevent the shipping of munitions of war from a neutral to a belligerent country, a trade which the United States in common with other nations has always insisted upon the right to practise, and which we did practise to an enormous extent during the present war. This, it was feared, might meet with much opposition in this country.

**Heads of Two Commissions** Robert Lansing, the American Secretary of State, was on February 3 elected president on the Commission on Responsibility for the War. Andre Tardieu, the French member, in nominating Mr. Lansing, said that before establishing a peace of justice it was necessary to impose penalties upon the authors of aggressions which had brought death to millions. The work of the Commission would be first to establish the guilt of those responsible for violation of treaties and of international law, and second to fix the penalties which were to be imposed.

Louis Klotz, the French Minister of Finance, was elected President of the Commission on Reparation, and accepted the place in the shortest speech yet recorded in the proceedings of the Congress. "I thank you," he said. "Let us get to work for justice. That is our program."

**Fighting in Russia** On January 30 and 31 the Bolsheviki attacked the American and Allied forces in Northern Russia and compelled them to retreat at one point as much as forty miles. Gas shells of German make were used by them. These operations were followed on February 1 by the proposal, by the United States and Great Britain, that all troops should be withdrawn immediately from Russia.

The Bolsheviki on January 31 captured Kiev, the Ukrainian capital, and

cut all railroad communication with that place, at Kovel. The Ukrainian Government fled to Winnitza. Four days later the Ukrainians were said to be preparing to attack Rumania, where troops were being mobilized to repel them.

Dispatches on February 3 announced that former soldiers of the Russian army had organized a revolt in Petrograd, and that in consequence that city had been bombarded from the fortress of Kronstadt with much loss of life.

The Central Soviet of Moscow on February 4 ordered the military mobilization of all men between the ages of twenty-nine and forty-five, and it was intimated that the order would be extended thruout Russia by the Bolshevik government.

Meantime reports from the Provisional Government at Omsk tell that order prevails in all that part of Siberia, that customs and excise receipts are increasing rapidly, and that the Government is able to collect taxes on real estate. These are regarded as an indication of the efficiency and stability of the Government at Omsk.

**Will Not Meet Bolsheviki** While the various governments of Russia and Siberia have delayed formal answers to the invitation of the Peace Congress to send representatives to a conference on Princes' Islands in the Sea of Marmora, it has been made plain by their agents in Paris and elsewhere that the three which are on friendly terms with the Allies will not enter any conference with the Bolsheviki. Admiral Kolchak, the head of the Provisional Government at Omsk, on January 30 issued a proclamation declaring that there could be no thought of an armistice with the Bolsheviki. "It is possible to reach an

accord with the various provisional governments," he said, "but with brigands never." Nicholas Tschaikovsky, the veteran revolutionist and President of the Northern Russian Government at Archangel, declared on February 2 that the invitation to Princes' Islands was not only impractical but humiliating. "There is," he said, "only one answer to the Bolsheviki, and it is: 'Hands off the state! Abdicate power and consent to the conditions which will allow Free Russia to elect its own Constituent Assembly.'" The Government of Georgia, in the Caucasus, on February 3 announced that it would not participate in the proposed conference, because it had declared its independence of Russia and was therefore no longer interested in the subject.

The Russian Soviet Government, in a wireless message to the Entente Governments sent out from Moscow by M. Tchicherin, Minister of Foreign Affairs, announcing that it is willing to begin conversations with the Entente to bring about a cessation of military activities, declares it is willing to acknowledge financial obligations regarding the creditors of Russia of Entente nationality. Moreover, it offers to guarantee the payment of interest on its debts by means of raw materials and to place concessions in mines, forests, etc., at the disposal of citizens of the Entente, provided

the social and economic order of the Soviet Government is not affected by internal disorders connected with these concessions.

**The German Colonies** The Supreme Council of the Peace Congress devoted January 30 and 31 largely to the question of the disposition of the former colonial possessions of Germany and of the parts of the Turkish and Austro-Hungarian empires which had been conquered and

## OWNER OF THE FIRST AIR FLEET

Roy U. Conger has just bought from the Canadian Government \$10,000,000 worth of aeroplanes and aeroplane equipment, with which he intends to establish a commercial air route in Canada, carrying express and possibly mail for the Canadian Government

occupied by the Allied powers, and by February 1 practical agreement was attained. President Wilson resolutely opposed the immediate annexation of the territories in question by right of conquest, and insisted that the disposition of the territories should be determined by the League of Nations. It was agreed by all that the colonies should not be restored to Germany, and it was recognized that most, if not all, of them were unprepared for an independent status. It was therefore proposed that they should be taken over by the governments most interested, not as military conquerors taking the spoils of war, but as mandatories of the League of Nations taking over a trust for humanity. The first proposal was that the territories should thus be assigned for a period of ten years, at the end of which their further disposition should be reconsidered. Later it was agreed that the assignment should be unlimited, subject merely to reports to the League at stated times as to the manner in which the colonies were being administered.

Under this arrangement it was understood that France would receive the Kameruns and Togoland in Central and Western Africa. German Southwest Africa and German East Africa would be assigned to the Union of South Africa. German New Guinea, Samoa and other islands would be assigned to Australia and New Zealand. Other minor islands in the Pacific would be divided between Great Britain and Japan. The former German holding in China would be restored to that country.

Even more important would be the disposition of the non-Turkish portions of the Ottoman empire. These, it was agreed, were capable of a large if not a full measure of independent self-government, though some degree of tutelage would at least for a time be

necessary. France had long cherished a sentimental and historical claim upon Syria, but was persuaded to waive it, and it was agreed that the limited suzerainty necessary for those lands should be exercised by Great Britain, over The Hedjaz, Palestine, Syria, Mesopotamia, Armenia, and Southern Persia. A strong effort was made to have the United States made the mandatory over some of these countries, particularly Armenia, but this was successfully resisted, it being held that such action would be contrary to the Constitution.

Other territories, the sovereignty of which might be changed as a result of the war, were recognized as standing in a somewhat different category. Such were the parts of Epirus and Asia Minor claimed by Greece, and the Dalmatian coast and islands, to which both

Italy and the Jugo-Slavs laid claim. These claims were based not upon the incident of conquest, but upon the fact of population. The sentiment of the Council was that these territories should be disposed of not at the demand of any single power but through the judgment of the League of Nations and under its authority. This rule did not, however, apply to Alsace-Lorraine, which it was agreed must be restored to France without demur or debate.

From Berlin  
to Weimar

The center of German interest shifts from Berlin to Weimar. The latter city was chosen, despite the insistent demands of the former, as the scene of the meetings of the German National Assembly, or Constituent Convention, which were appointed to begin on February 6. This choice gave great affront to the two extreme classes: To the Junkers and Pan-Germans, who wanted the Assembly at Berlin, the former seat of imperial autocracy; and to the Spartacans and Bolsheviki, who also wanted it at Berlin, where it might be influenced by the mob. It was reported on February 2 that the Spartacans and other Reds were preparing to move upon Weimar in a great multitude, to prevent by force the meeting of the Assembly, and perhaps to compel the disbanding of that body altogether, as the Bolsheviki dispersed the Constituent Assembly in Russia. In consequence the Government sent troops for the protection of Weimar and permitted nobody to enter that city without a pass or some proof of legitimate business.

The choice of Weimar for the scene of the Assembly is regarded as most auspicious, since it surrounds the meetings with memorials and at least sentimental influences of the great men of Germany—of Goethe, Schiller, Herder, Lessing, Richter, Liszt and others who made the name of Germany as great in the arts of peace as it has since become infamous for its identification with war.

## NO ADMITTANCE

Two interests that can have no voice in the Peace Conference: Bolshevism and Territorial Selfishness. "Waiting outside is a new experience for him," says the legend of the cartoon at the right

**Doings in Germany** While the German National Assembly is convening at Weimar, disorders continue in various parts of the country. The Spartacans persist in trying to set up Soviet governments at various points, but seem gradually to be losing ground. Scarcity of coal and other supplies is causing much trouble, the great Government arsenal at Spandau, employing 50,000 men, having been compelled to close on February 1. There are still serious disturbances on the eastern frontiers where both Russian Bolsheviki and Poles are said to be menacing Germany with invasion.

Serious fighting occurred at Bremen on February 5, where the Spartacans were besieged by Government troops. Workmen at Hamburg made demonstrations in sympathy with their comrades in Bremen.

The unofficial American mission to investigate the condition of Germany for the Peace Congress arrived at Berlin on January 31, headed by Captain Walter R. Gherardi, formerly American Naval Attaché at Berlin. It will make a tour of the principal cities of Germany.

The Staatsrat of Austria (the German duchies of Austria proper) on February 1 unanimously passed a bill providing for the union of those provinces with Germany.

**More War Revelations** M. Viviani, formerly Prime Minister of France, has made it known that in 1914, some time before the beginning of the war, in order to avoid danger of any clash between frontier guards, the French Government withdrew its forces in the Briey Valley a considerably greater distance from the international boundary, leaving a "safety zone" ten kilometers in width. Both the political and military authorities of France agreed upon this as a safeguard of peace.

There has just come to light at Constantinople a secret treaty which was negotiated in 1914, before the war, tho not actually signed until after the beginning of hostilities, giving additional evidence of the "Mitteleuropa" plans of Germany at that time. Under its provisions Russia was to be despoiled by the erection of the Trans-Caucasian state of Georgia into an independent sovereignty. Turkey was to give Georgia military assistance in establishing independence, and the costs of the campaign were to be met by Germany.

**Portuguese Revolution** The reactionary revolution in Portugal was reported on February 2 to be so successful that a "National" or monarchical Cabinet had been appointed by the army amid much popular enthusiasm, and that the arrival of King Manoel to resume his throne was eagerly awaited. The very next day the Royalists were reported to have been badly beaten and to be retreating, and a bill was introduced into Parliament for the expulsion and exclusion of all Royalist members.

Parody on New York Tribune

SORRY TO TROUBLE YOU, BUT

#### Poles and Czecho-Slovaks

The somewhat acrimonious dispute between the Poles and the Czecho-Slovaks over the possession of the valuable Teschen coal fields and other territory was brought before the Peace Congress on January 30. The Poles explained that they merely wished to recover territory which had been theirs before the partitions of 1772 and 1793, including the city and province of Posen and the city of Thorn, with free access to the sea at Danzig. The Czecho-Slovaks also explained the case from their point of view. The Supreme Council then advised both parties that they must refrain from action in the matter until the Peace Congress had

#### HEAD OF THE AMERICAN RED CROSS WAR COUNCIL

Dr. Livingston Farrand, president of the University of Colorado, has been appointed to succeed Henry P. Davison as chief of the War Council of the American Red Cross. Dr. Farrand has just returned from France, where he was given the Legion of Honor for his services as head of the Rockefeller Commission for the Prevention of Tuberculosis in France.

decided the dispute, and that meantime the territory in question would be occupied by the Allies. To this arrangement both parties assented.

#### The British "Embargo"

Some sensation has been caused by the promulgation of orders by the British government for certain restrictions of the import trade which some assumed would exclude American goods from the British markets. It was explained on February 1 that only measurable restriction and not exclusion was intended. The goods in question are of two classes. Importations of food and raw materials will be restricted, or subjected to license, because of the worldwide scarcity of them; an arrangement which is to go into effect on July 1. The other class, comprising a great variety of manufactured goods, will also be subjected to a license system as a much needed measure of protection to British manufacturers, corresponding somewhat with the American protective tariff. Boots and shoes form a special class, the importation of which is prohibited. This is to provide for the extraordinary situation in Great Britain caused by the Government's having taken over that entire trade during the war. It is explained that all these measures are merely temporary.

It was indicated on February 5 that similar action was to be taken by the French Government, for similar reasons.

#### The Strikes in Great Britain

Strikes, often accompanied with rioting, continue to prevail and to increase thruout the United Kingdom, and appear more and more to be inspired by the principles of the Russian Bolsheviki or the German Spartacans. On February 3 a sudden strike of all employees on the underground railways paralyzed local traffic in London and its suburbs.

#### Labor at Paris and at Berne

Samuel Gompers, President of the American Federation of Labor, was on February 1 unanimously elected President of the Peace Congress' Commission on International Legislation on Labor. Messrs. Fontaine, of France, and Butler, of England, were chosen general secretaries.

The American delegates to the Interallied Trades Union Conference at Paris, under the lead of Mr. Gompers, decided to join the Belgian delegates in refusing to recognize in any way the International Labor and Socialist Conference at Berne, Switzerland. This action was taken by the Belgians, and also by the Americans, for the reason that German delegates are participating equally with others in the Berne conference.

The British delegates all left Paris for Berne on January 31, apparently being ready to meet and fraternize with the Germans. The French Socialist deputies, forty-five in number, on February 1 voted that French delegates should go to Berne on three con-

ditions: That Bolshevism be denounced and renounced by the Conference; that two of the German Socialists be tried and expelled; and that no Socialists be admitted to future Congresses unless they accept democracy as the proper form of government.

The Berne Conference opened on February 1, and was quickly made the scene of violent rhetorical clashes between the French and German delegates. Eighty delegates, representing twenty-one countries, were present.

### Striking While the Iron Is Hot

The spirit of labor unrest centered in the textile industry last week and particularly in Lawrence, Massachusetts, and Paterson, New Jersey, where nearly 50,000 workers in silk and woolen mills went on strike. At Paterson the keynote of the dispute was the workers' demand for shorter hours; the more powerful of the two unions insisting on a forty-seven hour week, the I. W. W. demanding forty-four, with a Saturday half holiday. Two of the mills granted the forty-seven hour week at once, but most of the manufacturers would go no further than to offer to submit the whole dispute to the War Labor Board.

At Lawrence, where the woolen mills predominate, the strikers made their slogan "54—48," demanding fifty-four hours' pay for forty-eight hours' work, which would mean an increase of 12½ per cent over the present wages. The American Woolen Company, which controls four mills at Lawrence, led the way in meeting the strikers' demands by granting a forty-eight hour week, but refused to continue wages on the basis of a fifty-four hour week.

The company explained its attitude with this statement to the workers:

We feel that a further advance in wages such as you request would naturally increase our risk of meeting successfully the competition from foreign manufacturers and might result in idleness for our mills and consequently unemployment for you.

You will remember that since January 1, 1916, your wages have been advanced 87 per cent, while the cost of living from July, 1914, has advanced in industrial communities, as stated by the National Industrial Conference Board, not over 70 per cent, and the tendency in the cost of living is now downward.

For these reasons, and with the best interests of our employees always in mind, we will not increase the rate of wages, but will pay you 48 hours' pay for 48 hours' work, and should future business make it advisable for us to run our mills more than 48 hours per week, we will pay you time and one half for overtime.

One of the Lawrence mills voted to accept the American Woolen Company's proposal, but the other three rejected it and continued to strike.

In Fall River, Massachusetts; Dover, New Hampshire; Pawtucket, Rhode Island; New Bedford, Massachusetts; North Adams, Massachusetts, and Easthampton, Massachusetts, manufacturers have met the threatened general strike of the United Textile Workers of America by acceding to their demand for a forty-eight hour week. The union announced on February 3 that over 70 per cent of

### PIONEER OF PROHIBITION

William Jennings Bryan was presented this silver loving cup by the National Dry Federation in recognition of his services for nation-wide prohibition and to celebrate the ratification of the Federal prohibition amendment.

the textile manufacturers in the North had conceded the eight-hour day.

The hotel waiters' strike, begun in New York early in December, has proved a failure and the strikers have announced their willingness to go back to work on the old terms. The situation is complicated by the fact that many of the hotels, forced to employ women in the strike emergency, have found them more satisfactory than the men.

### Forty-four to One

Connecticut broke the even tenor of prohibition progress by a vote of the state senate on February 4 refusing to ratify the Federal amendment. The decision of the Nutmeg State, of course, does not affect the actual passage of the amendment, which was accomplished by the ratification of two-thirds of the states in the Union. It is interesting, however, in view of the fact that Connecticut is the first state

Cartoon by Chicago Tribune

### "STEADY, BOYS!"

Labor and Capital balance at either end of industry as Uncle Sam carries them over the tight rope of readjustment to peace prosperity.

to break the continuously favorable attitude toward the prohibition amendment, built up by its successive ratification by forty-four states. Connecticut seems to have a reputation to maintain in the matter of refusing to ratify amendments. It went on record as opposing the first twelve amendments to the Constitution, and also the sixteenth, which relates to the income tax.

### Shall We Bar Immigration?

A four-year ban on immigration into the United States was approved by the House Committee on Immigration in a bill introduced in Congress on January 30 after extended hearings, at which evidence was submitted to show that unless some such restrictive measures were adopted a heavy influx of immigration would immediately follow the signing of the peace treaty. One of the chief arguments advanced was that of Representative Royal Johnson of South Dakota, who served with the American army overseas. Mr. Johnson said that the Germans particularly were looking to America as an escape from their own war burdens.

I have talked with many German prisoners and found them practically united in a purpose to come to America as soon as the war ended. They believe they will be received here with open arms and that America is the land of wealth and promise.

Mr. Johnson also made the point that immigration, even if it brought us desirable citizens, would hamper seriously the employment readjustment we are facing now.

American labor has a right to work out its own salvation, which it cannot do if there is a tremendous influx of low-priced, impoverished foreign labor.

The bill as it was introduced makes provision for numerous exceptions to the immigration bar. Permission to enter the United States is given, for instance, to aliens lawfully resident here; to government officials, their families, attendants, servants, lawyers and employees; ministers or religious teachers, missionaries, teachers, students, authors, chemists and engineers, professional artists, physicians and travelers for pleasure, business or curiosity, or to their legal wives or their children under sixteen years of age.

Exception is also made in behalf of persons seeking refuge from religious persecution; parents or grandparents of any alien admissible under the bill or heretofore or hereafter legally admitted, or his unmarried or widowed daughter, or son not over eighteen years of age, and aliens who were drafted or who volunteered for service with the military forces of the United States or our allies.

Opposition to the immigration bill has already been rather generally expressed in Congress. A minority report of the House committee, filed by Representative Isaac Siegel of New York, called attention to the high record of service in the United States army made by recent immigrants to this country and urged that the bill to bar immigration

does not stand for those ideals for which we entered the war. It practically says to the

## AMERICA'S PEACE HEADQUARTERS

The Hotel Crillon, facing upon the Place de la Concorde in Paris, was requisitioned to serve as office building and living quarters of President Wilson's staff and the United States delegates to the Peace Conference

164,182 men who waived their right to exemption on the ground that they were aliens, that they were fit to go into battle for America, and even die for it, but that they were not inspired by love for our institutions, and that, therefore, the doors of our country are to be closed to their younger brothers and next of kin.

**Cut Rates on Shipping** Reductions of rates on freight carried by American vessels to Africa, Australia, New Zealand and the Far East have been announced by the United States Shipping Board to meet similar cuts in shipping rates previously announced by British lines. These reductions amounted to 42 or 43 per cent, making the total reduction in British shipping rates of pre-armistice days from 60 to 66 per cent. Rates on shipping between Great Britain and the United States have been similarly lowered by both countries.

**President Wilson on the Navy** A message from President Wilson influenced the House Committee on Naval Affairs last week to report favorably the bill urged by Secretary Daniels to appropriate

\$600,000,000 for a three-year naval building program. Just what the President said in his message has been kept secret, but it had the effect of changing the attitude of the House committee from opposition to unanimous support of the bill.

The provisions asked for by Secretary Daniels are retained intact; authorization is given for the construction prior to July 1, 1922, of ten first-class battleships, ten scout cruisers, and additional vessels and airplanes as recommended by the Secretary of the Navy and approved by Congress. The House committee modified the bill with a proviso by which the program may be suspended if a competent instrumentality for international peace is set up.

**The President's Return** It is expected that President Wilson will sail for home on February 14, by which time he hopes that sufficient progress will have been made in peacemaking to enable him to present a satisfactory report to Congress; after which further transactions at

Paris will be reported to Congress as they occur.

It was intimated on February 1 that the preliminary terms of peace would probably be presented to Germany on February 17.

**Our Soldiers Vindicated** The recent reports of numerous crimes and misdemeanors said to have been committed in Paris and elsewhere in France by American soldiers have been promptly and emphatically contradicted. General Pershing himself has denounced them as baseless. It is explained that they arose chiefly from two sources. One was the practice of Parisian "Apaches" in getting and wearing American uniforms so as to pass themselves off as American soldiers. The other was the malicious propaganda of German spies, who committed offenses in a way which would lead to their being charged against Americans. Careful investigation has reduced the number of murders charged against Americans from 34 to 2, and the assaults from 244 to 48.

## THE FIRST SESSION OF THE PEACE CONFERENCE

The delegates of the Allies are here assembled in the famous council chamber at the Quai d'Orsay in Paris to begin the most momentous peace negotiations that the world has ever known. Under the clock is standing President Poincaré of France delivering the address of welcome. President Wilson is at the left under the clock

# THE BIRTH OF THE LEAGUE OF NATIONS

BY HAMILTON HOLT

*The editor of The Independent is in Paris now as vice-chairman of the League to Enforce Peace and as delegate of the Church Peace Union. This first article will be followed by successive cables in which Mr. Holt will keep The Independent readers in close touch with the developments of the Peace Conference*

THE dreams of poets, prophets and philosophers have at last come true. On Saturday, January 25th, in the beautiful crimson and gold conference room of the Quai d'Orsay at Paris the League of Nations was born. Except for the few representatives of the press who squeezed themselves into the ante-room and could only get a partial view of the historic assemblage thru the heavily curtained doors, no one was permitted to attend the plenary conference because the room in which it sits is so small. I have never seen such an array of world renowned celebrities as were assembled together in that little chamber.

At the head of the table, directly in front of the statue of Peace above the mantelpiece, sat the venerable and bushy headed Clemenceau, Premier of the French Republic and President of the Conference, the only delegate who wore kid gloves during the proceedings. On his right was President Wilson with the American delegation. On his left was Premier Lloyd George with the British delegation. These men, editor, professor and attorney, are the Big Three of the Conference and weigh more in the balance when in agreement than all the other delegates combined.

Clemenceau and Wilson were honored with golden thrones. The others occupied chairs of pink satin and ebony arranged along the tables. Of the familiar faces I need only mention three: Premier Venizelos of Greece, Europe's foremost democrat; Field Marshal Foch, the savior of civilization, and Arthur Balfour, England's statesman philosopher. Field Marshal Foch and General Bliss, American Military Representative of the Supreme War Council, were the only delegates in military uniform. The two British envoys from India wore the native costume of picturesque flowing robes.

President Wilson's opening address was a masterpiece of English and statesmanship. Tho couched in the usual diplomatic urbanity it hit direct from the shoulder. His face was tense with earnestness as he spoke, and I am sure there was not one American present who was not thrilled with pride in his country's spokesman. When finally after a graceful peroration Mr. Wilson sat down, there was a general murmur of approval in which some members of the press so far forgot the etiquette of the occasion as to start applause. The President's speech was briefly seconded by Premier Lloyd George of Great Britain and Premier Orlando of Italy, both of whom spoke with more oratorical ardor than President Wilson. After other delegates had voiced approval, the motion was put and unanimously adopted by the representatives of the associated nations.

The resolutions adopted by the Conference read:

It is essential to the maintenance of the world settlement which the associated nations are now met to establish that a League of Nations be created to promote international obligations and to provide safeguards against war. This league should be created as an integral part of the general treaty of peace and should be open to every civilized nation which can be relied upon to promote its objects.

The members of the league should meet periodically in international conference and should have a permanent organization and secretaries to carry on the business of the league in the intervals between the conferences.

The Conference therefore appoints a committee representative of the associated governments to work out the details of the constitution and the function of the league.

There can now be no doubt whatever about it, the Peace Conference itself is the germ from which a real United Nations will eventually develop. Last evening found the people of France, England and Italy enthusiastic for a League of Nations, but the officials were pathetically acquiescent. Today we find all classes united heart and soul for such a league. From all I can learn, and I have had exceptional opportunities for consulting those of highest authority, I am prepared to say that we shall get some kind of court to settle all justiciable disputes and a council of consultation to investigate and make recommendations regarding non-justiciable questions. We can also rest assured that the powers are prepared to apply the necessary sanctions by means of moral, economic and military pressure to prevent any nation from breaking the peace of the world without first submitting the case to the international court or tribunal. Limitation of armaments in some form also seems to be a foregone conclusion. I understand that one of the great powers is ready to propose the creation of an international legislature for the development of international law and the betterment of human relations. I have cause to believe that this most admirable plan will be well received. It would be a pity if there were opposition, for such an international legislature or conference is the best way to secure coöperative international development.

There is, however, a very real danger that the power of the League of Nations will be lodged in a small group of men mostly from the five great nations and responsible only to presidents and premiers. This will of course make the League of Nations a league of governments rather than a league of peoples. But all Europe is now in a state of ferment and the people, especially the returning soldiers, are in no mood for halfway measures. The delegates at the Peace Conference well know that unless they satisfy the just demands of mankind the only alternative is Bolshevism. They will surely give us a League to Enforce Peace and if sufficient pressure is put upon them they may give us a League to Insure Progress.

# MAKING PEACE ON THE ADRIATIC

BOTH SIDES OF THE ITALIAN-JUGOSLAV  
DISPUTE AUTHORITATIVELY PRESENTED

## IN JUSTICE TO THE JUGOSLAVS

BY V. R. SAVICH

THE Jugo-  
slav-Italian dispute  
stands like  
an ominous shadow  
across the  
path of the fu-  
ture peace and  
freedom in Eu-  
rope. The Ital-  
ians are insisting  
upon the execu-  
tion of the secret  
treaty of London  
concluded with-  
out any consent  
of the people con-  
cerned, ceding to  
Italy the prov-  
inces on the east-  
ern coast of the  
Adriatic inhabit-  
ed by the Jugo-  
slavs. The Trea-  
ty of London did  
to the Jugoslavs  
the greatest in-  
justice, being of  
that very kind  
which was de-  
nounced on the  
ground of princi-  
ple by President  
Wilson as a trea-  
ty by which the  
peoples were bar-  
gained over to  
foreign sover-  
eignty like so  
much human chat-  
tel. It is a treaty  
savoring of the

Middle Ages, as it is setting at naught all the principles of self determination of nation and of open diplomacy for which the United States of America has entered the war. The Jugoslavs oppose that treaty because the ceding to Italy of those territories would imperil their national freedom, would mutilate their unity and hamper their economic development. The execution of that treaty means the defeat of America at the green table; means the perpetuation of those causes which have provoked the present crisis in Europe.

On the eastern Adriatic coast, the Italian population is represented only by settlements of tradesmen and merchants grouped in towns and commercial ports among a dense Slav population inhabiting those shores since the sixth century A. D.

Following up the fallacious and dangerous theory of strong strategic frontiers, a part of the Italian opinion has formulated a vast program for incorporating in Italy nearly all the Adri-

*No one is better qualified by experience and temperament to present the claims of the Jugoslavs than Mr. Savich. A Serbian journalist and member of parliament, he volunteered for military service when the Austrians invaded his country and he participated in that terrible retreat from Belgrade thru Albania to the Adriatic coast. His volume on "South Eastern Europe" is one of the best books on the Balkans that have appeared in English. He is in this country now*

The solid black line includes the territory inhabited chiefly by the southern Slavs and which they wish to bring into one nation of Jugoslavia (or Yugoslavia). But the Italians claim the right to annex the territory to the left of the broken line by virtue of the secret treaty of London, 1915

atic provinces lying on the opposite shore of the Adriatic.

In propounding such views the Italian Government and propagandists argue as follows:

1. The Adriatic is an Italian sea and Italy must possess or control all its coast.

2. Italy possesses historical rights to those provinces, as some of them belonged for a time to Venice.

3. Italy also possesses ethnographic claims, as a large Italian population inhabits these provinces.

4. Italy, for reasons of military efficiency, must have a strong frontier against her new Slavic neighbor.

5. When the Treaty of London was signed it was the fear lest Russia should seize the Serbian ports, now it is argued that the Austrians might use the Croats to menace the security of Italy, therefore Italy must occupy those ports.

The first contention that the Adriatic is an Italian sea and must be militarily

controlled by Italy, is a shallow piece of reasoning, whose kind is produced from time to time in every country by the heads of overzealous patriots. In such a way the Germans may fairly pretend that the Baltic Sea belongs to them, and the occupation of the Great and Little Belt would be a piece of justice. But it must sound like an attempt upon the sacred rights of all other nations if any single nation among them should try to appropriate a sea and to create of it a monopoly for her selfish interests.

With regard to the historical right of Italy to those provinces, I should say that there is scarcely any province in Europe belonging to any nation to which another na-

tion would not have some historic right. The argument of historic right is rather an antiquated one, and better suits the medieval and dynastic Europe with her people ruled by monarchs whose reigns are based upon divine right, than the modern European democracy in which rule is based upon popular consent.

In the Italy of later days, in a comparatively short time commercialism as an entire new social class has sprung up, and with it an entire new public opinion. The combination of military and commercial interests in Italy, as was the case with Germany, will surely weave the web of Italian destiny and lead to most dangerous complications. The closer study of the Italian claims on the Adriatic will convince us at once that those claims, tho announced in the name of military efficiency and strategic frontiers, are calculated to serve the interests of Italian commercialism and to secure for Italy a practical monopoly of the whole trade in the Adriatic. She claims Trieste in order to

tax the commerce of the German Austria and Czecho-Slovakia, and she wants Fiume just to kill it in order not to compete with Trieste.

The argument for Italian incorporation of those provinces based upon ethnography must fall at once when we look at the numbers of the racial statistics. In Dalmatia, against a pure Serbo-Croatian population numbering 630,000, the Italians number only 18,000, which represents less than 3 per cent of the total population. Therefore to base the Italian rights of occupation upon ethnography would be sheer absurdity. In Istria, Trieste and Gorizia the Italian claims based upon ethnography are better founded, altho they are not justified. In Istria the geographical line of ethnographical division can be easily drawn. The Italians are thickly grouped on the western coast, and the Croat population is found in the central and eastern parts of the peninsula.

As regards the nationality of the population of these provinces the fol-

lowing numbers (see the official Austro-Hungarian statistics of 1910) will give the best illustration:

	Superficial Area, kms.	Italians	Slavs	Germans	Total
Dalmatia	12,840	18,028	612,669	3,081	633,778
Istria ...	4,956	145,517	224,400	12,735	382,652
Trieste...	95	118,959	59,974	11,870	190,808
Gorizia...	2,918	90,119	155,039	4,500	249,658
Total...	20,809	372,623	1,052,082	32,186	1,456,896

In the districts of Logatec and Postojna, in the southwestern Carniola, ceded to Italy by the Treaty of London, with nearly a hundred thousand purely Slav inhabitants, there are no Italians, and these districts are claimed by the Italians only in virtue of strategic reasons.

Now we come to the supreme argument of the necessity of good strategic frontiers which urges Italy to occupy those provinces on the opposite shores of the Adriatic. The reason of strong strategic frontiers has always been a trump card in the hands of the mili-

tarists of every state and a constant source of friction among European nations. The direct results of such policy have been fear and hatred, and their lawful heir the military burdens under which the European nations have labored during the last sixty years. How can we expect or hope that an Italian occupation of the Serbo-Croatian provinces and the enslavement by her of a million of Southern Slavs can give different results? It is an axiom in science that similar causes produce similar results. But, if in spite of all sincere warnings, the naissant Italian imperialism, following blindly the teaching of German militarists, will try under the pretense of strategic frontiers to occupy the Balkan lands and to keep in subjection the Slavic population inhabiting them, Italy will inherit the weakness of Austria and, while greatly injuring her Slav neighbor, will endanger her own freedom and the peace of Europe. The Italian militarists wish to occupy these lands in the name of military effi- [Continued on page 238]

## ITALY'S CLAIM TO THE ADRIATIC

BY HAROLD DONALDSON EBERLEIN

*Mr. Eberlein has just returned from several months in Italy, where he made a special study of Italian claims to territorial readjustment and prepared at the request of the United States representatives a pamphlet to be presented in the Peace Conference. He is the author of a recent volume on the Italian Renaissance*

The black area is the territory which, according to the armistice, Austria-Hungary has relinquished and which, according to the treaty of London, was ceded to Italy. The Yugoslavs claim part or all of this territory on the east of the Adriatic on the ground of nationality. Italian imperialists desire further control of the entire eastern coast of the Adriatic, including the ports of Fiume, Spalato and Valona

IN the Balkans began the war from which we are just emerging, a war precipitated from tense conditions that had there been forced to a crisis. The equitable settlement of Balkan affairs and the provision of sufficient safeguards to ensure the world against a recurrence of the catastrophe thru which we have just passed is the most delicate problem confronting the Peace Conference. First and foremost in this task is the adjustment of the controversy between Italy and the Yugoslavs about portions of the Adriatic coast to which both lay claim.

Anent this vexed question the average American mind is in a maze. It knows only that there is a "row" on and that much heat and rancor are being engendered. There has been too much vituperative rhetoric; too much inaccurate or indefinite statement; too much presentation of half truths; too much assumption. At the same time, there has been a woful lack of exact knowledge, of calm, judicial statement of facts, of

inquiry into any conscientious sifting of the whole truth.

And this deplorable state of haziness in the popular mind is due in part to the hitherto very prevalent American disinclination to pay serious heed to the minutiae of modern European politics and history, in part to the inconvenient effort necessary to master and marshal the facts in this particular instance, an effort at variance with our

which those claims are made.

The Yugoslavs claim (1) the Austrian province of Carniola and the province of Gorizia and Gradisca; (2) all of Istria along with Trieste and Fiume; (3) Croatia, Slavonia and all of Dalmatia; (4) Bosnia and Herzegovina, and they desire to unite with Serbia and Montenegro. Italy claims (1) a small portion of Carniola and the province of Gorizia and Gradisca—in other

national weakness for getting our information, when we can, in capsule form like food in predigested tablets.

Nevertheless, it is so evident to any one who has carefully and thoughtfully followed the course of events that a serious crux of the peace settlement is going to center about the Adriatic and certain national boundaries thereto adjacent that the issue in all its aspects must be faced squarely. As a first step to getting a clear conception of the whole situation we must compare the conflicting territorial claims advanced by Italy and the Yugoslavs and then examine the grounds upon

words, the territory west and south of the Julian and Carnic Alps, whose watershed they regard as their natural boundary; (2) the whole of Istria, along with Trieste, and the port of Fiume. According to the Treaty of London Fiume was given to the Yugoslavs. Ever since that time the people of Fiume, by an overwhelming majority, have declared their desire to be under the Italian flag. Italy, therefore, now proposes to make Fiume, which is in Croatia, a free port under Italian protection; (3) Certain islands of the Quarnero off the Croatian coast; (4) a portion of Dalmatia and most of the Dalmatian archipelago.

An examination of the accompanying maps will show which islands and what part of Dalmatia fall within the claims of Italy, so far as we know the terms of the Treaty of London. That treaty, be it remembered, up to the present time, we know only thru the medium of a garbled Bolshevik publication. It should be added that the people of Italy feel that the boundaries indicated by these limits, with respect to Dalmatia and some of the islands, do not include all to which they are rightfully entitled by considerations both historic and ethnographic and that, in accepting them, they are making substantial renunciations in favor of the Yugoslavs, whose cause and aspirations they desire to further in every way compatible with reason and justice. It will be seen that the territory in dispute includes (1) the portion of Carniola west of the Alpine watershed, with the province of Gorizia and Gradisca, lying west of the Julian and Carnic Alps; (2) Istria, Trieste and Fiume; (3) Dalmatia and the adjacent islands.

The Yugoslavs base their claims upon (1) history, (2) upon ethnographic conditions, and (3) upon economic and geographic necessity. Italy bases her claims (1) upon history, (2) upon ethnographic conditions, (3) upon the principles of immutable geographic boundaries, and (4) upon the obvious necessity of having adequate military and naval guarantees of frontier defense.

The portion of Carniola west of the Julian and Carnic Alps, along with Gorizia and Gradisca, the Yugoslavs regard as theirs by right of successive waves of immigration and settlement that began in the seventh century, and by right of residence during the sundry vicissitudes of Hungarian and Austrian sway under which they have lived. They also base their claim upon the right of numerical preponderance and the consequent principle of self-determination. To Istria, along with Trieste and Fiume, the Yugoslavs base their claim upon the same grounds and, further, stress the necessity of possessing Fiume as a seaport essen-

tial to their economic welfare. To Dalmatia, likewise, their claims are ranged with great emphasis under all three heads.

To the same territory Italy lays claim upon historic grounds. Passing by the phase of Roman colonization—the first link in the brief of title—and the turbulent era of conflict between the Western and Eastern Empires, with its incidents of barbarian invasion, we come to the medieval period when the region in question—the eastern part of the district of Friuli—was chiefly under the control of the Counts of Gorizia. Upon the failure of their line in 1500, the territory was appropriated by Maximilian I and “remained in the possession of the house of Austria” thereafter with the exception of a brief period during the Napoleonic regime. The annexation to the opportunist Austrian hotch-potch of nationalities, however, only changed the political allegiance of the country and did not alter the essentially Italian character of its population and culture. Geographically Gorizia and Gradisca are one with Friuli and ought not to be arbitrarily severed.

Without at all denying the gradual infiltration of a numerous Slovene element into this territory that was first part of a Roman province, then a small and virtually independent state like other feudal states in medieval Italy, and then an appanage of the Austrian crown, Italy maintains that the Slavic element assimilated Italian culture and ideals, gladly profited by the higher order of civilization with which it came in contact, that the Italic and Slavic elements formed an amalgamation that was essentially Italian, and that all the architectural and other cultural remains of the period support the contention. Precisely similar conditions obtained in Istria, with an even stronger historic claim, for Istria belonged to the Republic of Venice until filched from her by the Treaty of Campo Formio in 1797. Istria is just as necessary

to the completion of Italy's natural boundaries and rightful bulwarks as the rest of the unredeemed land west of the Julian Alps. So long as Italy is without this territory she is unable to shut the door of her house against invasion—a privilege and safeguard that ought not to be denied to any nation.

Historically Dalmatia and the islands of the Dalmatian archipelago present an unusually checkered career, even for eastern Europe. When the empire crumbled and the Pax Romana became only a name, this territory fell prey to the vicissitudes of piracy and invasion. At an early date, for her own safety Venice had to suppress the pirates infesting the harbors and bays of this No Man's Land. Between 1102 and 1420 Venice and Hungary contended for mastery of the Dalmatian coast, the Venetians being generally possessors of it. From 1420 onward Venetian sway was broken only by occasional Turkish invasions until the Treaty of Campo Formio, which made Austria mistress of the land.

Owing to its peculiar development, Dalmatia never attained complete political or racial unity. The towns and cities, which represented the bulk of the population, were overwhelmingly Italian—the architecture alone would show this, even if there were no historical records to prove that all the culture was Italian and all affiliations with Italy. The sparsely peopled rural districts were chiefly Slavic.

By the Treaty of London the islands of Veglia and Arbe are given to the Yugoslavs, no claim is made to the coast of Croatia, as is often erroneously stated, so that the Yugoslavs are not shut off from free access to the Adriatic in that quarter and they have there the Bay of Buccari, with the ports of Buccari and Portore, a “bay so important that Napoleon, considering it capable of being converted into a great naval base for the Adriatic, had begun the necessary improvements.” On this shore there are also six other ports, including the port of Segna. At the lower end of Dalmatia to the Yugoslavs are left the important ports of Ragusa, Metcovic and Cattaro. Geographically Dalmatia and the Dalmatian islands are of the utmost importance to Italy. Whoever controls them controls Italy's east coast, which is undefended and incapable of defense—in other words, the master of Dalmatia holds the keys to Italy's house. So much for the past and so much for geographic considerations advanced by Italy.

It now remains that we summarize the situation, noting certain facts and conditions that have an important bearing upon the whole issue. More we cannot do here, for it is manifestly impossible within the

[Continued on page 228]

The shaded boundary line shows the extreme territorial claims of the Yugoslavs. Italy contends that her demands do not include the Croatian coast, thus allowing the Yugoslavs the Bay of Buccari and access to the sea as far as Dalmatia

# DISORDER VS. RED TAPE

BY EDWARD EARLE PURINTON

DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

A close inspection of a thousand still American offices reveals an astonishing fact. Most of them are not American at all, but either German or Russian.

And more alarming still, the managers and workers are unconscious of the fact.

The gentlemen who manage these offices are not at all Americans. They would be highly insulted if you called them anything else, particularly if you called them German or Russian. But psychologists know that a fellow is never so angry as when you call him what he really is, hence the fact of a man being insulted over what you call him proves the designation correct. We judge that in every thousand offices of the United States about two hundred are American, three hundred are German, five hundred are Russian.

A man's race is determined not by the country where he lives, but by the state of mind in which he dwells and the material surroundings that reflect the state of mind. You don't have to live in Germany to be a German, or in Russia to be a Russian. A man may live in America and still be in his mental and moral nature anything from a Chinese to an Arab. I myself have seen American Chinamen, also American Arabs.

Germany stands for red tape. Russia stands for disorder. America stands for the union of system and freedom of humanity and science, of modern method and eternal principle, of moral service and material reward, of bold individuality and firm authority, of close economy and open generosity, of keen work and care-free play; in short, of all the extremes that are extremely good when harmonized with their opposites, but extremely bad when allowed to run loose.

Germany stands for a blind, slavish, cruel, criminal subordination to a rule of thumb; and the man or the business concern guilty of the same folly may rightly be called German. Russia stands for a spirit of revolt, equally blind and equally destructive, though perhaps not so criminally base; and the man or business concern guilty of this folly may rightly be called Russian. The office that is not American does not belong in America. And, sooner or later, it will be properly and justly crowded out by the law of competition.

PERHAPS one office manager out of five is a born executive, organizer and leader, backed with a real working knowledge of the new scientific methods of management. He can be trusted to guide the business properly, avoiding the sharp decline of disorder that shoots down one side of the road to ruin, and also the dangerous mountain of red tape that looms up on the other side. But most office managers and workers, being fitted for their job neither by temperament nor by training, are apt to veer off the road and either smash in a valley of disorder or crash against a mountain of red tape. Either mistake will wreck your business machine. An automobile may be upset on the up side or the down side of a mountain road.

The business man, also the business concern, to take and hold the place of leadership, is the one to guard most against a natural tendency to extremes produced by temperament, custom, education and environment. The first move in stabilizing office work is to study the office worker. Doing this we find that where disorder prevails the employees generally are stupid, sluggish, careless, flippant, crude, slow, disrespectful, unartistic, or otherwise mentally

defective; or they are untrained in the right methods of doing their work and unsupervised in the process; or they are content with small pay and lack the overwhelming ambition that pushes a born leader out and on and up; or they live so far away from the broad new lines of business progress that they do not know what a modern office looks like; or they lack the nerve, will and enterprize to adopt the few suggestions for improvement that may happen to drift their way.

On the other hand, we find that the office bound up and tied around with red tape only marks the mental qualities of the people in it. They are too conservative, backward and sheeplike; or they have allowed themselves to become so frightfully systematic that they are now purely automatic; or they are governed by a mathematical sense of precision which by itself never got anybody anywhere; or they are too lazy and selfish to try new methods which might wear the rust off their brain and thus expose the character of the poor, dull thing; or they fear they would lose their job if they pointed a finger at a fraction of an inch away from the line of routine marked out by a cranky or domineering boss. The real picture of a man is not his photograph but his method of work. It is a good rule never to employ anybody who has worked in an office where either disorder or red tape is customary; you are likely to find that in either case the worker has been demoralized. When we are fully civilized, we will determine a man's place in society not by the gloss on his family crest nor by the gold of his patrimony, but by the appearance and the output of his workshop.

ABNORMAL states and conditions of your office produce an effect on your business like that produced on your health by abnormal states and conditions of your body. There are business doctors nowadays whose practice is limited to the diagnosis and cure of ailments of American offices. One of these business doctors, finding your office in a state of disorder, would probably diagnose the trouble as mental measles. But if he found your office in a condition of red-tape, he would diagnose the trouble as mental paralysis. Either affliction puts an end to commercial efficiency, and either unless cured will result in commercial death. Of the two, the mental measles of disorder, being epidemic, will be found to exist more widely; but the mental paralysis of red-tape, being chronic and deep-seated, will be found harder to cure. Also the latter is harder to diagnose—you can tell at a glance when a person has the measles, but you cannot thus determine whether he is partly paralyzed.

The new method in health culture is to diagnose a man before he is ill, then to provide him with instructions to keep him in health, not merely with prescriptions to get him out of sickness. The new method for guaranteeing health to a man's business will be similar, when it arrives. And it should have been here a hundred years ago, to prevent the annual crop of many thousands of cases of business failure, dissolution, death, which might have been avoided by the use of intelligent precautionary measures. Did you ever have your office diagnosed by a competent business doctor? If not, your business organization is liable at any time to fall the victim of serious disease or premature death. A few

days and a few dollars invested now in such examination will repay you a hundred, or even a thousand times, in the prosperous health of your business five or ten or twenty years from now.

What are the symptoms and results of disorder? How does it lower the vim, lessen the volume, cripple the power of a business office and a business organization? It causes delays, errors and complaints. It reduces output by increasing fatigue. It tends to the loss of valuable papers. It aggravates the risk of both fire and theft. It makes employees work overtime. It creates the irritability that follows nerve strain. It leads to bad feelings of many kinds. It produces a most unfavorable impression in the eyes of visitors whether customers, clients, patrons, directors, salesmen, publicists, creditors, debtors or messengers. It cuts down both wages and profits, leaving both employee and employer unfairly paid for their work and their capital invested. It occasions mutual distrust and disrespect on the part of employees to employer, of employer to employees, and of employees among themselves.

NOW let us turn to the other extreme. We find that red tape induces results equally dangerous and equally unnecessary. While its effects are different, they are no less undesirable. Red tape points backward instead of forward. It means loss of time in the cumbersome handling of roundabout methods. It holds up work in the absence of certain employees, or in emergency of any kind. It employs men to do the work of machines, instead of employing machines to do the work of men. It wastes money on utensils, materials and supplies that are not needed. It reduces production by failing to furnish right motive and incentive. It delays or inhibits promotion. It cramps energy, destroys initiative, leaves latent powers undeveloped, closes the door to opportunity, pushes down all employees to the fatal dead-level of mechanical routine. It bases the whole structure of business on the marshy ground of misplaced confidence, making the pillars of authority men who have no real capacity for leadership. It rewards the stability of mediocrity and punishes the ambition of genius. While disorder is more fatal to the business, red tape is more fatal to the man, which is worse.

If now the reader wishes to put his office to the test of an impartial examination, how shall he proceed? How is it possible to know whether one is caught in either extreme of mismanagement, or is drifting toward it? Self-knowledge both complete and reliable is exceedingly rare. Even a doctor, when ill, has to employ another doctor to diagnose and cure him. How then shall a plain business man get a clear view of his own commercial and industrial organism?

We regard perhaps of highest value the method of contrast, whereby two undesirable extremes are fully depicted so that the observer can measure himself by each, and thus learn to avoid the specific errors of each. Many people otherwise sensible foolishly imagine that the way to see how you look is to stand in front of a mirror. No, not so. All that a mirror can do is to show whether or not you are dressed in the usual manner. But as the usual manner is seldom the right manner, a glance in your mirror may be a further aid to self-deception. The scientific method of judging your appearance is to get in your mind's eye two complete pictures before you look at yourself. The first picture should be

that of a man giddily, gaudily overdressed, a riot of superfluous color and style; the second, that of a man poorly, carelessly underdressed, a deficiency of neatness and thoughtfulness. If you study these contrasting types, and point by point compare your own attire with that of each, you will get a sane view of whether you are overdressed or underdressed.

We will apply here the method of contrast. The accompanying table is compiled from a study of the prominent features of a number of both types of office—the type afflicted with disorder and the type afflicted with red tape. The outline is to be regarded in each case merely as a composite photograph, rather than a detailed picture of any one office. The way to compare your office with both extremes is not to expect a majority of the features of either as here given to apply exactly to your case, but to see how many of them describe your condition partially or approximately, then to count and compare the totals of each column of descriptive phrases. The larger of the two numerals will of course be found on the side of the extreme where lies your actual or probable danger.

Forty points are named in each column. If a thorough, calm and impartial consideration leads you to check in either or both columns ten or more points of resemblance to your office, you may be sure it is time to wake up and look around for somebody or something to pull you out of the rut of commercial decline where your business machine is traveling.

A highly commendable plan is to call together all the members of your office force, then read to them this article, pausing a minute or so after each point in the table and requesting each member to vote regarding each point, on blank slips of paper distributed before the reading; numerals from one to forty should be typed or written on the ballots in advance of distribution, and they should be arranged in numerical order, then clipped together for speedy handling. The marks on the ballot should be merely symbols, perhaps a capital D for Disorder and a capital R for Red Tape; or any other marks might be used that would not reveal the identity of the voter. A single sheet of paper with the forty numerals and with two columns ruled off might be preferable to the series of ballots. The only important thing is to have each employee cast his vote on every point frankly and freely, which he will not do if he is forced to sign his name or otherwise to make known his identity relating to his expression of opinion. The joint view of employer and employees is fundamental to the formation of an accurate estimate of a business organization.

Now let us take a definite example of how to avoid both extremes, that of confusion and irresponsibility on one side, that of complexity and monotony on the other. Take the problem of making, keeping and closing appointments or interviews in a private office. One extreme is to have no schedule of appointments, no arrangement in advance, no time limit and no method of persuading the caller to get up and go when he should. The other extreme is to have a time schedule and limit so precise and relentless that the nerves of the people involved are strained to the point of breaking, and the interview while closed promptly ends with a virtual command for the visitor to get out, which leaves a bad impression and spoils the whole effect. Some business men try to soften this forced departure of the caller who doesn't know when he is thru by having a secretary or messenger boy rush into the office at a certain time or on a certain signal and proclaim to the man at

the desk that he is wanted immediately on important business elsewhere! This method of closing an interview is wearing and wasteful. Moreover it is deceitful. Worse, it is stupid. A business man who cannot get a caller to leave without dragging in a false and feverish summons from nowhere is too dumb-headed and numb-hearted to be in business at all. Yet there are men who actually pride themselves on their feeble recourse to a subterfuge of this kind.

How should business appointments be made, kept, closed? A model system has

been worked out by the President of the United States. A schedule of appointments, invariably made in advance by his secretary, is laid on his desk every morning. Most of these appointments are limited on the schedule for three to five minutes, the majority three. When the caller enters he is invited to have a seat—there are no standing interviews. The President has learned by a few direct questions or implications to extract the meat of the matter in a caller's mind before this gentleman knows what is being done to him. The answers (Continued on page 234.)

OFFICE ROAD MAP

Copyright 1918 by Edward Earle Purinton

KEY TO MAP. Column 1 shows the bad results and danger signals of Disorder, column 2 the bad results and danger signals of Red Tape. Imagine the double vertical line down the center of the page to be the road leading straight to efficiency and success. Imagine the vertical line at the left side of the road to be the brink of a precipice falling by a sheer drop of several hundred feet to the chasm of Disorder. Imagine the vertical line forming the right boundary of the road to be the bottom of a steep cliff rising to a mountain of Red Tape. Imagine yourself guiding your business machine carefully, safely and swiftly on the road between the chasm below and the cliff above. Remember that each danger signal here shown, to the left or to the right, should be heeded as promptly as though it were a big red sign of "Warning" placed beside a road on which you were driving an automobile. Now observe the narrow dotted lines bordering the road on both sides. Each line is placed opposite a danger signal. When you believe a danger signal applies to the way you are running your office, put check mark on dotted line immediately opposite, the lines referring to Disorder signals following the signals, and those referring to Red Tape signals preceding the signals. Check all that apply to your work or workers even partially or approximately. Do not give yourself the benefit of the doubt. Finish the checking process by counting each column of check marks, the larger number signifying the extreme where your danger lies. If you locate ten or more signals, on either side of the road, you may infer that the present methods of handling your business machine are fraught with peril and should be changed quickly and permanently. See accompanying article for suggestions leading to improvement.

DISORDER		RED TAPE	
1. Dirt and dust visible	.....	.....	Sanitation overdone
2. Hands of workers soiled	.....	.....	Hands of workers manicured
3. Clothing untidy	.....	.....	Appearance too prim or too fashionable
4. Nothing locked up	.....	.....	Everything locked up
5. No place for anything	.....	.....	Receptacles too many and too complicated
6. Filing system inadequate or obsolete	.....	.....	Filing system and clerks too costly
7. Costs unknown	.....	.....	Risks never taken
8. Debt habitual	.....	.....	Credit unused
9. Materials and supplies bought indiscriminately	.....	.....	Materials and supplies bought preferentially
10. Furnishings bare and ugly	.....	.....	Furnishings inappropriate or extravagant
11. No time schedule	.....	.....	Clock made a fetish
12. Workers often late	.....	.....	Workers come on time but hate to
13. Frequent demands to work overtime	.....	.....	Chronic unwillingness to work over time
14. Pencils usually dull	.....	.....	Pencils always sharpened by machine
15. Not enough machines	.....	.....	Not enough brains
16. No understudies	.....	.....	Employees jealous and employer suspicious
17. Too few officials	.....	.....	Too many officials and too many in a place
18. No office forms	.....	.....	Confusing multiplicity of office forms

# NATIONAL EFFICIENCY SOCIETY

The Ratio of Achievement to Effort is the True Measure of Efficiency

## McADOO—THE MAN

BY JOSEPH M. SHAFFER

At the Vanderbilt Hotel on the Sunday evening following the outbreak of the war a group of New York's most influential bankers were gathered. The New York financial situation was panicky. Already runs had been started on several New York banks. The Secretary of the Treasury had been called hurriedly from Washington, and he was there, probably the coolest man in the lot. Banker after banker rose and explained the gravity of the situation. One of the biggest bankers in New York said that by three o'clock the next afternoon the doors of every bank in New York would be closed. Every man talked panic. Plainly these big men were rattled. The Secretary listened calmly, then walked into an adjoining room, and in a few minutes came back with a memorandum which he had written in pencil on a scrap of paper. He read this memorandum to the assembled bankers, who welcomed it joyously. Briefly it stated that the Secretary of the Treasury would deposit \$500,000,000 in the banks of New York City the following day and as much more as would be needed. The next day there was no panic. Not a bank closed its doors. Mr. McAdoo's quick action had saved the situation.

I have often been asked the question, "What is the secret of Mr. McAdoo's great success? How does he handle so admirably the tremendous problems and responsibilities entrusted to him, whether as Secretary of the Treasury, Director General of Railroads, Chairman of the Federal Reserve Board, Chairman of the Farm Loan Board, Chairman of the War Finance Corporation, President of the International High Commission, or as executive officer of any of the other activities with which he has been associated?"

Ever since the war began, I have been associated with Mr. McAdoo as his stenographer and reporter of his speeches. I have taken down every speech he has made in this time, written his personal letters, been in four Liberty Loan campaigns with him, been on every railroad inspection trip he has made (we have covered about 60,000 miles in the last year and a half on Liberty

Loan and railroad trips) and gone with him every time he has *tried* to take a vacation. I have worked at his house when the doctor has ordered him to stay in bed and have seen him do more work in bed than most men do at the office. He lies in bed with the telephone to his ear the whole day thru and conducts the day's business in that way. At different times he has been told that unless he went away for an absolute rest he would break down, and reluctantly and protestingly he has gone away for a few weeks, but he has obtained no rest. He has carried his responsibilities around with him, wherever he has gone. He went thru Glacier Park, Montana, last summer on horseback and sent and received telegrams at every place where there was a telephone and he could get in touch with civilization. While traveling on trains, he works all the time.

His program at Washington was as follows: As soon as he opened his eyes in the morning he began the day's work by reading his newspapers in bed. At nine thirty he was down at the office and worked until seven or eight o'clock in the evening. But his day's work was not yet over. He always took home several envelopes full of Treasury and railroad matters ("light reading" we used to call it) and finished up the day by reading in bed. So that from the time he opened his eyes in the morning until he fell asleep at night, he was working all the time.

I have wandered off a bit from what I started out to say. In the last eighteen months I have seen more of Mr. McAdoo than any other person has—not even excluding Mrs. McAdoo. In that time I have obtained more than a college education by watching how he works. This article, therefore, is not the result of what I have read or heard about him—it is based on what I have seen of him.

It is impossible to name in the order of their importance the qualities which have made him one of America's most successful men. But underlying his great accomplishments has been his confidence in the American people. Without this belief in the

© Underwood & Underwood

William G. McAdoo—the man of decision

soundness at the core, the sense of justice, the patriotism of the American people, Mr. McAdoo could not have done the colossal things he has done.

When the war broke out he knew that immense sums of money would have to be raised, sums larger than any previous Secretary of the Treasury had had to deal with. So he called into consultation some of the best bankers in America. They were unanimous in their opinion that the absolute limit of any loan that would be subscribed by the American people was \$1,000,000,000, and they told him that to obtain this amount it would be necessary to offer a high rate of interest. Mr. McAdoo replied, "Gentlemen, I believe that if a direct appeal is made to the American people, and they are told exactly what this money is needed for, we can raise at least \$2,000,000,000 and we can do it at 3½ per cent." Armed with this confidence in America, Mr. McAdoo toured the country, doing the unprecedented thing of appealing to the people of the country personally, and raised not only the \$2,000,000,000 but an extra billion on top of that. And in every succeeding Liberty Loan his confidence in the citizenship of America has been shown to be fully justified.

But even with this belief in the American people, Mr. McAdoo could never have accomplished the huge things he has if he did not possess the ability to make decisions instantaneously. If any one thing is the secret of his success, it is his hair-trigger mind. To make such rapid decisions requires an extraordinarily sound judgment and courage. He has an "instinctive" judgment which seems to be superior to the reasoned judgment of most men. He has the uncanny faculty of always "guessing right." In no other way can you explain the success of the many great decisions he has made on the minute. Brice Claggett calls him a "yes or no man."

The natural quickness of his mind has

Born Service

Mr. McAdoo held nine jobs and complained that he hadn't time to do more

served him several times in Liberty Loan speeches. On these campaigns it has not been unusual for him to make four or five speeches a day, each speech lasting about an hour. In such circumstances an occasional slip-up is inevitable. I remember in the first Liberty Loan campaign Mr. McAdoo was making a speech at Tacoma, Washington. The previous evening he had made an address at Spokane. Everybody on the Pacific Coast knows the intense rivalry between these Northwestern cities. At the beginning of his talk Mr. McAdoo told the Tacoma people how glad he was to be there and how delighted he was to see the fine spirit of patriotism prevailing in "this great city of Spokane." Of course he meant to have said Tacoma. As soon as the Secretary mentioned Spokane several people in the gallery started to laugh. Immediately realizing his mistake he made a profound bow and said, "I beg your pardon, but I am traveling so fast these days and the spirit of patriotism of one American city is so similar to that of the other that it is difficult for me to remember exactly in which city I am speaking." The American people like nothing better than to see a man pull himself out of a hole quickly, and that Tacoma audience applauded enthusiastically at the neat way in which he had extricated himself.

Mr. McAdoo's callers have often presented propositions which they expected him to take weeks in deciding, and they are astounded when he gives them his decision before they leave his office. To make such rapid decisions and to accept the full responsibility which a quick conclusion entails, requires courage of a high order. And whatever else Mr. McAdoo's enemies may say of him, none will say that he is lacking in courage. He is Scotch-Irish and he is a fighter "from the ground up" for the things he considers right.

In the second Liberty Loan campaign Mr. McAdoo had been urging the people to cut out luxuries, to give Liberty Bonds for Christmas presents instead of jewelry. A committee of seven jewelers called on him and told him that his speeches were ruining their business. Mr. McAdoo listened patiently until they had presented their case and then said in his quiet and earnest way, "Gentlemen, what of it if your business is ruined. When we are shedding the blood of our sons, can we stop to think of any man's business? We must go forward and do the things which are necessary to be done to win this war." And he said a few more earnest things to them. When he finished they all shook hands with him and told him that he was right and that if they had seen the matter in that light they would not have come in the first place. It took courage to say that to these men and they recognized it, too.

Mr. McAdoo has not a large head (he wears a No. 7 hat) and the more I have watched him the more my "wonder grew that one small head could carry all he knows." The profound knowledge he has shown in the various fields has astonished even the experts in those lines. When he entered the Cabinet in 1912 he knew little about finance, but since that time the best bankers of America have taken off their hats to him.

Immediately after the outbreak of the war Mr. McAdoo called to his office the presidents of the large insurance companies of the country to advise with them regarding the feasibility of making provision for our soldiers and sailors and their dependents in some scientific way. They told him that it would be impossible for any company or any combination of companies to go into that business. They said that if the Government went into this field the cost would be enormous, that less than

25 per cent of the men would take out insurance, and that of those who would insure themselves the majority would not take more than \$2500 worth. Again Mr. McAdoo showed that his judgment was better than that of the experts. Over 90 per cent of all our soldiers and sailors have taken out insurance at peace-time rates and the average of insurance taken is about \$9000. At the present time the American Government is the greatest insurance organization in the world, having outstanding more than \$38,000,000,000 worth of insurance.

And so it is with the other agencies formerly under his jurisdiction. He can talk with thoro knowledge about the work of the Federal Reserve Banks, the foreign

(c) Harris & Ewing

Secretary Lane and Mr. McAdoo after the daily physical drill taken by the Cabinet

exchange situation, excess and war profits taxes, the work of the Federal Land Banks, the accomplishments of the International High Commission in promoting the commercial and financial relations with South and Central American countries, the customs service, the Public Health Service, the work of the Coast Guard, the work of the Bureau of Engraving and Printing and the Mint, the splendid work of our Secret Service, the activities of the War Finance Corporation, and the Capital Issues Committee, all of which were under him. As to the railroad situation I think that fair-minded railroad officials will agree that no man in America knows the railroad situation for the country as a whole better than he does.

The tremendous scope of his mind, the breadth of his knowledge, is really amazing. Two aids in the acquisition of this knowledge have been his power of intense concentration and a remarkable memory. He attributes his excellent memory to the fact that his father, who was Attorney General for the Knoxville District of the Tennessee Courts, made young McAdoo memorize poems and selections and declaim them in his law office while he listened gravely and critically.

Mr. McAdoo is fifty-five years old, but possesses an energy and an enthusiasm which we always associate with exuberant youthfulness. Joseph Conrad, in his book, "Youth," has one of his characters, who

is lamenting the loss of his youth, say "Oh youth! The strength of it, the faith of it, the imagination of it." If these are attributes of youth, then Mr. McAdoo is young indeed, because he possesses them in abundant measure. The hard knocks of the world have not withered his idealism nor shattered his faith.

Very few people can imagine how Mr. McAdoo has driven himself. The pressure under which he has worked has been terrific. And he always complains that he has not time to do more. Secretaries and subordinates come flying out of his offices as if shot from a catapult. When he asks for a paper, it must be brought to him immediately, else he is consumed with impatience. His friends often wonder how on earth he has stood that fearful pace. His capacity for work is enormous, almost limitless. And with it all he maintains that enthusiasm, that optimism, that bubbling youthfulness and good humor, which simply is irresistible. Everybody who comes in contact with him is infected with his enthusiasm. That is the reason his associates and his subordinates will work their very heads off for him. Cold, unemotional, hard-headed business men have come to his staff, and, catching the spirit from their chief, have become warm and enthusiastic in their work. Theodore H. Price has said that Mr. McAdoo has humanized the science of railroading, and it seems to me that Mr. McAdoo has also humanized his railroad officials.

On November 22, 1918, when the news was given out that Mr. McAdoo had resigned from public life, Richard, his faithful old messenger, cried like a baby. With eyes still wet he told me that it made no difference who the next Secretary of the Treasury would be he could not be as kind, as sympathetic, as considerate of his employees as Mr. McAdoo had been. And the same sentiment was expressed by all the Treasury Department employees.

The "common people" everywhere love Mr. McAdoo for his warm sympathy. They know that he can appreciate the position of the laborer and wage-earner. He knows how to feel for them. He has been thru the mill himself. Few people have been brought up in such poverty as was his lot in those early days when his family was forced to leave their home in Marietta by Sherman of "Atlanta to the sea" fame.

Newspapermen have often remarked that Mr. McAdoo is "human," and I have heard railroad men say of him, "He's a regular guy." He is natural, approachable, simple in his tastes and manner. He cares nothing for the frills and furbelows of false dignity. He is not pompous, nor "stuck on himself." On railroad trips, when stopping at some small country town, he likes nothing better than to walk around the town and talk to the villagers. Often they are shy at first, but he soon makes them feel at home, and before long they are telling him about their crops and their boys abroad.

One of the most touching scenes I have ever witnessed was the meeting Mr. McAdoo had with his railroad staff immediately following the announcement of his resignation. These men toiled with him thru the dark days of last winter. They made big sacrifices to come to Washington and have not spared themselves in the service of their country. At this meeting each man in turn expressed what it had meant to him to be associated with Mr. McAdoo in the tremendous job of running all the railroads of America. And now their guiding spirit was leaving. There were few dry eyes at this meeting.

Another scene I shall always remember was the one that took place in Mr. McAdoo's office at [Continued on page 237]

# THE AUTOMOBILE SHOWS THIS YEAR

BY JOHN R. EUSTIS

DIRECTOR OF THE INDEPENDENT MOTOR SERVICE

**M**OTORISTS and others interested in the progress of motor travel have always looked upon the big annual automobile shows as the initial visualization of new techniques in design and construction, new ideas in equipment and utilization. In this they have not been disappointed because the industry has found in these exhibitions the ideal opportunity of bringing to public attention new developments and innovations in the art of automobile building. The annual shows have thus gained the recognition of establishing distinctive steps in the great advance of motor travel, each marking the turning of a new page in automobile history.

This year there is an added interest due to the special conditions prevailing during the past twelve months on account of our ever increasing activity as participants in the war, and the heroic work of the industry since last November in converting its attention and facilities back to peace time motor car production. This special interest is divided between the progress and plans of the makers in supplying the new peace market, and the changes in design and construction resulting from the experiences gained in building motor vehicles of many types for military purposes and in making other munitions and equipment. Then, too, possible reductions from the prices prevailing under war time conditions are important considerations.

At this writing the annual automobile show at Chicago has just closed and the one in New York is in full swing. Hardly of secondary importance are those to be held during the next two months in some eighteen other large cities. The New York and Chicago shows, held for the first time under the auspices of the local automobile dealers organizations, have been just as national in character as when they were conducted by the manufacturers. In fact the visiting public could not discern any change in this respect, nor was there really any, because the dealers flocked to these shows from far and wide as in other years and the makers coöperated loyally in supplying exhibits and by attending. New attendance records were established, the doors of the New York show being closed twice on the opening night by the New York City Fire Department, because of the great crowds within the two buildings, but this fact is as much attributable to the growing public interest in motor travel as to the magnificent way in which the dealers staged and conducted their shows. From the standpoint of decorations also the show in New York, at least, surpasses any previous one held there. The total number of exhibitors was slightly less than in 1918, Chicago having 68 makes of cars against 79 a year ago, and 135 accessories in comparison with 146 in 1918.

**F**ROM the standpoint of design and construction the automobile shows of 1919 disclose no surprises. The visitor with a knowledge of things mechanical, however, found many minor changes and improvements. Body designs are neater and mechanism more simple and accessible. Six cylinder motors are found in greater numbers, altho fours hold their own and there are the usual number of eights and twelves. Braking systems are much improved and this also holds true with the wiring system, spring suspension and better accessibility in getting at the more intricate parts of the mechanism. There is further a tendency toward greater weight reduction and more is likely to be accomplished in this direction during the year. The adoption of

overhead valves, successfully installed on several cars in the last two years, is growing in favor and next season will undoubtedly see a larger proportion of cars so equipped. Motors also show other changes directly traceable to lessons learned in designing and building aviation engines, while in the case of some of the higher priced cars aviation motors are installed.

The prices of cars which have shown a tendency to slight reductions in some makes since the cessation of hostilities, are not yet on a level with the pre war conditions, and the prevailing impression is that no radical changes in price will be made during the year. Take it all in all the price of reliable cars is about as low as it is possible to produce them and owners secure vehicles of higher quality and better workmanship than was possible four or five years ago.

The automobile shows of 1919 disclose a marked tendency to brighter and more varied color effects. The cars are brighter in hue, and this is not due to an increase in the number of strictly show jobs on the exhibition floors, but, on the contrary, due to an increase in the number of stock models painted in other colors than black. At Chicago, for example, there were twenty-seven black cars out of a total of eighty-five. The next popular color is green, which was represented by fourteen cars, the shades of green being so different, that they can be classed as cars of different colors. The use of colors other than black is appreciated by dealers as well as by motorists. This is evident by the fact that it was commented on probably more than any other feature of the shows.

**I**N the matter of body lines there was noticeable an increase of bevel-edged jobs and there are also many four passenger cars, which stood out in marked attractiveness due to the graceful lines made possible by the absence of the deep wheel housings in the sides of a body. The double cowed type of body is still popular and was represented by a number of makes, but the rear cowl is more subdued than in previous examples of the type. From what was seen at the shows the bevel-edge body should not be attempted by makers who cannot afford to put the best workmanship and materials into the body. In the low priced body where the material used is of light gage and not well reinforced, the bevel edge is hard to keep in a straight line, and the result is a loose-jointed appearing job. The comparatively new four passenger touring car attracted much attention at the shows. One, a stock job, is in a shade of blue green with tau upholstery. It is featured by long narrow lines only possible with the four passenger type of design, and has a low well cut top, which gives it a striking appearance. If space permitted a score of other equally beautiful cars might be briefly described. An innovation among high priced cars of substantial size is the high hood,

which gives an appearance of great power, and with a comparatively low top, a rather straight top line along the entire length of the car.

In the matter of folding tops new types and advanced ideas were decidedly noticeable. There seems to be a decided tendency toward the use of disc wheels, and one large limousine shown at New York was thus equipped with dual pneumatic tires on the rear wheels, the latter feature copied from the prevailing custom in Europe during the war in the case of passenger car chassis converted into armored cars.

The observing show visitor noticed a decrease in the number of tire sizes, indicating the adoption of the new standard sizes established some months ago as a war measure. One feature of engineering importance noted is the cleaning up of chassis lubricating questions. This does not imply that the inaccessible grease cup has been done away with, because this is not so. It is there in just about as great numbers as was the case a year ago. There has, however, been an increase in the use of oil cups for spring shackles. Some of the cars have self-lubricating bushings at the shackles; some have oil cups on the steering knuckle pins, altho this practise has not become nearly so well represented as the practise of providing oil cups on the spring shackles.

**A**NOTHER tendency which makes for a greater efficiency in power production is that of regularly equipping motors with devices for heating the explosive charge before it enters the firing chamber of the cylinders. This is generally accomplished by admitting heat to the air intake. In other words the car makers have recognized the value and practicability of the devices developed by accessory and part manufacturers, another instance of the excellent contributions made to the motor car itself by the so-called allied industries. Where a lack of foresight may be noticed is in the possibility of controlling the heat. There should be some sort of damper or by-pass which would allow the admission of air at atmospheric temperature during warm weather operation. Some of the cars have a damper which can be adjusted by means of a screw driver. It seems that the better way would be to follow the practise of others and make the heat control a matter of hand adjustment. A detail that is growing in popularity with designers is the use of a cross-member at the extreme front of the frame. The cross-member is generally of tubular construction and is not only a stiffening element in the frame itself, but also is of value as a bumper in case of collision.

The automobile shows of 1919 further displayed a tendency toward smaller bodies if the four passenger type previously referred to be an example. It is probable that a six passenger design carrying out the same lines, with the extra seats well upholstered and folding neatly into the backs of the four seats would prove popular. A movement toward shorter wheel bases is also evident. In the past a long wheel base was considered essential to comfort and easy riding. These qualities are now secured with shorter wheel bases thru scientific balance, better springs and better coördination of the various parts. The shortened wheel base is advantageous in that it permits shorter turning of the car and easier handling in congested traffic. In one model the wheel base has been shortened seven inches, yet the body is more graceful, and three inches have been added to both the driver's and tonneau seats, in comparison with the same model last year.

*Ask the Motor Efficiency Service anything you want to know concerning motor cars, trucks, accessories or their makers. While The Independent cannot undertake to give in this department an opinion as to the relative merits of various makes of cars or accessories, it is ready to give full and impartial information about any individual product.*

# GMC Trucks at Pre-War Prices

The announcement of a reduction of \$280 in the price of the GMC Model 16, 3-4 ton truck, is good news to truck buyers.

Back of this action is an interesting story of war production of which little has been told.

The General Motors Truck Company is one of the largest builders of motor trucks. Prior to the close of the war fully 90% of its production was for the government.

But it was building **GMC trucks** for the government—GMC models selected by the government.

The enormous government demand made extensive improvements in manufacturing facilities necessary. The capacity was doubled and trebled and every possible efficiency measure adopted.

With war orders completed, we have proceeded without factory changes or alterations in design—we are continuing quantity production.

We are making the same high grade trucks that the government selected and standardized after they had been proved by years of government service and had successfully stood every test, under official scrutiny.

The reputation that GMC trucks have made, not only in government service, but among the best business concerns throughout the world, is one we are proud of.

We cannot afford to, and **will not** cheapen our trucks in any particular; we constantly make them better when we can.

But we can and have reduced the price on all six models of GMC trucks to the lowest point consistent with their high quality and a legitimate manufacturer's profits.

GENERAL MOTORS TRUCK COMPANY  
Pontiac Michigan

# THE NEW BOOKS

## International Control

A sense of exceptional moment comes to mind in Francis Bowes Sayre's *Experiments in International Administration*. Herein the author has collected the fruit bearing efforts in international control of unaffiliated or disputed remnants of the earth's surface, and carried his plan properly further by including such agreements as the European Danube Commission, International Sanitary Councils and the International Sugar Commission. While Mr. Sayre does not overlook failures in the past and difficulties ahead in the path of international control, it will, nevertheless, surprise many to discover how much has already been accomplished. Mr. Sayre's book not only places his subject before the average reader in a manner more plainly convincing than a dozen learned treatises, but is so far entirely the most hopeful promise for the League of Nations.

A new peace phrase is added by Frederic C. Howe in *The Only Possible Peace* to the bewildering number of those already minted. This is Freedom of the Mediterranean, which carries with it internationalization of the Balkan States, Turkey, Asia Minor, Persia, Mesopotamia, the Bagdad Railway, Adriatic Sea, Black Sea, Straits of Gibraltar, Suez Canal and the Dardanelles. The author offers the idea as a peace monument to the permanent dethronement of imperialism. Mediterranean nations can now drop their subscriptions into Mr. Howe's extended hat, the pious wish being that England will respond with Gibraltar and Italy with the Adriatic.

*Experiments in International Administration*, by Francis Bowes Sayre. Harper & Bros. \$1.50. *The Only Possible Peace*, by Frederic C. Howe. Charles Scribner's Sons. \$1.50.

## Problems of Peace

IN *The League of Nations, Today and Tomorrow*, Horace M. Kallen very ably reviews the whole subject, discussing the problems to be solved in its formation and the principles necessary to its permanent establishment. He admits the sudden armistice caught every one unprepared for the peace table, over which now looms "a gigantic and fearful spectre."

The dictators of public opinion have decreed that this specter shall be called "Bolshevism."

When Napoleon had been crushed in 1815 as the Hohenzollern was in 1918 there was a looming specter over the peace table at Vienna. The specter was called Democracy. The Bolshevism of 1918 bears the same relation to the peace of 1918 that the Democracy of 1815 bore to the peace of 1815.

H. H. Powers prefaces *The Great Peace* with a deeply thoughtful analysis of such contributory subjects as Internationalism, Nationality and Trusteeship, Nationality and Internationalism, Diplomacy and Treaties. He upholds England as the pattern guardian for peoples still in process of self-government, and hence would place under her trusteeship not only the German colonies, but Portuguese Africa, together with nearly all the Near East including Arabia. Mr. Powers believes the peoples of these regions are ready to self-determine in favor of England's trusteeship. The claims of Belgium, France and Italy are estimated on their just aspirations. Concerning a League of Nations, Mr. Powers says:

Internationalism is a thing, not of the flesh, but of the spirit. It is a growth, not a contrivance. What we need is to recognize it, not invoke it. The league that we have dreamed of is here, less symmetrical and mechanical than that of which we had dreamed, but infinitely more vital and effective. Its widening circle passes from the English to the British, from the British to the Anglo-Saxon, from the Anglo-Saxon to the democratic. It has but one more step—from the democratic to the human. This is a long step, but a step to be hastened rather than forced, and not to be hastened by force.

*The League of Nations*, by Horace M. Kallen. Marshall Jones Co. \$1.50. *The Great Peace*, by H. H. Powers. Macmillan Co. \$2.25.

## Sea Warfare

IN *Hunting the German Shark*, by Herman Whitaker, is set forth mainly how the terror of the U-boat came to be shifted by a variety of ingenious methods from the hunted to the hunter. Writing shortly before the close of the war the author describes entertainingly and sometimes thrillingly the energetic part played by American sea forces in reducing U-boat warfare nearly to extinction. He dissipates the claims made by German naval authors regarding the length of time submerged and the speed of their U-boats under water.

In referring to the cordial relations linking American and English naval officers, Mr. Whitaker relates a characteristic ex-

ample of the—er—perhaps a trifle bewildering courtesy of the latter on all occasions. In rescuing the survivors of a hospital ship after twelve hours' exposure, an exhausted English naval officer was lifted over the side of an American ship.

When one of our chaps told him how glad we were to have him on board, he replied in his quiet English way, "A pleasure, I assure you"—then fainted and lay unconscious for nine hours afterward.

*Hunting the German Shark*, by Herman Whitaker. Century Co. \$1.50.

© International Film

Captain James Norman Hall, aviator and author of "High Adventure"

## High Adventure

IN all the descriptive writings of war aviators *High Adventure*, by James Norman Hall, is preëminent for the vivid force with which the author shares his experiences with the reader and camouflages by entertaining anecdote and graphic description a wealth of information about the airman's work. Captain Hall is the author of "Kitchener's Mob," written before America entered the war. He went to France soon after as a member of the American Flying Squadron, made an unusually long record of successful fighting, was wounded in a sensational battle with a German "circus," recovered, went to flying again, was shot down and taken prisoner, and has just been released. His story of these adventures is a rare combination of journalistic skill and modesty concerning personal achievement.

*High Adventure*, by James Norman Hall. Houghton, Mifflin Co. \$1.50.

## Soldiers of the Sea

IN this history of the United States Marine Corps, Mr. Abbot takes that famous body of fighters from its small beginnings (it was, he tells us, created by a resolution of the Continental Congress on November 10, 1775) up thru its splendid participation in this great war just ended. The part played by the Marines in every crisis in the history of our country is portrayed with an appealing vigor, and a swing of vividness which make one respond

© International Film

The story of "the first to fight," their part in the history of our country and their achievements in the Great War is told by Willis J. Abbott in "Soldiers of the Sea"

as never before to the words of the Marine's own hymn:

First to fight for right and freedom  
And to keep our honor clean,  
We are proud to claim the title  
Of United States Marine.

It is fitting that such a book should be written at a time when the achievements of the Marine Corps in this war are still proudly fresh in our minds—when we still hear on every side glowing accounts of the way in which that comparatively small body of men, fighters all, yet all completely new to the methods of European warfare, took and held Belleau Wood, and the town of Bouresches.

Mr. Abbot's is a book worthy of its subject. It is a history, and deals not with conjectures but with facts—not with fiction but with realities. Yet the force of the style, and the intenseness of the descriptive and narrative powers so combine as to stimulate the imagination of the reader not a whit less than does the most adventure-filled type of romance.

Read *Soldiers of the Sea!* You will be repaid by a sense of a better knowledge of United States history, and by a deepened pride in that body of its fighting forces whose motto is quoted as:

"We kill or get killed!"

*Soldiers of the Sea*, by Willis J. Abbot. Dodd, Mead & Co. \$1.50.

### The Doughboys

"THE guys," said the colonel, "are getting durned dissatisfied." Yes, he said it just like that; at least Patrick MacGill says he did. When you reflect on what an American's conversation apparently sounds like to an Englishman it very nearly strikes you dumb. It is a pity that Patrick MacGill wrote *The Doughboys*, "Brown Brethren," "The Great Push" and "The Red Horizon" have led us to expect from him not pleasant but very vivid, very real stories of the men in the trenches.

Patrick MacGill knows the Tommies, he has fought with them, he is one; but the American soldiers he does not know. Where, one wonders, did he get his impression of them as somewhat heavy and pious youths who address each other as "cracker-jack" and "rounder" and sprinkle "durned" thru their conversation with a liberality that would amaze a New England farmer. And the story, quite unlike the author's other books, is not even a good story.

*The Doughboys*, by Patrick MacGill. George H. Doran Co. \$1.50.

### General Foch's War Principles

THESE lectures given by General Foch at the French War College are no less pertinent now than when they were delivered, altho they were not based on the present war. One of the most interesting features of Foch's conduct of his campaigns has been the faithful adherence and consistent working out of the principles which he had laid down for fifteen years in his capacity as instructor at the War College. In spite of the tremendous changes wrought by modern methods of warfare, the fundamental principles of tactics have held good in this war as in those that preceded it. Because he was well schooled in these principles and also, because he knew how to adapt and modify where necessary, he has been able to direct the Great War and bring his forces thru to victory.

No work on military tactics will have greater weight than his and this book should be widely read not only because it is spoken by one having unquestioned authority but especially because it is well spoken and of popular interest.

*The Principles of War*, by General Foch. Translated by Major J. de Merim. H. K. Foy Co. \$1.25.

# Look at Your Teeth In Ten Days

All Statements Approved by High Dental Authorities

## See What Film Removal Does

This is to urge a ten-day test of a dainty film remover. Then look and see what really clean teeth mean.

Old methods of teeth cleaning have proved sadly inadequate. They don't protect teeth, as millions have discovered. Teeth still discolor, still decay. Tartar accumulates, pyorrhea often gets a start. Statistics show that tooth troubles have constantly increased.

Dentists know that the reason lies in a film—a slimy film which you feel with your tongue. It clings to the teeth, gets into crevices, hardens and stays. And most tooth troubles are due to it.

That film is what discolors—not the

teeth. It is the basis of tartar. It holds food substance which ferments and forms acid. It holds the acid in contact with the teeth to cause decay.

Millions of germs breed in it. They, with tartar, are the chief cause of pyorrhea.

Dental science has for years sought a way to combat film, and has found it. Many clinical tests by able authorities have proved it beyond question. It is now embodied in a dentifrice called Pepsodent, and leading dentists all over America are urging its adoption. But to let all people quickly know what it means we are offering this ten-day test.

## Just Let It Prove Itself

The best way to know what Pepsodent does is to use it and watch results.

Pepsodent is based on pepsin, the digestant of albumin. The film is albuminous matter. The object of Pepsodent is to dissolve it, then to constantly combat it.

Pepsin long seemed impossible. It must be activated, and the usual agent is an acid, harmful to the teeth. But science has discovered a harmless activating method. Five governments have already granted patents. That fact inaugurates a new dental era. We

can now combat film, the great tooth wrecker, as we never could do before. The results are such that no one would miss them if he knew, or let his children miss them.

Send this coupon for a 10-Day Tube. Use like any tooth paste. Note how clean the teeth feel after using. Mark the absence of the slimy film. See how the teeth whiten as the fixed film disappears.

These results are all-important. Film-covered teeth are unsafe and unclean, and this test will prove them needless. Cut out the coupon now.

Return your empty tooth paste tubes to the nearest Red Cross Station

## A New Way to Sell Real Estate ANY KIND ANY WHERE

I got cash for my property in less than two  
weeks. Made sale myself so had no com-  
mission to pay. You can do the same with

The Simplex plan for selling Real  
Estate. No matter where located,  
these practical, Scientific Plans will  
show you how to sell your property  
—quickly, and for cash—without  
employing agents or paying com-  
missions. Invest gate at once.  
Learn how easy you can use The  
Simplex Plans, just as I did, to sell  
your real estate. Write today (a  
postal will do) to

**The Simplex Company**  
Dept. 18, 1123 Broadway, N. Y.  
They will send you full particulars  
without cost or obligation.

## In the Soldier's Service

LETTERS written by Mary Dexter, an American woman, to her mother, describing her war experiences in England, Belgium and France from 1914 to 1918, have been published under the title *In the Soldier's Service*. They cover hospital work with the British Red Cross and the Belgian Red Cross at the front, ambulance driving with the Hackett Lowther Unit, an English Unit attached to the French army at the front and work in London with the newly established Medico Psychological Clinic for War Shock. Miss Dexter's letters are unusually interesting, but those concerning the treatment of war shock according to psychoanalysis are the most absorbing of all, and the reader regrets that she did not go into more detail in writing home about this fascinating mental surgery. No small credit is due Miss Dexter's mother for her skilful editing of the letters, so that they are woven into an unbroken narrative. The book is illustrated by photographs.

*In the Soldier's Service*, by Mary Dexter. Houghton, Mifflin Co. \$1.50.

## Old Glory and Verdun

UNDER this title are collected Miss Fraser's accounts of her experiences in France; first as a nurses' aid in a hospital for the French wounded, and later as a magazine correspondent, when she penetrated almost to the firing lines of the Western Front.

To the telling of all that she did and saw Miss Fraser has brought in an unusual degree the force of sympathy, of understanding, and, at times, of a particularly engaging humor. Her style is simple, and so clear that we are enabled to see, almost as she saw, the individual heroism of the wounded in the hospital wards, to sense with her the tremendous human side of war's countless tragedies, and to understand something of what her work meant when she says:

... A sick warrior is nothing after all but a sick child, docile, naive, craving for sympathy. . . . He demands everything and gives everything. And at night as I passed, dog tired, down the ward, heads were raised, hands outstretched; and the shower of cries of "Bonsoir, Mees!" "a demain, Mees Californie!" were sweeter than bouquets of roses thrown across the footlights to a reigning star.

*Old Glory and Verdun*, by Elizabeth Fraser. Duffield & Co. \$1.50.

## Richard Baldock

THIS unusually moving and inspiring study of a healthy English boy and his growth to manhood, is a sane, artistic and balanced piece of work with much wise philosophy discreetly and humorously submerged beneath the story. As the original Mr. Bliss is made to remark:

Make up your mind early in life what you're going to do, and rely on yourself for doing it. If accidents come, such as riches might in your case, use them to further your aims, but don't depend on them. It isn't riches you want to make you happy in this world; it's work—work with an object.

The only character in the book who does not live is Lettice. She is merely a charming necessity to a traditional happy ending.

*Richard Baldock*, by Archibald Marshall. Dodd, Mead & Co. \$1.50.

## A Pocketful of Poetry

A convenient pocketful of poetry for a summer afternoon outdoors is *The Golden Treasury of Magazine Verse*, compiled by William Braithwaite. In it are many of the verses that you intended to clip for yourself when you first read them in a magazine, poems that you have already made your favorites and new ones to increase your pleasure in the poetry of today. Only American work is included;

Sara Teasdale, Robert Frost, Amy Lowell, Louis Untermeyer, Witter Bynner, Josephine Preston Peabody, Vachel Lindsay, Edgar Lee Masters, Alan Seegar are some of the poets whose contributions make the volume notable. There are many temptations to the reviewer to quote according to his own enjoyment of this anthology, but one good quotation only leads to another—it is wiser in this case perhaps to leave to the reader the full pleasures of discovery.

*The Golden Treasury of Magazine Verse*, compiled by William Braithwaite. Small, Maynard & Co. \$2.

## Maggie of Virginsburg

IT is easy to forgive Mrs. Martin for the happenings in her newest novel that make fiction stranger than truth, for she uses them, not to tell a story with an idea, but to present an idea with a story. The first third of the book deals, like her previous books, with the Pennsylvania Dutch, and is the least interesting part. But it serves as the necessary background to set off the heroine for the rest of the story.

A girl, abandoned when she was a baby by a mother whom she has reason to think had aristocratic birth and breeding, becomes secretary to her grandfather. Neither of them is aware of the relationship. Differing from them as she does in all their social ideas, her opportunity to study her family so closely is in itself an interesting situation. But when she is in a position to put her ideas into practice, and finds that the once patronized secretary is now kowtowed to, merely because she married a man with money, Maggie puts across her ideas with intensely interesting sureness, swiftness and cleverness.

Judged from the superficial plot as well as the underlying theme, *Maggie of Virginsburg* is the best of Mrs. Martin's novels.

*Maggie of Virginsburg*, by Helen R. Martin. Century Co. \$1.40.

## Acrid Irony

ACRID irony is the predominant flavor of *The Madman, His Parables and Poems*, an interesting group of Arabian wisdom-pieces. To our Occidental minds, steeped in a literalness that finds expression in verse of unprecedentedly concrete expression of individual moods, the aloofness of the Oriental poet is foreign enough, but there is a pungency in his observations that arrests the attention. To quote a very little one:

THE FOX

A fox looked at his shadow at sunrise and said, "I will have a camel for lunch today." And all morning he went about looking for camels. But at noon he saw his shadow again—and he said, "A mouse will do."

*The Madman, His Parables and Poems*, by Kahlil Gibran. Alfred A. Knopf. \$1.25.

## The Ghost Garden

CONSTANT use of the eternal triangle has chipped the corners and worn down the edges. But by placing one of the angles in the shadow world, Amelie Rives has achieved the feat of employing this age-old situation in a fairly new way.

*The Ghost Garden* tells of a spirit woman with the disposition of a moving-picture vampire who is prompted by jealousy to fascinate the lover of a young girl. The book does not pretend to be a study of psychic phenomena; there are no explanations in the last chapter. By taking spirit life for granted it manages to weave a very definite character out of the gossamer threads of another world. The rivalry of two women, one living and one dead, is the pivotal point of this unusual romance.

*The Ghost Garden*, by Amelie Rives (Princess Trobetskoy). Frederick A. Stokes. \$1.50.

## Arctic Exploration

DONALD B. MacMILLAN, F.R.G.S., has written an interesting narrative of exploration in the Arctic. Mr. MacMillan's fidelity to accuracy rather than any play to the sensational will appeal to those readers searching for sound information on the regions traversed. Mere physical hardship and danger the author seems to brush aside in a few pen strokes as if hardly worth the telling, compared with the goal to be won of "supplanting ignorance and conjecture" with scientific knowledge of unknown, or little known, seas and lands. With him that is of first importance, and not as the Wall Street banker put the case: "What are you going to do with the land when you find it? Can you raise wheat on it?"

It is thus with the enthusiasm of the discoverer Mr. MacMillan writes, nothing daunted by frigid temperatures or hazardous ice barriers.

*Four Years in the White North*, by Donald B. MacMillan. Harper & Bros. \$4.

## Industrial Reconstruction

"A study in the principles underlying industrial reconstruction," is what the author calls his book on industrial relations. Originally planned as a study of industrial relations as they existed in 1914, it was interrupted by war conditions and is now offered in a modified form to suit the needs of the reconstruction period.

The problem of industry and industrial relations is tremendously important, not only in itself but because our whole national life seems to hinge upon the outcome of the industrial situation. For this reason all authoritative opinion upon the subject is eagerly read. Dr. King has wide knowledge of practical industrial problems and his present book, tho largely theoretical, has a firm practical basis.

The existing attitude of Capital and Labor toward each other is too largely one of mistrust born of fear. That was the position of the nations of Europe before the war. If industry is to serve Humanity this attitude must be changed to one of trust inspired by faith. An industrial system characterized by antagonism, coercion and resistance must yield to a new order based on mutual confidence, real justice and constructive good will. The change will involve patience—but nothing short of it will solve the problems to which industry gives rise.

The replacing of fear by faith is the keynote of Dr. King's industrial philosophy and it is on this basis that he presents a work of well founded ideas and clear thinking.

*Industry and Humanity*, by Hon. W. L. Mackenzie King. Houghton Mifflin Co. \$3.

## A Story of Business

PROBABLY no man with any sense would have spent an inheritance in buying "sight unseen" a hardware store. But then Dawson Black had no sense, as he quickly found out, and what is even more remarkable, admitted it. So this young exclusive merchant embarked in business and had pounded into him the elements of merchandizing. A young woman, or the young woman helped to keep the boat from rocking, so after all Dawson Black won out.

The story is interesting and not the least value of it comes from the suggestions it gives on modern forms of merchandizing. In fact the story is a splendid vehicle for carrying instructive selling points which any business man interested in retaining and learning with profit.

Mr. Whithead has previously given us "The Business Career of Peter Flint," a story with much the same interest and instructive value.

*Dawson Black—Retail Merchant*, by Harold Whithead. L. C. Page Co. \$1.50.

PERFECTION in quality, appearance, construction and service is embodied in the National Royal Loose Leaf Ledger. It is handsome, durable and offered in various sizes with many forms of ruling. Talk this over with your head accountant. He will know and appreciate the best. At your stationer's.

## A NOTED AND CHARMING ESTATE

The Estate instructs immediate sale of "Seven Chimneys," one of the most delightful Old Dutch Colonial houses in Bergen County. Estate comprises 18 acres of beautiful, high, rolling land with a pretty brook flowing through it. The particularly charming house, built mainly of cut brownstone, is on an attractive knoll, insuring good breezes; abundant lawns, great variety of fine shade. Thirteen rooms which are spacious and beautifully decorated. Two bathrooms (Mott fixtures), steam heat, electric light. Less than 15 miles from New York City, via all good auto roads; seven minutes from Ridgewood and Arcola Golf Club. This is a rare opportunity at a tempting price.

ALLABOUT & SON, 63 Wall St., New York City

## HOW TO USE THE INDEPENDENT IN THE TEACHING OF ENGLISH

This brochure prepared by Dr. Frederick Houk Law, Head of the English Department of the Stuyvesant High School, where nearly FIVE THOUSAND boys attend, is of special help to teachers of Oral Composition, Supplementary Reading, Public Speaking, Rhetoric, Journalism, Extempore Speaking and Oral Expression. It is free. Sending for it will not place you under any obligation. Address: The Independent, 119 West 40th St., New York.

## DISORDER VS. RED TAPE

(Continued from page 325)

and remarks of the visitor, with comments of his own, the President quickly jots down for later transcription and classification by his secretary. When the time set for the interview is up, or possibly sooner, the President collects his notes, rises as though unconsciously, tells the caller that the matter will be attended to promptly and fully, then graciously bows him out. If he was a half minute late in coming the bow is not so gracious. If he was a minute late without a quick and valid excuse thereafter he is regarded with suspicion by the President and may as well ask no more favors whatsoever.

This method of handling appointments does what every business method should do: combines and blends shrewdness and kindness in such a way that the shrewdness is not apparent nor the kindness transparent. The President during an interview keeps the clock in his mind but out of his heart. Speed that kills courtesy kills the future of the man who tolerates it. But on the other hand courtesy that kills speed, kills the future of the business. The caller on the President is first made to feel at home in a comfortable chair, at a psychological distance from the desk. He is pleased and flattered when he observes the President taking notes of the interview—who would not be rather exalted in spirit to have the President of the United States for his amanuensis? The caller is honored further by having the President ask his opinion, rather than imposing an objection or a foregone conclusion. By the time the interview should be over, the caller is in such a right, mellow mood that he just naturally rises when the President does, hardly noticing at all, and finds himself outside the door and on his way home safely before he realizes what has happened to him. The time of the President has been saved—and the temper of the caller.

The fundamental problem of office management is contained in the following question: Should an office be run by no system, or by an uncertain system, or by a wrong system, or by too much of the right system, or by the exact amount needed of the one right system? You must answer it one way or another. Everybody who works in your office, and everything that is done, planned, thought or produced there, is somehow affected, for good or ill, by the answer. Out of the hundreds of items of office operation that might well be considered, we will refer briefly to one general principle, and to one specific method.

The general principle is that of the measurement of man-power, and the placing, educating and rewarding of employees on the basis of this measurement. Each worker is paid to do a certain kind of work, or different groups of a certain kind of work. How much of that specific work can be done, should be done, is or is not done by each worker during the time which is the unit of pay, whether a week, a day, an hour or a minute? Few office managers, hardly any office workers, could answer this question promptly, fully and scientifically. Man-power is several times as costly as machine-power. Hence man-power should be determined even more accurately than machine-power. You would not buy an office machine without first proving its capacity for work, in the number of operations it will perform without error in a given time, and in the uniform cost of each. Why should you be less logical and businesslike in paying for the work of human hands and brains?

Permit us to quote a chapter from our own office experience. Once we had a typist who could do in thirty minutes a regular standardized piece of typewriting that another typist took eighty minutes to complete. And the first operator did the work better—she had gone to a modern business school and was thoroughly grounded in the principles of grammar, punctuation, spelling, tabulation, and business copy. But the second typist had certain qualifications for other branches of office work that were fully as essential as typewriting speed, and that the speed expert did not have at all.

Here was a problem. If we kept both girls on typewriting work and paid them an equal salary, one of two bad results would happen: if we paid them by the hour the first typist would be cheated; if we paid them by the job the second typist would starve, and in either case the business would suffer by the adoption of a method unfair and unwise both morally and financially. We found this to be the solution of the problem—which might not work in any other office, and is given here by way of illustrating the right principle, not necessarily of demonstrating the right method.

Classify all work as either general or special, according to whether it requires ability and training of a general or a special character. Establish for general work a minimum salary by the hour that will enable the employee to live decently and not much more. Establish for special work a salary by the job, or the quantity and quality of piece work, that has been tested and approved by the largest and best organizations in your line of business. Compare the daily output of each worker for a specified period, as regards both quantity and quality, with records of performance like those adopted in the great factories to measure the daily output of the expert employee. Let highly trained workers devote a certain amount of time each day to general office duties, and on the other hand train the general workers along the lines of their special untrained aptitudes for a certain time each day, so that they may qualify later for the expert class. Then keep two sets of pay slips for each employee, covering the general pay by the hour and the special pay by the job. Call a meeting of the entire office force and explain the new method fully, so that each worker is satisfied regarding its absolute fairness, and is moreover stimulated to reach the expert class and the expert pay in the shortest time possible.

The two tracks on which the engine of personal ambition must be made to run are satisfaction and stimulation; if either track is defective, the engine won't go, or it will go to smash. By the adoption of a method similar to the foregoing, the two extreme types of workers represented by those in our office receive better treatment and do better work than would be possible without a standardized system of gaging, regulating and rewarding personal production. The one clear line of advance for a business man to follow is that of equal justice to employer and employee.

We judge that the complete process of changing an office from one of disorder to one of order, in the many departments where such a change is required, would mean 50 to 75 per cent greater production, at a cost materially decreased from that involved in the present low output.

Nothing succeeds now but the most work, done in the best way, for the highest motive and the surest reward. Expert

# How a Better Memory Increased My Business

## A Secret Learned in One Evening

By Victor Jones

**I** KNOW it was my improved memory that did it.

I will take my oath on it.

For there is simply no other way I can account for the astonishing change that came about in my whole business life—to say nothing of that hundred thousand dollar increase which I rolled up in the six months from the time I learned—in one evening—how to do things with my memory that I had never dreamed were possible.

One day my partner came in with our latest statement and said: "How in heaven's name did you do it, Victor, with our line of goods and in these times? You make me believe we've got a war bride in disguise."

He really knew how I did it—or at least he strongly suspected—for I had let him into my little memory secret long ago.

It all came about through the Roth Memory Course which had given me—right from the start—a firmer grip on myself and my business than I had ever possessed before.

It gave me a quicker grasp of business tendencies, a better balanced judgment, a keener foresight and an almost uncanny knack of seeing when to act, and how.

It is really astonishing—though it seems quite a matter of course to me now—how the new power that Mr. Roth's course gives you enables you to see clearly ahead and to visualize conditions in exact perspective and to remember clearly the things you need to remember at the instant you need to recall them in a business transaction or an important talk of any kind.

Thanks to Mr. Roth I have been able to seize many golden opportunities which before I am sure would have slipped past and been out of reach before I woke up and got my memory working.

You see the Roth Course has done vastly more for me than teach me how to remember names, faces, telephone numbers and facts.

It has done more than give me confidence on my feet through remembering just what I want to say.

The Roth Course has made me Master of Myself.

I dropped in on Mr. Roth a few days ago to discuss some of the fine points of his code for remembering business statistics. His desk was piled high with letters from those who had bought his course and had taken the pains to tell him of the wonderful things it was doing for their memories.

"Read this one," said he, "from Terence J. McManus, the well-known trial lawyer of New York." It read:

"I regard your service in giving the Roth Memory Course to the world as a 'public benefaction!' The wonderful simplicity of the method and the ease with which its principles may be acquired appeal to me tremendously. I have already had occasion to test out the effectiveness of the first two lessons in preparing for trial an important action in which I am about to engage."

Before I left he showed me so many other letters of like nature that I did not wonder his publishers were at their wits end to supply the steadily increasing demand for Mr. Roth's lessons.

This sensational success of the Roth Memory Course recalls vividly my first meeting with the "memory master" when he electrified the whole Rotary Club at the Hotel McAlpin with one of his seemingly uncanny exhibitions of memory feats.

It was just such an occasion as the one described in the following news item from the Seattle Post Intelligencer:

"Of the 150 members of the Seattle Rotary Club at a luncheon yesterday not one left with the slightest doubt that Mr. Roth could do all claimed for him. Rotarians at the meeting had to pinch themselves to see whether they were awake or not.

"Mr. Roth started his exhibition by asking sixty of those present to introduce themselves by name to him. Then he waved them aside and requested a member at the blackboard to write down names of firms, sentences and mottoes on numbered squares, meanwhile sitting with his back to the writer and only learning the positions by oral report. After this he was asked by different Rotarians to tell what was written down in various specific squares, and gave the entire list without a mistake.

"After finishing with this, Mr. Roth singled out and called by name the sixty men to whom he had been introduced earlier, who in the meantime had changed seats and had mixed with others present."

At that time the ability to do such things as the above seemed as far out of my reach as the moon. Yet today I can go into a room with 50 people and one hour after being introduced to them call each name instantly with hardly a single mistake.

Major E. B. Craft, Assistant Chief Engineer of the Western Electric Company, who the first evening he tackled Mr. Roth's Course learned one hundred words so he could call them off forward and back without a mistake, tells me that first lesson was only a "starter"—says money could not buy what he has learned in many ways from his study of the Course.

On the ship coming back from the battle front in September he volunteered to give an exhibition of Memory Feats in the amateur entertainment they got up for the benefit of the passengers.

With a blackboard back of him he called off without a moment's hesitation a list of 25 outlandish words that were flung at him by his audience and told the number opposite which each word had been written on the board. For good measure he called back in their proper order a list of twenty "errands" of every conceivable kind. "They thought I was a freak," says the Major, "until I gave them a little memory talk and told them how easy it was to do those seemingly miraculous stunts by Mr. Roth's method. If the Independent Corporation doesn't get a few hundred orders for Mr. Roth's Course from my fellow travelers on that ship I shall be very much surprised—for it certainly had them going."

I mention this because Mr. Roth always says "anyone with an average mind can do these things just as easily as I do," and Major Craft's experience is only one of thousands that prove by their own actual accomplishments that what Mr. Roth claims is absolutely true.

VICTOR JONES

### Send No Money

So confident is the Independent Corporation, the publishers of the Roth Memory Course, that once you have an opportunity to see in your own home how easy it is to double, yes, triple your memory power in a few short hours, that they are willing to send the course on free examination.

Don't send any money. Merely mail the coupon or write a letter and the complete course will be sent, all charges prepaid, at once. If you are not entirely satisfied send it back any time within five days after you receive it and you will owe nothing.

On the other hand, if you are as pleased as are the thousands of other men and women who have used the course, send only \$5 in full payment. You take no risk and you have everything to gain, so mail the coupon now before this remarkable offer is withdrawn.

#### FREE EXAMINATION COUPON

DAVID M. ROTH

#### Amazing Feats of David M. Roth

When Mr. Roth first determined to undertake his memory training, he found it was no ordinary feat. He had to learn a new way of thinking, a new way of remembering, a new way of organizing his thoughts. He found that the key to memory was not in the amount of information, but in the way it was organized. He found that the key to memory was not in the amount of information, but in the way it was organized.

Mr. Roth has learned to organize his thoughts in a way that makes it possible for him to remember anything he wants to. He has learned to organize his thoughts in a way that makes it possible for him to remember anything he wants to. He has learned to organize his thoughts in a way that makes it possible for him to remember anything he wants to.

# IMPORTANT BOOKS

## Keeping Fit All the Way

By WALTER CAMP

MR. CAMP here provides the general health, strength, efficiency, and happiness to be enjoyed by millions of people, fat, nervous, dull, and the like. He tells how to get and stay in good physical condition, and he tells how to get and stay in good mental condition.

Profusely Illustrated. Post \$2.50. Cloth, \$1.75.

## Too Fat to Fight

By REX BEACH

HERE is a Rex Beach masterpiece of humor, a little book big with laughter. It is destined to be read by millions of people, fat, nervous, dull, and the like. It will become one of the best beloved books of 1919. Nobody can resist a fat man, and "Dimples," as he is commonly called, is irresistible.

Illustrated, 75 cents.

## Experiments in International Administration

By FRANCIS BOWES SAYRE

"IT is quite obvious that such a book as this is just about the most timely and useful that could possibly be put forth, now that the question of the League of Nations to enforce peace is dominant in the mind of the world. For so compactly and yet apprehensively supplying the need we owe great thanks to Mr. Sayre."—*N. Y. Tribune*.

Post \$2.00, \$1.50.

## Mother Love in Action

By PRUDENCE BRADISH

A BOOK of inspiration for parents—mothers especially. While it is full of practical suggestions for the treatment of child-life, it is by no means a volume of medical, dietary or other precise instruction. A book for those who would train their children with their hearts in the work as well as their heads.

\$1.35

## The Seven Purposes

By MARGARET CAMERON

"IN this arrestingly interesting volume, the messages which she sets down have meaning, coherence, intrinsic interest . . . there are many interesting references to the war, and prophecies of a still greater conflict to come."—*New York Times*.

\$2.00

HARPER & BROTHERS

New

York

(Est. 1817)

knowledge, analysis, training, planning, supervision, execution—all must be had by the man of the concern aiming for the prizes of leadership. There are five main sources of information, inspiration, education, cooperation, supervision, and supply. Every office manager, worker, helper of any kind should have such close personal acquaintance with all these national sources of modern office efficiency that he could turn to the right one at any time for the solution of any problem, the settlement of any difficulty, the achievement of any ambition. The five sources are:

1. Books on office management. The last few years have witnessed a remarkable development in the United States of business literature. All the departments of office work are included, such as bookkeeping, accounting, financing, credits and collections, cost-finding and cost-reducing, wages and salaries, economy and production, filing, addressing, typewriting, advertising and selling, business correspondence, employer and employee, scientific management, records and reports, furniture and supplies, tools and machines, modern standards, human engineering, welfare work. A modern office contains anywhere from five to a hundred of these books, depending on the kind of work and the size of the organization.

2. Business magazines and trade journals. A few of these are devoted strictly to office work; others, while presenting a variety of business subjects, always contains valuable suggestions on improved office method.

3. Home study courses in personal efficiency. Any man, whoever he is and whatever he does, needs the help of one of these courses if he is of the fighting age—from eighteen to forty-five inclusive. He can learn thus how the great men of the country fight and win their business battles—and he cannot learn fully in any other way. Physical, mental, financial, social and industrial improvement will result, for the betterment of his work in particular and his life in general.

4. National efficiency organizations. Membership in one or more of these will not only put you and keep you in direct touch with the leaders of the nation who are founders and managers of these societies, but will also furnish you with bulletins and reports of many kinds to inform you of the results of late experiment and research in the big factories, shops, stores, offices, municipalities, efficiency laboratories, schools and government institutions.

5. Personal consultation with office experts and efficiency engineers. This costs a good deal and is generally advisable in large offices only. But every office manager and department head should know the kind, scope and quality of service now offered by a number of these business experts, and should employ one or more if the needs of the office, extent of the work, and possible increase of profits would justify the expense.

The great problem of the alert, ambitious man is to locate the business authorities mentioned above, and secure an introduction. Their different headquarters are scattered all over the United States. Months of research and comparison would be needed, as well as hundreds of dollars in cost of stationery, postage, typing and overhead, to obtain a full directory of these efficiency leaders. The best way is to consult a national clearing house of efficiency information.

The primary test of a man's business knowledge is how he regards, analyzes, arranges, equips, conducts his office. And the final test of his power is what he does by means of it.

# If You Want to Know the Truth

—In words that are crystal clear, subject to but one interpretation, with a courage that is considered unusual, THE WEEKLY, by George Harvey, gives the true meaning of the absorbing drama now appearing on the world stage.

THE WEEKLY is a continuation of The War Weekly. It has inherited all of the talents of its predecessor. Like The War Weekly, THE WEEKLY knows what it wants and fights for it.

In short, sharp, crisp editorials THE WEEKLY gives its opinions, based on substantiated fact and not on hope or credulity, of every subject, domestic and international, that is of concern to America. Especially pungent are its discussions of the President's Peace Mission.

If you want to know the truth you want to read—

## McADOO—THE MAN

(Continued from page 227)

the Treasury when he announced his resignation. For about an hour the newspaper men had been asking him all sorts of questions and he was answering them in his usual manner, frankly and freely. The conference was nearing its close and several of the newspaper men rose to go, but the Secretary called them back by saying, "Wait a minute, I have an announcement to make that may have a news value. I have resigned my offices as Secretary of the Treasury and Director General of Railroads and the President has accepted my resignation." The newspaper men seemed to have turned to stone. Not a man moved a muscle. They were paralyzed. I am told that this is the first time in this Administration that a Cabinet officer has announced his resignation to newspaper men without a rush being made at once for the telephones. It was not until after about ten minutes from the time the Secretary told them of his resignation that the newspaper conference broke up.

The newspaper men realize that they are losing from official life in Washington a real friend. Mr. McAdoo's policy has been to tell them everything that is in his mind, asking them to keep confidential those things which it would be manifestly improper to discuss at the time.

And especially has Mr. McAdoo in his heart a soft spot for the soldiers and sailors of America. He has said many times that nothing we can ever do for them will repay the debt we owe them for what they have done for America and for the world. He sponsored and successfully fought for the Soldiers and Sailors Insurance Act, which placed upon a scientific basis, for the first time in history, the payments to the dependents of our soldiers and sailors, and which provided for suitable compensation to them in the event of total or partial disability. Thanks to this wise act, the pension scandals which have followed each of our previous wars will not follow this one. He also directed that soldiers and sailors on furlough be allowed the one cent rate of fare on the railroads, which gave many of the fellows who were about to go abroad a last chance to see their loved ones before starting on that dangerous journey.

It would be impossible to conclude an account of the reasons for Mr. McAdoo's success without mentioning one of the greatest Mrs. McAdoo. She has been an inspiration to him, the value of her inspiration being immeasurable. She takes a keen, absorbing, and extraordinarily intelligent interest in everything he does, and in addition to taking care of her exceedingly active husband, finds time to do much patriotic work herself. Mr. McAdoo has a profound respect for her judgment. She is a tower of strength to him and an active counselor when things seem to be going "dead wrong."

I have briefly enumerated some of the qualities which it seems to me have made Mr. McAdoo a great man. I have not touched upon his capacity for leadership, which is acknowledged even by his enemies—and like every strong man, he has many of these. In this short sketch of the man I have simply put down the things which have come into my mind when I tried to reason out the causes of his success.

While it will take the perspective of time to show whether the work of Mr. McAdoo has been of enduring value to America, there can be no doubt that this country will feel for many years the beneficent effects of his accomplishments while in public office. He has left the impress of his genius on the fabric of America's commercial, financial and industrial life.

## Good Guns Need Good Oil

Talk to a hundred men accustomed to handling a rifle or shotgun—men who shoot for sport and in earnest. Ask what oil they use. Most of 'em will answer: "3-in-One." Soldiers, game hunters, trap-shooters and military academy instructors have preferred

## 3-in-One

The High Quality Gun Oil

for 25 years. Leading firearm manufacturers use and recommend it. No matter where you're shooting—at the training camp, in the woods and fields, or at the traps—get a bottle of this pure, high-grade oil.

3-in-One lubricates perfectly the magazine, trigger, shell extractor, hammer and break joints. Prevents rust forming inside and outside the barrel. Cleans and polishes the wooden stock and fore-end. Keeps entire gun bright and shiny.

**IMPORTANT:** After firing with smokeless powder, always clean out residue of powder thoroughly with a solvent first. Then apply 3-in-One. This method absolutely prevents leading, pitting and rust. 3-in-One

Oil is sold at all good stores. East of the Rocky Mountain States, 15c, 25c and 50c in bottles; also in 25c Handy Oil Cans.

**FREE** Liberal sample of 3-in-One Oil and Dictionary of Uses—both sent free for the asking.

## IN JUSTICE TO THE JUGOSLAVS

(Continued from page 219)

Italy. But the security of Italy and the progress of the Italian democracy will be brought into peril by that very worship of efficiency. From the adversity which, after this war, will fall upon the German people and a lesson for the Italian imperialists. Sorely burdened by the occupation of an alien population, threatened by a warlike and undisciplined nation such as the South-Slavs, the Italians would experience all the difficulties of the new position. It would be a burden which their nervous and easily excitable democracy could not, and would not, meekly endure. The Slavic menace would become a nightmare for them which could easily deteriorate the normal course of their economic, political and social development. The inborn love of freedom which enabled the Serbo-Croats to shake off the Turkish yoke of five centuries and so successfully to resist the German onrush to the East would certainly enable them to resist Italian dominion.

The further Italian argumentation in defense of the imperialistic claims is only a repetition of German arguments against the Slavs. The Austrians argued that they had nothing against the Croats, whom they loved and trusted, but they wished to coerce the unruly and barbarian Serbs. The Italians say they admire the heroic Serbs, but they wish to control the suspicious and unruly Croats. The Austrians did not succeed in separating the Croats from the Serbs in the common struggle for national freedom and most surely the Italians will fail to draw a wedge between the Jugoslavs united and determined to fight any oppressor of their race. The Austrians proclaimed that they want to control Serbia as a hotbed of Russian intrigue; the Italians claim the right to control the Croats, alleging that they are the Austrian catspaw.

A year ago the German Kaiser boasted to have restored to the German Kultur the Baltic provinces. The Italians, claiming "the full fruits of their victory," demand to rule Dalmatia in the name of the Italian civilization against the barbarian Slavs. Today the Lettish peasantry allied with Bolshevism is burning the castles of German Baltic barons because to them they are the symbols of oppression and foreign exploitation. The same fate is awaiting the Italian minorities if they oppose the Slav freedom and unity. In denying to the Slavs the right of self government and claiming for themselves the sole right of control over the Adriatic, the Italians stand for the old principle of exclusion and competition against the new and higher principle of coöperation among the nations proclaimed by America and sincerely adopted by the Jugoslavs. Thus the Italian action is in contradiction with the higher principle of modern civilization, whereas the Slavs are defenders of the new order of the things which ought to dawn in Europe as a price for enormous sacrifices sustained by all nations.

For the Jugoslavs the establishment of Italy upon the eastern shore of the Adriatic would mean that they have only changed masters and that Italy in regard to them has replaced Austria. The Jugoslavs have resisted the Austrian occupation and have contributed largely to her collapse; likewise they must fight the Italian mastery.

The Jugoslavs are willing to guarantee the complete national development of Italian minorities living among them but will never consent to sacrifice their own unity and economic development to a foreign power which seeks to establish its economic monopoly in the Adriatic.

Trieste economically belongs to the Central Europe. It is a port for Bohemia and countries on the banks of the middle Danube. Therefore Trieste ought to be a free city where the Italians as well as the Jugoslavs would have complete freedom and every guarantee for national development. The Western Istria with Pola as well as the southwestern part of Gorizia around Cormons, Monfalcone and Gradiska where the Italian population is continuous and dense ought to be incorporated to Italy provided that Italy should guarantee to the Slav minorities the same rights as the Italians of Fiume and Dalmatia should be accorded. Only in such a way a just solution can be attained and a durable friendship be established between the Italians and the Jugoslavs who are the right possessors of these eastern shores and guardians of the future peace upon them.

Again today as on the eve of the Great War the Jugoslavs, in order to avoid the hostilities and preserve the peace of Europe, are ready to settle the dispute with the imperialistic Italy by referring it to an impartial court of arbitration. We propose that President Wilson, in the name of the American nation, should act as the arbitrator on the basis of the principles solemnly proclaimed by himself. In order to insure the impartiality of President Wilson's decision it is necessary that Italian troops now occupying those disputed territories, should be replaced by Americans and that a committee appointed by President Wilson should investigate the problems on the spot and report to him. The Jugoslavs will accept his award. If the Italians refuse that the united Jugoslavs will meet their aggression in the same way as they have met the Austrian attack. The responsibility for the consequences of it they leave to that group of Italian politicians who have learned nothing and forgotten nothing during the Great War, but insist upon the pounds of Yugoslav flesh as specified by an immoral secret treaty.

## ITALY'S CLAIM TO THE ADRIATIC

(Continued from page 220)

compass of a brief article to discuss fully all minutiae of the subject. Suffice it to say that trustworthy verification for all statements is available. Before all else, Italians of all ranks and all shades of political opinion feel that their strongest claim to all the unredeemed regions just discussed, the claim most obligatory upon them to press, is that their blood kindred there, not only in this last war but for years past, have sealed with their blood their ardent desire for redemption and political union with their mother land; that these men of unredeemed Italy have always protested Austrian domination just as vigorously as did their brothers in the territory wrested back from Austria in 1866, and that a surrender of Italian claims now would be a foul betrayal of all the men who have died for Italy's cause from 1866, and indeed long before, till November, 1918.

That the Slavic element seems numerically preponderant in some of these districts, Italy admits, and that the Slavs are now actually in the majority in Dalmatia Italy also admits. But this Slavic preponderance is artificial. Back of it lie fifty years of Austrian guile, treachery, injustice and cruelty, with the deliberate intent of crushing out the Italianity of these regions. In the past decade the process has been carried forward with feverish haste. The fos-

# HOW TO STUDY THIS NUMBER

## The Independent Lesson Plans

### ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOOK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

#### I. A Lincoln Anthology

1. Read aloud the poem called "Abraham Lincoln Walls at Midnight," reading it in such a way that you make its thought particularly emphatic.
2. Prove that the poem presents a kindly, realistic picture of Abraham Lincoln.
3. Prove that the poem presents the noble spirit that made Abraham Lincoln the most loved of all American Presidents.
4. Explain in full the meaning of the seventh stanza.
5. Point out, and explain, figures of speech that add greatly to the effect of the poem.
6. Read aloud the poem called "He Leads Us Still," reading it as you might have read it to an audience at the time when Germany was most victorious.
7. What characteristics of Lincoln are presented in the first stanza?
8. Explain in what respects Lincoln "leads us still."
9. Explain the full importance of the line: "Here truth must triumph, honor must prevail."
10. In what respects is the second poem like the first? In what respects is it different?
11. Which poem particularly pleases you?
12. Write a character study of Lincoln, basing your work on the picture.
13. Prepare a short talk that will tell the story of Lincoln's life.
14. Show in what respects President Wilson is like Abraham Lincoln.

#### II. The Birth of the League of Nations. By Hamilton Holt.

1. What is the purpose of the article?
2. The article is about the length of an ordinary school composition. In what ways is it like, and in what ways is it unlike, a school composition?
3. Point out effective uses of adjectives.
4. Give the meaning and the derivation of every one of the following words: conference, plenary, array, urbanity, peroration, acquiescent, sanctions.

#### III. Italy's Claim to the Adriatic. By Harold Donaldson Eberlein.

1. Study the article in connection with its companion article, "In Justice to the Jugoslavs," by V. R. Savich. Imagine that the two articles were given as parts of a debate of which you were judge. To which side would you award the decision?
2. Make an outline of the points presented by each writer.
3. Show how each writer uses refutation.
4. What methods does each writer employ to make his points emphatic?
5. Which writer follows the more effective plan? Explain.

#### IV. McAdoo—the Man. By Joseph M. Shaffer.

1. Without immediate reference to The Independent or to any notes, tell one or two anecdotes concerning Mr. McAdoo.
2. Contrast Mr. McAdoo's habits of work with the habits of work of any person whom you know.
3. How can you make your work in English aid you in forming habits of quick thinking?
4. Explain the allusion, "Wonder grew that one small head could carry all he knew."
5. Compare the personality of Mr. McAdoo and the personality of Henry V, as presented in Shakespeare's play.
6. In a single unified paragraph summarize Mr. McAdoo's good qualities.
7. Give a talk, based on the article, on "The Characteristics That Make for Success."

#### V. Disorder vs. Red Tape. By Edward Earle Purinton.

1. Explain exactly what is meant by saying that every American office is either German or Russian.
2. Give a clear, oral account of President Wilson's business methods.
3. What is the value of the "Office Road Map" as a means of giving the article emphasis?
4. Show how much of the "Office Road Map" may be applied to your work in English.

#### VI. The Story of the Week.

1. Read aloud the selection from the President's Paris Address. Point out examples of balanced construction.
2. What is the composition plan of "The German Colonies"?
3. Prepare either side of a debate on "Shall We Bar Immigration?"

### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

#### I. The Peace Congress—"Birth of the League of Nations," Story of the Week.

1. Under the three headings of the resolutions adopted by the Allied Conference, give the probable details of the organization of the League of Nations as indicated in the news item "The League of Nations."
2. "Limitations of armaments . . . also seems to be a foregone conclusion." What evidence of the probable working out of this principle do you find in the news item "Freedom of the Seas"?
3. What would be the danger if "the power of the League of Nations [were] lodged in a small group of men from the five great nations"?
4. Explain the system of control of the conquered territories which the Allied Conference has adopted in principle? Upon what grounds have these territories been tentatively assigned to the various "mandatories" indicated in the news item "The German Colonies"?
5. Why will the United States probably refuse to accept the responsibility as a "mandatory" over Armenia or any other conquered region?
6. What did the President mean by his statement: "Beyond the Rhine . . . there are questions unanswered, and they must be for the present unanswerable"?
7. What are the five underlying principles of "Freedom of the Seas" submitted to the Allied Conference for discussion? Why will England probably oppose the first, the United States the fourth? What will be the effect if the fifth is adopted?
8. Describe the present conditions in Germany and in Austria. How will these two countries be represented when the actual Peace Conference convenes?

#### II. Italy and the Jugoslavs—"The Adriatic Problem and the Secret Treaties," "In Justice to the Jugoslavs," "Italy's Claim to the Adriatic."

1. "The Great War arose out of the efforts of the Southern Slavs . . . to unite." Give a brief history of this effort down to August, 1914.
2. In what sense is it true that "the question was not settled by the Great War"?
3. Show how the secret treaties complicate the problem of territorial settlements (a) in Central Europe, (b) in Eastern Europe, (c) in the region of the Adriatic, (d) in Southeastern Europe and the Near East.
4. Indicate the claims of the Jugoslavs and of Italy on a map. Show clearly the regions in which these claims conflict.
5. Summarize the arguments advanced by the two parties to the Jugoslav-Italian controversy. In what sense do "many of the arguments on both sides appear quite irrelevant"?
6. Which argument of Mr. Savich do you regard as most convincing? which argument of Mr. Eberlein?
7. What, in Mr. Savich's judgment, would be the outcome for Italy if all of her claims were allowed? for the Jugoslavs?
8. From a reading of the evidence can you suggest a possible reasonable compromise between the two parties?

#### III. How McAdoo Handled His Job—"McAdoo—the Man."

1. Pick out the topic sentences in the above article which give the answer to the question: "What is the secret of Mr. McAdoo's success?" Develop one or more of these topic sentences into full paragraphs.
2. Make a list of the various offices held by Mr. McAdoo. Discuss briefly his relations to two or three of the boards and commissions of which he was chairman.
3. "And especially has Mr. McAdoo in his heart a soft spot for the soldiers and sailors of America." What are the proofs of this assertion?

#### IV. Immigration—"Shall We Bar Immigration?"

1. Summarize the present Immigration Law of the United States. When and how was the law last modified by Congress?
2. What is the purpose of the proposed four year ban on immigration into the United States?
3. What is the reason for each of the exceptions to the proposed ban on immigration?
4. On what grounds will the proposed law be opposed?

The price of The Independent is ten cents a copy, four dollars a year. Postage to foreign countries in the Postal Union \$1.75 extra; to Canada, \$1 extra. ## THE NEW PLAYS

*Les Frères Karamazov* is a long, powerful and intensely pessimistic play from Dostoevski's novel, acted with great skill by Copeau and his company of French players. (Theatre du Vieux Colombier.)

*Triumph and Peace*, the new symphony by Yamada, Tokio's symphony conductor, is splendid. Yamada is clever, scholarly and dynamic, and his music is melodic and structurally sound. (Carnegie Hall.)

*Mis' Nelly of N'Orleans*. A picturesque creole comedy that gives Mrs. Fiske an opportunity to display her irrepressible youthfulness. (Henry Miller's Theater.)

*Pelleas and Melisande*. This is Maeterlinck's season. Three of his going at the same time in New York, one as opera, one in English, and one in the original, played with simplicity and sad sincerity at the Theatre du Vieux Colombier.

Marie Cahill's spontaneity and fresh humor liven up a familiar rural setting, and make of the much used material in *Just Around the Corner* a thoroly enjoyable play. (Longacre Theater.)

Three significant and excellently presented plays by Lord Dunsany, and an interlude, comprize Stuart Walker's second bill. *The Golden Doom* is a well done satire, but *King Argemine* and the *Gods of the Mountain* are more forceful and more liberally supplied with Dunsany's blend of poetry and humor. (Punch and Judy Theater.)

Victor Herbert's music gives distinction to *The Velvet Lady*, a musical comedy that blends the usual ingredients with unusual skill. (New Amsterdam Theater.)

*Good Morning, Judge*. A jolly, dashing, English musical comedy, full of clever jokes and excellent dancing. As a supposed to sedate English magistrate George Hassell is exceptionally good. (Shubert Theater.)

The presentation for the first time of Mascagni's *Cleopatra* gave the Chicago Opera Company an opportunity for a series of magnificent and artistic stage pictures and the display of the simualities of Russian dancers. It was another triumph for the dramatic genius of Mary Garden in the portrayal of the Serpent of the Nile. Anna Fitziu in the title role of *Isabelle* gave an especially fine performance, and Yvonne Gull as Juliette in *Le Glémmeau* played with great skill and much personal charm. Music and appesdingly artistic, *Pelleas and Melisande* showed Mary Garden in her most famous role, well supported by an excellent cast. This second New York season of the Chicago Opera Company is being supported with well deserved appreciation and enthusiasm for the performances are of uniform high quality.

## REMARKABLE REMARKS

E. W. HOWE--Remember the week day and keep it busy.

KURT EISNER--Bolshevism is the most terrible insanity of our times.

EX-CROWN PRINCE--Allied and American papers unfairly depict me as deficient.

HENRY VAN DYKE--America is a peace loving nation of fighting men and women.

HARRY H. MERRICK--At heart all men of brains seek to dominate to the absolute limit of their power.

VICE-PRESIDENT MARSHALL--Our country is not an international boarding house nor an Anarchist café.

GIFFORD PINCHOT--Farmers are more likely to be right on any public question than any other body of men.

WILLIAM H. TAFT--One of the things that parents have to recognize is the reproduction in their offspring of their own faults.

CHANCELLOR EBERT--We have done forever with princes and nobles by the grace of God. We will be an empire of truth and justice.

RICHMOND TEMPLE--President Wilson's speeches and personality have influenced more people than any other man that has lived since Christ.

ALBA B. JOHNSON--We in the United States are slow to make up our minds that an annoyance has attained to the stature of an evil and is worth ending.

SECRETARY LANE--Political machinery, like all other machinery, is a dream first and then passes thru phases of valueless crudeness to phases of perfect utility.

EDITOR J. W. ROBERTSON SCOTT--There are well-meaning people who would set about the work of interpretation between Japan and the West by telling only the best things about their fellow-countrymen and unblushingly hiding the rest.

MAXIM GORKI--The cultural creative work of the Russian Labor Government, which is going on under the most difficult conditions and requires heroic exertions, is now about to have a scope and a form which have hitherto been unknown in the history of mankind.

## CAPITAL COPY

Approximately 4,000,000 officers and men of the army and navy are insured with the United States Government for a total of almost thirty-seven billion dollars.

Maximum prices for goods for domestic consumption have been fixed by the Danish Government as one method of giving relief from the advancing cost of living.

It is estimated that at least as many persons thruout the world died of influenza in the recent epidemic as were killed during four years of war in the armies of the Allies.

The United States Employment Service, Department of Labor, is organizing a Junior Section for the 14 per cent of the country's workers who are between sixteen and twenty-one years old.

# Setting a Candle to Catch a Thief

OUTSIDE air that filters through the brick-enclosing walls of boilers, costs industrial America many thousands of dollars each year because such leakage "cools" the fire, kills draft and therefore wastes coal to the extent of thousands of tons in the national aggregate.

Yet, just as the detection of such leaks is easy (see note under picture), so is the remedy simple; but it is simple largely through the pioneer work of Johns-Manville in its practical contributions to boiler-furnace improvement.

Through a complete line of products listed below, Johns-Manville can assure plants of new standards of heat saving in the boiler-room; standards that met and satisfied the Government during the coal crisis just past, when tons of fuel were saved and many hours of shut-downs averted—at a consequent increase in factory production.

Seldom has conservation been better served by Johns-Manville than in this branch of its service.

And it can be predicted that the products listed below, and the expert knowledge of their application, will be of as great service to the nation in this present period of post-war readjustment as they were during the war.

Because to the progressive plant, conservation has become permanently a national obligation, as well as a business expedient.

H. W. JOHNS-MANVILLE CO.  
New York City  
10 Factories—Branches in 63 Large Cities

These Johns-Manville Products save fuel in boiler-rooms:

*High Temperature (Refractory) Cements* for boiler settings.

*Aertite Boiler Wall Coating* for boiler wall exteriors.

*Monolithic Baffle Walls*—tight, durable, easy to install; prevent short circuiting of hot gases.

*Asbestos Sheets and Blocks* for insulating hot surfaces; *Insulating Cements*.

*Heat Insulations* for steam and hot water piping.

*Steam Traps*.

*Sea Ring Packing*—eliminates unnecessary friction between rod or plunger and packing.

A WOODEN frame, over which is fastened a square of cardboard having a small aperture at its center, is pressed against a boiler wall and the edges temporarily but completely sealed by some plastic material. It is obvious that any leakage in the part of the boiler wall covered by this frame, will immediately be detected by the inrush of air at the small aperture in the center of the cardboard, consequently, a candle flame held to this aperture will be sucked inward, thus immediately revealing the fact that there is an infiltration of air through the boiler wall, which means fuel waste.

Thousands of tons of coal have been saved by preventing boiler wall leakage and by similar corrective measures at and around the boiler furnace.

A complete service in this department of engineering was one of the important contributions made by Johns-Manville during the fuel crisis.

## PLENIPOTENTIARIES TO THE PEOPLE

**D**URING the last four years many millions of dollars have been spent by foreign countries in the education of the American people. It was an education calculated to remedy one of the recognized faults of Americans, namely, their lack of interest in other lands. The United States is now called upon to cast a deciding vote as to the reorganization of Europe and the redelineation of the map of the world. How much less competent we would be for this delicate duty if it had not been for the deluge of literature from the nationalities whose fate is in our hands. The spokesmen for the Poles, Czecho-Slovaks, Jugoslavs, Lithuanians, Greeks, Italians, Jews, Finns, Albanians, Armenians, Syrians and Irish have argued their case before the free forum of America and given us an insight into international relations that could not have been gained in any other way. Not all of us can travel around the world and none of us can know all languages. When therefore we can have this indispensable information brought to us free of charge, should we stop our ears and shut our eyes?

Yet that is what some folks propose to do. A bill is to be introduced into Congress to prohibit foreign propaganda and advertising of all sorts. This would virtually establish a perpetual censorship more stringent than that now prevailing. It would be a deadly blow at the League of Nations, for any such association must rest upon mutual understanding. It is in direct contrariety to the President's principle of open diplomacy, for it would prevent the argument of international questions before the jury of the whole people by the authorized advocates of the opposing claimants. We should take it as an honor, as it certainly is a privilege, to have received the representatives of the various nations who have been coming to us. We are glad that France thought it worth while to send over such men as Joffre and Viviani, Bergson and Tardieu; Italy such men as Marconi and Nitti, and England such men as Balfour and Northcliffe, Gilbert Murray and Bishop Gore. There have been thousands of such distinguished visitors in America during the war, some commissioned by their governments, some sent by foreign associations, some invited by

American organizations, some coming at their own expense, but all bringing us useful information and broadening our point of view. Even the propaganda of the German Government in the first two years of the war had its value. It corrected some of the absurdities in the cables that we got at first and it exposed the weakness of the German cause. The American people felt that if so able a man as Dernburg could not make out a better case than he did, his country must be in the wrong, but if they had been prevented by law from learning the German side they would rightly have been reluctant to decide against it.

The old idea of diplomacy was to send an ambassador to live near some court from which he could transmit what gossip he gathered in secret messages to his government. The new idea is to send a journalist to explain to the people what his nation thinks, wants and means to do. The international organizations for the promotion of science, religion, commerce, education, labor interests and social relations are the cement that holds the world together. Such official, semi-official and unofficial agencies as the Italy-America Society, the American-Scandinavian Foundation, the Japan Society, the Pilgrims Society, the Church Peace Union, the League of Free Nations Association, the East and West News Bureau, the Far Eastern News Bureau, the Pan-American Union, the Australian Commission, the Jugoslav Information Bureau, the Czecho-Slovak Board, the Council on Foreign Relations, the Foreign Press Service, and many others are all useful to the United States in disseminating information and presenting diverse views, and it would be a pity to have their activities in any wise prevented or restricted. The splendid propaganda carried on by the United States Government in Allied, neutral and enemy countries did much to bring the war to a successful conclusion and prepare the way for a durable peace. It would therefore be absurd for Congress to pass a law against such propaganda in America, as tho it were an improper governmental function. Still worse would it be to attempt to check or control the exchange of thought thru the unofficial news agencies and international associations. Don't put blinders on Uncle Sam.

## THE RECONSTRUCTION OF CHAOS

**A**FTER all the noble words with which the prophetic reconstructors of worlds, political, legal, industrial, and miscellaneous, have fed our hopes during the sorry days of bloodshed and destruction, it is discouraging to discover, now that the war is over, that no reconstruction worth mentioning is under way anywhere and that, instead of any decently ordered effort to that end, we descry in daily events little more than a resolution of human society into primal chaos.

The Bolshevik anarchism in Russia, Germany and elsewhere is doubtless the most tragic phase of our madness and ineptitude, but it is by no means the most humiliating or the most discouraging. Much can be forgiven to ignorant men in desperate need, especially if they are temperamentally dreamy, sentimental and prone to the auto-intoxications of fanaticism. No such forgiveness can be extended to peoples enlightened, sophisticated and boastfully practical. The people of the United States, we assume, belong

A more optimistic view of Bolshevik dangers and their menace to world powers, drawn by Orr in the "Chicago Tribune"

in this latter class, and if we are failing miserably to make good in the discharge of the most obvious duties confronting us in these days of disintegration, we can hardly expect to be judged leniently by those who are to suffer by our failure, or to keep our own self respect.

The facts then, or some of them, appear to be these: First, the National Government has been much too precipitate in demobilizing its own departmental and clerical staffs. Men responsible for successfully putting thru the tremendous task of organizing our military and naval forces and getting our army overseas, creating supplies of munitions, conserving and distributing food, and a thousand other auxiliary materials and services of war, and who have become reasonably well acquainted with their jobs, have been permitted to throw them up and hasten back to private opportunities in civil life. Some one in the Administration should have had the wisdom and the authority to say peremptorily in the words of Paul on a critical occasion, "Except these abide by the ship, ye cannot be saved." Instead, offices of pivotal importance have been turned over to a succession of underlings of lower and lower rank, and work that should have been performed intelligently, faithfully and thoroly has either been dropt and forgotten, or half done, or worse.

For example, an untold amount of needless mental anguish has been inflicted upon the families of our soldiers, killed, wounded and missing, thru the disgraceful failure of the War Department to record and transmit the simplest information. Apparently the card catalog has not been kept up, and the department itself is even unable to answer its own questions in thousands of individual cases. Day by day men are returning on the transports and rejoining their families or, from hospital wards getting word to them, while Washington is perfunctorily replying to appeals for information that these men are missing or probably dead or in hospitals not located. Failure quite as bad is day by day reported from reception hospitals on this side of the water. Multiplying instances are coming to light of men brought from boats without adequate clothing, of convalescents having the use of their legs and able to walk who can't get out of doors for much needed exercise because they have no shoes, and of numerous other negligences of like kind. The Government had ample time to anticipate all requirements in these cases, and ample appropriations of taxpayers' money to meet the situation.

Turning to industrial and commercial matters, the departments at Washington knew in advance how tremendous would be the problem of readjusting war contracts, upon the cessation of hostilities. The good name and the self respect of the nation demand that these readjustments should on the one hand deal justly with contractors, and on the other hand protect the national treasury against dishonesty, extortion and graft. It is a task requiring ability of the highest order, good judgment, firmness, consideration and tact. It is not being handled by men of such qualifications. On the contrary, executive heads competent to handle it have returned or are day by day returning to civil life, and men left in charge, who may be thoroly honest and well intentioned, are nevertheless lacking in the experience demanded for such work.

Yet more serious has been and will be the failure to handle properly the demobilization problem as it affects industry and social order. Every man in camp on this side of the water or brought back from Europe should have been or should be returned to the address from which he was inducted into the service, expenses paid, and ordered to report there to a properly constituted authority, unless he could show that he had a job awaiting him elsewhere, in which case he should be or have been sent to that job and there ordered to report. If the draft boards could have been kept intact (and we believe that they could have been) they should have been constituted the authority to which dis-

charged men should report and either the boards or some other community center or council should have been made responsible for exerting every possible effort to get the men into self supporting employments.

Obviously the thing that has happened has been a precipitate abandonment of all those principles of organized cooperation between the Government and individuals which were so loudly acclaimed when we were organizing for war. Already they have been forgotten, and we have rushed back into the merry old ways and irresponsibilities of *laissez faire*. If upon the heels of this folly we suffer a long and severe industrial depression we shall get what in all reason we have plenty of cause to expect.

## OUR UNDEMOCRATIC SENATE

THE United States Senate was intended by the founders of the republic to act as a brake upon the popular will and certainly no part of the governmental machinery they set up has fulfilled their intention more completely. It was modeled after the English House of Lords, but the English House of Lords has been deprived of its veto power while in the United States Senate one man has deprived half of the citizens of twenty-five states from exercising their natural right to vote for the next President.

Who would have dared to predict five years ago that the women of the Russian and German empires would gain the suffrage before the women of the American republic? Even the Bolsheviki point the finger at us and say that in Russia under the Soviets 90 per cent of the adults can vote, namely, all who earn their own living, while in the United States only about 65 per cent can vote, namely, white men and in certain states women and black men. As soon as Germany became a republic women were enfranchised as a matter of course. The new nations, Czecho-Slovakia and Jugo-Slavia, Austria and Hungary, Finland and Ukraina, are to be constructed upon the broad basis of equal suffrage. Women have full political rights in England, Ireland, Australia, New Zealand, Canada, Sweden, Norway, Denmark, Holland—but not in the United States of America. It is proposed to restrict the League of Free Nations to countries having a democratic franchise. Will the United States, which initiated the League, be excluded from it because of that one senator?

## LOWER CALIFORNIA

WE are glad to see that Senator Ashurst of Arizona has introduced a resolution calling for the opening of negotiations with Mexico for the purchase of Lower California, for The Independent has for many years advocated its acquisition. It is already semi-detached territory, both geographically and politically, and would be vastly better off under American management. As Senator Ashurst says:

For more than ten years the Mexican Government has practically abandoned Lower California. The Federal or so-called de facto Government of Mexico receives no revenue whatever from the peninsula; it makes no appropriations whatever to govern it; it sends no ships, no troops, no soldiers, no supplies to that territory, and it receives no troops, no soldiers, and no supplies from the peninsula.

The present governor of Vieja California was appointed by Diaz and the peninsula has been virtually independent of Mexico since the revolution and undisturbed by the civil war that has afflicted the mainland since the fall of the great President. When war threatened between Mexico and the United States, Lower California declared its intention of remaining neutral. During the reign of Emperor Maximilian, 1864-1868, Lower California was independent, as it was also in 1859-1861. In 1847 it was occupied by American troops and the inhabitants called upon to swear allegiance to the American flag. This they did gladly on the

authority authorized by the President that the flag would never be hauled down. But the President could not get his way with the Senate because the northeastern states did not want the nation to spread toward the southwest. So the pledge was violated, the flag was lowered and the United States Government had to rescind from Mexican revenge the people who had too confidently espoused its cause and to apologize them for their losses.

The two Californias, Alta and Baja, belong together and it seemed both to separate them. But the treaty of Guadalupe Hidalgo did worse. As any one can see by a glance at the map, the boundary line between Mexico and the United States, instead of running straight west along the southern side of Arizona to the Gulf of California, as it was intended to, takes a sudden shoot upward and passes above the head of the gulf, thus shutting off that access to the sea which, according to President Wilson, is the right of every nation even the largest. The line looks as tho it had been drawn by a drunken man, and old Mexicans hint that it was. At any rate, it is now Senator Ashurst's intention to have it drawn straight, and we hope he will succeed. The strip of the province of Sonora proposed to be acquired comprizes about 10,000 miles of desert land, which would be no loss to Mexico but would give the United States a port at the head of the gulf.

Lower California likewise is of no present and little prospective value to Mexico, while it would be of considerable value to the United States, for it has some agricultural and mining possibilities and decided strategic advantages. It would extend our frontage on the Pacific by eight hundred miles and give us several much needed harbors on the way to Panama. We could not under the Monroe Doctrine allow any other power to possess them, yet we have no way of directly defending them. In 1901 Secretary Hay heard that the Kaiser was secretly negotiating for the purchase of these harbors "for his own personal use"—probably as private bathing beaches in lieu of Ostend. The American people have also at various times become suspicious of England, France or Japan on the same account and such suspicions, however unjustifiable—especially if unjustifiable—are likely to disturb friendship. It would be well to remove the cause. There is no reason why Mexico should resent a fair offer to buy the peninsula any more than Denmark resented our proposal to purchase her West India islands. In this case, as in that of the Virgin Islands, a transfer of sovereignty would be to the benefit of the inhabitants as to both the countries concerned.

## LOOK AFTER YOUR PRAYERS

ON December 23 Charles Stewart Davison, chairman of the American Defense Society, sent out a letter to the clergymen of the country asking them to preach the following Sunday on the need of supporting Admiral Kolchak, who, according to the letter, represented the party of law and order in Russia.

Now Admiral Kolchak suppress by force the only government in Russia having any vestige of legal authority. He made himself absolute dictator and imposed the death penalty on all who opposed him. He imprisoned, killed or exiled the members of the Constituent Assembly. He removed the elected officers of the Czechs who had been the only force successfully fighting the Bolsheviks. He abolished the prohibition against liquor. He devoted 1,714,000 bushels of grain to the making of spirits. He is now getting a revenue of \$5,000,000 a month from the sale of vodka. He is known to be a monarchist and is suspected of endeavoring to restore the old regime of the czars. He refuses to comply with President Wilson's request for a conference of all the Russian parties.

In consideration of these facts would it not be well for those ministers and congregations that followed the advice

of the American Defense Society to send a rush wireless to heaven asking that their prayers for the success of Kolchak be held up and not acted upon till further notice?

## IT'S UP TO THE WOMEN

THE emancipation of womankind from domestic industry has been brought forward in suffrage speeches as a reason for permitting women to vote.

The day was when "the home," or at any rate the household, was a busy place. Flax and linen and wool were spun therein and woven and dyed. Clothing was made there, and laundered there, and repaired. Incidentally the home was a bake shop and a brew-house, and in the huge oven more things than angel cakes and patties were baked. Now the industries have been taken away from the domestic circle to be developed capitalistically in that great outer world where man has ruled. There they have become vast economic interests, textile factories and clothing trades, bakeries and biscuit companies, laundries and dry cleaning enterprises.

The ladies so left to their own devices have been provided with colleges for their higher education, clubs for their intellectual exercise, and business and professional opportunities for their talents. Nevertheless, many among them have been apprehensive lest these substitutes for domestic occupation prove inadequate. Therefore, they have urged us to open political opportunities to women, and place upon them all the responsibility of voting citizenship.

As believers in the essential soundness of this philosophy and advocates of the complete political equality of men and women, we may, perhaps, be permitted to remark, and without prejudice to urge, that the practical problem created by the removal of industries from the household has not been solved by any of these new experiments, and that the political enfranchisement of women appears to put upon them a responsibility which we hope they will not sidestep.

The production once carried on in the household, and now after a fashion carried on elsewhere is at present scandalously ill done. Not to mention the obvious difference in quality between our factory made textiles which go to pieces in less time than it took the Puritan spinster to spin and weave the sheets or blankets that, firm and strong, are in many instances yet preserved as heirlooms, the stuff that goes into our stomachs ought by all the rules of hygiene to kill us, and garments that go thru the steam laundries ought, if we had not been toughened by long exposure, to spread pestilence. Not to be too nice in our language, the things that we eat and the goods that we wear are nasty, and in our opinion it is up to our industrially emancipated and politically enfranchised women to do something about it.

Revolutions do not go backward. Neither does evolution. The industries have left the household for good, but the result to date cannot be described as good in another sense of the word. It should be made good qualitatively as quantitatively, and the job is, for every reason, one which the women should take hold of. By their ballots affecting legislation, thru organization which they have learned in their clubs and associations, thru the knowledge which they are obtaining in colleges and technical courses in domestic science, and with the drive of their consciences and pertinacity, let them get after these very serious evils. It's up to them to give us decent laundries, cleanly bake-houses and properly kept markets. Ladies, we look to you to save and maintain the elementary decencies of civilization.

Will Greenwich Village now change its title from Bohemia to Czecho-Slovakia?

As near as we can make out the Soviet means self-determination but not self-government.

Of all the various suggestions of a monument to Roosevelt that of Senator Phelan for a Roosevelt National Park seems the most suitable.

# THE STORY OF THE WEEK

## Planning the League of Nations

Interest in the Peace Congress has continued to center in the work of the commission which is drafting the constitution of the League of Nations. It was announced that the work was proceeding so rapidly that the draft would doubtless be completed and agreed upon before President Wilson's departure from Paris on his return trip to this country. M. Ferdinand Larnaude, head of the Paris Law Faculty and a member of the commission which is drafting the constitution, reported on February 9 that the League would consist, like the United States Government, of three departments: The Executive, clothed with great powers; the Legislative, in which all nations would be represented according to their population; and the Judicial, to which minor controversies would be referred for adjustment. The Executive is to sit permanently in a world capital, not yet selected.

It was further announced on February 12 that the commission had practically agreed upon the following scheme:

There will be a small body of representatives of all the countries, which will govern the Society of Nations, meeting every two or three months in a place that will be international. Each country will provide a list of experts in international law, from which body will be chosen arbitrators when disputes between nations are submitted for settlement.

Every difference between countries will have to be submitted to the governing body of the Society of Nations, which will make a decision within three months, during which time the contending parties must refrain from any act of hostility. Once a decision is

Harding in Brooklyn Daily Eagle

### THE HAUNTED HOUSE

given, if it is not accepted by one or more of the parties to the conflict, the case will be referred to a committee of arbitration.

If the country, which the decision of the arbitrators places in the wrong, does not accept the ruling of the arbitrators and has recourse to arms, not only the forces of the other contending party to the dispute, but the forces of all the other members of the Society of Nations in a position to help will take up arms against it.

Such armed intervention is not, however, to be compulsory upon any nation. But all will be required to maintain at the demand of the League an economic boycott against the offending country, while remaining on terms of friendly intercourse with its antagonist.

## An Economic Council

The Supreme War Council, acting on President Wilson's initiative, on February 8 voted to establish a Supreme Economic Council, to deal with all matters of finance, food, blockade control, and shipping of raw materials during the period of the armistice. This council will absorb or replace all other existing inter-Allied bodies dealing with such matters. It will consist of not more than five representatives of each interested government. It was also provided that there should be added to the present permanent international armistice commission two civilian representatives of each government, who might consult with the Allied high command but who should report directly to the Supreme Economic Council. This action was interpreted as significant of the gradual change from war conditions to the normal conditions of peace.

## For League Army in France

M. Leon Bourgeois, the senior French member of the Commission on a League of Nations and one of the most conspicuous advocates of such an organization, is earnestly seeking the formation of a strong international army under the control of the League, to be maintained in France. He points out in support of that scheme that France is the diplomatic and military center of Europe, and is the country likeliest to be attacked in another war, and that therefore the defensive force should be massed where the blow is apt to fall. It was announced on February 12, however, that the commission had practically rejected this proposition because of the opposition of the American and British delegates, it being recognized by them that there would be

GERMANY'S SURRENDER OF THE "GRAND FLEET" OF MOTOR TRUCKS

This procession of army trucks coming into Montauban, Germany, is surrendering to the American army of occupation in accordance with the terms imposed by the armistice.

**THE ELECTED PRESIDENT OF GERMANY**

The first National Assembly of the German Federal States met at Weimar on February 12 and elected Friedrich Ebert President of the State. Ebert is a Socialist, of humble birth, before the war a member of the Reichstag and previously editor of a Socialist paper in Bremen. Simultaneously with the resignation of the Kaiser he was announced Chancellor of the German Empire. On December 6 he was acclaimed President of the republic by a crowd of revolutionary soldiers

grave constitutional obstacles to America's participating in such an international force or entering a league which would make it compulsory for her to go to war at the mandate of any other body than Congress.

**Discord at Paris** A somewhat discordant and disquieting note was sounded in news from Paris on February 10, when it was intimated that the question of removing the Peace Congress to some neutral country might be considered if there was persistence in what was called the "obstructive policy" of the French press and certain French officials. This was supposed to refer partly to the French Foreign Minister's condemnation of the conference with the Bolshevik government, and to a vigorous statement of M. Clemenceau's in which he reconsidered the declaration that the war had been won and said that the present cessation of hostilities might prove to be only a lull in the storm. There has also been increasing dissatisfaction manifested in France with what is regarded as the slow progress in

making peace, especially since the delay causes corresponding delay in the much needed work of domestic reconstruction. It seems to be thought by many Frenchmen, moreover, that other nations, including America, do not adequately appreciate the special menace to which France is subjected in being directly adjacent to Germany, and her special interest, therefore, in the amplest possible guarantees against further German hostilities.

In consequence of these circumstances there was on February 10 a heavy selling of French rentes on the Paris Bourse, with a serious decline in prices.

**Extending the Armistice**

Marshal Foch was authorized to go to Treves on February 17 to arrange for another extension of the armistice. The terms of such extension were discussed at length by the Peace Council on February 7, 8 and 10, and it was understood to be the determination that there should be no relaxation but rather an increasing stringency because of Germany's failure to fulfil all her obligations. It was intimated that the great industrial center of Essen might be occupied by Allied troops, and that the port of Danzig and the Danzig-Thorn railroad might also be occupied, to prevent further conflict in that region between Germans and Poles.

**President of Germany**

The German National Assembly at Weimar on February 11 elected as "Provisional State President" of the German Empire Dr. Frederick Ebert, formerly Chancellor and head of the provisional government which has been administering affairs since the abdication of the Kaiser. Dr. Ebert received 277 out of 379 votes. Count von Posadowsky-Wehner received 49 votes, and Philipp Scheidemann and Matthias

Erzberger one each. Dr. Ebert, in accepting his election, declared that his purpose would be to dispense justice impartially, without fear or favor.

Later on the same day the Assembly unanimously adopted the draft of a provisional constitution. This action was preceded by a long dispute between the Independent Socialists and all the rest of the Assembly over the matter of secret diplomacy. The faction named insisted that Germany should at once commit itself to open diplomatic agreements, while the great majority of the Assembly favored the declaration, which was finally adopted, that open agreements should be required only after the admission of Germany to a League of Nations based upon that principle.

The man who has thus been selected to replace William Hohenzollern as the political head of the Teutonic world, on a salary of a million marks a year, was formerly a harness maker and was an active member of that Social Democratic party which the late Emperor once stigmatized as being composed of men "unworthy to bear the name of German." More than a year ago, as a member of the Reichstag, he warned the government that the speedy making of peace was a necessity of labor in all countries, and that the policy of the "mailed fist" would perish with the war. Shortly before the armistice was signed he presented to the government an ultimatum of the Social Democrats that all their members would resign from the ministry if peace were not made quickly. When the downfall of the imperial government occurred, Prince Maximilian of Baden, who had been Chancellor, selected Dr. Ebert to be his successor, and so designated him. Dr. Ebert was at that time vice-president of the Social Democratic party and president of the Committee of the Whole of the Reichstag. On be-

#### THE FIRST INDIAN IN THE BRITISH CABINET

Lord Satyendra Sinha, appointed Under Secretary of State for India in Premier Lloyd George's new Cabinet, is the first Hindu to hold such a position in the British Government. His appointment carried with it the title of British peer, making him also a member of the House of Lords. Lord Sinha graduated from the University of Calcutta, studied law in London and returned to Calcutta to practise. He became advocate-general of Bengal and in 1915 was elected president of the Indian National Congress

coming Chancellor he issued a proclamation and manifesto begging that Germany be saved from anarchy. He promised that he would "form a new government with parties and shall report within brief delay about results to public. New government will be government of people." He added that it would be the aim of the new government to "bring peace as quickly as possible and to confirm the liberty which it has gained."

**The Assembly at Weimar** About three thousand political leaders from all parts of Germany, and also from Alsace-Lorraine and Posen, thronged the little city of Weimar on February 6 for the opening of the National Assembly which is to determine the future form of government of the empire and to adopt a preliminary constitution. The multitude comprized many of the best known statesmen and publicists, and of course many obscure men. The name of Eichhorn, the former chief of police of Berlin, who was conspicuously concerned in the Spartan revolt, was stricken from the roll of the Assembly. He did not present himself and his whereabouts was unknown.

Herr Ebert, the Chancellor and head of the Provisional Government, called the Assembly to order and made a vigorous address of welcome to the delegates. After declaring that Germany was "done forever with princes and nobles, by the grace of God," and that the German people were now ruling themselves, he made a bitter attack upon the Allies for the "unheard of and ruthless" conditions with which they

were oppressing Germany. "We warn our opponents not to drive us to the uttermost," he said. "Hunger is preferable to disgrace, and deep privation to dishonor." He aroused much cheering by referring to the proposed union of Austria with Germany.

Dr. Eduard David, for years one of the foremost leaders of the Social Democratic party, was elected permanent president of the Assembly on February 7, receiving 374 out of 399 votes. A Clerical delegate, Herr Fehrenbach, formerly president of the Reichstag; a Democrat, Herr Haussmann; and a Conservative, Herr Dietrich, were elected vice-presidents. Dr. David made an address similar in tenor to Herr Ebert's, and the Assembly proceeded energetically to the business of constitution making.

The preliminary constitution had its first reading on February 8, and its second and third readings on February 10. As drafted it empowers the Assembly to adopt a permanent constitution and to enact "such national laws as are urgently necessary." It provides for the choosing of a national President by a majority vote, and for the creation of a "Committee of State," which shall occupy the position of a quasi-second chamber.

The instrument makes no attempt to anticipate or limit the future permanent constitution, except as to one vital detail. This is a provision that the territory of the German states shall not be altered without their consent, which is obviously the Government's method of meeting the opposition evoked by the earlier reports that a division of Prussia was contemplated.

The Central Council of German Soldiers and Workmen, which was given control of the Government in December last and which has the right to appoint or dismiss the "People's Commissaries," as the Ministers are styled, wrote to the Assembly on February 7, offering to surrender its powers to the Assembly whenever the latter body desired it to do so.

**More German Disorders** Renewed disorders have broken out in various parts of Germany. Soldiers and sailors on February 6 stormed the court house at Magdeburg and liberated many prisoners, and were in turn attacked by Government troops. The same day Bremen, where the Radical Socialists had set up an independent rule, was the scene of fighting. Another Spartan outbreak occurred at Kiel, and there were riots at Hamburg and Luebeck. In Berlin, on February 9, a civilian mob attacked Government troops who were searching for arms, and serious fighting with loss of life ensued. It was reported that the former chief of police, Eichhorn, had returned and was leading the insurgents.

**Opening of Parliament** The new British Parliament opened its first session on February 11. In the speech from the throne the King urged legislation calculated to re-

move the causes of social and economic unrest, and express a hope of increasingly intimate and cordial relations with the United States.

The Prime Minister, Mr. Lloyd George, made a notable address, devoted chiefly to social and economic topics. He spoke strongly against the strikes and other industrial disturbances in the United Kingdom, warning British labor that such things were delaying the making of peace and thus militating against the best interests of the agitators themselves. Despite such handicaps, however, the Peace Congress was making better progress than might have been expected. He promised that the peace treaty, when completed, would be laid before Parliament for its consideration and approval before ratification. His speech, while commanding general commendation,

#### PEACE DELEGATE FROM INDIA

His Highness the Maharaja of Bikaner is the ruler of an Indian state with a population of about a million people, which cooperated with the British forces against the revolutionists in 1957 and is one of the most progressive in industrial affairs today. The present ruler, appointed to represent India at the Peace Conference, is a colonel who served with the British armies in the early part of the war and later represented India at the Imperial War Conference in London in 1917.

A CHURCH CONGREGATION WITH A MILLION DOLLAR INCOME

The twenty-nine members of the Merriman Baptist Church in Eastland County, Texas, have come into a fortune by the discovery of oil on the church property. At first the deacons refused to lease the churchyard for commercial purposes, but they finally consented and the oil well sunk there is producing \$400 a day royalty, which the church has apportioned among its benefices, saving a part to build a larger church since the oil boom is enormously increasing the population of the town. So far the congregation has refused to lease the church graveyards, from which oil wells would bring a \$1,000,000 royalty within a short time.

failed to satisfy the Labor Party in Parliament, which proposed an amendment to the reply to the speech from the throne, regretting that the latter did not make more definite proposals for dealing with industrial unrest and for ameliorating the conditions of life and labor among the people.

**Dealing with Bolsheviks** The Supreme Council of the Peace Congress received on February 6 the Russian Bolshevik Government's acceptance of the invitation to a conference on Princes' Island, in the Sea of Marmora. M. Tchitcherin, the Bolshevik Foreign Minister, stated in his acceptance that his Government was willing to recognize its financial obligations to the creditors of Russia in the Allied nations, to guarantee the payment of interest on such debts with supplies of raw materials, and to grant concessions in mines and forests to citizens of Allied powers, "provided the social and economic order of the Soviet government is not affected by internal disorders connected with these concessions." He added that: "The extent to which the Soviet government is prepared to meet the Entente will depend on its military position in relation to that of the Entente governments, and it must be emphasized that its position improves every day."

The other Russian governments persisted in their unwillingness to enter a conference in which the Bolsheviks would be present. M. Pichon, the French Foreign Minister, on February 9 declared that, while the conference would be held, there would be no negotiations with the Bolsheviks as equals, but the commissioners of the powers would merely listen to what they had to say for themselves. William Allen White, the well-known Kansas editor, and Professor George D. Herron, Socialist, were designated as the American commissioners to the conference.

**Fighting in Russia** Further fighting occurred on February 7 between American and Allied troops and the forces of the Bolshevik government on the River Vaga and elsewhere between Archangel and Petrograd, in which the former were generally successful. It was announced that the total casualties in the American forces in that region of Russia up to and including January 31 were 180 killed, died of wounds, sickness or from other cause, or missing in action, and 229 wounded or injured, making a total casualty list of 409 out of a force that numbered 4925.

Meanwhile indications multiply of the purpose of the Allies to withdraw altogether from Russia, leaving the various factions and rival governments in that country to settle their differences as best they can. In anticipation of this the Russian government at Omsk, Siberia, was reported on February 8 to have accepted an offer of aid from Japan, in men, arms and money, in return for which Japan will receive a valuable concession for coal and iron mining.

**The Polish Elections** The Polish elections for delegates to a Constituent Convention resulted in a victory for the provisional government of which Mr. Paderewski is Premier, its list of candidates receiving 50 per cent of the ballots. Jewish candidates received 35 per cent and Socialists 15 per cent. Women voted in great numbers.

The Constituent Convention opened at Warsaw on February 9, with about 200 members, of whom the National Democrats had 91, the Polish Peasants 51, the Peasants' Union 19, the Socialists 14, the Workmen's Union 7, the Jewish party 8, the United Polish Peasants 6 and the German Colonists 2.

The convention will draft a constitution and adopt it, and elect a President of the republic. One of the chief

questions to be decided relates to the division of the land, and it is expected that nobody will be permitted to own more than a thousand acres. There will probably be some action taken to discourage emigration, and to induce Poles to return from America and help to build up their own country.

**Poles and Germans** The Polish Government refused the demand of Prussia that the Poles should evacuate the province of Posen, and also refused to agree to a suspension of hostilities. Accordingly, on February 6 the Germans moved against and recaptured from the Poles the important city of Bromberg, sixty-nine miles northeast of the city of Posen. The Polish Government called all men of military age to the colors, and the Premier, Mr. Paderewski, instructed the Polish National Committee in Paris to urge the Allied powers to permit the return to Poland of the Polish army which has been fighting in France under General Haller. It was asked that the army be sent home by way of Danzig, and that the Danzig-Thorn route be opened to the Poles for food and other supplies.

It was reported on February 7 that serious conflicts were occurring between Poles and Czecho-Slovaks on the Galician and Hungarian frontiers, while German soldiers returning from Russia declared that an immense Bolshevik army was about to sweep over Poland from the north and east.

**Recognition of Jugo-Slavs** Secretary Lansing at Paris on February 7 formally announced American official recognition of the independence and union of the Serbian, Croatian and Slovene peoples formerly under the dominion of Austria-Hungary and now united with the kingdom of Serbia. The final settlement of the frontiers of the new state must, he added, "be left to the Peace Conference for adjudication according to the desires of the peoples concerned."

## THE GREAT WAR

*February 6*—German National Assembly opened. Russian Soviet government accepted invitation to Princes' Islands conference.

*February 7*—Proposal to abolish conscription abandoned by Peace Congress. Yugoslav independence recognized by America.

*February 8*—Supreme Economic Council created by Peace Congress and civilians added to Armistice Commission.

*February 9*—M. Clemenceau declared that the armistice might be "only a lull in the storm." Fighting in Northern Russia.

*February 10*—Talk of removing Peace Congress from Paris. Spartacan revolts in Germany. Poles and Germans fighting.

*February 11*—British Parliament opened. German Assembly elected Frederick Ebert President of Germany and adopted constitution.

*February 12*—Representatives of 1,500,000 workmen confer with British Government on social economic topics.

**Arrests in Turkey** Delayed news has been received of the arrest at Constantinople on February 1 of forty leaders of the "Committee of Union and Progress" who were plotting a revolt. Among them were Djavid Bey, Ismail Bey, Midhat Chukro Bey, Kemel Bey, and other notorious associates and agents of Talaat Bey and Enver Pacha who were deeply concerned in the Armenian and other massacres.

**International Labor Laws** The American delegates on the Commission on International Labor Legislation have submitted to the Peace Congress a schedule of proposed laws which they declare and urge should be incorporated in the peace treaty. These comprise provisions for a league of all free nations; no reprisals thru vindictiveness; recognition of the rights of small peoples, and of self-determination; prohibition of human slavery; trial by jury; and free association, assemblage, speech and press. There follow these provisions specially affecting labor. It is asked that the peace treaty shall declare:

That in law and in practise the principle shall be recognized that the labor of a human being is not a commodity or an article of commerce.

That the seamen of the merchant marine shall be guaranteed the right of leaving their vessels when the same are in a safe harbor.

No article or commodity shall be shipped or delivered in international commerce in the production of which children under the age of sixteen years have been employed or permitted to work.

No article or commodity shall be shipped or delivered in international commerce in the production of which convict labor has been employed or permitted.

It shall be declared that the work day in industry and commerce shall not exceed eight hours per day, except in case of extraordinary emergency, such as danger to life or property.

The sale or use for commercial purposes of articles made or manufactured in private homes shall be prohibited.

It shall be declared that an adequate wage shall be paid for labor performed—a wage based upon and commensurate with the standards of pay conforming to the civilization of the time.

That equal wages shall be paid to women as is paid to men for equal work performed.

**The British Strikes** After an almost complete stoppage of railway traffic in England, the order for a nation-wide strike on February 7 was canceled, and on that day the men generally resumed work. Adjustments were made in other industries, and by February 10 practically all the great strikes in the United Kingdom were at an end. At the same time miners, railway men and others to the number of more than 1,500,000 began an organized movement for reforms in employment, their demands comprising a six-hour day and 30 per cent increase of wages for the miners, and an eight-hour day for railway men.

**The Strikes Go West** Seattle was the storm center this week of manifestations of labor unrest. A general strike of 65,000 workers, including nearly every trade and industry, was called on February 6 and for four days practically paralyzed activities in the city. Soldiers from Camp

Lewis were called out to maintain order in case the strikers carried out their threat of taking over the police power of the city and establishing a soviet government. But the steady executive decision of Mayor Ole Hanson kept the situation in hand and the strike was ended on February 10 without victory to either extreme. As Mayor Hanson put it:

It was a rebellion but it's all over now. Capital may try to use the failure of the strike to win economic advantage, but the great mass of Seattle citizens—capitalist and union labor alike—are agreed that no such thing shall happen. We'll continue to be a progressive, closed-shop town—the best union town in the United States.

But while he upholds labor unionism Mayor Hanson puts criminal responsibility for the strike where it belongs:

It is the duty of the United States Government to arrest and try all the leaders in this conspiracy against the American Constitution. It was a strike, conceived by certain men and executed thru dupes, against the very basis of our social life.

In Butte, Montana, a smaller strike brought more disturbance. An I. W. W. walkout of 12,000 miners protesting against wage reduction was endorsed by the Sailors' and Soldiers' Association, an organization of discharged men patterned somewhat after the Russian Soldiers' and Sailors' Council. The strikers formed a semi-military soviet government and persuaded the union carmen to strike, thus tying up city transportation. United States regulars were called out to patrol the streets and restore municipal order.

Two carloads of foreign labor agitators, arrested in Seattle and in Butte, were sent to New York on February 10 for immediate deportation to their own country, which in most cases is Russia. They will be deported under the Federal law against anarchists.

The workers in the woolen mills of Lawrence, Massachusetts, ended their strike on February 10 by voting to accept forty-eight hours' pay for a forty-eight hour week.

In the New Jersey silk mills at Paterson and Passaic the strike is still on, but the workers have asked the War Labor Board to fix temporary hours under which they may return to work.

The general strike of carpenters and builders, called out in New York and planned to affect fifty cities, was ended by mutual agreement on February 12 and the men returned to work pending settlement of the wage question.

#### The Victory Loan

Asserting that with the cessation of hostilities the forthcoming Victory Liberty Loan in April cannot be successfully floated within the limitations imposed by existing laws, and pointing out the imperative necessity of remedial legislation, Secretary of the Treasury Glass appealed to Congress on February 10 for legislation granting him greater latitude in the exercise of discretion as to the terms of the new Victory Loan.

Secretary Glass asked authority to increase the authorized issue of bonds from \$20,000,000,000 to \$25,000,000,000, which would increase the amount of Liberty bonds authorized but not

issued to \$10,000,000,000; removal of the limitation as to interest rate so far as regards bonds maturing not more than ten years from date of issue, authority for an issue not exceeding \$10,000,000,000 of interest-bearing, noncirculating notes maturing in from one to five years, authority to issue notes and bonds payable at a premium, the creation of a 2½ per cent. cumulative sinking fund for the retirement of the war debt, continuation of the existing authority for the purchase of obligations of foreign Governments and other important legislation.

The greater latitude of authority indicated by these requests is made necessary, as Secretary Glass explained:

In view of the early expiration of the life of the present Congress and the apparent impossibility of convening and organizing the new Congress in time to enact further bond legislation before the Victory Liberty Loan campaign begins, I should be only too glad to have the Congress share with me the responsibility of this extraordinarily difficult determination, but, believing that it would be a grave mistake to reach a final determination at this time, I must ask authority to deal with the matter as the situation may develop.

#### Our Biggest Tax Bill

The House of Representatives passed on February 8 the bill which will require the taxpayers of the United States to pay \$6,000,000,000 into the Federal Treasury during the fiscal year, and \$4,000,000,000 in the following years. The bulk of the taxes are levied upon war excess profits of corporations and on incomes, individual and corporate.

When the revenue bill first came from the House last fall it asked for more than \$8,000,000,000, but after the signing of the armistice it was cut down by the Senate to its present amount. In conference the rates of the Senate on transportation, beverages, cigars and tobacco, amusement admissions, club dues, luxuries and semi-luxuries, stamp and special taxes all substantially were adopted, while the House rates on estates and insurance were reinstated.

The principal rate increases agreed to in conference were to raise the corporation income rate of 1920 from 8

London Opinion

THE BRITISH LABOR "LEADER"

per cent, as proposed by the Senate, to 10 per cent, and an increase from 60 to 65 per cent in the second "bracket" or sliding rate on corporation's excess profits for this year. The 80 per cent war profits tax for this year was adopted, and, upon insistence by House conferees, extended to 1920, but made applicable next year only upon such profits from Government war contracts. Practically all of the provisions of the Senate, designed to prevent hardships in imposition of the corporation taxes, were adopted.

The storm of popular objection raised against the 10 per cent tax on semi-luxuries resulted in an announcement by the House conferees that a joint resolution to repeal it would be passed after the enactment of legislation. This item was expected to produce about \$14,500,000.

The revenue bill includes the provision that all officers and enlisted men of the army and navy are to be paid \$60 bonus if honorably discharged, whether before the armistice or after.

**More Advice on the Railroads** Two million railway employees, representing, they say, with their families, eight million persons, are in favor of a plan presented to Congress recommending Government ownership of the roads, and their oper-

ation by a corporation formed from the employees and run upon a cooperative basis.

The plan has been endorsed by the executives of the brotherhoods, who represent 400,000 men, and by the executives of the railway unions which come under the head of the American Federation of Labor, representing about 1,500,000 workers. Under this plan Government bonds would be exchanged for the securities now held by investors in the railroads, which are valued at about \$18,000,000,000 to \$20,000,000,000. Working capital would be provided by the Government for the corporation, but the only capital the corporation would present would be "operating ability."

The employees would handle the revenues of the roads, now about \$5,000,000,000 annually, and would pay all expenses, including their own wages. The payroll, which was \$1,700,000,000 before Federal control, has now reached \$2,600,000,000 a year.

Out of the net income, after paying all expenses, the employees would pay the Government a rental for the use of the property. If there were a surplus of revenue above 5 per cent, it would be split between the Government and the employees. But if a deficit resulted it would be sustained by the Government through taxation.

The advocates of the cooperative scheme argue that it would remove the railroads from politics, coordinate State and Federal control, protect investors by removing "water" from securities, and because Government financial support would be safer and cheaper than private.

No power would be taken away from the Interstate Commerce Commission, and on the other hand it would be free to have further powers by which to secure full regulation, adequate and efficient service. For the settlement of wage disputes, wage boards are suggested, whose deadlocks would be opened by decision of the board of directors of the corporation.

Probably the most remarkable feature of the scheme is the "single corporation," composed of employees which would run the railroads—as the plan presented to Congress puts it—

as a corporation where operating ability constitutes its sole capital. We would recognize as operating ability the skill, industry, and application of every employee, from President down to office boy. It should be organized under a Federal law. It should be authorized to take and hold and operate these properties under the full regulatory power of the Government, to whom it should account for all of its operations and expenditures. It should be required to meet all costs of operation and fixed charges upon the capital employed which had been guaranteed by the Government. A certain agreed percentage of the net results of operation should belong to this corporation.

The stock of this corporation should be held in trust for the benefit of the employees. The earnings of the corporation should constitute a trust fund to be declared as a dividend upon the amounts paid to the labor which it employs, every employee receiving that proportion of this trust fund which his annual wage bore to the total annual compensation of all employees.

**Suffrage Blocked Again** By one vote only the Senate failed on February 10 to pass the Federal Amendment for woman suffrage and thereby submit it to the States for ratification. President Wilson cabled an urgent appeal for the passage of the suffrage measure and it seemed previous to the vote as if there would be just enough support to carry it. But the solid opposition of eleven Southern democrats, standing pat on the principle of State's rights, proved the chief stumbling block and the Senate defeated the amendment 55 to 29.

The Senators who voted against woman suffrage are: Democrat—Bankhead, Beckham, Fletcher, Gay, Hardwick, Hitchcock, Martin (Virginia), Overman, Pomerene, Saulsbury, Simmons, Smith (Georgia), Smith (South Carolina), Swanson, Trammell, Underwood, Williams, Wolcott—18. Republicans—Baird, Borah, Brandegee, Dillingham, Hale, Lodge, McLean, Moses, Penrose, Wadsworth, Weeks—11. Three of them who are not returned for the next session will be succeeded by Senators who are known to favor woman suffrage. There seems to be little doubt therefore that the amendment will be passed by the next Senate and the credit for it go accordingly to the Republican party.

#### LANDING ON A ROOF—A NEW STUNT IN AVIATION

By making a successful landing on the roof of the Galleries Lafayette, a Paris department store, Jules Vadrines, a French pilot, established a precedent in aviation and won a prize of 25,000 francs. Leaving Issy le Moulineux, a suburb of Paris, in a dense fog, Vadrines guided his machine low, barely skimming the roofs of the houses. Directly opposite his destination he shut off the power and cleared the parapet surrounding the roof by a few inches. The roof was fifty-two feet wide and about seventy-five feet long, while the machine used by Vadrines measured thirty-six feet

# ORGANIZING THE LEAGUE OF NATIONS

BY HAMILTON HOLT

*Mr. Holt's account of the session of the Peace Conference at which the League of Nations was created was published in The Independent of February 15. In this article he describes the form the League is taking, presenting views based on his own conversations with President Wilson and with the premiers of Great Britain, France and Italy. Mr. Holt's official position at the Paris conference is vice-president of the League to Enforce Peace, delegate of the Church Peace Union and delegate of the Federal Council of Churches. His cabled accounts of the Peace Conference proceedings will appear regularly in The Independent*

**T**HE League of Nations now occupies the center of the stage. All other questions rising out of the war are for the time being in abeyance.

The special committee, under the chairmanship of President Wilson, appointed to prepare a constitution for the League of Nations has already begun its conferences and is working night and day in order to have the plan completed before the President sails home about February 15. The Hotel Crillon, where the conferees meet twice a day, is as bustling an American center as the Union-Station at Kansas City. The representatives of the associated nations have already passed the stage of offering proposals and are now engaged in harmonizing differences.

From audiences with President Wilson, Premier Lloyd George of England, Premier Clemenceau of France, Premier Orlando of Italy and half a dozen other delegates, I am of the opinion that the world can count absolutely upon the early creation of some sort of a League of Nations. The following things seem to be certain to come:

1. All disputes between members of the League must be settled by reason. If the disputes are justiciable they must be referred to an arbitrator. Whether this referee will be a permanent court or a special board of arbitration is not yet decided. If the dispute is non-justiciable it must be taken before a council of conciliation composed of the ambassadors at the capital city which shall be chosen as the seat of the League of Nations.

2. In case a nation seeks to violate peace before trying arbitration or conciliation measures, all the other nations will then combine to use economic pressure. The belligerent member will be blockaded, perhaps completely isolated, and if necessary, force will be used to put it down.

3. The League will make provision for the control of the German colonies captured by the Entente powers thru mandatories according to General Smuts's ingenious proposal. The mandatories will act under a charter of the League of Nations and be responsible solely for the administration of the colony. Expenses of administration that cannot justly be charged to the colony will be borne not by the mandatory but by all the members of the League, apportioned on a pro-rata basis.

4. The limitation of armaments is an assured fact, certainly on land and probably also upon the sea. Public opin-

ion in Europe is ready to go much further in this direction than Americans have supposed possible. The English proposal to abolish conscription and the American plan to reduce to the minimum point necessary for domestic tranquillity will probably be fused into a single proposition. Each nation will agree to use only a certain small force, but some, like England, will abolish conscription altogether and depend upon highly paid volunteers. Others, like Italy and France, which do not propose to pay soldiers highly, will depend upon conscription to raise the small quota of troops necessary. All implements of war used solely for international warfare and not necessarily for preserving domestic peace may be scrapped.

5. There will also be a real attempt made to create new and better conditions of labor thruout the world, but as this subject bristles with difficulties it is probable that only a very general beginning will be made.

The great issue that is still in doubt is whether the League of Nations will be a League of Governments or a League of Peoples. I find that many delegates have little conception of a league that can do more than merely prevent war from breaking out after a dispute has arisen. Of course any plan that will accomplish this deserves the gratitude of mankind. Nevertheless, public opinion in most countries has already gone beyond this and it is now seen as senseless to attempt to abolish war by waiting until a dispute has arisen as it is to abolish disease by adopting no sanitary precautions until the patient has taken to bed. Some of the delegates are content to set up an international court and council, give it the proper sanctions and there let the matter rest. They seem to have no idea of a League that proposes affirmatively to modify the fundamental conditions leading to war. If the League of Nations is to be a vital living organism it must have some sort of a representative congress meet periodically. Yet most plans that I have seen along this line go no further than the creation of a council of ambassadors adjusting prices, and bargaining with one another over

conflicting national claims. The thing that is wanted at the Peace Conference and wanted immediately is some statesman to demand as an integral part of the League of Nations a representative democratic congress to formulate and modify international law as conditions change and to consider any matter affecting the tranquillity of the world and the betterment of human relations.

## A NEW WORLD

BY DAVID LLOYD GEORGE

*Think out new ways; think out new methods; think out even new ways of dealing with old problems. Don't always be thinking of getting back to where you were before the war. Get a really new world.*

# WHEN DREAMS COME TRUE

BY IRVING T. BUSH

**I**T has seemed to be that a large part of the American public has misunderstood the purposes underlying President Wilson's trip to Europe, because they have not realized that the results which he hopes to accomplish are identical with the aspirations and ideals which lie deep in the American heart. If the American people can once understand this, all criticism of the President's trip will cease and they will give to him as Americans without party lines a united support at the Peace Table.

*The founder of the Bush Terminal Company is one of the business men of America whose word carries weight by virtue of his own achievements in making dreams come true. Beginning when he was still in his teens with two hundred acres of unprofitable sand in Brooklyn he built up the organization now known as the Bush Terminal, including over a hundred warehouses, eight piers, twelve industrial buildings and all facilities for receiving, shipping, storing, selling and manufacturing goods—an organization that contributed materially to America's part in winning the war. Mr. Bush brings to bear in this article on America's international position the same practical idealism that permeates his own business success*

There is deep rooted in the American heart a love of peace and of liberty, of free speech and the right of the peoples of the earth to govern their own affairs in their own way, so long as their government is based on justice and democracy, and does not interfere with the peace of the world. We have made war magnificently—not because we like war, but because it was the only way in which the might of a military autocracy threatening the world's happiness could be crushed. We do not believe in armament, and wish to maintain only such military and naval establishments as will safeguard our rights and those less powerful nations who look to us for justice. We are willing to bear the burden of an armed force, if there be no other way to secure the peace of the world. We do not wish to use such a force in aggression, and there is in the hearts of the masses of the people of this country a hope which finds echo in the hearts of the people of other lands, that a way may be found to guarantee liberty and justice to all the peoples of the world, without the maintenance of great national armaments. We hope that some way may be found to settle international disputes as we settle individual differences—in courts of law, and the manhood and womanhood of the world be permitted to devote their energies to the progress of industry and peace. These are the aspirations of the American people. They lie deep in President Wilson's heart, as in the hearts of his fellow citizens, and it is because he has realized that the voice of America at the Peace Table must speak for the ideals of our people, that he has broken an established precedent and gone in person to France. He faces a greater problem, involving the happiness and welfare of a greater number of people, than any man has ever faced before. It is a task almost beyond human power, but he has with rare tact thus far maintained the dignity of democracy and complete harmony with the leaders

from other lands, who, because their people have suffered more grievously than ours, bring to the Peace Table a greater spirit of bitterness.

There is only one kind of liberty, but there are two kinds of despotism. There is a despotism of class and a despotism of mass. Russia has discarded the first and accepted the second. Her people, who have not trod the paths of freedom before, have turned liberty into license. In this country our standard of education is higher and public opinion more informed thru an enlightened and unrestricted public press, but there beats in the hearts of both nations the same ideals. We have translated them into being. The people of Russia are strug-

gling toward them thru a fog of ignorance and a maze of misunderstanding. In Germany a military autocracy has been overthrown and the fires of a new hope are kindled in the hearts of the masses of her people. In the other countries of Europe new ideals are stirring and when President Wilson speaks they listen to him as to the voice of America. The ambitions of the people and of their governments are not in all cases the same, and some of those at home, who have been critical of the speeches of President Wilson in Europe, and the oft repeated reiteration of lofty ideals, have not realized that his message and our message was not intended for the governments of Europe, but for the eager awakening people behind those governments, who see in President Wilson the spokesman of a people who have achieved liberty, and whose ideals they are beginning to understand. To carry this message to the hearts of Europe, it has been necessary to say and say again many simple things which are old to us, but new to them, and it has been impossible to deal in exact detail. That must be left to the Peace Conference.

I have spent two months in France and England. I have talked with many. I have read all shades of the public press. I have listened to public speeches and I have sat an interested spectator at mass meetings of labor. I know men both of France and England, and Americans who make their home on the other side, who disagreed entirely with the policy of President Wilson's trip to Europe before he came, and who thought of him as a visionary theorist, coming to preach ideals impossible of accomplishment, who now recognize that his presence in Europe is the greatest single force to unite the people of the world and their representatives in France, and to bring into

being a higher standard of international ideals. He has spoken to the people of Europe, and their hearts have responded. Statesmen who were struggling toward better things have taken new courage, and those who hoped for the reestablishment of the old order see over their shoulders the specter of the rising wave of public opinion, and are swimming with the new tide.

It is impossible to fool all of the people all of the time and it is equally impossible to please all of the people all of the time. There are many in America who are just as patriotic and ambitious for the honor and dignity of their country as those with whom they differ, who have not seen with Presi-

dent Wilson's eyes. Some have thought that his duty lay at home; others that he should have consulted Congress more freely as to the personnel of our Peace Commission, others that his trip abroad was based upon motives of personal ambition and a desire to receive the plaudits of Europe, and others have based their criticism upon different points of view. Whether any of these criticisms is right or wrong is not at the moment a vital question. They are small things, when balanced in the scale against the the great issues at stake.

President Wilson on the surface did not carry with him to Europe a united public opinion. I am confident that this was because the people of America did not understand that the same hopes and ideals are in his heart as are in theirs. This has made his task more difficult, because the people of Europe and their statesmen have been puzzled by an apparent division of opinion on this side, but in quiet dignity he has voiced our ideals, and

step by step progress has been made toward better things.

Sitting at first a solitary figure at the Peace Conference, speaking for standards which seemed to some of the statesmen of Europe, who have struggled with the bitter reality of the last five years, to be unattainable ideals, he has patiently waited for the voice of

wish it were within my power to put into the heart of every American the conviction which is in my own, that this is a time when party lines should be forgotten, petty differences of opinion overlooked and public opinion unite to uphold the hands of our Peace Delegation in France, who speak the voice of America.

the people to echo the hopes which are struggling to life in the hearts of mankind. He is no longer solitary. Others are beginning to see that out of the world's melting pot in Paris will come a new order of things, that ideals will be translated into reality, that international tribunals can be established and maintained, that international war can be made if not impossible, at least unlikely, the burden of great armaments lifted from the shoulders of industry and the debt of the greatest war the world has ever known paid thru the economies of permanent peace.

Peace is not yet made, but our dreams are trembling upon the brink of reality, and I

Marcus in New York Times

THE SOWER

**T**HE American boy who has reached the age of twelve without being spanked for fighting is either a good liar or the son of unusual parents, for a black eye is a stubborn fact.

If under the legal age for enlistment in the army or navy when the war broke out, he had something more coming to him for wanting to join the man behind the guns.

Imagine his surprise when he was invited into the war by a national organization which had a local headquarters in every boy's home town—a boys' club with a khaki uniform, a quarter of a million members, and a will to fight the Hun until he cried for mercy.

Promptly upon the declaration of war this organization, the Boy Scouts of America, sent to the President and to Congress a resolution pledging 100 per cent loyalty and the entire strength of its membership for any war service which boys could render. Then it said to all the rest of the American boys

Scouts combing the grass for peach pits to be cleaned and shipped to the Government

## HALF A MILLION SCOUTS

BY ARMSTRONG PERRY

who wanted to serve their country. "Come on!"

They came! A thousand a day, then fifteen hundred a day, and then a sustained average of two thousand applications for membership and service, a day.

The only limit was imposed by the shortage of trained leaders. A scoutmaster in the Boy Scouts of America must be a man who, in the language of the Scout oath, keeps himself physically strong, mentally awake and morally clean. Such men were the first to volunteer for service in the defense of their country. Fifty five per cent of the

scout leaders found places as officers or among the rank and file early in the war. The vacant places in the scout troops at home were hard to fill. Only by searching out qualified men who were ineligible for military service for good cause were the old troops provided with new leaders, and scoutmasters secured for the thousands

of new troops forming. Rapidly the number of Boy Scouts and scout leaders grew to considerably over 400,000.

This was the war time proposition which was put up to every scout thru national and local leaders:

Every American must fight

Military work is beyond a boy's ability.

We will be prepared for our Government's orders telling us how we may fight, and then we will obey those orders.

America went into the war in the month of April which, for much of the country, is the beginning of the gardening season. One of the first orders received by the [Continued on page 269]

*When there was no skilled labor to drive farm tractors, farmers' wives did the work because city men didn't know how*

EVERY time I see the term "unskilled labor," I think of the experience of my friend Kelly. He is a college graduate, first class reporter, former lieutenant in the United States Army, and globe trotter. It was his custom to work on the local staff of a newspaper just long enough to accumulate the railroad fare to the next city of his liking, and five dollars for expenses. He arrived in Chicago one winter day and asked for work. Before he got it his five dollars had been spent. He became hungry. In the window of a restaurant on an obscure street he saw a sign: "Dish washer wanted." He hastened in. The proprietor asked him if he was an experienced dish washer. Hungry as he was he had to struggle to suppress his laughter at the suggestion of "experienced dish washer," but he asserted that he was experienced and he got the job. Thirteen minutes later he was kicked out into the backyard, pursued by the curses and maledictions of the proprietor and all the other employees. He had managed to break more than a dozen dishes in the time he had been there.

If you are interested in the problems of reconstruction and readjustment, you have doubtless heard many men discuss labor. They will immediately make a division into two classes—skilled and unskilled. It is odd how seldom they attempt to settle what they mean by the terms. If you think they are agreed on the subject try to get them to agree on ten kinds of jobs as either skilled or unskilled. You can start a fight in five minutes.

In my humble judgment one of the principal troubles with which agriculture has to contend in this country today is that the farmer has refused to admit that his hired hand is a skilled laborer. When the shortage of labor threatened to become a national problem in the spring and summer of 1918 I went out, along with other men, to organize volunteer squads of city men who would agree to drop everything to help the farmers when called. The response of the city men was inspiring. Then I went out to tell the farmers what we had done. They laughed. In the fields I saw their little daughters in overalls riding huge cultivators. Later I saw their wives and children riding the harvesting implements in the wheat fields.

# WHAT IS UNSKILLED LABOR?

BY CHESTER CROWELL

These men could well afford to hire men for the work, but they couldn't find the men. They said that our volunteer squads were so useless that they would rather pay policemen to keep us off the place. They appreciated our spirit, but they couldn't help laughing.

But some farmers, in desperation, tried us. Men who had been reared on the farms would hoe for two hours and go home sick. Former farm boys who had plowed before they had even gone to school, would attempt to plow the corn and plow up about half of it. They tried and tried and tried, but they were no good and admitted it. They put hay on wagons and it fell off. They tore down gateposts because they couldn't drive. And one big strong man was relieved of duty as water boy just as soon as the farmer could get a little boy from a neighboring farm. The boy did that better than the man. The man was a county judge.

One farmer with whom I discussed this problem said that after the first day all his city help had turned inventors. The men and boys sat around the tables trying to figure out schemes to get the farm work done without manual labor. The men who failed on the farms were not all office men by any means. Most of them were very robust men, nearly all had come off the farms as boys, and many of these men have done some manual labor.

The point I wish to make is not that they had lost their hardness of muscle and their endurance, but that they had lost their skill. Little boys and girls and old women would do the work much better. Strong men would go down from fatigue because they didn't know how to use their hoes, while little girls and boys would walk thru the fields swinging their hoes with the deft touch and graceful art of painters at their work.

How long does it take to learn this business? The farmers told me that one either learns it as a child and keeps in practise or he is utterly useless. They told me that they have tried out many men who came from the cities and that very few are a success.

I came back from the farms to find that men were being displaced in the elevators of the larger office buildings under the work or fight order. But some of the buildings still retained their men operators. I made inquiry as to why they were so unpatriotic. The answer was that these buildings had to have very skilled operators or they could not take care of the traffic. They never trained operators of their elevators and could not do so without putting thousands of men and women to serious inconvenience. I smiled. I thought it was a subterfuge. But figures were pro-

*(C) Underwood & Underwood*

*Rivetting is a form of labor, not unskilled, but more readily learned than some others*

duced. I do not know how it was elsewhere, but the unskilled women operators are not even yet very skilled. Many of them are less than 50 per cent as effective as the men—well, it isn't a case of sex but of skill.

Not long ago I was in a little town where the chief industry is lumbering. Farm labor there at that time was being paid \$2.50 a day. Negro girls were preferred over white lawyers. Many negro men were working in the fields. A short distance from this town a man could get a job sawing lumber at \$7 a day upward, according to what he could saw. The farmers had about enough labor, but the lumber industry was short. I waited for the usual story about the worthlessness of all black men. But that was not the story. It seems that only a few men can saw lumber there because only a few men are strong enough. The sort of labor they need has to be born, it cannot be trained. It might be classed with Caruso. What they required was not labor but a form of genius. I have seen the same situation in ports where big ships are loaded. There is in demand in such places a class of labor that is always independent because the world doesn't produce enough giants to give these men very much competition. Under the circumstances I should certainly hesitate to call them unskilled labor.

I state very frankly that I cannot think of any work at this moment which I would unhesitatingly class as unskilled. I do not like that term. Some morning when you are reading your newspaper and come across the term "unskilled labor" stop right there and try to fold up your paper in the same hard roll in which you found it. Try to do just what the newsboy did with that newspaper. Also remember that you must not tear it. And if you do not think that little trick is important try to figure out some other way for the newsboy to make his deliveries within a reasonable time—some other way that does not involve throwing the papers from side to side as he hurries on. And if you think it is very, very easy to learn to roll a newspaper just that way ask the boy who delivers your paper. Ask him if he ever heard of a boy or man being discharged because he couldn't learn to fold the papers right. As I said, ask him!

# MARRYING OFF THE AMERICAN ARMY

BY CORRA HARRIS

AUTHOR OF "A CIRCUIT RIDER'S WIFE," "EVE'S SECOND HUSBAND,"

© Underwood & Underwood

*"Millions of American soldiers are returning from France. They are not the men who went over a year since. They are better men"*

**S**ENSIBLE people in this country believe in marriage. If all the marriageable men and women married, if they remained faithful and friendly to their vows, which are made not only to each other, but to society, and if they worked out this one great miracle of love and life with patience and courage, it would settle more than half the problems of a vexed and anxious civilization. For this reason it is easier to marry here than in most countries. In times of peace, law, sentiment and public opinion all favored a wedding, anybody's wedding. We never shook our heads in doleful prophecies until the bride and bridegroom were out of sight. It is a habit we have to encourage hasty marriages, always hoping for the best. So when this nation declared war and joined the Allies, and wedding weather became inclement, we stood by our war brides. We accepted them tenderly as one of the inevitable emergencies of love brought on by the sense men had of insecurity and of approaching danger. Soldiers who might have remained bachelors if we had remained neutral chose brides hurriedly as skeptics sometimes pray when they are in mortal peril. It is the instinct of a man to finish off with God and a wife when he faces the possible end of his own life. If every man was sure of death before the age of forty years there would be no heretics and very few bachelors.

Thus for more than a year our shores have been shadowed with the dim figures of these little war brides watching the ships that slipped down in the dark to the sea, bearing their husbands away to fight in France. No one will ever know the fate of these thousands of girls who married soldiers going to France. There are no casualty lists in the tragedies of love. The young widows who became the mothers of orphans whose fathers were killed in action will not be mentioned on the nation's roll of honor. There were the other casualties, too, due to "accident and other causes," brides who became a little less married than they should have been as time passed, separated from their husbands by seas and continents and silence and all the chances of war. It is not so easy nor so natural as some poets would have you believe to remain faithful to a husband acquired under a patriotic impulse, with whom you have never really lived, and whom you only kissed good-by with just a bride's excessive emotion, which is not nearly so enduring as the graduate wife's deep and patient devotion.

But now all that is changed. The war is finished. The Allies are victorious. Civilizations are to be overhauled and cleaned up and revised. Some millions of American soldiers are returning from France. They are not the men who went over a year since. They are better men. No matter what any

small carping critic says of them they are infinitely better men. They are stronger and cleaner physically. They have endured terrific training and incredible hardships. They have received an education that no school or university could have given them. They have seen the world. They have met mankind, they have learned that great text, comradeship. They have practised the brotherhood of man in the trenches and on the battlefield, not self consciously like artificial Christians and hypocritical political classes of men do, but normally and naturally until it has become a quality, not a theory. They have faced death with courage, and they live. They have graduated from a furious conflict which involved everything, and they have saved everything. They have achieved a great salvation for this nation and, more particularly, for themselves. That may be said of the roughest soldier who returns to our ports what a certain French woman said of a marshal of France, "God will think twice, mes.ieurs, before he damns such a gentleman!" There is no damnation for these men unless we betray them here at home. They have become already the colossal figures of American history, not only those who actually fought in France but those in training here.

The one immediate and most intimate problem in this country today is what we shall do with these young American veterans, how we shall pre-

serve them and make the best possible use of their glory and strength in this nation.

It is comparatively easy to provide for them in a material way. There are more positions to be filled, more work to be done, greater opportunities than when these men enlisted. They have only to show their obedience, energy and courage which has distinguished them as soldiers in order to find employment and to prosper. But who is to take care of them individually?

The only person qualified by nature and society to do this is a man's wife. When the soldier has a wife to provide for and a home to live in he makes the only safe provision for his own safety.

It is therefore time to announce the engagement and approaching marriage of all young American soldiers to all young American women.

This will undoubtedly happen. War is a great incentive to matrimony. To live in trenches, to be billeted in barns, to subsist upon the strictly male diet of a military commissary, to be "deloused" in a public steam vat, to have no home but a "Y" hut, and only an occasional Salvation Army doughnut to remind you of the way women's food tastes, to go over the top at dawn in a drizzling rain, with every woman who knows you

and loves you three thousand miles away; to lie wounded in a shell hole, with no one but another man to give you first aid; to have an efficient and professionally sympathetic Red Cross nurse to take *her* dear place beside your bed in the hospital—all these experiences revive the ideal of woman in the minds of fighting men. They forget the petty faults of the girls at home. They cease to be critical of their own womenkind, they remember incessantly how dear these girls were, how really good, how different and dearly beautiful in comparison with other women. In short, they are all in love, these returning soldiers. They are readier now than they ever were, or will ever be again, to marry.

And these girls they left at home are not the same. They are finer, braver, more dutiful women. They have a new sense of responsibility, for they also have accomplished their part in this war. More than a million of them enlisted for service, not in the army, but for the men in that army. They have served for them, knitted for them, made bandages for their wounds, prayed for them. Therefore they also are in love with these returning soldiers. It is natural and it is right, the best kind of righteousness.

So, everything is arranged except the details of more weddings than we ever had before. There will be the incidental hardships of earning a living for these brides of victors, but nothing to compare with the hardships of conquering the German arms, and not so dangerous. And having her to provide for will keep many a young veteran off the soap-box platform of the agitators and disruptors of our national life.

And whatever happens if they accomplish this matrimonial insurance against the risks of the future, this nation is safe because we shall have a generation endowed with health and courage and honor from their birth, with not so much as a single indigent millionaire or lazy aristocrat, or pauper among them, and a pair of fighting parents whose courage made the world safe for them to be born in.

We have the enormous task of settling the problems of a peace that is wide enough and strong enough to cover the nations of the earth, and we have our war debts to pay, but nothing can touch or diminish this great inheritance of the next generation earned and paid for by the young veterans of our American armies. Their children have only to be born in order to become the heirs of imperishable riches.

## SUNSET

BY JOHN CROWE RANSOM

I know you are not cruel,  
And you would not willingly hurt anything in the world,  
For there is kindness in your eyes,  
There could not well be more of it in eyes  
Already brimful of the sky.  
I thought you would one day begin to love me,  
But now I doubt it badly;  
It is no man-rival I am afraid of,  
It is God.

The meadows are very wide and green  
And the big field of wheat is solid gold,  
Or a little darker than gold.  
Two people never sat like us by a fence of cedar rails  
On a still evening  
And looked at such fat fields.  
To me it is beautiful enough,  
I am stirred,  
I say grand and wonderful, and grow adjectival,  
But to you  
It is God.

Cropping the clover are several spotted cows.  
They, too, are kind and gentle,  
And they stop and look round at me now and then  
As if they would say:  
"How good of you to come to see us!  
Please pardon us if we seem indifferent,  
But we have not much time to talk with you now,  
And really nothing to say."  
Then they make their bow,  
Still kind and calm,  
And go their way again  
Towards the sunset.  
I suppose they are going to God.

Your eyes are not regarding me,  
Nor the four-leaf clovers I picked for you,  
(With a prayer and a gentle squeeze for each of them),

Nor are they fretting over dress, or shoes,  
Or image in the little glass,  
Restlessly,  
Like the eyes of other girls.  
You are looking away over yonder  
To where the crooked rail fence gets to the top  
Of the yellow hill  
And drops out of sight into space.  
Is that infinity that catches it?  
And do you catch it too in your thoughts?  
I know that look;  
I have not seen it on another girl,  
And it terrifies me,  
For I cannot tell what it means,  
But I think  
It has something to do with God.

We are a mile from home  
And soon it will be getting dark  
And the big farm-bell will be ringing out for supper.  
We had better start for the house.  
Rover!  
O here he is, waiting;  
He has chased the birds and run after the rabbits  
A thousand miles or so  
And now he is hungry and tired.  
But he is a southern gentleman  
And will not whimper once  
Tho you kept him waiting forever.  
He knows his mistress' eyes as well as I,  
And when to be silent and respectful.  
I will try to be as patient as Rover,  
And we will be comrades  
And wait unquestioningly  
Till this lady we love  
And her strange eyes  
Come home from God.

For almost fifty years E. P. Powell, whose death occurred in 1914, was a contributor to *The Independent*. He wrote always of simple and beautiful things in a style that made his readers enjoy with him his reminiscences. We publish here with his description of his early farm house home

From "American Reminiscences," Courtesy Wm. T. Comstock Co.

**O** U R S was a farm house of the colonial times, built before the architects were about.

It was broad at the bottom, but broader at the top; and the shingles reached down so low to the ground that I have myself ridden off the rear slope from the big chimney, and dashed into a snow drift—and none the worse for it. And under those eaves—God bless them!—there were warm hearts; and there were also doughnuts in huge piles, and pumpkin pies in rows; and there were other comforts; for no one had then discovered bacteria, and we were in no danger from eating good food. When we got cold out of doors we could go inside, and be warmed internally. The house was painted red, for that was the warm color, like the fire in the chimney; and I know no other reason why all old-time farm houses were of that color. Only the front was white, and there were green blinds—which I think was a fashion; and the time never was when any one would be out of fashion. Fashion, you must know, is simply doing what things others do, and not bothering your head about them; and believing what others believe with just as little trouble to yourself. It is a beautiful way of keeping us all alike; for what might come of it if no two ever did the same thing, or believed the same thing, or wore the same style of coat; or for that matter, loved the same person? The old-time people had a reason for the catechism, and it was a good one. It kept them all together, like a regiment. Nowadays there are some who would even throw away the dictionary, and spell, the Lord knows how—just as each one pleases.

Over the double door reached the big arms of a great butternut. Do you know there is no tree in all this world so homeful as a butternut? Its arms are like those of a father; and it has not a stingy trait about it. Then you should lie, as I have, in September, and hear of a night the nuts falling off; one, or two, or three at a time on the roof. Rat, tat, tat; until our dreams

## YE OLD-TIME FARM HOUSE

BY E. P. POWELL

were full of the joys of the morning; or, for that matter, even of the pudding, which should come of it when the meats were enough to fill a big bowl. Yes, indeed! a butternut pudding, with a plenty of cider, is good even in dream land. To the back of the house was an orchard, where Spitzenburgs and Pears were grown. Some of the trees leaned so that we could walk up them, and sit with the birds. I, when a boy, knew a robin so well that she built her nest within five feet of me, while I whistled and talked to her. To the side of the orchard stood a fine grove of basswood, in which were fifty hives of bees, in two long houses—two rows in each house. There is nothing in the world so wonderful as an apple orchard in blossom. It is fit for worship. The trees are friendly and hearty. Their arms come low down to the ground, as if reaching after us. What wealth of blossom! There is no suggestion of niggardliness. Even now I see the old grandmother in her chair, when the petals came down in a great shower and lay lovingly on her white hair. And the blessed mother beside her also. Nature loved them. There was a sweet fitness, and when we boys came to their side, and brought the ripest Early Boughs and Lady Sweets, and otherwise identified them with the fruit, it was out of our hearts. I am not yet half around the house, and my soul will not let me hurry on. To see things and hear things when they happen is well enough; but, ah, to have them in one's self, and be able to call them out of the memory, that is worth the while. 'Tis better than any phonograph.

There was an offset in the turf, just beyond the harvest pear; and this was where the little mother had her pinks, and poppies, and bachelor buttons, and cinnamon roses, and Johnnie-jump-ups. It was a place of marvelous beauty, and of marvelous work—of that I can myself testify. Every pink cost a pound

of sweat, and the tulips were red, because well, I had my notions why. But it was delicious in the early morning, before the day was on a grid-iron—and again after sundown. You should have seen the little mother and Granny Williams, or some other one, going about this Treasure Island in the midst of the world. "Ah, this!" and "Ah, that!" "It smells like a fresh young babe," said

Granny Williams. "Indeed," said the little mother, "but I had not thought of that; but, as likely as not, for it has a soft pinkish yellow color." Then she would sniff at it, like any professor examining a new chemical mixture. All the time she was gathering in her apron dropt rose leaves and poppy leaves to press between the pages of the big Bible.

A little down the slope lay the vegetable garden of my father, full of long, narrow beds, all turned over each year, by the spade, and the spine. Oh, Lord! but yet I have the memory of it in my back. Why had they not thought of gardens to be furrowed by horsepower? But they had not. I think because they were yet too full of Old England; and a Yankee was, after all, the most imitative creature in the world. He shook his fist, and wagged his tongue like the great bell of Moscow, at the word Englishman; but for all that he was himself English, both in his stomach and in his head. He not only spaded his gardens, but he took his snuff like an Englishman, and he built his fences after an English pattern. What else could explain why we had so many little yards about our houses, and built our houses close down by the road? As if we were crowded into a little island, and had not room enough to turn around in! We are more independent now, and really are getting some notions of our own. But then our house stood only a stone's throw from the highway, and there was a little box of a yard in front, and this was full of locust trees and honeysuckles; and there at night the honey-moths would come and play high-spy in the blossoms. George III, our great gray cat, would sit down to look at them, and once in a while would strike at one that came too near—for what was it?—a bird or a butterfly? And like all of us, he was a bit of a naturalist. He liked very much to classify the world, but never hesitated to put the choicest specimens in his stomach! which I see is the way with other sci-

entists. They will eat a megalothoroid as quick as a pig.

But you should have seen the "sturtions," as they grew in rows all about the vegetable beds, for our father also had an eye to beauty. Did he not set hollyhocks all about his corn fields? Then, when the great stalks of crimson and gold stood up in summer, and the folk that went by to church stopped to look with admiration, he said, "Truly, one shall not live by bread alone!" And he liked best those neighbors who looked the longest; as the little mother liked best those who ate most of her goodies. The saffron and dill, and the rue and rosemary, and caraway, and fennel, and the mints, that grew by the brook that ran down back of the house and garden; and, indeed, there were also more of these herbs that stood always in the place of a family doctor. Indeed, you may look; but it was not so bad an exchange! And as for the notions, they may have been no worse than the guesses of the profession nowadays. But this is neither here nor there. I will let the doctors alone, if they will not treat me as we treated our chimneys, and send a drug to go up and down the insides of me, and sweep and scrape. It may be, yes, indeed, it may be, saffron did not cure yellow diseases, and red poppy leaves did no good for red eruptions; and it may be bitter wormwood did not kill worms; but I know for a certainty caraway seed was good to keep one awake thru a long sermon, and it was good in cookies.

I told you there was a brook. There is no good living where there are no brooks, and this was a brook of the first water. It bubbled out of a rocky hollow, some little secret cavern; and then it laughed and tumbled for half a mile before it got over its fun. The little mother in summer would walk with us there, and she would sometimes say, "Now! let us go farther over to the Glen, where the bigger brook is, and the ferns, and the witch hazel and the yellow birch, and the beechdrops." Oh, it was glorious fun. What of plant wisdom did that little mother not have? She dug putty root, and crinkle root, and sarsaparilla, and wild ginger, and ginseng, and she told which was Solomon's seal; also, which was wholesome and which was poisonous. And then we went home with our hands full of squirrel-corn, or trilliums, or hopple-bush flowers. But at night, after work, the dear father would come early from the field, and say, "Now, let us all go for strawberries." Then—ah, but how can I tell you such delicious joys. You know nothing of wild strawberries; much less do you know the delight of creeping about the meadows and down

by the stumps in the pastures, while the bobolinks whistled and the brooks gurgled, as we gathered the long stems that lay lovingly against the grass.

Where are we? I had no business out of season, and in midwinter to take you thru snow banks to pick strawberries. But 'tis such tricks the memory plays. We will get at once back to the house. The front door, as you see, opens just in the middle, in halves, and from that the hall runs back as straight as a Puritan's nose, right thru everything, till it lands in the big kitchen. And the two halves of the door swing open separately. I know not why it was, unless it were an inheritance from pioneer days, when it was well to be able to look out and parley a little before opening the way for an Indian rush. So at any rate all the doors in those days were cut across the middle. In the big yard was the woodshed, and that was full of piles of wood, as dry as tinder. It was the comfort of winter, and the very right arm of a successful home. From the woodshed we all went—kicking first the dirt from our boots—into the great living room, where we were all together. Over this door was twined with care a great bittersweet, and all over the stone curb of the well was a wild white-flowering clematis.

"Father," said the little priestess, "'tis well to cultivate the beautiful and enjoy it. Why should it all be shut up in books?" "It is so," said my father. "God made the world, and he put the flowers here as well as the potatoes. I

girls—if first we ourselves are right. What more could we ask?" "'Tis at least," said my father, "for us to transform the evil into good." And our Jim looked so grand, so noble, so beautiful, it seemed to come over into my soul, and to make me like himself.

And the birds, ah, but you should have seen how they nested about that house. "They will eat all the cherries," said my Uncle George, and he rapped his cane lustily on the floor of the porch. But our father smiled, and said, "Let us count them all into our family, and plant for them also when we plant." So he put in a few rows of peas more, and said, "They are for the orioles." And a dozen cherry trees down by the fence were for the robins, and for the cedar birds, who have a cherry tooth. Then he went up to the wood's edge, near by the big beeches, where there were wild cherries, and into these he put scions of finer sorts; "for the birds, my boys." So the robins, and the bluebirds, and the wrens, and the indigo birds, and the goldfinches, and the catbirds, and all other sorts of thrushes and finches, and I cannot tell you how many more, came to us; and they filled the trees with nests, and they paid for all they took, in song and helpful labor. Then our father would say, "Little mother! another spring I must plant more for the birds—for, indeed, they are not well paid for all they do." "To be sure," said she, "it is but justice, and one of nature's laws." And a robin built its nest in the window seat of his bedroom, and sang to him

in the morning, while he lay in his bed. Ah, yes! they worked well together, my father and the birds; and he would say, as the robins hopped after his plow, "Yes! yes! our family is growing, but there is room for more." And a catbird that sat on the butternut would sing, "Yes! yes! for more."

The barn stood across the street from the house, and on a line with the highway. "'Tis not decent," said the little mother. "There should be shade for the cows and the pigs and the hens." "You are right, little mother," said my father;

and he brought a load of willow sticks; and they planted them all the way around the barn and its yard. And these grew and throve mightily; and at last they were a great grove, that hung all over the barn and hid it. The little mother said, "Did I not tell you"—and then she drew the breath coolly thru one corner of her mouth, as she surveyed the transformation. "Indeed, you did, little mother!—you said it—and no one would have done it, had you not." And the hens cackled their delight, and the cows at night lay down facing the [Continued on page 265]

*"Under those eaves there were warm hearts; and there were also doughnuts in huge piles and pumpkin pies; and there were other comforts"*

have no patience with those who do not follow God." "To be sure," said my little mother, "and the weeds are here to teach us diligence and patience." "But the quack!" said my father, "that might as well be left out." "And the burdocks," said she, "are excellent for beer, and the leaves are good for drafts." "Perhaps, if we could see it," said he, "all things are good." "'Tis for us to make the best of everything," said she. And as our Jim came up, she put her hand on his arm and on mine, and then said slowly: "'Tis a world in which we can make beautiful boys and

**T**HERE is no dramatist today who more truly loves his characters, his audience and the world than the Peter Pan of playwrights, Sir James Matthew Barrie. The gods endowed him at his birth, fifty-nine years ago, they gave him a master key to the doors of life and bade him go forth, when he could, and write good novels and good plays. He has done both with equal facility, with equal zest and enjoyment; he has constructed both with equal understanding of their different techniques, and unlike most novelists who write plays, he has never confused styles, but has been completely one or the other.

Nevertheless, both of his artistic roads have led to the same end. After reading "Margaret Ogilvy," "Auld Licht Idylls," "A Window in Thrums" and "Sentimental Tommy" we said "Dear Barrie." That expressed our feeling as to his loveliness. "It's by Barrie," wrote Robert Louis Stevenson regarding "A Window in Thrums," "and he's the man for my money." It was not only Scotch character he seemed to depict with the fidelity and color of a miniature artist, but it was the quaintness of humanity he brought forth with the genial sympathy of his own nature. "I am a capable artist," wrote Stevenson to Barrie, "but it begins to look to me as if you were a man of genius."

The theater had known Barrie in his early days, but not until he made success with "The Professor's Love Story" (1894) did one detect the flavor of his work, which was further evident in his dramatization of "The Little Minister" (1897) and then blossomed forth as an old-fashioned nosegay in the rosemary atmosphere of "Quality Street." After that, one began to speak in the theater of "Dear Barrie." One went to the theater, as one went to his novels, for Barrie characteristics—a fresh liveliness of humor, a quaint unexpectedness of situation, a gentle correction of the ills of life by means of an irony which tickles the fancy and leaves a sweet taste in the mouth.

So vociferously has he been greeted by playgoers that it almost seems as tho Barrie has completely forsaken his early craft. We've had no new novels from him in many a year. "My Lady Nicotine" has colored richly with age, like a meerschaum. "Sentimental Tommy" has tears and laughter still newly wept and sounding in its pages. "Margaret Ogilvy" is still the most perfect tribute of a son to his mother. But the fickle public wants Barrie, the playwright, these days. In fact the highest praise that can be rendered any dramatist of the present is to say, "Why, he has the quaint inventiveness of Barrie"; "He's almost caught the Barrie trick."

*Sir James Matthew Barrie*

## DEAR BARRIE

BY MONTROSE J. MOSES

AUTHOR OF "THE AMERICAN DRAMATIST"

Said David to the Comtesse, in one of Barrie's very best plays, "What Every Woman Knows," "My lady, there are few more impressive sights in the world than a Scotsman on the make." This is equally true of a playwright on the make. For Barrie's success in the theater, while it has been partly dependent, as far as America is concerned, on the personal charm of Miss Maude Adams, who has played in "Peter Pan," "Quality Street," "What Every Woman Knows," "The Legend of Leonora" and "A Kiss for Cinderella"; and on quaint conceit of situation, has something more tangible to rest on. Barrie has a dramatic sense; he has likewise a sense and love of the theater as a mechanism which is so constituted as to necessitate springs and tricks with which to catch the heart, mind and conscience of audiences. "The Admirable Crichton" has ironic charm in its detailing of how a butler became the better man on a shipwrecked island, while titled folk dropt to second place in the scheme of things. On that theme Barrie could have written a wonderful novel; but he wrote instead an exceptional play by the theatrical means he resorted to in order to create sustained interest. Such, for instance, was the scene where Crichton, deserted by his superiors because of their "class" jealousy, depends on night-fall, hunger, and the assertion of Nature to draw them all back to him. And they do return dejectedly, one by one, to the glow of Crichton's camp fire. Such, again, is the scene in which Crichton, dominant, has fallen in love with Lady Mary, when suddenly the boom of a cannon from a passing ship

indicates that after two years they are about to be rescued. Shall they give the distress signal?—and go back to class prejudices? It is a moment of supreme dramatic emotion. Its effectiveness on an audience is as mathematically sure as three and three are six. Take Peter Pan's appeal to the audience—"Do you believe in fairies?"—it's a trick of Barrie's to make the most of the hysterical joy of those "in front." Examine "What Every Woman Knows." When the Wylie brothers and their sister wait in hiding for the thief who has been stealthily entering the house night after night—is not the suspense the same as tho there were about to enter a murderer instead of an attractive thief intent on stealing knowledge?

All the more do we admire Barrie because his theatrical instinct is so evident. By it he has been able to gage for success; only once did he fail—a failure due to being in

advance of his public's sense of humor, and not to a lack of excellence in the play itself. I refer to "Little Mary," which juggled ironically with British love of overeating—the "Little Mary" of the piece being the Big Stomach of the public.

Barrie's plays are all different in idea. But the characters are all of the same family. Maggie Wylie, in "What Every Woman Knows," and Phoebe Throssel, in "Quality Street," are twin sisters, with just the differences in intellect and temperament to keep their identity. When you first meet the Wylie brothers you feel somehow that in "The Little Minister" days you saw their like before. And in the new play, which is now regaling New York, you find characteristics so beloved of all. "Dear Brutus" it is called. "How like Barrie!" you exclaim. It is an effective unfolding of what would happen if a group of people were given a second chance to live over their lives—would they be better for the chance? And Barrie has spread fancy webs over it—not the child fancy of "Peter Pan" but the eternal fairy fancy of "A Midsummer Night's Dream." By a happy turn, he twists the lives of a group of people, so magically, so magnetically, that the spirit of Puck laughs all over the stage, as Tinker Bell, in "Peter Pan" shimmered in fleeting ways all over the wall. Lob—guardian of the magic wood, in which the second chance is hid—how like and yet unlike the Pantaloon of Barrie's poignant dramatic fragment of that name! The daughter, who is the dream child in the second chance life of an artist gone awry—what is she but an older Peter Pan?—not this time the boy who would never grow up—but the eternal girl whom we would like to keep a girl for ever.

The strange thing is, you can never tell by the title of a Barrie play what you are going to get. But when you have seen the play, the title is inevitable. "Little Mary" is a classic disguise for the stomach, and may be freely mentioned in any parlor without blushing; "Dear Brutus" from Shakespeare's lines in "Julius Caesar," "The fault, dear Brutus, lies not in our stars, but in ourselves, that we are underlings," is used as a gentle ingathering of the dear Public as part of the moral which is tagged to the play. For the first time, Barrie has nearly lost his balance; he has almost become a sentimental moralist in "Dear Brutus." But we forgive him, because he is Barrie, and because the new play has all the Barrie characteristics—freshness, youth, quaintness, fancy, humor, laughter and tears, impetuosity, unusualness. I wouldn't sacrifice "Peter Pan" or "Crichton" or "What Every Woman Knows" for it, but I wouldn't give it or "The Betrothal" up for any other piece on the stage in New York today. It runs close to the line of affection, like the Maeterlinck play. The one is just like Barrie, the other just like Maeterlinck!

In another line has Barrie's master key proved magic. The one-act play—so different in many ways from a full grown drama—has been handled with consummate success by him. The realistically grown up Mr. Barrie has blossomed here in "The Twelve Pound Look." And there are many other examples of his power in the one-act form to show that Barrie in essence is the same as Barrie in larger magic jars.

## YE OLD-TIME FARM HOUSE

(Continued from page 263)

moon, as it sifted in between the leaves; and all day they were nicely comforted from the sun. And when old Daisy went to the tub to drink she would look up between sips, as if to say, "The Lord be praised for this shady yard." A true barn-yard is a delightful place, full of peace and love. Lilah, the collie, goes and puts her head thru the gate once an hour, and, surveying matters, says, "Yes, all is as it should be; all is correct"; then she goes back to run along where Jim and I and our father are at work in the orchard. Or if it be—and it really is—or it ought to be, New Year's Day, she looks in at the kitchen window, and waits till we open the door that she may curl up by the fire. But Timothy gets up on his hind feet to the door latch, and rattles it; and then waits till we let him in. A true cat is half human. Ah, if but—if cats could once get articulation, what would come of it? It is well that they can not, for they would rout out and dispossess half or more of the human sort. So with quack and thistles, and talking cats, we should be made either wiser or killed off.

In those days it was not yet forgotten to be neighborly, and once a year we all expected to look in on each other, and break bread, or at least eat cake. And we sat down to a bit of gossip and exchanged news; and when it was over everybody knew all about everybody else, and there was no need at all to print it. But I shall tell you nothing at all about it. It was our own business and we were simple folks, and you who live today have your big notions and your new ways and you laugh too easily. Not one of us envied your telephones and telegraphs and other nicknacks, or ever gave them a thought. Bless the Lord! enough is enough; and it is not likely you have any more idea of what will be about a hundred years from now. Indeed I think they will look back and call you savages. What a world of conceits it is!

# McCutcheon's New Gingham

for  
Spring and Summer 1919

THE FOREMOST fashion authorities favor fine "Zephyr Gingham" for the coming season.

In anticipation of the great demand for this most practical of all fabrics, we have prepared a most unusual and elaborate collection which is now on sale. We would advise our patrons to supply their wants while the assortments are at their best. The following lines will prove most attractive:

**"McCUTCHEON'S GINGHAM"** (imported) made exclusively to our order. A beautiful fabric in all the plain colors, checks of all dimensions, and all the wanted color combinations, 32 inches wide, 95c yard.

**D. & J. ANDERSON'S GINGHAM** In all the newest plain colors, stripes, checks, new plaids, and Roman effects, 32 inches wide, \$1.25 and 1.35 yard.

**"AMERICAN GINGHAMS"** The entire collection from two of the leading "American Mills," "Glen Roy" and "Lorraine," checks of all sizes, stripes, plain colors, and all the new plaid effects, beautiful fine quality and fast colors, 32 inches wide, 75c yard.

**"MERCERIZED GINGHAMS"** (plain colors only) light weight and admirably adapted for children's wear, 32 inches wide, 55c yard.

**"ART SILK GINGHAM"** (Silk and Cotton) in a range of plain colors, stripes, checks and plaids, 31 inches wide, \$1.50 yard.

**"DEVONSHIRE CLOTH"** The most practical fabric for Children's garments, White, Rose, Copen, Maize, also stripes and checks in a wide range of good designs, 32 inches wide, 50c yard.

# THE NEW BOOKS

## A Republic of Nations

THE League of Nations is the subject of much discussion at the present time and any other public question and all contributions to this important problem are eagerly seized upon by the reading public. This book by Professor Minor assumes that the League of Nations will be repub-  
 lican in government and presents a plan of government based chiefly upon that which has been worked out in the United States. This government is, in essentials, the most successful one that has ever been put into operation for a federal union of states and is, therefore, the most feasible one to be used as a basis for an international union. Taking up the Constitution of the United States, clause by clause, Professor Minor works out a new constitution for a republic of nations, modifying the original wherever necessary to suit the inclusion of heterogeneous peoples and the exigencies of international relations. His plans for the legislative and judicial branches are substantially those of the United States Government; the European idea of a ministry responsible to the legislative branch is followed out in the plan for the executive end of the government.

This book is a convincing and practical presentation of a plan which will be of the utmost interest to all thoughtful readers who believe that a working union of the nations of the world is possible and practicable.

*A Republic of Nations*, by Raleigh C. Minor. Oxford University Press. \$2.50.

## Democracy and World Relations

ORIGINALLY planned as a textbook or reference work for college students, Dr. Jordan's new book is especially interesting just now to any reader on account of its straightforward presentation of facts in unbiased fashion.

Democracy in all its phases and aims, its relations to the governmental problems of any state and its especial adaptation to the problem of world union and world coöperation is its theme. Dr. Jordan has been called a pacifist in times when the insidious evil of the dynastic state which he condemns was less well-recognized than now. In the light of much that has happened since, we

can see that, in common with many other so-called pacifists, he was really only a better democrat than most of us.

*Democracy and World Relations*, by David Starr Jordan. World Book Co. \$1.20.

## Wilson Interpreted

AS an Englishman who has lived in Washington twenty years, Mr. Low can indeed claim both a detachment of viewpoint which shall make for impartiality and a knowledge which shall make his words authoritative. This new book of his is an interpretation and that only:

I have made no attempt to write either history or a biography of Woodrow Wilson. That time has not yet come. . . . What I have endeavored to do is to interpret the character and motives of Mr. Wilson as revealed by his speeches, writing and statesmanship, letting the reader draw his own conclusions from the evidence presented. It has seemed to me that it is work that ought to be done, because the man who today occupies the largest place in the world's thought is almost as little understood by his own people as he is by the peoples of other countries and still remains an enigma.

Mr. Low has done his work well—impartially, judiciously but always sympathetically. He has analyzed the writings, the speeches, above all the actions of our war President, and showed us the consistent growth and development that has brought him to the forefront of world leadership. Mr. Wilson is that rarest of all men—a straight thinker. Therein lies the secret of his power and the ability which he possesses in such marked degree, to tackle a problem for which nothing in his former experience would seem to have fitted him to solve the work satisfactorily.

Mr. Low interprets Mr. Wilson not merely as an individual but as the leader of his people. His ultimate success in solving the problems facing him has been largely due to the fact that he knew perfectly the psychology of the American people—how they felt and when they could be roused for action. Mr. Low's analysis of this aspect of the President's character is unusually apt. He himself is the author of a work on the psychology of the American people. His judgment of Mr. Wilson as the leader of the American people is, therefore, doubly interesting, especially when presented in the easy and readable style in which the book is written.

*Woodrow Wilson; an Interpretation*, by A. Maurice Low. Little, Brown & Co. \$2.

## Tales of the Sea

NO more gallant record of sea fighting has come out of the war than is set forth in *Naval Heroes of Today*, by Francis A. Collins. Even if a great battle of fleets has been denied to our sailors, these individual actions, together with the stress of storm and fire at sea, reveal the miracle of lifting a youth from, it may be, some farm in the Middle West and shortly thereafter presenting him standing at a gun on a wave swept craft, his garments stiff with frozen spray. He will be waiting hopefully for the signal to put a shot into a submarine, or cheerfully accepting the chance of swimming for life when the deck sinks beneath his feet. One hesitates to single out for special mention any one of these actions where all are equal in devotion to duty. But as a result of the excellent discipline maintained, take this from the sinking of the "Lincoln":

The scene is probably unique in the history of the Navy. There survived over seven hundred men, some five hundred in the open boats and two hundred on the life rafts, crowding these frail craft to their capacity. The sea was rough and the nearest land remote. . . . The spirit of the men was admirable.

It has long been the criticism of sailors that modern "arm chair" land writers of the sea entirely lack the sense of its spiritual element—that *esprit* of the deep by which men are moved to brave deeds and which even seems to enter into the material craft on which they sail. Mr. Bennett Copplestone's *The Silent Watchers* is conspicuous chiefly for presenting this true ring of the voices which fight in the British navy, and the same may be said for the American service. Speaks a young sub-lieutenant anent fighting machines:

No, naval war is a war of men, as it always was and always will be. For what are the machines but the material expression of the souls of the men?

"Taffrail" is a British naval man whose new book, *The Sub*, the autobiography of David Munro, Sub-Lieutenant, Royal Navy, will be relished by all those who love tales of the sea. *The Sub* devotes considerably more space to the prehostility days than to the war, since it is the author's aim to give us some idea of the life and training of the boy who enters the Royal Navy as a cadet thru the colleges at Osborne and Dartmouth. When war was

Drawn by G. H. Davis for the London "Sphere"

An American and a British destroyer answering an S. O. S. Actions such as this are recounted in these tales of the sea

declared David Munro was a sub-lieutenant, assigned to H. M. S. "Lictor," a torpedo boat destroyer belonging to the North Sea fleet. The "Lictor" features in a series of exciting events—is chased by a German light cruiser, has a very scrappy time of it in the Battle of Blight off Heligoland, and suffers a collision which puts her temporarily out of commission. The book is full of thrilling sea adventures, all of them "true stories."

Felix Riesenbergs *Under Sail* is a real tale of the sea written by a real sailor, with adventure, fun and hardship in abundance, but minus the blood-and-thunder, nonsensical melodrama of a certain class of sea fiction. It is in the smart handling of this American vessel, the pride of the crew in their work despite the hard-fisted discipline, and the decency of the men in the fo'c'sle which brings Mr. Riesenbergs book up to the very best of sea narratives.

On the ship "Fuller" was gathered at that time as decent a lot of men as ever sailed the seas. I have listened to more obscenity in a short space of time among men who held themselves educated than fouled our ears during the whole voyage.

A timely book for every one to read who would see the Stars and Stripes float in pride upon the Seven Seas.

*Skipper John of the "Nimbus,"* by Raymond McFarland, is an exciting Maine coast fishing story which suffers somewhat from the demand of this type of book to provide rapidity of action, "something doing" in every chapter, unlikely to happen in the naturally, at times, slower moving process of a real sea narrative. It is then the master hand of a Conrad touches the inner consciousness of the sailor to characterize him in reflective moods for which he is seldom credited by the landsman. The author has done very well, especially in those parts where he describes the rugged Maine coast and its hardy fishing folk:

The old inhabitant remains a while longer: the ancient wharves, landmarks of former virility, scarcely bear up through succeeding winters: while the eternal ice and tides tear ruthlessly at the coast as they have done since the retreating Ice Sheet left the deeply scarred shores bare and unfertile, and as they used to tear when the iron generation of my boyhood dared to defy their terrors thru every season.

*Naval Heroes of Today,* by Francis A. Collins. Century Co. \$1.50. *The Silent Watchers,* by Bennett Copplestone. E. P. Dutton & Co. \$2. *The Sub,* by "Taffrail" George H. Doran Co. \$1.35. *Under Sail,* by Felix Riesenbergs. Macmillan Co. \$2.50. *Skipper John of the "Nimbus,"* by Raymond McFarland. Macmillan Co. \$1.50.

## The Heart of the Jungle

THIS remarkably interesting book by the Curator of Birds at the New York Zoological Park recounts his search in British Guiana for the site for a jungle laboratory, and of the successful establishment of a Tropical Research Station of which he is now the director. The story of this achievement is told not merely in popular scientific language but with a literary style that is most unusual and entertaining. Mr. Beebe has made a lasting contribution to good literature.

After serving in northern France as an aviator, he seeks the solitude and peace of the tropical jungle. He tells us of the sensations of flying at 8000 feet over New York, and likens the life of the city, viewed from above, to a great ant's nest. On ship-board he soon gains the interested attention of the captain and passengers as he grapples for the sargasso weed thru which the steamer plows its way. Torn by storms from the Central American Coast and carried northward by the Gulf Stream, this sea-weed is full of fascinating tropical life, which is remarkably protected by its con-

## Does the Work of Five Hand Mowers

Ideal Power Lawn Mowers are great labor savers. Any man with an Ideal can easily cut as much grass as five hard-working men could with hand mowers. Moreover, as the Ideal is designed with the roller as an integral part of the machine, the grass is rolled every time it is cut—this keeps the turf firm, smooth and in the finest possible condition.

### Cuts Four to Five Acres a Day

The mower has 30-inch blades and with one man to guide, cuts four to five acres of lawn a day, on an operating expense of about fifty cents for fuel and oil. The Ideal is of extremely simple design with no complicated clutches nor gears. All the operator has to do is to guide the machine and operate the starting and stopping lever.

### Uses Tractor Principle

The cutting blades operate by their own traction upon the ground, just the same as the blade on a hand mower operates. This eliminates the difficulties that are almost sure to occur where an attempt is made to drive the blade direct by power from the engine.

### Cuts Close to the Walks, Trees, Flower-beds and Shrubbery

With the Ideal a man can work just as close to various obstacles as with a hand mower. The mower is hung at the front in such a manner that it turns easily and is guided around corners, flower-beds, trees, etc., without difficulty.

Photo at right shows how the Ideal is quickly converted into a power roller by using the small castor which we furnish. Valuable feature for early spring rolling.

### Five Days Trial—Satisfaction Guaranteed

Write for particulars of our five day trial offer. Ideal Power Lawn Mowers are sold on a positive guarantee of satisfaction and we will willingly refund money on any machine that does not prove satisfactory when properly operated.

You can secure this Ideal through your hardware dealer or direct from our factory. Write today for special literature.

## IDEAL POWER LAWN MOWER COMPANY

R. E. Olds, Chairman 425 Kalamazoo St., Lansing, Mich.  
Branches: 515 N. Wacker St., Chicago, Ill. 309 Arch St., Philadelphia, Pa. 163 N. May St., Detroit, Mich.

## IDEAL TRACTOR LAWN MOWERS

### ROSEHILL CEMETERY AND CREMATORY

Rosehill Lodge, Linden, N. J., Nov. 26th, 1918  
Ideal Power Lawn Mower Co., Lansing, Mich.  
Gentlemen:—The Ideal Power Lawn Mower we purchased last spring has proved to be a life saver to us, coming into use at the time when labor was so scarce and high. It proved equal to two horses and saved much, as it worked up close to obstructions saving much hand work in this way. Yours very truly, L. L. HOWARD, Supt.

### TOWN OF ARLINGTON, SCHOOL DEPT.

Arlington, Mass., Nov. 26th, 1918  
Ideal Power Lawn Mower Co., Lansing, Mich.  
Gentlemen:—We have found our Ideal Power Lawn Mower very satisfactory indeed. It does great labor saving and we would not want to do without it. Yours very truly, G. C. MURPHY, Supt.

### JOHN L. BUCK

Trenton, N. J., Nov. 26th, 1918  
Ideal Power Lawn Mower Co., Lansing, Mich.  
Gentlemen:—I have about three acres of lawn about Trenton to the Ideal Power Mower. I have been cutting it since the summer and it is the best I have ever used. It is so simple to use that a boy could use it. In my judgment, it would require at least four men with hand mowers to do the same amount of work as I am getting out of my Ideal. Yours very truly, JOHN L. BUCK.

**C. E. BROOKS, 490F State St., Marshall, Mich.**

cooling coloration. As the water grows chilly this life drops off; and finally the weed itself dies and sinks into the depths of the ocean. Mr. Beebe especially enjoys the Crow's Nest for its unobstructed views, but on peaceful days he lashes himself to the anchor, close to the waves, where he watches the foam and the flying fish.

In Guiana the heart of a naturalist is glad, for here is the home of the rarest of birds and animals. Along the seashore there are ever changing vistas of brilliant colors, while in the dim, cool depths of the jungle a new world of life awaits discovery. Mr. Beebe describes his trip along the Pomeroon road with its rare trees, its gorgeous flowers and birds, and tells us of the jungle which closes in about one until finally the dark tidal road of the river is reached. His sketches of native life are illuminating and unusual, revealing a point of view which is quite the reverse of that of a dry and narrow scientist.

The search for a site in close proximity to the jungle and at the same time convenient to civilization was successful and the Kalacoon laboratory was soon in full operation. Mr. Beebe's work is not merely to collect specimens, but to study carefully life in its natural environment. He is interested in demonstrating that scientists from this country may carry on research work in the tropics without impairment of health and with reasonable economy. The enterprise was encouraged by Colonel Roosevelt, who visited the station and had many interesting walks and talks with the author.

The cutting of a trail from the laboratory, thru an almost impenetrable tangle of recent growth, to the primeval jungle, is vividly described. Other chapters recount the thrilling capture of a great bushmaster snake for the New York Zoölogical Park, and give the details of a fierce battle by army ants which attack everything living in their path. On one occasion Mr. Beebe watched for a week the changing bird life that fed on the berries of a single wild cinnamon tree. To enliven his homeward voyage, he gathered four square feet of jungle mold into a bag, finding within it a thousand visible organisms. You have never read so effective a description of night in the jungle with all its weird mystery and poetic charm. All readers of this delightful volume will look forward expectantly for the account of Mr. Beebe's travels in the East Indies, in Ceylon, and among the Himalayas.

*Jungle Peace*, by William Beebe. Henry Holt & Co. \$1.75.

### Anglo-Saxon Supremacy

**WILLIAM S. HOWE** in his *War and Progress* takes a wider and more independent view of international problems than is customary. From his experience in the American Consular Service in China he is especially concerned with the importance of maintaining Anglo-Saxon interests in Asia and the Pacific. The complete victory of the Allies is a vital necessity but in order to effect the overthrow of Teutonism it is necessary to understand where in its real strength lies. This leads the author to criticize certain popular delusions such as the following:

The first three months of the war, for which the Germans were undoubtedly far better prepared than the Allies, were, in the larger sense, a colossal German failure. The remaining period up to the present has seen them marching from one tremendous success to another. The handicap of the German was soon overcome; he paused, took breath, and has continued to draw away ever since.

The same specialization, the same scientific spirit, the willingness to study each case as a separate problem and fit measures to it, rather

than hope it will fit in with accustomed methods, which were giving Germany gradual control of the industrial markets of the world, were what proved her salvation in time of war. The very high level of German education in all stages has done far more to win her the war than most of the immediate preparations in the way of armaments.

In general, then, it may be stated that the primary cause of the German success has been their collective system combined with high individual ability and efficiency within the system, the whole cemented and preserved by a deep patriotism of obedience.

*War and Progress*, by William S. Howe. Le Roy Phillips, Boston. \$1.

### Another Sidelight on Socialism

**THE** war seems to have made altogether kaleidoscopic the once orderly pattern of socialism. It is a far cry from the rigid principles laid down by Karl Marx to present-day discussions of the so-called socialists. But this disintegration—or reclassification—is illuminating, not only to the Socialists, but to us all. One product of it worthy of attention is *Americanism and Social Democracy*, by John Spargo, formerly a leader of Socialists in the United States, now the exponent of a new party, the Nationalists, who seek progress along the basic principles of socialism, but repudiate its petty political tyranny and pro-German leanings. Mr. Spargo's book is particularly clarifying in the distinctions it makes between Socialist party and Socialist principles; it is full of thought-provoking statements; but it fails to make convincing any constructive political program of the Nationalists.

*Americanism and Social Democracy*, by John Spargo. Harper & Bros. \$1.50.

### With Those Who Wait

**TO** the many friends Madame Huard won for herself by her two previous war books—"My Home in the Field of Honor" and "My Home in the Field of Mercy"—this, her latest volume, will bring no sense of disappointment. It lacks, to be sure, the thrilling and rapid movements which characterized the others, but for this we are, by the title, prepared. *With Those Who Wait* is a picture, or to be more exact a series of pictures, of the way in which the mothers, wives and sweethearts, the fathers and children of the soldiers of France met and adjusted their lives to the almost unbelievably difficult conditions created by the war. Madame Huard writes only of those French cities and villages with which she is personally familiar, yet these, indeed, bear names with which to conjure: Paris, Soissons and the countryside about her own chateau, of which she says:

That very country whose obscurity was our pride has become an open book for thousands of eager enemies and allies, while on the lips of every wife and mother from Maine to California Belleau Wood have become words of fearful portent. . . .

And if Belleau Wood, what of Chateau Thierry, which she portrays in enlightening detail?

Madame Huard's style is always graceful, and this last book is peculiarly stamped with her two especial gifts—the knack she has of making the reader feel himself one of a chosen circle of inmates, and that fine choice in the selected incident which opens, as with some charmed key, the vista of the whole.

This is, in short, a book which we would all do well to read—we who have felt in cold reality so little of war's actual hardship; so few of those daily deprivations and discomforts difficult indeed to bear, and everywhere cheerfully, even greatly borne by those who waited in France.

*With Those Who Wait*, by Frances Wilson Huard. George H. Doran & Co. \$1.50.

## HALF A MILLION SCOUTS

(Continued from page 255)

scouts came from the United States Department of Agriculture. In effect, it said: "Grow grub."

A half million American fathers and mothers who had walloped their errant offspring for failure to weed the onion patch stood aghast at the rush for hoes and the demand for garden plots. "Every Scout to Feed a Soldier" was the slogan on every boy's lips. Scout gardens sprouted in window boxes in crowded city streets. scout farms grew green with acres of potatoes, beets and beans. The Reserve Officers in Washington smiled grimly as their golf links in Potomac Park were furrowed by tractor plows and received the seed from which grew a \$10,000 crop of Boy Scout corn.

Every scout endeavored to enlist nine other persons in the gardening campaign. It was not so easy a task as it seemed. The first who filled his list found his neighbors already engaged in planting, and he was compelled to write to acquaintances in distant states. He enrolled a girl in Florida, a family of three boys in South Carolina, a youth in Kentucky, three children in Pennsylvania—eight. He was almost at the end of his resources—but not quite. He found a box, filled it with loam, spent a dime for two packets of seed, put the outfit in a rowboat, pulled four miles to a light-house on a small and barren rock in the middle of Long Island Sound, and initiated the keeper's eight-year-old son into the Honorable Order of Grub Growers.

When the crops began to appear a difficulty arose. The directness of boyhood demanded that every peck of peas and every mess of greens should be delivered forthwith to the soldier for whom it was grown. There was some supprest disappointment when it was learned that, except in cases of quantity production, the method by which the scout was to feed his soldier was by eating the stuff himself, thus saving the local merchant from handling goods transported in cars which were needed to carry foodstuffs from the great farming districts.

"Oh gee!" exclaimed one scout, as the intricate system was at last made plain to him, "why didn't I grow peanuts instead of navy beans?" But indirect as the method was, thousands of soldiers fared well because of the scout with the hoe.

When the first Liberty Loan campaign was launched, William G. McAdoo, Secretary of the Treasury, requested the Boy Scouts of America to lend a hand. It was an untried field, bond selling, but the scouts, thru their national organization, were quickly trained for the work. They secured subscriptions amounting to \$23,000,000. Using the experience gained in the first campaign, they raised in the second drive a total of \$102,084,000 in 533,820 separate subscriptions.

Local Liberty Loan committees felt that some business men and concerns which should have subscribed thru other channels had saved their subscriptions for scouts. Objections were raised. The Boy Scouts, to show that their only desire was to render needed service, proposed a new plan for the third campaign. They offered to serve as gleaners after the reapers, "collecting no subscriptions until the last few days after all other committees and organizations had covered the field. This time they brought in 669,553 subscriptions totaling \$1540,600.

Local committees had wider latitude in the fourth Liberty Loan drive and no uniform national plan could be used by the Boy Scouts. Conforming to the regulations in each city and town, they rolled up a

## Both Carry The Same Food Value

Measured by Energy Units

The 32-cent package of Quaker Oats contains 6,221 calories of energy. And foods, as you know, are now measured by calories.

Note what a bulk of some foods it takes to equal that single package. That is, to supply the same energy value.

*It Equals  
In Calories*

53 Cans of Tomatoes  
Or 21 Cans of Peas  
Or 50 Large Potatoes  
Or 750 Oysters  
Or 80 Bananas  
Or 22 Pounds Perch  
Or 89 Eggs  
Or 9 Pounds Veal Cutlets

Compare the cost on this same basis and the difference is amazing. See table below.

Note that meat foods, fish and eggs average ten times Quaker Oats' cost for the energy they yield.

But the difference is greater still. The oat is a better-balanced food. It is more nearly a complete food. For people of all ages, it is called "The Food of Foods."

Note these cost comparisons, based on prices at this writing. Consider them in your breakfasts. Ten people can be fed on Quaker Oats at the cost of feeding one on meats.

# Quaker Oats

*The Exquisite Flakes*

### Cost Per 1,000 Calories

total which, when the final reports are all in, promises to aggregate \$150,000,000.

Just as a side line, the Boy Scouts sold over \$20,000,000 in war savings stamps for the Treasury Department in 1918, and are still hard at it.

Seasoned fighters these Boy Scouts are now. They knocked out a deal of Hun propaganda by carrying direct to the homes of the American people millions of copies of official statements concerning the war, issued by the Committee on Public Information. Their work is said to have established a record in house to house distribution.

A genuine scouting job was offered when the War Department's stock of walnut lumber ran low. No more walnut forests were to be found, but gun stocks and airplane propellers were needed in increasing quantities. There were only isolated trees, widely distributed.

The scouts were given a description of the tree and told what size trees were wanted. Instruction was given in locating and mapping the standing timber. They discovered and reported to the War Department trees which, reduced to sawed lumber, would yield 20,758,660 board feet, or 5200 carloads.

The last big job undertaken before the armistice was signed was the collection of material—principally peach pits—to be reduced to carbon for the respirators of gas masks. The pits were gathered in receptacles on street corners, combed out of the long grass of the orchards, dried, sacked, and shipped by carloads—over one hundred carloads before the hunt was called off by the signing of the armistice.

One stealthy scout followed a fruit huckster for half a day, arousing the curiosity and critical comment of his troopmates, who were sure that no huckster would donate good, ripe peaches for the sake of saving a pit. The next day it was discovered that the scout had noted the addresses of the peddler's customers and called after the fruit was eaten to collect the "leavin's."

These are but some of the man-size tasks laid hold of by Boy Scouts. They, too, fought to make the world safe for democracy. Thruout the war the Boy Scout has been a fighter. With envious eyes upon his brother oversea, he has fought heat, fatigue, potato bugs, the desire for play, the love of sugar. Many whole troops denied themselves all candy for the duration of the war. That means a lot to a boy.

And the Boy Scout is plugging right along. "The war is over, but our work is not," is the slogan immediately adopted upon the signing of the armistice. They have not been demobilized. They are ready for whatever service Uncle Sam calls for.

What is the secret of the success of this great movement? Man-leadership. The scoutmaster is the backbone of the Boy Scout movement. In England before the war the Government would not permit scoutmasters to join the army, so important was their work considered to be. Our own War Department has issued an order calling the attention of officers and enlisted men upon their discharge "to the opportunities afforded them for further service to their country, by the Boy Scout movement." Here is something that challenges a man. There are somewhere around eight million boys in the United States of scout age. The country needs to have more of these boys under scout training. Between three and four hundred thousand are not enough: they should run into the millions. And there are plenty of men of the right character, to jump in and handle this national problem as scoutmasters. It's the best thing yet discovered for keeping men young.

# Putting a Fortune At Your Tongue's End

How Business Men Are Finding New Power Through Effective Speaking and Are Talking Their Way to Better Work and Bigger Incomes

By STANTON COLE

IT was my first morning on the new job. Of the many fresh impressions I received that day, one in particular will stay with me always because of its actual horror.

"This is Mr. Welton, Mr. Cole," said my new chief as a man of some forty years of age and decidedly good appearance entered the private office in answer to the presidential buzzer. "Welton has been with us for twenty years and will be able to show you over the place from top to bottom. When you are through come back to my office."

Twenty years with the firm and still answering buzzers? Twenty years of steady work to finally act the part of office guide on occasions? There was something very much wrong here. If Welton had been a different sort than he looked to be I should have thought nothing of it, but he impressed me at first as of big calibre. He had as much the appearance of an executive as my new employer. Could it be that Welton represented the firm's attitude towards its men? This thought staggered me, and as I looked at Welton I could think of nothing but his twenty years of minor duties. It was enough to horrify any man of ambition.

Welton was speaking. I became fully aware of it when I heard the words, "Perhaps I didn't make myself clear." I apologized and asked him to repeat his last remark.

I had heard it well enough but it hadn't seemed to convey its meaning to me. He went back and tried to explain the thing again. At the end I said I understood. Privately I determined to have somebody give me the facts later.

We went through the place thoroughly. Welton beside me, talking continually, interrupting himself after every sentence or two to say, "Perhaps I didn't make myself clear" or "What I mean to say is," and forty-five minutes after I had left the president's office I returned to it in a rather dazed condition, without one single definite idea of how the place was organized or operated. Welton left me at the door.

My employer seemed to guess my state of mind.

"Sure," I delegated Welton as your guide," he said. "I'm afraid the job wasn't very well done. You

probably noticed his weakness—his inability to make himself clear no matter how many words he uses. Frankly that's why he hasn't progressed. He's had any number of chances.—on the road, Chicago representative, manager of one of our southern districts,—and after each opportunity he has come back here to do about the only work he can do.

"If there is one thing more universally needed than another by business men today," he continued, "it is the ability to talk well,—to stand on their feet and express themselves clearly, forcefully and convincingly. Instances of this are everywhere. Welton is simply a 'horrible example' of how seriously the lack of this quality can keep a man back. Right here in our firm we have equally impressive proof of the power for advancement in the faculty of effective speaking. I could name you a dozen men of my acquaintance who have talked their way into better work and bigger incomes and who will go further yet before they are through. To speak well, if only in conversation, is to multiply the power of every natural ability you have. It is the one thing that will put your personality across.

"There ought to be a course of instruction in business talking. Oratory and eloquence are out of place in business but effective, straight-away speaking is needed, and the man who learns the secret of it has a fortune at his tongue's end."

In the days that followed I thought a good deal about this advice. I could not claim to be much more than average as to speaking ability. I could remember many an occasion on which I had turned back to explain myself, responding to a mystified look on the faces of my hearers, and I had suffered the usual embarrassments that come to young men when they are asked to "say something" at a business or social gathering. What I had heard and seen was enough to start me on a still hunt for a way to proficiency in talking. And I didn't stop until I found it.

Dr. Frederick Houk Law, A.B., A.M., Ph.D., educator, executive and author, at present lecturer in English in New York University, after years of experience in both the principles and practice of public speaking has prepared a course, "Mastery of Speech," for the very purpose of teaching men the extremely necessary accomplishment of sure footed, practical speaking. Its application is so commonsense and easy that its usefulness made itself felt with me after only one evening's study of the course.

There is a right way and an effective way to say everything whether in business, in professional work or socially. Dr. Law has taken the subject of speech and reduced it to fundamentals, showing men the way to talk, something that all of us think we can do but very few of us really can do.

It was not until after I had talked myself into a raise in salary, thus proving the value of "Mastery of Speech" to my satisfaction, that I told my chief about the course.

"With Dr. Law had done it ten years ago," he said and promptly subscribed for the course himself. Shortly after he had twenty-five subscriptions to "Mastery of Speech" entered in the names of men who were working under him. Welton was one of them, and as I write, Welton at his own request is getting ready to

tackle "the road" again. He'll make good I know. The world's respect and, incidentally, the world's money goes to the man who, when it is his turn to talk, speaks effectively.

\*\*\*\*\*

Probably the most remarkable thing about Dr. Law's Course, "Mastery of Speech" in eight

lessons is the ease with which people are learning this new secret of effective talking. We have the word of thousands of subscribers that the clue to direct, able, forceful speech came to them during the first evening with Dr. Law's Course. Every one of the eight lessons is fascinating, stimulating, and points the way to higher accomplishments.

So confident are we that you will see the immediate value to you in the possession of Dr. Law's "Mastery of Speech" and the simplicity of making these great principles yours as soon as you examine it in your own home that we are willing to send you the entire course on approval.

## Send No Money

Just mail the coupon printed below or write a note. If you are pleased with the lessons as thousands of others have been, send only \$5 in full payment. If not return the course and you will owe nothing. You take no chance and have literally one of the greatest things in the world to gain—the power of successful, effective, speaking.

## TESTIMONIALS

"After viewing the Course twenty minutes, I am well pleased. I would recommend Dr. Law's Course to anybody."

"I have found in this what the average man has been looking for these many days. It is, in my opinion, a most valuable asset for any ambitious man."—George E. Better, Field Supt., Midfield Camp, Wray, Colorado.

"The Course is far more than was expected. I am sure it will be a great help."—Richard C. Hutcheson, 644 Smith Street, Providence, R. I.

"I am greatly pleased with the interesting way the art of speech is simplified. My friends to whom I have shown the books, think them of great value to any man whether he is a lecturer or business man."—Arthur Call, Sidney Mines, Nova Scotia, Canada.

"Even if a person is never to speak to a larger audience than one, it is quite evident that the Course gives information and suggestions of inestimable value."—R. W. Wheeler, The Cleveland-Oshorn Mfg. Co., 395 Broadway, New York.

"I consider this one of the best investments I have ever made."—Julius Fietz, 1981 Maple Avenue, New York City.

"I have subscribed to a number of courses on Public Speaking from other firms which cost six times the price of 'Mastery of Speech' and they were not near as good."—J. J. Halbin, 676 Cooper Street, Ottawa, Canada.

"I am very much pleased with Dr. Law's Course and believe the first lesson is worth the money."—A. W. Rutten, 17 Cumberland Apartment, Salt Lake City, Utah.

# THE INVESTMENT OUTLOOK

BY LUIGI CRISCUOLO

DIRECTOR OF THE INDEPENDENT SERVICE TO INVESTORS

IN the year 1918 corporate financing suffered a very large decline in comparison with the year previous, the decrease being largely accounted for by the vast issue of Liberty Bonds sold by the Government for war purposes as well as on account of the restrictions placed on security issues. In pre-war times, financing amounting to a billion dollars a year was considered quite a respectable figure, but after the beginning of the war, with large foreign loans being placed with American investors, there seemed to be no limit to the amount of bonds sold here. The listing of bonds on the New York Stock Exchange by no means gives one a true impression of the extent of financing by governments or corporations in this country, but it does convey an idea for comparison's sake which cannot be overlooked. In 1915, bonds listed amounted to nearly \$650,000,000, in 1916 there was an increase to \$1,800,000,000, in 1917 the amount was \$1,388,000,000, while in 1918 there was a sharp decrease to about \$412,000,000. Liberty Bonds have not been included in this compilation because they are regarded as extraordinary financing.

It has been predicted that we are about to witness an era of great financing, the greatest the country has ever seen outside of the abnormal war finance era. Not only will funds be needed to retire maturing loans of foreign governments, but those of our own corporations which it has been estimated will amount to over \$750,000,000 from the first of February to the last of June. The reconstruction of our industrial forces will create a great demand for new capital for industries and railroads. Leading railroad executives have stated that the railroads of the country will require about a billion dollars a year for several years in order to place them in a condition to handle the growing business of the country efficiently and expeditiously.

Corporate financing in 1918 was in part retarded because of the unintelligent financing of the railroad problem by the Government railroad administration. Its policy was to prohibit railroad corporations from paying high rates for money required for retirements or new construction and then to refuse to finance the railroads at low rates from Government funds which were being borrowed at 4½ per cent. The railroads were forbidden to pay much over 6 per cent for money when the Government was paying several times normal prices for railroad equipment for account of the railroads, much of which the roads did not require and in some cases refused to accept,

and double the wages of normal times to thousands of railroad employees. This lack of cooperation between the Government and the railroads has had a great deal to do with the uncertainty in industry which has become so prevalent all over the country and with the strikes and closing down of factories which have been a natural consequence. If the Government had inaugurated a policy of large expenditures, at properly regulated prices, on railroads and public works, we would have no problem of unemployment, no problem of what to do with the returning soldiers.

In spite of these conditions, there seems to be a great deal of money seeking investment. The market was sounded in December of last year with the offering of \$20,000,000 Liggett & Myers Tobacco 6 per cent notes which were sold on a 6¼ basis, and \$9,850,000 Kansas City Terminal Railway 6 per cent notes which were sold on a little over a 6 per cent basis, and offerings continued on an increasing scale until the aggregate of the important financing in January exceeded \$200,000,000. This is at the rate of \$2,400,000,000 per annum, so the statement that we are entering a period of extraordinary financing does not seem at all exaggerated. The next Government loan will undoubtedly exceed five billion dollars but with all due respect to the war finance organization, it is well to point out that the best authorities seem to be agreed on the point that it is extremely puerile to expect that the American public will be willing to purchase bonds with the same spirit that they purchased them during the war, no matter what the rate may be. As we are entering into a period of financing when strong corporations are willing to pay 7 per cent for money, it seems that if the Government wishes to see a five billion dollar loan a success, not only will the new bonds have to bear an attractive rate of interest, but they should be made otherwise attractive to investors by having tax exemption features which will make them unusually desirable for large investors.

The placing of large loans by the Government and private corporations, if these loans are successful, cannot fail to be a stimulus to general business. The expenditure of perhaps half a billion dollars a month for Government or corporate purposes will be sufficient to keep industry busy. A spirit of real cooperation between capital and labor and the public will mean a great deal to our future welfare. If capital receives a fair return, labor a just wage and commodities are sold to the public at a

price that will insure a continued demand for goods, there will be no opportunity for economic and industrial disturbances in this country. The great mass of Americans and foreigners residing here do not want to see a condition of semi-anarchy in this country. Every man who has a hundred dollars invested is a capitalist and wants to see his savings protected. Every man who has a hundred dollars to invest wants to invest it safely. These facts should be a guarantee that our institutions will be adequately safeguarded.

The accompanying tabulation sets forth the principal financing accomplished from the first of the year up to the time this article was written. The investor will note that many securities afford a return in excess of 6 per cent which in normal times was a danger mark beyond which was the precipice of speculation. With the war and the greatest nations paying over 6 per cent for money, this gage can no longer be utilized, at least not until we have normal conditions. In fact there are many investments which return above 7 per cent and which can be recommended to business men who can afford by the nature of their business to take some risk. There was a time when standard railroad bonds which were legal investments for savings banks in New York were regarded as the highest type of bonds and sold at prices to yield as little as 3½ per cent. In the past ten years such bonds have declined as much as twenty-five points and while they have not lost any of their security the uncertainties in the railroad situation have decreased their sales. Nevertheless, there are many industrial and other corporation bonds which have held their prices better than legal railroad bonds and which any conservative banker can afford to recommend to his clients.

This is not a time to engage in riotous spending or indiscriminate investment in nondescript oil, motor or mining stocks but it is a good time to invest in Government railroad and industrial securities including such standard stocks as are quoted daily on the prominent exchanges. Some theorists advise investors to try and buy when securities are low and sell when they are high, but in view of the difficulty of pointing out the high or low levels, it is preferable to buy when one has funds to invest year in and year out. As long as an investor discriminates in purchasing and has the advice of a reputable banker he should not be annoyed by fluctuations. No investor can make a mistake in buying for the "long pull" in a period like the present.

Amount	Security	Per cent		Price	To yield

## Pebbles

"Don't you think her voice ought to be cultivated?"

"No, I think it should be harvested."—*Boston Transcript.*

*Newark Advertiser* (advertisement)—  
"Wanted, a boy to go errands and make himself useful. Also youth to milk and wash motor-car."—*John Bull.*

There was a rip-roaring Apache  
Who never could grow a mustache.

He would howl and would swear

Until you'd declare

He had a most awful toothache.

—*Chicago Tribune.*

The Tragedian—I think it within my rights to ask for real wine in the banquet scene.

The Stage-manager—Right-o, old man. And perhaps you'd like real poison in the death scene?—*Passing Show.*

"I say, Jones, I want to insure my coal-yards against fire. What would a policy for \$20,000 cost?"

"What coal is it? Same kind you sent me last?"

"Yes."

"I wouldn't bother insuring it if I were you. It won't burn."—*Boston Transcript.*

"Before we were married," she complained, "you always engaged a cab when you took me anywhere. Now you think the street-car is good enough for me."

"No, my darling, I don't think the street-car is good enough for you; it's because I'm so proud of you. In a cab you would be seen by nobody, while I can show you off to so many people by taking you in a street-car."—*Tit-Bits.*

A Yankee soldier was being shown over an old church wherein hundreds of people were buried.

"A great many people sleep between these walls," said the guide, indicating the inscription-covered floor with a sweep of his hand.

"So?" said the Sammy. "Same way over in our country. Why don't you get a more interesting preacher?"—*London Opinion.*

Two facetious cockneys were passing a Dublin butcher's shop the other day when, seeing the owner standing at the door, they decided on a laugh at his expense.

"Well, old boy," said one of them to him, "according to your notice on the window you have cuts to suit all purses."

"An' sure, so I have," replied the butcher.

"Well, then, what sort of a cut can you give me for an empty purse?" he was asked.

"A cowl'd shoulder, of course."—*Chicago News.*

## THE BOUR-GEE-OISE

## A Washington Square Litany

I love the Proletariat;  
I scorn the Bloated Plutocrat  
With all his Parasites and Toys;  
But how I loathe the Bour-gee-oise!

That Groundling works to pay his way,  
To win his three square meals a day,  
A home, and other sordid joys,  
Oh, how I loathe the Bour-gee-oise!

His taste would make a Zulu blush;  
He dotes on chairs in crimson plush;  
He has no Grasp—no Flair—no Poise;  
Oh, how I loathe the Bour-gee-oise!

His attitude to Art is low;  
He likes the vulgar movie show;  
And when he laughs he makes a noise,  
Oh, how I loathe the Bour-gee-oise!

He has no Quest—no Soul to search;  
He sometimes even goes to church  
And takes his wife, his girls and boys!  
Oh, how I loathe the Bour-gee-oise!

He lacks my Broad Humanity,  
My Universal Sympathy,  
My Zeal for All that nothing dares—  
Except, of course, the Bour-gee-oise.

—*Arthur Guiterman in the New York Tribune.*

# Your Share in the Great Era of Prosperity

WITH the war ended, every historic precedent points to a great era of prosperity for the United States, in which every citizen should share.

The great lessons of thrift we have learned, both as a nation and as individuals, must not be forgotten. We should all continue to lay aside and invest a fixed portion of income, in peace as in war. In selecting investments, safety rather than unduly large income yield should be the first consideration of the prudent buyer.

## Safe 6% Investments

The first mortgage bonds, safeguarded under the *Straus Plan*, and issued in \$100, \$500 and \$1,000 denominations, afford you a sound and attractive investment, based on the nation's permanent prosperity. Their record of thirty-seven years without loss to any investor, or delay in payment of either principal or interest, is abundant evidence of their safety and is especially significant in view of the four years of war-time conditions through which we have just passed.

Write today for our "Questionnaire for Investors" and current 6% offerings. Ask for

## AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the **METROPOLITAN LIFE INSURANCE COMPANY**, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$623.60 absolutely beyond question of doubt. The Annuity Department, **METROPOLITAN LIFE INSURANCE COMPANY**, New York, will give advice as to the return at any age, male or female.

# STATE INSURANCE MONOPOLY AND ITS DANGERS

BY W. E. UNDERWOOD

DIRECTOR OF THE INDEPENDENT INSURANCE SERVICE

**U**NDER the whip of organized labor, heretofore opposed to socialistic insurance schemes, the legislators of a number of states are now advocating the enactment of compulsory and monopolistic workmen's compensation laws, taking the one now in force in Ohio as a model.

It is not my purpose at this time to discuss the various features of that law, nor is it essential to the object in view to refer more than briefly to one of them—that which excludes competition. Workmen's compensation insurance is a state monopoly in Ohio. No insurance company may write that line of business there.

The advocates of that system defend it with two principal reasons: First, the benefits to be sought by those who need workmen's compensation insurance are of such a nature that they do not constitute a proper source from which to furnish investment returns on private capital; and, second, by monopolizing the business, the state can conduct it at very much smaller expense than can the private companies. Emphasis is placed on the savings made in the matter of agents' commissions, an expense which the state does not incur.

The reasons are more plausible than convincing. Let us take the first in its concentrated form: it is wrong to pay dividends on an enterprise which makes a monetary reparation for time lost by workmen who have been disabled by injury or disease.

Is the reasoning sound? Do all the commodities which laborers buy go to them at net cost—that is, devoid of profit to those who furnish them? If they do not what is there in the commodity of insurance that is peculiarly adapted to labor's daily needs that raises it out of the common class of things?

Why should not those who work with their hands be protected against profit-makers in other lines of business? These are not the only poor in the mass of the population. There are millions of men and women in this country who cannot by occupation qualify for the benefits of workmen's compensation insurance, whose incomes are never greater, and very often smaller, than the industrial and other workers who do so qualify.

But returning to profits made in some lines of business on the patronage bestowed by working people, consider undertakers and grave makers. Misery in its most poignant form enters the workingman's home with death. The creature he loved must be laid away in the bosom of the universal mother. The dear clay must be prepared, shrouded, encoffined and enhearsed. Should profit be made on this misery and grief?

Are we sincere, are we fair, when, crying out for help, in begging for services we cannot render ourselves, we reproach as wicked those who, organized on a business basis for that purpose, perform that service for us and brand the system as one which makes profits on human sorrow?

While men cannot live by bread alone, they cannot live at all without it. Wherein are the profits of the insurance company more illegitimate than those of the baker, the miller or the farmer. Here is the prime necessity of human existence. If there is any single object made by man that is

sacred, it is bread. And yet millions of people make money producing it and tens of millions of workers pay profit to them.

Now we come to the feature of monopoly, the plea for which I regard with less respect than that which constitutes the first reason mentioned. Why? Because it is palpably false.

It comes to this: the state is so sure it can render the working people better service, at less cost in the line of compensation insurance than can private insurance companies that it will not permit the latter to compete with it.

Does that sound sane?

If you knew you owned the patent on the best mouse-trap that was ever put together, and you could sell it for a smaller price than any other in the market, would you care how many competitors you had?

But if you had one of the poorest and one of the most expensive to make, would you not like it if some power so manipulated conditions as to run the others out of the market?

Perhaps you would not, because you are a single human being with a soul; but monopolists have no souls and they do.

"As a man-to-man, square deal, fair-play proposition," asks Edson S. Lott, president of the United States Casualty Company of New York, an accepted authority on the underwriting, economic and juristic principles of workmen's compensation insurance, "if a state insurance fund can, on its merits, get and hold business in competition with private stock and mutual insurance, why is a lawmaker justified in giving it a monopoly? Why restrict the number of bidders to one? If the state could not take away your business in competition, would you think the lawmakers were fair if they took away your business and gave it to the state?"

In the institution I have described, we have the first real experiment of government insurance in this country, the State Fund of Ohio, conducting the business of workmen's compensation insurance. There are several others, including that operated by the United States for the benefit of soldiers and sailors, but they are not completely socialistic, for none of them are both compulsory and monopolistic.

Will the desire for this system grow and eventually include all forms of insurance?

I am compelled to admit that within the last twelve months the idea has made some progress. Whether this drift toward socialism is one of the effects of the world struggle and will cease when the peoples settle back into a more normal state, or whether it indicates a permanent departure from old customs, is difficult of determination. Insurance is not the only interest involved. It is, however, the only one I am capable of discussing in connection with such a movement. While it is impossible and would be unseemly to dogmatize on such a subject, I am profoundly impressed with the belief that a system of nationwide compulsory monopolistic insurance would be a calamity.

This judgment is not warped by self-interest, nor do I think there is an insurance man in the country whose opinion on the subject could be affected, for the simple reason that their services would be in demand even if the Government monopolized

the business. All the people who understand insurance are working in it and their services would be necessary for years to come. There are thousands of people outside it who think they know more about how it should be run than those in it; but they are all in politics. In time these two groups will change places—the men with knowledge of insurance will be in some other lines of legitimate business, and the politicians will be running the insurance machine. When that time arrives, it will mark the end of efficient insurance service.

In fact, insurance does not respond to governmental management. It generally decays. Great Britain has a life insurance organization under the management of its Post Office Department, but it is a puny concern. Italy has a monopoly, and the Italian people are among the poorest insured of Europeans.

In 1912, Wisconsin established a state company, called a fund to do a life insurance business. It commenced accepting risks in 1913 and during that year issued 239 policies for \$147,500; in 1914 but 83 new policies for \$82,800 of insurance were placed; the figures for the succeeding two years fell lower yet; in 1917 the decline was 80 per cent; in 1918 only 11 policies were issued. At the close of that year there were 461 policies in force for \$379,700; the total assets were \$55,676 and the actual mortality exceeded the expected 40 per cent. Nearly all well managed old line private companies save from 20 to 40 per cent on their expected mortality.

Recommending the reinsurance of the fund, Governor Phillip said in his annual message to the legislature last month:

... The state is liable only to the extent of the fund and if the reserve is impaired the policies are not worth 100 cents on the dollar.

The state should not continue a system of life insurance that does not guarantee the full value of the policy—in fact if this type of insurance is permitted to continue I would regard it as a moral obligation on the state to make good any loss that the policyholder might sustain for the reason that the policy was sold by the state and that in itself should be a guaranty against any loss by the policyholder and I am certain it was accepted in that spirit.

This fund is based upon the theory that desirable life insurance risks voluntarily seek insurances. That theory is unsound—they do not do so. If this enterprise is to prosper and grow, as it must to have a normal experience, it must to have a normal experience, it must have an organization for soliciting business. If the expense of such an organization is incurred the fund can offer no inducement not offered by privately managed life insurance companies and fraternal societies.

I recommend that you repeal the statute under which this form of life insurance is being carried and direct the insurance commissioner to reinsure the present policyholders in a reliable company.

Hundreds of millions of new insurance have been issued on the lives of Wisconsin citizens by private companies since the state fund was established. The state company has not sold one thousand policies and it ends up its seven years of life with but 461 policies in force for a total sum of less than \$300,000.

If it had possessed any advantages over the private companies, certainly the citizens of the state would have recognized them with their patronage.

In Ohio the workmen's compensation proposition is different. The employer is first compelled to protect his employees against occupational disabilities and death; then he is compelled to use the state fund as the insurer, because private companies are not permitted to transact workmen's compensation insurance. I do not hesitate to express the belief that, as the result of the prescription of the companies, employers are paying more for the same service, or less for unsatisfactory service, than they could get from private insurers. If this is not true, then I cannot understand the refusal of the state fund to face competition.

## The MIRACLE of MILK

### Drinking Your Way To Health

You know in a general way that milk is good for you. But if you knew what a precious life-giving fluid it really is—if you knew the almost miraculous results it produces for those who drink it intelligently, you would be truly amazed. For anemia, indigestion, constipation, any difficulties of the stomach, liver, kidneys, heart or bladder, Bright's disease, rheumatism and many other ills for which physicians have no reliable remedy, the right use of milk almost invariably overcomes the trouble. For instance, feet and hands that are usually cool and clammy, become warm and lifelike a few days after beginning this marvelous self-treatment. Bernard Macfadden, the famous physical culturist in collaboration with Dr. Sanford Porter, the milk diet specialist, has written a book of priceless value entitled: "The Milk Diet, How To Use It."

### You May Have It Free

It will be a revelation to you. Send us a three months' subscription for PHYSICAL CULTURE MAGAZINE at the regular price of five and we will mail you the book at once. PHYSICAL CULTURE MAGAZINE should be part of your reading every month. Its inspirational articles on Health, Hygiene and Success-building are of great value to you in many ways. ## HOW TO STUDY THIS NUMBER

### The Independent Lesson Plans

#### ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

##### I. Sunset. By John Crowe Ransom.

1. What is the physical point of view of the two people mentioned in the poem?
2. Describe the view at which they look.
3. How does the scene affect the girl?
4. How does the scene affect the man?
5. How does the girl in the poem differ from many other girls?
6. Explain what is meant by "her strange eyes."
7. If you like this poem, read Wordsworth's "Lines Composed a Few Miles Above Tintern Abbey." In what ways are the two poems alike?

##### II. Dear Barrie. By Montrose J. Moses.

1. Explain every one of the following expressions, and show how every one is illustrated in some English text that you have read in school: (a) A fresh liveness of humor; (b) A quaint unexpectedness of situation; (c) A gentle correction of the ills of life; (d) An irony which tickles the fancy; (e) Quaint inventiveness; (f) A moment of supreme dramatic emotion; (g) Theatrical instinct.
2. If you have not read any of the following books, read at least one, and tell the class, with reasons, whether or not you found the book interesting: "Sentimental Tommy," "The Little Minister," "A Window in Thrums," "Auld Licht Idylls," "Margaret Ogilvy."
3. What bonds of interest united Mr. Barrie and Robert Louis Stevenson?
4. What is meant by "The eternal fairy fancy of 'A Midsummer Night's Dream'?"
5. Tell the class about any of the following plays that you may have seen or read: "The Little Minister," "Quality Street," "What Every Woman Knows," "The Legend of Leonora," "A Kiss for Cinderella," "Dear Brutus."
6. What are the characteristics that make a good play?
7. How do modern plays differ from Shakespeare's plays?
8. What characteristics have made Maude Adams a noted actress?

##### III. Ye Old-Time Farm House. By E. P. Powell.

1. For what purpose did Washington Irving write? For what purpose does Mr. Powell write?
2. How does an essay differ from most other types of writing?
3. What characteristics make an essay excellent?
4. In what ways is an essay much like a lyric poem?
5. What is the spirit of the article?
6. How does the author make his work personal? How does he avoid making his work offensively personal?
7. Point out examples of mild satire.
8. Point out and explain at least two epigrammatic sentences.
9. Prove that the essay is discursive. Explain how the discursive nature of the essay adds to its charm.
10. Prove that the essay emphasizes the love of the beautiful.
11. Is the writer more to be praised for his observation of nature, or for his love of nature?
12. How does the writer produce the atmosphere of old-time country life?
13. What is the moral effect of the essay?
14. Point out examples of quiet humor.
15. Point out some unusually pleasing similes.
16. Characterize the writer's father.
17. What makes the description of the writer's mother piquant and charming?
18. How much of the pleasure given by the article is due to its content, and how much is due to its style?

##### IV. Half a Million Scouts. By Armstrong Perry.

1. Imagine that you are recruiting for the Boy Scouts. Plan an effective speech as an inducement for prospective members.
2. Imagine that you are a Four Minute Speaker in a moving picture theater. Give a talk explaining the present condition of Germany, and the relations of Germany with the surrounding nations.
3. Write a short composition on "Today's Bolsheviks in Russia and Elsewhere."

#### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

##### I. The League of Nations—"Organizing the League of Nations," "When Dreams Come True," "Planning the League of Nations," "For League Army in France."

1. Compare the underlying principles of the League of Nations as it is being gradually evolved with those which governed the Holy Alliance of a century ago.
2. Discuss the five propositions which Mr. Holt regards as settled. Which of the five, in your judgment, is the most important?
3. Why does Mr. Holt insist on making a distinction between "a League of Governments" and "a League of Peoples"?
4. "There is deep rooted in the American heart," says Mr. Bush, "a love of peace," etc. How deep do those roots go?
5. Why does Mr. Bush regard President Wilson as the greatest single force in Europe today? How do you account for the opposition to Mr. Wilson in this country?

##### II. Two New Republics—"President of Germany," "The Assembly at Weimar," "The Polish Elections," "Poles and Germans."

1. What are the principal provisions of the new German constitution? Is this new constitution anything like that which controls the government of Bolshevik Russia?
2. What is the relation of the new Polish Republic to the other European governments? What form will the new Polish constitution probably take?
3. Why is Poland quarreling with Germany over Posen and with the Czecho-Slovaks over the Galician and Hungarian frontiers?

##### III. Russia—"Dealing with Bolsheviks," "Discord at Paris," "Fighting in Russia."

1. What concessions are the Bolsheviks willing to make to the Allied Nations; what concessions do they demand?
2. Show that the "discord at Paris" is connected with the progress of Russian affairs.
3. What in your judgment would be the result of the withdrawal of Allied troops from Russia? of the acceptance of Japanese aid by the Omsk Government?

##### IV. Labor and Reconstruction—"What Is Unskilled Labor?" "International Labor Laws," "The British Strikes," "The Strikes Go West."

1. Indicate as clearly as you can the difference between skilled and unskilled labor. Is farm labor unskilled? Are elevator operators unskilled labor?
2. Do you agree with the following: "... I cannot think of any work ... which I would unhesitatingly class as unskilled?"
3. What factors have resulted in the collapse of the British strikes? The strikes in Seattle and other similar labor movements in this country?
4. What relation is there between the national labor movements in Great Britain and this country and the demands submitted to the Peace Congress by the Commission on International Labor Legislation?

##### V. Reconstruction—"The Reconstruction of Chaos."

1. "... now that the war is over ... no reconstruction worth mentioning is under way anywhere," etc. How do you account for this?
2. "... the National Government has been much too precipitate in demobilizing its own departmental and clerical staffs." Give some of the facts that justify this statement.
3. Have you any facts which confirm or controvert the assertion that there has been a "disgraceful failure of the War Department"?
4. "Yet more serious has been and will be the failure to handle the demobilization problem as it affects industry and social order." What evidence of this failure can you produce?

##### VI. Expansion of the United States—"Lower California."

1. Indicate on a map our acquisitions of territory from Mexico during the past seventy-five or eighty years. Under what circumstances was each parcel of land acquired?
2. Why was Lower California not included in the cession of 1848?
3. What are the arguments in favor of the acquisition of Lower California at the present time? Arguments against it?

## POETS OF TODAY

Two young American poets have come into sudden prominence by their interpretation of the Ghetto and East Side New York, to which they both bring a keenly realistic point of view fired by imaginative insight. Alter Brody paints in poignant detail the reactions of the Russian Jewish immigrants to tenement America; Lola Ridge sees the same subject in the perspective of its influence on the future. The foreword of her volume, *The Ghetto and Other Poems*, published by B. W. Huebsch, presents succinctly her insistence on hard realism.

#### TO THE AMERICAN PEOPLE

Will you feast with me, American People?  
But what have I that shall seem good to you!

On my board are bitter apples  
And honey served on thorns,  
And in my flagons fluid iron,  
Hot from the crucibles.  
How should such fare entice you!

"The Ghetto," by far her best poem, is too long to quote and too cumulative in its effect to be presented by a sample. "Bowery Afternoon," however, has something of the same atmosphere.

#### BOWERY AFTERNOON

Drab discoloration  
Of faces, facades, pawn-shops,  
Second-hand clothing,  
Smoky and fly-blown glass of lunch-rooms,  
Odors of rancid life

Deadly uniformity  
Of eyes and windows  
Alike devoid of light  
Holes wherein life scratches—  
Mangy life  
Nosing to the gutter's end

Show rooms and mimic pillars  
Flourishing out their gaudy vestibules  
Bossoms and posturing thighs

Over the Elevated  
Dreaming like a bloated fly.

But Miss Ridge can paint in more than one medium. Witness "The Fog":

#### THE FOG

Out of lambs ear-tarred and clouded dusk—  
Snaring, illuding, concealing,  
Magically conjuring—  
Turning to fairy coaches  
Beetle-backed limousines  
Scampering under the great Arch—  
Making a decoy of blue overalls  
And masters of scarlet shawls—  
Inch-long—  
Knowing no impediment of its own advance—  
Descends the fog

Louis Untermeyer says in his introduction to the poems of Alter Brody, collected under the title of *The Family Album*, published by B. W. Huebsch, "The unifying note is its definitely socialist undertone—that queer blend of

#### GHETTO TWILIGHT

An infinite weariness comes into the faces  
of the old tenements,  
As they stand massed together on the block,  
Tall and thoughtfully silent,  
In the enveloping twilight.  
Pensively,  
They eye each other across the street,  
Thru their dim windows—  
With a sad recognizing stare,  
Watching the red glow fading in the dis-  
tance,  
At the end of the street,  
Behind the black church spires;  
Watching the vague sky lowering overhead,  
Purple with clouds of colored smoke  
From the extinguished sunset;  
Watching the tired faces coming home  
from work,  
Like dry-breasted hags  
Welcoming their children to their withered  
arms.

#### TIMES SQUARE

An August day,  
The eddying roar of the Square—  
Crowds, stores, theaters, tall buildings  
Assaulting the senses together—  
And suddenly,  
The taste of an apple between my teeth  
Suffuses my mouth  
Where did it come from?  
Strong and sharp and deliciously sour,  
The taste in my mouth—  
Where?

I cross the street  
And suddenly,  
Crowds, stores, theaters, tall buildings,  
The glare and the glare of the day  
Fade.  
October blows thru the market-place  
In a town of faraway Russia—  
The booths are laden with fruit.  
A little boy,  
Snub nosed, freckle-faced, plump,  
Frest in a newly washed jacket,  
Stolidly strolls by the booths  
Clutching a coin in his fingers—  
I know him,  
That freckled-faced boy;  
I know him.  
Proudly he passes the stores of the Row,  
Tendering them all—  
Until he reaches at last  
The booth of the widow Rebecca:  
"What do you want, little darling?"  
"Here is a penny;  
I want this apple."  
"Take it."  
The tense little fingers unclose to sur-  
render the penny  
And close on a big red apple.  
And suddenly,  
The taste of an apple between my teeth,  
Strong and sharp and deliciously sour,  
Suffuses my mouth.  
The toot of an automobile,  
Insistent, shrill,  
Lure me back to the Square

## WHAT HAPPENED AT ARCHANGEL

**I**N our issue of February 8 we tried to find out from the conflicting reports "what happened at Omsk." But the Archangel region is like Siberia now shrouded in darkness equally hard to penetrate. From the official despatches we learn that the Allied and American forces which had advanced up the Vaga River to the border of the province of Vologda, some eighty-five miles south of Shenkursk, have been forced to withdraw behind Kadish, a retreat of about 175 miles, thru the forest and snow by the light of the Aurora borealis with the mercury 30 degrees below zero. The evacuation of the village of Shenkursk was so hasty that our supplies fell into the hands of the enemy and it was feared for a time that our forces might be cut off, for the Reds attacked on both wings as well as the center, along the Pinega River on the east and the Onega River on the west, as well as along the Vaga in the center. But reinforcements were sent to the front, Kadish was retaken and the flanks are now said to be secure. The threat of the Bolsheviks to "drive the Allies into the White Sea by March" has been foiled. The Michigan and Wisconsin men by fighting Indian fashion in the swamps and woods prove more than a match for their more numerous foes.

The cause of this setback was the underestimation of the enemy. It was assumed that the Bolsheviks were incapable of organizing an effective force, that they were short on equipment, that they could not maintain discipline and that they had no competent officers now that the Germans were withdrawn. This assumption has unhappily proved fallacious. Lord Denbigh says on good authority that "the Bolsheviks have a well organized army of about half a million, which is well paid and well fed." On the other hand Noulens, the French Ambassador to Russia, says that they have only 90,000 trained troops. Savinkoff, the anti-Bolshevik representative at Paris, says that the Red army numbers at least 300,000, well paid, amply and excellently fed and under iron discipline.

The force our men are fighting is the Sixth Army of the Soviet Government, comprizing 23,000 men with 191 machine guns, 66 field guns and 9 six inch guns. It is under the command of General Vetrin, former leader of the Lettish Brigade. His chief of staff is General Parski, former commander of the Twelfth Russian Army Corps. They are now using high explosive and gas shells and in their recent offensive are estimated to have fired a thousand shells a day for a week.

Shenkursk, the main point of attack, is an unfortified town of about 1500 and was defended by two companies of Americans and a detachment of British, with the aid of two companies of the newly organized Russian volunteers. The total American contingent in the Archangel region is now 5419. The British have about 6000, the French 1500, and there are 1000 of other nationalities such as

Serbs and Italians, besides 1200 Russians under French officers. Our casualties up to January 31 numbered 180 dead and 229 wounded. These are the main points about the military situation coming thru headquarters. Apart from this we have little information. A correspondent of the *Chicago Tribune* coming out of Archangel gives this dismal view of it:

The North Russia allied expedition has developed into a pitiful failure. It has failed to inspire confidence and loyalty and give real assistance to Russia. It has become a cesspool of jealousy, hatreds, mistakes, and shattered illusions. The different allies distrust one another and the Russians distrust the entire expedition.

The American troops were put under an absolute imperialistic command, being handled in a way that was against every tradition of the army and country. They were put to doing a king's business and to do whatever task was assigned to them by the British.

Here in the north, in a district that never was violently Bolshevik, where the Allies had many friends at the start, and where, since the first days there have been unlimited opportunities to advance confidence and gain respect, here with everything their own way, the Allies have failed utterly.

Today, in Archangel, Murmansk, and the other cities of the district, there is growing dissatisfaction against the way the expedition has interfered in local Russian affairs. Every phase of life within the district is controlled by the Allies and dominated by them.

The Russians frankly resent this. They will tell you openly that they, and not the outsiders, should determine the exact form of government and pick the leaders. Today if a Russian fails to follow the ideas and opinions of the allied leaders he is classed as a Bolshevik, with the possibilities of jail to keep him silent. Only such men as conform with the foreigners' ideas last in the local government.

The foreign military are actually and undeniably interfering in local affairs. They are dominating every department, forcing their own ideas and judgments against the wishes of the North Russian Provisional Government. Martial law has been established, placing the foreign military above the local authorities. All this reflected against the avowed motives of the Allies.

All the time the Americans felt they were doing a job for certain nations, helping to collect their debts and reestablish their commercial supremacy.

The avowed reason for original entrance at Murmansk was the threat of the white Finns, under German leadership, to turn the ice free ports of Murmansk and Petchenga, on the Murman coast, into German submarine bases. This was outlived when the expedition started to Archangel under the slogan of guarding the great war supplies about to fall into the German hands. Reaching Archangel, the foreign soldiers found no supplies.

Whether this is an accurate picture of the situation or not it is plain from official sources that the Allied policy of military intervention has had the opposite effect from what was intended. It has strengthened the Bolsheviks instead of weakening them, for it has rallied to their side many of the more moderate revolutionists and even conservatives. They are now getting bourgeois experts to manage their factories and the Czar's officers to command their armies. The penetration of foreign armies into Russia and the instigation of counter revolutionary movements gave to

the Bolsheviki a pretext for wholesale massacre of opponents and the shutting off of food has increased the misery on which Bolshevism thrives. From a mere military standpoint the Archangel expedition is unfortunate. It has not improved our prestige or won us friends among the Russians. The local governments set up by the Allied authorities in the occupied district have no cohesion or stability and the partial, or as now announced, the complete withdrawal of the foreign forces will leave the inhabitants worse off than ever.

In short, intervention has taken just the form that President Wilson opposed and has had just the effect that he foresaw. Let us recall his words when he reluctantly consented to add a contingent of American troops to those the Allies were determined to send to the Arctic coast:

In the judgment of the Government of the United States—a judgment arrived at after repeated and very searching considerations of the whole situation—military intervention in Russia would be more likely to add to the present sad confusion there than to cure it, and would injure Russia rather than help her out of her distresses. . . . Whether from Vladivostok or from Murmansk and Archangel, the only present object for which American troops will be employed will be to guard military stores which may subsequently be needed by Russian forces and to render such aid as may be acceptable to the Russians in the organization of their own self defense.

In taking this action the Government of the United States wishes to announce to the people of Russia in the most public and solemn manner that it contemplates no interference with the political sovereignty of Russia, no intervention in her internal affairs—not even in the local affairs of the limited areas which her military force maybe obliged to occupy—and no impairment of her territorial integrity either now or hereafter, but what we are about to do has as its single and only object the rendering of such aids as shall be acceptable to the Russian people themselves in their endeavors to regain control of their own affairs, their own territory and their own destiny.

What President Wilson wanted to do then is what should be done now, namely, to send aid and not armies to Russia, to invade the country with engineers and school-teachers instead of generals, to use reapers instead of machine guns and seed corn instead of shrapnel. There was no objection raised by the Soviet Government to guarding the supplies at the ports against the Germans. In fact the occupation of the Murmansk coast was made at the invitation of the local Soviet and with the express approval of Trotzky, the Minister of War. According to the agreement between the Murmansk Regional Council (Soviet) and the representatives of Great Britain, the United States and France signed on July 7, the object of the occupation is: "The defense of the Murman region against the Powers of the German coalition." Let us quote further, since this document constitutes the legal ground of our action and since it is not well known to Americans, if indeed it has been published here at all:

The Presidium of the Murman Regional Council for the Russian people and the Governments of Great Britain, the United States of North America and France declare that the only object of this agreement is to guard the integrity of the Murman Region for a Great United Russia.

The whole authority in the internal administration of the region belongs without qualification to the Murman Regional Council. The representatives of Great Britain, the United States of North America and France and their agents will not interfere in the home affairs of the region.

The London *Times*, from which we quote, has recently published a controversy between the British Admiral Kemp, who brought the troops to Archangel, and the British Consul General Young, who negotiated the agreement with the Soviet. Mr. Young asks of the admiral:

Does he not remember the, to me, memorable afternoon of July 6, when some time between 4 and 6 p. m. in the Presidium Chamber of the Archangel Soviet, he informed them in my presence that "speaking for himself and he was sure he could say the same for General Poole, he could assure them that the Allied action in the White Sea was not aimed against the Soviet Government"?

Admiral Kemp does not deny this, but states that it was not until ten days afterward that he received a cipher des-

patch from the Versailles War Council ordering him to occupy Archangel. It was, according to British officials, only after the occupation of Archangel that the position of the British even in Moscow, the seat of the Bolshevik Government, was made uncomfortable and it was a month later when the determination of the Allies to penetrate into the interior became manifest, that the imprisonment and murder of British subjects by the Bolsheviki took place.

Admiral Kemp makes his opinion plain:

Interest and honor alike forbid any withdrawal of Allied forces from Russia, which would subject those who have been loyal to the Allied cause to savage reprisals. Nor will any guarantees short of the forcible smash-up of Bolshevism in Russia suffice. This involves the occupation of Kronstadt, Petrograd and Moscow, together with the surrender to the Allies of Lenine, Trotzky, Tchitcherin and the principal commissaries responsible for the orgy of outrage and massacre in Russia. . . . The only relationship which can exist between them and the British Government is that of criminal and judge.

A good many Americans will sympathize with this point of view, but the plan, even tho desirable, is not in the least likely to be carried out. At the very time Admiral Kemp was writing this the British Government was proposing to the French and American Governments to open negotiations with the Soviet Government. To secure the safety of the troops at Murmansk, Archangel and south of there, the British Government has called for 2400 more troops and the President has consented to send two companies of railroad troops, about 720 men, to Murmansk, but one purpose of these reinforcements is declared to be "to facilitate the prompt withdrawal of American and Allied troops in North Russia at the earliest possible moment that weather conditions in the spring will permit."

The original occupation of the Murmansk coast was undoubtedly necessary as a war measure, for the Germans threatened to seize the Arctic ports and so to cut off the only channel of communication with Russia in Europe. But when the Allied and American troops penetrated seven hundred miles into the interior the Soviet Government interpreted it, not unnaturally, as a hostile move and resorted, quite unjustifiably, to reprisals on foreign residents. We cannot get our troops out for several months yet and perhaps by that time the Allies may be willing to give President Wilson's original plan a trial.

## BRAZILIAN STUDENTS IN THE UNITED STATES

THE promptness and heartiness with which Brazil followed the example of the United States in entering the war showed how close akin the great republic of the South had grown to that of the North. But to cement the friendship thus started mutual acquaintance is essential and this can be most effectively promoted by giving young people, of the impressionable age, an opportunity to study and live in the other country. The first step, and a big one, has been taken in this direction by the Brazilian Government, which has picked out one hundred young men and sent them to the United States to complete their education with an allowance of \$1000 a year for expenses. Thirty-six of them have already arrived, mostly graduates of the Brazilian universities and technical schools. They have been scattered among various colleges and institutions in this country, many of them going to the southern states for special work in sugar and cotton. Some American educators have been asked to aid Brazil in the reconstruction of her school system and the preparation of better text-books in the effort now being made by the Brazilian Government to lift the heavy load of illiteracy under which that country suffers.

Fifty years ago the United States had a similar opportunity to be of service to a southern neighbor when President Sarmiento of Argentina invited Horace Mann to plan a public school system for that republic as he had for

Massachusetts. That act is remembered with gratitude in Argentina, tho it may be forgotten here. There is an amusing story heard occasionally on a college campus that a delegation of distinguished scholars from Argentina on coming to this country wished to show their respects to the great American educator by a visit to his tomb, but on going to Providence and inquiring of the authorities of Brown University where this most distinguished graduate and officer of that institution was buried nobody seemed to know! It was as if General Pershing were unable to ascertain from the French Government the way to the tomb of Lafayette.

The education of young Brazilians in this country for several generations will have as great an influence on international relations as the training of Japanese and Chinese students in our schools. And perhaps in the course of time our exporters will stop sending to Brazil circulars in Spanish and checks on Buenos Aires.

## THE DIFFICULTY OF PROPHECY

THE past four years have been hard times for the prophets' profession. It took a nimble mind to keep up with the march of events and few were agile enough to get ahead of them. On account of the shortage of paper and pressmen it has often happened that a perfectly good prognostication has been held up until it was spoiled, or what was worse, came out on the day when it was discredited. For instance, after reading in the daily papers an account of the overthrow of the Czar by the revolution we received the *Nineteenth Century* for March, 1917, in which Robert Macleray, on the basis of his intimate acquaintance with the "The Political Situation in Russia," endeavored to correct some current misapprehensions:

What we must bear in mind is that the Progressive movement in Russia is national in spirit, constitutional in tone and unmistakably loyal to the Czar. . . . The Progressive or Liberal element, by far the biggest factor in Russian politics, sharply dissociates itself from all thought of a revolution. . . . No doubt there are some revolutionists in Russia and these are mainly Socialists of various types; it has to be observed, however, that the majority of the Russian Socialists are fervent upholders of the war, the old Nihilist spirit, at one time so active, would appear to have vanished.

Yet it was these Progressives who started the revolution and deposed the dynasty and the Socialists who followed them withdrew from the war and are displaying something very like the old Nihilist spirit.

But if we had reason for skepticism the next number of *The Nineteenth Century* reassured us, for J. Y. Simpson, who was "privileged personally to know half the members" of the Provisional Government, wrote:

The workmen of the towns are a drop in the bucket compared with the great peasant population of the country in whose hearts there is a deep and instinctive love and reverence for the "Little Father." . . . The revolution is the hardest blow that Germany has received in the war to date. Hitherto Russia has been fighting with one arm bound; now she can really prosecute the war wholeheartedly.

But somehow the great peasant population seemed to have as little heart for the Czar and stomach for fighting as the workmen of the towns.

The German revolution likewise came upon us with little warning from those on whom we depend for guidance. A fortnight after reading how Scheidemann on November 9 had upset the Kaiser's Government we received the *London Spectator* of that date and read:

It is impossible to conceive of a time-server like Herr Scheidemann as a revolutionary leader.

There are more things in heaven and earth—especially in Germany—than are conceived of in the *Spectator's* philosophy. The *London Times History of the War* is the most complete and authoritative work of the kind yet published; let us see what light it can give us. Turning to the

part issued last April on internal conditions in Germany we find there were for a time some people in England—still more perhaps in the United States—silly enough to suspect that Bolshevism might spread westward:

Even leading statesmen in England—still more perhaps in the United States—for a time believed seriously that the Russian revolution, which was hailed with delight at Potsdam, threatened Germany with infection.

But it now looks, unfortunately, as tho Joffe, the Bolshevik Ambassador to Berlin, had not altogether wasted the \$5,000,000 he spent in spreading the infection.

Charles Edward Russell, who was sent over on the American Commission as a counterpoise to Elihu Root, might have been expected, since he is a Socialist, to appreciate the revolutionary forces at work in Germany, but in his *Unchained Russia* he makes fun of the Bolsheviks for their credulity in expecting an overthrow of the German Government:

There was the universal conviction that the German people are about to revolt, throw off the autocracy and proclaim the German republic. I was never done wondering at the extent to which this delusion went. . . . Germany, where there was as much chance of a revolution as there was at the North Pole!

Even Professor Roland Usher, who saw and exposed the schemes of Pan-Germanism when the world was blind to its dangers, has a blind spot in his own eye on this side. In his latest book, *The Winning of the War*, he says:

When the Allies hold that the Social Democrats and the Socialists will bring about a democratic revolt in Germany that will cripple the Government in the prosecution of the war they are leaning upon a broken reed.

Yet it was, as we now know, the Socialist revolt that disabled the army and put the fleet altogether out of action.

Those who were on the inside seem to have been as much in the dark as the outsiders. Sven Hedin, the Swedish explorer, who was *With the German Armies* and wrote so enthusiastically about them, says that when he asked the soldiers who among them were Social Democrats, they laughed at the idea and answered: "All that rot has been washed away." Professor Rohrbach is the sanest of the German protagonists, yet in his *German World Politics* he wrote:

Only thoughtless people or those who are blinded by their political fanaticism can hope to make of Germany a Social Democratic republic. . . . No man of sense believes any more that the social dissatisfaction in Germany will culminate in the attempt at overthrowing the whole form of our government.

Somehow the senseless, thoughtless and fanatical people appear to have been nearer right than the professor.

McLaren's *Germany from Within* (1916), speaks with equal authority:

From what I know of German history and from what I saw of the German masses thruout the period of unrest I should say that there will be no revolution in the strict sense of the word, in Germany, if she emerges humiliated from the present conflict. . . . Syndicalism with its claim to control industries has never gained any footing among the workers of Germany.

Nevertheless there is a revolution in Germany in the strictest sense of the word and syndicalism is the very form it takes.

Now we do not mean to find fault with these forecasts. We cite them only to show how difficult it is to estimate the power of subterranean popular movements. If such competent authorities failed to discern the rising of the Red Dawn in Russia and Germany, what assurance have we that we are not similarly deceived as to the situation in Italy, France or England and perhaps other countries?

Instead of leaving the ninety and nine in the fold and going out after the one stray sheep, the modern pastor lectures the one faithful sheep in the fold about the ninety and nine that won't come in.

It is now claimed by the anti prohibitionists that wine and beer are not intoxicating. Strange that so important a point should have been hitherto overlooked. The question should at once be settled by experiment, provided any person can be found self-sacrificing enough to submit to the test in the interests of science.

# THE STORY OF THE WEEK

## Peace Congress Transactions

With the presentation of the draft of the Constitution of the League of Nations on February 14, and the departure of President Wilson, popular interest in the doings of the Peace Congress suffered some diminution, tho that body continued its work, dealing with various topics of great importance. Colonel E. M. House took the President's place as a member of the American delegation. The Supreme Council on February 15 took up for consideration the Russian question, heard delegates from The Lebanon concerning the interests of that country, and appointed a special committee, of which Charles H. Haskins and Colonel S. D. Embick are the American members, to study the claims of Belgium for an indemnity. It was announced on February 17 that the proposed conference with various Russian factions on Princes' Island might be abandoned and new invitations be issued for such a gathering in a form which would be acceptable to the governments which had declined the former one.

The Italian delegation on February 18 informed the Congress that it could not accept the proposal which had been

made by the Jugo-Slavs for arbitration—presumably with President Wilson or M. Clemenceau as arbitrator—of the rival claims in Dalmatia. They took this ground because other territorial claims were being referred to the Peace Congress for decision, and they thought that no special course should be pursued in this or any case. The territorial claims of the Jugo-Slavs in other directions had already been submitted to the Congress for determination by its commission created for that purpose.

Meantime the Supreme Allied Council is said to be expediting work on the formulation of the peace treaty itself, with the expectation that by the time President Wilson returns to Paris five or six of its essential provisions will be drafted and ready to present to the full Congress.

## The Armistice Extension

The Supreme War Council authorized Marshal Foch to renew the armistice with Germany, on such terms of increased severity as seemed good to him. On February 17 he was able to report that Germany had accepted his terms and that the armistice had accordingly been extended. The

German Cabinet was at first unanimously opposed to acceptance of the terms prescribed, and favored refusing to do so and taking the chances of the Allies renewing their advance. At the last moment, however, wiser councils prevailed, and the Cabinet gave its assent to the terms. When these were reported to the National Assembly at Weimar by Matthias Erzberger, the head of the Armistice Commission, there was general consternation and resentment. The members of the Assembly apparently would not regard Germany as conquered in the war, and could not therefore understand why she should be treated as a conquered nation.

The new terms are reported to require Prussia to surrender the major part of Posen to the Poles and to refrain from operations against Poland in that region; to prohibit German troops from invading Russia within certain limits; and to require the dismantling of all fortifications on Heligoland and along the Kiel Canal, the latter highway being opened to international commerce. It was also provided that the renewal of the armistice should be for an indefinite period, to be ended at any time on three days' notice. It is intimated that further and more stringent terms await the approval of the Supreme War Council.

## Attempt to Kill M. Clemenceau

An attempt was made on the morning of February 19 to assassinate the French Prime Minister. Georges Clemenceau, as he was leaving his home to go to the War Office. His assailant was a French anarchist, named Emile Cottin, variously reported as twenty-five and as only eighteen years of age, who sprang upon the running board of the Minister's automobile and fired seven shots from a pistol. Only one bullet struck M. Clemenceau, wounding him in the shoulder. The would-be assassin and another who seemed to be a confederate were roughly handled by the bystanders and were arrested by the police. The aged statesman—he is past seventy-seven—alighted from the car and walked into his house, where he was presently attended by a physician who examined and dressed his wound and pronounced it not serious. It did not appear that there was any international significance in the crime, or anything more than the unreasoning hatred of anarchists for the representatives of authority.

## Germany Defiant

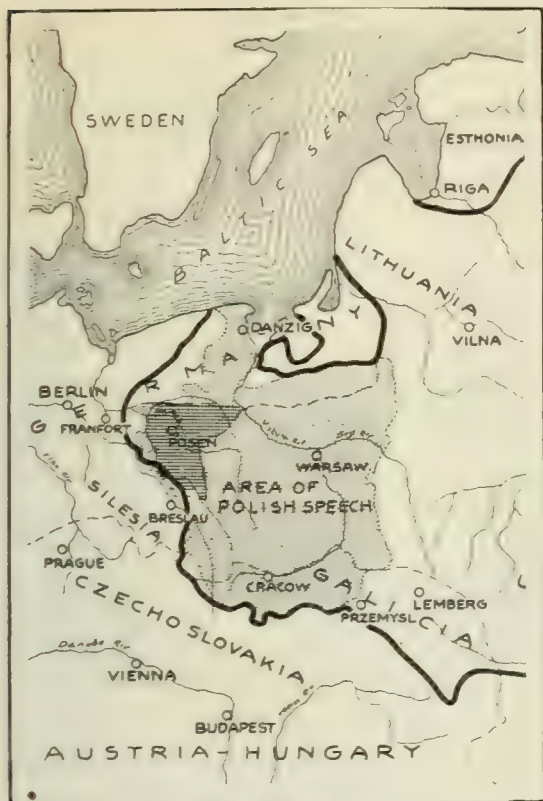

An increasing spirit of defiance toward the Allies and the Peace Congress on the part of the German Government and the National Assembly is reported. Count von Brockdorff-Rantzau, the Foreign Minister, on February 14 made an aggressive speech, in which he de-

THE EXTENT OF ZEPPELIN RAIDS ON LONDON

The points marked on this map show where more than four hundred bombs were dropped on London by the German Zeppelin raids. For military reasons the exact places hit were kept secret during the war. In all 522 persons were killed and about four times as many were wounded. In one Zeppelin raid alone fire damage to the amount of £1,500,000 was done. It will be seen that several bombs fell in Woolwich Arsenal, yet the damage there was quite insignificant.

POLISH CLAIMS

German territory ceded to Poland by the Powers at Paris is shaded by dark cross-hatching. The lighter stippled area is that inhabited mostly by Poles. The heavy black line encloses the territory of old Poland and claimed by the new Poland

plored the fact that "Germany's voluntary disarmament" had not softened the hearts of her enemies, and declared that he had repulsed and would continue to repulse all attempts to destroy the old military system of Germany and to replace it with a new democratic army. In order to test the sentiment of the Assembly on his policy, he then offered his resignation, but withdrew it on the unanimous assurance that his views were regarded with favor.

It was announced on February 13 that with the disbandment of the classes of 1916 and 1917 the German army would be reduced to about 100,000 men on the eastern front and a standing army at home of about 450,000 men of the 1918 and 1919 classes.

**Interests of Germany** Dr. Schiffer, the German Minister of Finance, on February 15 announced the necessity of asking for credits of no less than \$6,424,000,000, of which \$750,000,000 would be used for building houses. The total credits already voted, and loans, aggregated more than \$35,000,000,000, not counting \$1,500,000,000 in treasury notes. The bank bills in circulation amounted to \$10,875,000,000. It is observed that the last given figures indicate a perilous degree of inflation of the German currency, while the total debt announced is equal to about two-fifths of the entire assets of the empire.

Renewed strikes and political outbreaks are reported from various parts of Germany. Extensive strikes have nearly paralyzed business in Berlin. These are not political in character save as they are a protest against the hardships which the people are suffering in consequence of the war and the terms of the armistice. More serious are the Spartacan insurrections which began on February 16 at Nuremberg,

in Bavaria, and at Gelsenkirchen, in the Rhine provinces. By February 18 a general political strike, attended with much violence, was ordered by the Spartacans thruout the great Ruhr industrial region along the Rhine. The Spartacans occupied with armed forces Bochum, Hamborn, Muelheim, Düsseldorf, Essen and other places.

**Report on Germany** Captain Walter H. Gherardi, of the United States Navy, after a two weeks' official visit of inspection in Germany, returned to Paris on February 19 with an unfavorable impression of the condition of that country. There was much unemployment, and there was a restless, dissatisfied spirit prevalent which threatened mischief. The food supply was not sufficient for more than a month. The German army had shrunk to inconsiderable proportions and was no longer formidable.

**For German Ambassador** A dispatch from Weimar on February 19 reported that Professor Henry Lammasch, Prime Minister of Austria, had been selected by the German Government as the new German Ambassador to the United States, to be sent as soon as diplomatic relations are restored after the ratification of the peace treaty; contingent, of course, upon the German provinces of Austria being annexed to the German republic.

**Affairs in Russia** American and Allied operations against the Bolsheviki in the Archangel district of Russia continue, with general success. Bolshevik propaganda, well written and printed in English, has been copiously distributed from some unknown source among both troops and civilians in that region.

The Lettish Republican government accepted the invitation to the Princes' Island conference on condition that the Bolshevik government of Russia would

withdraw all its forces from Letvia and cease all offensive operations; declaring that Letvia had entirely separated from Russia and had formed an independent state. The Esthonian government took similar action.

News came on February 18 that some days before General Denikine had advanced 231 miles to the Caspian Sea, scattering a Bolshevik army of 100,000 men and capturing 31,000 prisoners, ninety-five guns and vast stores of military and other supplies. This victory would, it was assumed, enable him to turn his attention to the Don region, where the anti-Bolshevik forces were in much need of aid. General Denikine, who was formerly Russian Chief of Staff, is acting in coöperation with Admiral Kolchak, the head of the anti-Bolshevik government at Omsk.

Word also came of several defeats of the Bolsheviks at the hands of the Ukrainians, in the neighborhood of Kiev, to which capital the Ukrainian government was reported to have returned in triumph. Poltava and Khar'kov were also reported to have been reoccupied by the Ukrainians.

**Poland in Peace and War** The special mission from the Peace Congress to Poland was joyously received at Warsaw and at once set to work to investigate the affairs, controversies and tribulations of the restored Polish state. It was largely because of its recommendations that the surrender of much of Posen to the Poles was required of Germany in the new armistice.

It was announced on February 16 that an agreement had been reached between Poland and Lithuania, under which the German forces were to withdraw from the latter country and be replaced by Poles.

The conflicts between the Poles and Ukrainians and Ruthenians continue, Lemberg being the trouble center.

#### THE ALTAR OF BOLSHEVISM

The huge box draped in red, around which Bolshevik representatives are grouped, was erected in the main square opposite the Moscow Soviet to commemorate the Bolshevik seizure of the Russian Government. It was here that the heaviest fighting took place and the revolutionists used cannon and shrapnel to establish their domination. The banners in this photograph are in honor of the International Conference at Moscow

Both Thurners in London Observer

THE EX-KAISER "WHAT A BLOOD-CURDLING NOISE!"

**The Austrian Elections** Elections were held in the German provinces of Austria on February 16 for members of a National Assembly. The results so far as known indicate a considerable plurality of Social Democrats, and the probability of their forming a coalition with other factions which will give them control of the Assembly. This is assumed to assure the taking of action for the annexation of those provinces to Germany, and thus the extinction of Austria as an independent nation.

Such annexation would be much deplored by France, and it is intimated that an effort will be made to have the Peace Congress forbid it, on the ground that such annexation without the sanction of the Congress is as bad as an effort by a nation to readjust its boundary lines in advance of a decision by the Congress. It is pointed out that the proposed annexation would add 9,000,000 population to Germany, thus more than recouping the losses of the war and making Germany at least numerically stronger than ever.

The Government of German Austria

### THE GREAT WAR

**February 13**—Draft of Constitution of League of Nations adopted by committee. Revolt in Rumania.

**February 14**—Draft of League Constitution read by President to Peace Congress. President left Paris for home.

**February 15**—President sailed for home. Terms of extended armistice presented to Germany.

**February 16**—Elections for Austrian National Assembly. Spartacan outbreaks in Germany.

**February 17**—Terms for extended armistice accepted and signed under protest. New conference with Russian factions planned.

**February 18**—Italy declined arbitration of territorial dispute with Jugoslavs. Peace Congress considered Russian disarmament.

**February 19**—Attempt to assassinate M. Clemenceau. Mrs. Roosevelt visited grave of her son Quentin in France.

his protested against the demand of Italy for the delivery of 100 locomotives and 2000 cars, on the ground that the rolling stock belongs to all the states of the former empire, and that therefore each state should contribute pro rata. It also complains that the taking of the engines and cars by Italy would cripple traffic, disorganize the food supply, and provoke disorder thruout Austria.

**Bolshevism in the Far East** Refugees from Moscow at Geneva report that Lenine and his Bolshevist colleagues are directing a fanatical propaganda in India and China, and among the border tribes, with a view to effecting a Bolshevik revolution in those countries. In some regions Lenine himself has been proclaimed as the reincarnation of Genghis Khan, and portraits of him in Tartar or Chinese dress have been widely distributed.

**French War Finances** The French Minister of Finance, Louis L. Klotz, on February 19 announced a plan for dealing with the financial problems arising from the war, as follows: Claim from the enemy full payment of his debt; ask from the French taxpayer only what is indispensable, imposing a tax upon capital which would be spread over a number of years; oppose all non-productive expenditures; continue to appeal to the people for credit while at the same time lowering the interest rate on loans. In this way he hoped to avoid throwing too heavy a burden upon the present generation. He also urged close union and coöperation among the Allied Powers in matters of finance.

It is estimated that France's total war expenses will aggregate \$36,400,000,000. Her resources to meet them comprize \$3,600,000,000 from taxation, \$10,800,000,000 from four war loans, \$4,000,000,000 advanced by the Bank of France, and other sums from loans from Allies and credits opened in foreign countries, aggregating \$31,600,000,000. Thus there is a deficit of \$4,800,000,000. But in addition there must be provided compensation to civilians for ravages of war and many other special expenses, probably bringing the total deficit up to \$10,000,000,000.

**British War Claims** Andrew Bonar Law, Government leader in the British House of Commons, announced on February 13 that the British delegates at the Peace Congress had been definitely instructed to claim from Germany an indemnity which would not only repair damages actually caused but also the cost of the war to which the country had been put by Germany's acts.

**British Labor Conference** While the great strikes in Great Britain have subsided, much agitation in the labor world continues. The Government has accordingly decided to call a National Labor Peace Conference, probably on February 27, which Mr. Lloyd George will open with

a speech discussing labor problems from a broad national point of view. He will propose that a cabinet of twenty members be formed, half representing labor and half capital, which shall remain in session during the transition period from war to peace.

**French Socialists Against Berne** The forty-three Socialists of the French Chamber of Deputies under the lead of M. Morel, on February 16 issued a sweeping repudiation of the International Labor and Socialist Congress at Berne. They declare that body to be abnormal in character, having been constituted without giving a proper opportunity for representation and organization; and to be badly discredited by the refusal of the Belgian laborites to participate, the voluntary abstention of the Italians and Swiss, and the abstention of the English National Socialists, the Italian Socialist Union, and the American Social Democratic League. They also condemn the conference for its hesitant and temporizing policy toward Germany and toward Bolshevism. This action of the forty-three Deputies is assumed to foreshadow a serious split in the Socialist party in France.

**The President's Return Trip** The President left Paris on the night of February 14, in a pouring rainstorm, and at 11:15 the next morning, sailed from Brest on the steamer "George Washington," on his return to this country to transact the necessary business incidental to the close of the session of Congress, and also to explain and to advocate the Constitution of the League of Nations before Congress and the American people. He had a few hours before his departure presented the draft of that Constitution to the Peace Congress, by which it was favorably received tho of course not finally acted upon, and had made a noteworthy speech in explanation and support of it. (The texts of the Constitution and the President's speech are printed fully elsewhere in

Heading in Brooklyn Daily Eagle

A DANGEROUS DERELICT

Morris in Spokesman's Review.  
UNCLE SAM: "NOW TO GET BACK WITHOUT BREAKING MY NECK"

these pages.) His last act on leaving France was to issue a farewell message to the French people, gracefully expressing appreciation of their hospitality and of sympathy with France in her sufferings and problems, and promising to return for the completion of the work of the Peace Congress.

His homeward voyage was reported daily by wireless telegraphy, as proceeding safely and pleasantly. On the first day it was announced that he had nominated Hugh C. Wallace, of Tacoma, Washington, to succeed William G. Sharp, resigned, as Ambassador to France. Mr. Wallace is a close personal friend of the President and of Colonel E. M. House, and has been a careful student of international affairs, especially during the war.

**No Big Standing Army** The maximum enlistment of 175,000 men authorized in the national defense bill of 1916 is retained in the bill which has been passed by the Senate to provide for the resumption of voluntary enlistments in the peace time army.

Legislation providing for a temporary military establishment of about 540,000 officers and men during the fiscal year beginning next July 1 was eliminated from the annual army appropriation bill in the House after passage of the Senate bill.

The House also adopted the army appropriation bill, which now goes to the Senate. It carries a total of \$11,070,000,000 for the War Department for the twelve months after June 30.

**Army Injustice** Brigadier General Samuel T. Ansell, Acting Judge Advocate General of the Army, created a nation wide sensation when he brought before the Senate Committee on Military Affairs last week evidence that arraigned the whole army system of administering justice and showed that military administration of justice for the great democratic army of the United States thru the medium of courts martial is a travesty on all

judicial procedure, and virtually deprives the soldier of those fundamental guarantees for the protection of life and limb enshrined in the Bill of Rights and embodied in the Constitution. Brigadier-General Ansell's office has passed on some 18,000 or 20,000 cases and the charge that he brought of extreme harshness resulting in cruel and unjustifiable sentences was based on a sufficient number of cases, he said, fully to justify the general indictment.

One instance that he gave was of two soldiers with the American army in France who were sentenced to death for refusing to fall in for roll call when they were physically incapable of doing so, owing to incapacitation from exposure while on duty.

Another case was that of a drafted boy, who, within his first month in the army, was found by a lieutenant smoking a cigaret while on kitchen duty. He swore at the lieutenant who ordered him to stop smoking and he was consequently court-martialed and sentenced to dishonorable discharge and forty years in prison.

The Senate is continuing the investigation opened by General Ansell and a bill has been introduced by Senator Chamberlain, Chairman of the Committee on Military Affairs, to secure a more humane mode of dispensing justice to the men composing the army by minimizing the discretionary powers of military commanders and placing the power of revision and appeal in the hands of the judge advocate.

Under present conditions the court-martial can hand down a sentence of guilty, the soldier has no appeal and the Judge Advocate General has no power whatever to revise.

WHEN A FELLER NEEDS A FRIEND

**The Senate's Taste for Pork** The Rivers and Harbors bill, otherwise known as the "pork barrel," is having a stormy voyage in the Senate, but the indications are that it will pass successfully. A vote of 34 to 29 upheld the measure on a test motion proposed by Senator Smoot, of Utah, one of the strongest opponents of the bill. Senator Smoot moved to strike out the appropriation of \$100,000 provided as this year's expenditure by the Government on the \$733,000 project to provide a six-foot channel for the Oklawaha River, Florida, in the home state of Senator Fletcher, chairman of the Commerce Committee. Information brought out in the debate disclosed the fact that the commerce of the Oklawaha, which amounted to 99,000 tons in 1910, when the Government first

Collected & Enlarged

#### CALIFORNIA'S MASKED BALL.

The ordinance requiring every one to wear a mask preventing influenza has aroused indignation and led to some amusement in various California cities. These players and umpire wearing gauze masks during a ball game in Pasadena show one of the more laughable incidents. But a mass meeting of protest in the same city and the attendance of 5000 citizens at an Anti Mask League meeting in San Francisco are evidence of the serious disapproval of the people.

## OUR NEW AMBASSADOR TO FRANCE

Hugh C. Wallace of Seattle has been appointed by wireless from President Wilson to fill the vacancy caused by the resignation of William Graves Sharp, United States Ambassador to France. Mr. Wallace has been prominent in Democratic politics for many years. Under President Cleveland's administration he held the position of receiver of public moneys for Utah

undertook to improve it, had dwindled to 11,265 tons in 1917.

Senator Kenyon, of Iowa, added his arguments against the Oklawaha appropriation, likening it to another item in the "pork barrel" bill which provides funds for developing Newbegun Creek, North Carolina, the commerce of which last year did not appear in any statistics of the Department of Commerce because the only boat plying its waters had been destroyed by fire.

These efforts of Republican senators failed, however, to retard the progress of the bill, which will apportion \$33,000,000 worth of alleged Democratic pork.

**Labor Wants Still More** The strike epidemic was most severe in the building trades last week, calling out 100,000 men, with the promise of more to follow, and tying up operations on practically every big building contract in the country.

The key to the situation seems to lie in the settlement of the employees' grievances at the army base being erected by the Government in South Brooklyn, New York. It was there that the trouble started last November when the quartermaster's department of the army ruled that \$5.50 a day was the prevailing rate of wages in this city and refused to permit contractors on the Brooklyn army base to pay more. This rate was established by agreement between Secretary Baker and President Gompers, of the American Federation of Labor. Since then a survey has been made of conditions and wages in New York, and the carpenters contend that the findings show three-fourths of the contractors in New York to be paying \$6.50 a day. Their strike is the culmination of demands for this dollar a day increase.

Another point on which the employees are protesting by their strike is the right of the employers to get together in secret conclave and fix the financial condition of the workingman without a representation of the latter.

The employers, on the other hand, contend that the employees have violated an agreement previously made by which difficulties were to be submitted to arbitration and that the men must now return to work before settlement can be undertaken.

Secretary of War Baker and Secretary of Labor Wilson issued a request on February 17 to representatives of employers and employees to confer with them in Washington for the settlement of the strike. Both Ronald Taylor, president of the Building Trades Employers' Association, and William L. Hutcheson, international president of

the carpenters and director of the strike, announced that they would act promptly upon this Government suggestion.

The carpenters' strike tried to assume an international character on February 17 by means of a cablegram sent by the Executive Council of the American Federation of Labor to Samuel Gompers, president of the Federation, who is in Paris now heading the International Labor Conference. The cablegram read:

Hostile attitude of New York building contractors has caused a continent-wide strike. We understand several large New York contracting firms are now seeking European contracts. The building trades of America request that they be given no recognition until their destructive designs upon organized labor are withdrawn and that you give this matter the fullest publicity to our friends thruout Europe.

Besides sending this message to President Gompers the Executive Council of the American Federation of Labor outlined a program of reconstruction upon which it urged Congress to take early action. The main points it asked for were:

1. That sufficient money be appropriated by Congress to complete Government construction work suspended during the war.
2. That Congress appropriate sufficient money to pay salaries to soldiers and sailors between the time they are discharged and the time they find employment—pay for a year if necessary.
3. That Congress purchase new land, or take Government land, stump it, irrigate and drain it, and sell it to the men discharged from the service on long-term payments, and arrange so that the men can borrow money to build houses, buy farm implements and seed, so that they will be able to produce a crop for next year.
4. That immigration be stopped during the period of reconstruction—for four years if necessary.

In Butte, Montana, the street car service, suspended out of sympathy with the striking miners, has been resumed by a vote of the carmen and practically every mine in the district has reopened with full shifts of workmen. The unions officially declared the

## THE BAND THAT TOLD THE WORLD THE YANKS WERE COMING

When the negro troops that pounded back the Germans thru one hundred and ninety-seven days of heavy fighting marched triumphantly up Fifth Avenue last week they stepped to the music of their own regimental band, the band that taught the Allies what "jazz" meant and that became the most famous exponent of American music in the war. In Paris it was given a vote of honor as ranking with the British Grenadiers, the Garde Republicaine and the Royal Italian, chosen as the four best bands in the world. The band was organized and led by Lieutenant Jim Europe, the only colored commissioned officer in the 369th, and before the war the famous leader of Europe's Orchestra. And when it played its triumphal march thru New York the bandmen beat four drums that they had captured from the Germans in Alsace.

Darling in New York Tribune

CAPITAL AND LABOR—UNITED THEY STAND

Marcus in N. Y. Times

CAPITAL: "IF YOU DESTROY THE BOAT, WE BOTH GO DOWN"

end of the miners' strike, which was called in protest against a reduction of a dollar a day in wages.

The garment workers' strike in New York for a forty-four hour week was augmented by some 20,000 workers, makers of kimonos and children's dresses. The dress and waist makers' strike has reached its fourth week without achieving any definite results.

A decision of the War Labor Board in favor of a forty-two and one-half hour week of five days for textile workers sent back to the mills the 17,000 silk makers in Paterson, New Jersey.

**Losing Money on the Railroads** The financial results of Government operation of railroads, as given out in a statement by Director General Hines, show that the net Federal railroad income for the year fell short of the standard return by \$202,135,602. The standard return for the year is given as \$890,385,685. The net Federal income was \$688,200,083. Operating revenue increased 21.4 per cent. Operating expenses increased 40.3 per cent.

The Director General's statement points out that wage increases had the effect of increasing the 1918 operating expenses by \$583,000,000. The full effect of the wage increase was not felt in 1918, as some of the higher wages did not go into effect until late in the year, and the effect of these increased wages for a full year could not be shown by the 1918 figures. These wage increases for the full year 1919 may reach \$900,000,000.

"In considering the results for 1918," says the Director General,

it should be borne in mind that that year was almost wholly one of war conditions. It was necessary to move freight expeditiously, in many cases regardless of cost. Preference had to be given to munitions traffic, and this naturally militated against economies. In addition, the railroads were compelled in many instances to employ inexperienced and inefficient labor, due to

the inroads made upon their forces by the demands of the military service. It should not be overlooked in this connection, that the railroads not only had to supply the demands of the military service generally, just as other industries did, but also had the special demand made upon them of supplying the men for the military railways in France. Therefore, in considering comparisons with previous years, the fact that 1918 was one of war conditions should be constantly borne in mind.

#### Prohibition in Canada

The next great fight of the prohibition forces, now that they have won the United States, will probably be waged in Canada. War time emergency legislation there has already done much to drive out liquor traffic, temporarily at least, so that by the first of next May bone-dry conditions will prevail thruout the Dominion of Canada. Eight provinces—Prince Edward Island, Nova Scotia, New Brunswick, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia—are now dry by provincial enactment, while the Province of Quebec comes under prohibitory law on May 1. Quebec now

has, under local veto, 1097 municipalities dry, including the city of Quebec, and 90 municipalities wet, including the city of Montreal.

This prohibition order continues in force during the war and for one year afterward. But in the dry provinces, with the exception of Ontario and British Columbia, prohibition has been lifted out of the realm of war emergency and made permanent on the statute books. It is expected that a referendum will be taken in these two provinces after the return of soldiers now overseas. The Dominion Prohibition Committee has submitted to the government of Canada a request embodying three distinct proposals: That the provisions of the war-time order-in-council be embodied in permanent legislation; that the legislation be continued in effect until a vote of the electors shall have been taken upon the question; that ample notice be given of the taking of the vote so that there will be no mistake as to what the people really want.

POOR SERVICE

# THE LEAGUE

## Presented by President Wilson to the

I have the honor, and assume it a very great privilege, of reporting in the name of the commission constituted by this conference on the formulation of a plan for the League of Nations. I am happy to say

that it is a unanimous report, a unanimous report from the representatives of fourteen nations—the United States, Great Britain, France, Italy, Japan, Belgium, Brazil, China, Czechoslovakia, Greece, Poland, Portugal, Rumania, and Serbia.

(President Wilson then read the con-

stitution of the League, published in full below, and continued.)

Fourteen nations were represented, among them all of those powers which for convenience we have called the great powers, and among the rest a representation of the greatest variety of circumstances and interests. So that

## COVENANT OF INTERNATIONAL FRIENDSHIP

*Preamble*—In order to promote international cooperation and to secure international peace and security by the acceptance of obligations not to resort to war, by the prescription of open, just and honorable relations between nations, by the firm establishment of the understanding of international law as the actual rule of conduct among governments and by the maintenance of justice and a scrupulous respect for all treaty obligations in the dealings of organized people with one another, the powers signatory to this covenant adopt this constitution of the League of Nations:

### ARTICLE I

THE action of the high contracting parties under the terms of this covenant shall be effected thru the instrumentality of a meeting of a body of delegates representing the high contracting parties of meetings at more frequent intervals of an executive council and of a permanent international secretariat to be established at the seat of the league.

### ARTICLE II

Meetings of the body of delegates shall be held at stated intervals and from time to time as occasion may require for the purpose of dealing with matters within the sphere of action of the league. Meetings of the body of delegates shall be held at the seat of the league or at such other places as may be found convenient, and shall consist of representatives of the high contracting parties. Each of the high contracting parties shall have one vote, but may not have more than three representatives.

### ARTICLE III

The executive council shall consist of representatives of the United States of America, the British Empire, France, Italy and Japan, together with representatives of four other states, members of the league. The selection of these four states shall be made by the body of delegates on such principles and in such manner as they think fit. Pending the appointment of these representatives of the other states representatives of [blank left for names] shall be members of the executive council.

Meetings of the council shall be held from time to time as occasion may require, and at least once a year, at whatever place may be decided on, or, failing any such decision, at the seat of the league, and any matter within the sphere of action of the league or affecting the peace of the world may be dealt with at such meetings.

Invitations shall be sent to any power to attend a meeting of the council at which matters directly affecting its interests are to be discussed, and no decision taken at any meeting will be binding on such power unless so invited.

### ARTICLE IV

All matters of procedure at meetings of the body of delegates or the executive council, including the appointment of committees to investigate particular matters, shall be regulated by the body of delegates or the executive council and may be decided by a majority of the states represented at the meeting.

The first meeting of the body of delegates and of the executive council shall be summoned by the President of the United States of America.

### ARTICLE V

The permanent secretariat of the league shall be established at ———, which shall constitute the seat of the league. The secretariat shall comprize such secretaries and staff as may be required under the general direction and control of a secretary general of the league, who shall be chosen by the executive council; the secretariat shall be appointed by the secretary general, subject to confirmation by the executive council.

The secretary general shall act in that capacity at all meetings of the body of delegates or of the executive council.

The expenses of the secretariat shall be borne by the states members of the league, in accordance with the apportionment of

the expenses of the International Bureau of the Universal Postal Union.

### ARTICLE VI

Representatives of the high contracting parties and officials of the league when engaged on the business of the league shall enjoy diplomatic privileges and immunities, and the buildings occupied by the league or its officials or by representatives attending its meetings shall enjoy the benefits of extraterritoriality.

### ARTICLE VII

Admission to the league of states not signatories to the covenant and not named in the protocol hereto as states to be invited to adhere to the covenant requires the assent of not less than two-thirds of the states represented in the body of delegates and shall be limited to fully self-governing countries, including dominions and colonies.

No state shall be admitted to the league unless it is able to give effective guarantees of its sincere intention to observe its international obligations, and unless it shall conform to such principles as may be prescribed by the league in regard to its naval and military forces and armaments.

### ARTICLE VIII

The high contracting parties recognize the principle that the maintenance of peace will require the reduction of national armaments to the lowest point consistent with national safety and the enforcement by common action of international obligations, having special regard to the geographical situation and circumstances of each state, and the executive council shall formulate plans for effecting such reductions.

The executive council shall also determine for the consideration and action of the several governments what military equipment and armament is fair and reasonable in proportion to the scale of forces laid down in the program of disarmament, and these limits, when adopted, shall not be exceeded without the permission of the executive council.

The high contracting parties agree that the manufacture by private enterprise of munitions and implements of war lends itself to grave objections, and direct the executive council to advise how the evil effects attendant upon such manufacture can be prevented, due regard being had to the necessities of those countries which are not able to manufacture for themselves the munitions and implements of war necessary for their safety.

The high contracting parties undertake in no way to conceal from each other the condition of each of their industries as are capable of being adapted to warlike purposes or the scale of their armaments, and agree that there shall be full and frank interchange of information as to their military and naval programs.

### ARTICLE IX

A permanent commission shall be constituted to advise the league on the execution of the provisions of Article VIII and on military and naval questions generally.

### ARTICLE X

The high contracting parties undertake to respect and preserve as against external aggression the territorial integrity and existing political independence of all states members of the league. In case of any such aggression or in case of any threat or danger of such aggression the executive council

shall advise upon the means by which the obligation shall be fulfilled.

### ARTICLE XI

Any war or threat of war, whether immediately affecting any of the high contracting parties or not, is hereby declared a matter of concern to the league, and the high contracting parties reserve the right to take any action that may be deemed wise and effectual to safeguard the peace of nations.

It is hereby also declared and agreed to be the friendly right of each of the high contracting parties to draw the attention of the body of delegates or of the executive council to any circumstances affecting international intercourse which threaten to disturb international peace or the good understanding between nations upon which peace depends.

### ARTICLE XII

The high contracting parties agree that should dispute arise between them which cannot be adjusted by the ordinary processes of diplomacy, they will in no case resort to war without previously submitting the questions and matters involved either to arbitration or to inquiry by the executive council and until three months after the award of the arbitrators or a recommendation by the executive council, and that they will not even then resort to war as against a member of the league which complies with the award of the arbitrators or the recommendation of the executive council.

In any case, under this article, the award of the arbitrators shall be made within a reasonable time, and the recommendation of the executive council shall be made within six months after the submission of the dispute.

### ARTICLE XIII

The high contracting parties agree that whenever any dispute or difficulty shall arise between them which they recognize to be suitable for submission to arbitration and which cannot be satisfactorily settled by diplomacy, they will submit the whole matter to arbitration. For this purpose the court of arbitration to which the case is referred shall be the court agreed on by the parties or stipulated in any convention existing between them.

The high contracting parties agree that they will carry out in full good faith any award that may be rendered. In the event of any failure to carry out the award the executive council shall propose what steps can best be given to give effect thereto.

### ARTICLE XIV

The executive council shall formulate plans for the establishment of a permanent court of international justice, and this court shall, when established, be competent to hear and determine any matter which the parties recognize as suitable for submission to it for arbitration under the foregoing article.

### ARTICLE XV

If there should arise between states members of the league any dispute likely to lead to rupture, which is not submitted to arbitration as above, the high contracting parties agree that they will refer the matter to the executive council; either party to the dispute may give notice of the existence of the dispute to the secretary general, who will make all necessary arrangements for a full investigation and consideration thereof.

For this purpose the parties agree to communicate to the secretary general, as

# OF NATIONS

## Peace Conference February 14, 1919

I think we are justified in saying that the significance of the result, therefore, has the deepest of all meanings, the union of wills in a common purpose, a union of wills which cannot be resisted, and which, I dare say, no nation will run the risk of attempting to resist.

Now as to the character of the docu-

ment. While it has consumed some time to read this document, I think you will see at once that it is very simple, and in nothing so simple as in the structure which it suggests for a League of Nations—a body of delegates, an executive council, and a permanent secretariat.

When it came to the question of determining the character of the representation in the body of delegates, we were all aware of a feeling which is current thruout the world. Inasmuch as I am stating it in the presence of the

promptly as possible, statements of their case, with all the relevant facts and papers, and the executive council may forthwith direct the publication thereof.

When the efforts of the council lead to the settlement of the dispute, a statement shall be published indicating the nature of the dispute and the terms of settlement, together with such explanations as may be appropriate. If the dispute has not been settled, a report by the council shall be published, setting forth with all necessary facts and explanations the recommendation which the council thinks just and proper for the settlement of the dispute.

If the report is unanimously agreed to by the members of the council other than the parties to the dispute, the high contracting parties agree that they will not go to war with any party which complies with the recommendations and that if any party shall refuse so to comply the council shall propose measures necessary to give effect to the recommendation.

If no such unanimous report can be made it shall be the duty of the majority and the privilege of the minority to issue statements indicating what they believe to be the facts and containing the reasons which they consider to be just and proper.

The executive council may in any case under this article refer the dispute to the body of delegates. The dispute shall be so referred at the request of either party to the dispute, provided that such request must be made within fourteen days after the submission of the dispute.

In any case referred to the body of delegates all the provisions of this article and of Article XII relating to the action and powers of the executive council shall apply to the action and powers of the body of delegates.

#### ARTICLE XVI

Should any of the high contracting parties break or disregard its covenants under Article XII, it shall thereby *ipso facto* be deemed to have committed an act of war against all the other members of the league, which hereby undertakes immediately to subject it to the severance of all trade or financial relations, the prohibition of all intercourse between their nationals and the nationals of the covenant-breaking state, and the prevention of all financial, commercial or personal intercourse between the nationals of the covenant-breaking state and the nationals of any other state whether a member of the league or not.

It shall be the duty of the executive council in such case to recommend what effective military or naval force the members of the league shall severally contribute to the agreed force to be used to protect the covenants of the league.

The high contracting parties agree further that they will mutually support one another in the financial and economic measures which may be taken under this article, in order to minimize the loss and inconvenience resulting from the above measures, and that they will mutually support one another in putting any such measures aimed at one of their members by the covenant-breaking state, and that they will afford passage thru their territory in the form of any of the high contracting parties who are cooperating to protect the covenants of the league.

#### ARTICLE XVII

In the event of disputes between one state member of the league and another state which is not a member of the league, or between states not members of the league, the high contracting parties agree that the state or states not members of the league shall be invited to accept the obligations of membership in the league for the purpose of such dispute, upon such conditions as the executive council may deem just, and upon acceptance of any such invitation, the above

provisions shall be applied with such modifications as may be deemed necessary by the league.

Upon such invitation being given the executive council shall immediately institute an inquiry into the circumstances and merits of the dispute and recommend such action as may seem best and most effectual in the circumstances.

In the event of a power so invited refusing to accept the obligations of membership in the league for the purposes of the league, which in the case of a state member of the league would constitute a breach of Article XII, the provisions of Article XVI shall be applicable as against the state taking such action.

If both parties to the dispute when so invited refuse to accept the obligations of membership in the league for the purpose of such dispute, the executive council may take such action and make such recommendations as will prevent hostilities and will result in the settlement of the dispute.

#### ARTICLE XVIII

The high contracting parties agree that the league shall be intrusted with general supervision of the trade in arms and ammunition with the countries in which the control of this traffic is necessary in the common interest.

#### ARTICLE XIX

To those colonies and territories which, as a consequence of the late war, have ceased to be under the sovereignty of the states which formerly governed them, and which are inhabited by peoples not yet able to stand by themselves under the strenuous conditions of the modern world, there should be applied the principles that the well-being and development of such peoples form a sacred trust of civilization, and that securities for the performance of this trust should be embodied in the constitution of the league.

The best method of giving practical effect to the principle is that the tutelage of such peoples should be intrusted to advanced nations, who, by reason of their resources, their experience or their geographical position can best undertake this responsibility, and that this tutelage should be exercised by them as mandatories on behalf of the league.

The character of the mandate must differ according to the stage of the development of the people, the geographical situation of the territory, its economic conditions and other similar circumstances.

Certain communities formerly belonging to the Turkish Empire have reached a stage of development where their existence as independent nations can be provisionally recognized, subject to the rendering of administrative advice and assistance by a mandatory power until such time as they are able to stand alone. The wishes of these communities must be a principal consideration in the selection of the mandatory power.

Other peoples, especially those of Central Africa, are at such a stage that the mandatory must be responsible for the administration of the territory, subject only to the maintenance of public order and morals, the prohibition of abuses, such as the slave trade, the arms traffic and the liquor traffic, and the prevention of the establishment of fortifications or military and naval bases and of military training of the natives for other than police purposes and the defense of territory, and will also secure equal opportunities for the trade and commerce of other members of the league.

There are territories, such as Southwest Africa and certain of the South Pacific Isles, which, owing to the sparseness of their population, or their small size, or their remoteness from the centers of civilization, or their geographical contiguity to the mandatory state and the other circumstances, can be best administered under the laws of the

mandatory state as integral portions thereof, subject to the safeguards above mentioned in the interests of the indigenous population.

In every case of mandate, the mandatory state shall render to the league an annual report in reference to the territory committed to its charge.

The degrees of authority, control or administration to be exercised by the mandatory state shall, if not previously agreed upon by the high contracting parties in each case, be explicitly defined by the executive council in a special act or charter.

The high contracting parties further agree to establish at the seat of the league a mandatory commission to receive and examine the annual reports of the mandatory powers, and to assist the league in insuring the observance of the terms of all mandates.

#### ARTICLE XX

The high contracting parties will endeavor to secure and maintain fair and humane conditions of labor for men, women and children, both in their own countries and in all countries to which their commercial and industrial relations extend, and to that end agree to establish as part of the organization of the league a permanent bureau of labor.

#### ARTICLE XXI

The high contracting parties agree that provision shall be made thru the instrumentality of the league to secure and maintain freedom of transit and equitable treatment for the commerce of all states members of the league, having in mind, among other things, special arrangements with regard to the necessities of the regions devastated during the war of 1914-1918.

#### ARTICLE XXII

The high contracting parties agree to place under the control of the league all international bureaus already established by general treaties if the parties to such treaties consent. Furthermore, they agree that all such international bureaus to be constituted in future shall be placed under control of the league.

#### ARTICLE XXIII

The high contracting parties agree that every treaty or international engagement entered into hereafter by any state member of the league shall be forthwith registered with the secretary general and as soon as possible published by him, and that no such treaty or international engagement shall be binding until so registered.

#### ARTICLE XXIV

It shall be the right of the body of delegates from time to time to advise the reconsideration by states members of the league of treaties which have become inapplicable, and of international conditions, of which the continuance may endanger the peace of the world.

#### ARTICLE XXV

The high contracting parties severally agree that the present covenant is accepted as abrogating all obligations *inter se* which are inconsistent with the terms thereof, and solemnly engage that they will not hereafter enter into any engagements inconsistent with the terms hereof. In case any of the powers signatory hereto or subsequently admitted to the league shall, before becoming a party to this covenant, have undertaken any obligations which are inconsistent with the terms of this covenant, it shall be the duty of such power to take immediate steps to procure its release from such obligations.

#### ARTICLE XXVI

Amendments to this covenant will take effect when ratified by the states whose representatives compose the executive council and by three-fourths of the states whose representatives compose the body of delegates.

official representatives of the various governments here present, including myself, I may say that there is a universal feeling that the world cannot rest satisfied with merely official guidance. There has reached us thru many channels the feeling that if the deliberating body of the League of Nations was merely to be a body of officials representing the various Governments, the peoples of the world would not be sure that some of the mistakes which pre-occupied officials had admittedly made might not be repeated.

It was impossible to conceive a method or an assembly so large and various as to be really representative of the great body of the peoples of the world, because, as I roughly reckon it, we represent, as we sit around this table, more than twelve hundred million people. You cannot have a representative assembly of twelve hundred million people, but if you leave it to each Government to have, if it pleases, one or two or three representatives, tho only with a single vote, it may vary its representation from time to time, not only, but it may [originate] the choice of its several representatives. [Wireless here unintelligible.]

Therefore, we thought that this was a proper and a very prudent concession to the practically universal opinion of plain men everywhere that they wanted the door left open to a variety of representation, instead of being confined to a single official body with which they could or might not find themselves in sympathy.

And you will notice that this body has unlimited rights of discussion—I mean of discussion of anything that falls within the field of international relations—and that it is especially agreed that war or international misunderstandings, or anything that may lead to friction or trouble, is everybody's business, because it may affect the peace of the world.

And in order to safeguard the popular power so far as we could of this representative body, it is provided, you will notice, that when a subject is submitted, it is not to arbitration, but to discussion by the executive council. It can, upon the initiative of either of the parties to the dispute, be drawn out of the executive council on the larger form of the general body of delegates, because thru this instrument we are depending primarily and chiefly upon one great force, and this is the moral force of the public opinion of the world—the pleasing and clarifying and compelling influences of publicity, so that

intrigues can no longer have their covert, so that designs that are sinister can at any time be drawn into the open, so that those things that are destroyed by the light may be promptly destroyed by the overwhelming light of the universal expression of the condemnation of the world.

#### ARMED FORCE AS A LAST RESORT

Armed force is in the background in this program, but it is in the background, and if the moral force of the world will not suffice, the physical force of the world shall. But that is the last resort, because this is intended as a constitution of peace, not as a league of war.

#### A LIVING THING IS BORN

A living thing is born, and we must see to it what clothes we put on it. It is not a vehicle of power, but a vehicle in which power may be varied at the discretion of those who exercise it and in accordance with the changing circumstances of the time. And yet, while it is elastic, while it is general in its terms, it is definite in the one thing that we were called upon to make definite. It is a definite guarantee of peace. It is a definite guarantee by word against aggression. It is a definite guarantee against the things which have just come near bringing the whole structure of civilization into ruin.

Its purposes do not for a moment lie vague. Its purposes are declared, and

and suspicious eyes upon the maneuvers of one another, while the thought of statesmen has been about structural action and the larger transactions of commerce and finance.

Now, if I may believe the picture which I see, there comes into the foreground the great body of the laboring people of the world, the men and women and children upon whom the great burden of sustaining the world must from day to day fall, whether we wish it to do so or not, people who go to bed tired and wake up without the stimulation of lively hope. These people will be drawn into the field of international consultation and help, and will be among the wards of the combined governments of the world. This is, I take leave to say, a very great step in advance in the mere conception of that.

#### THE END OF SECRET TREATIES

Then, as you will notice, there is an imperative article concerning the publicity of all international agreements. Henceforth no member of the League can claim any agreement valid which it has not registered with the Secretary General, in whose office, of course, it will be subject to the examination of anybody representing a member of the League. And the duty is laid upon the Secretary General to publish every document of that sort at the earliest possible time.

I suppose most persons who have not been conversant with the business of foreign affairs do not realize how many hundreds of these agreements are made in a single year, and how difficult it might be to publish the more important of them immediately, how uninteresting it would be to most of the world to publish them immediately, but even they must be published just as soon as it is possible for the Secretary General to publish them.

#### TO LOOK AFTER LITTLE NATIONS

Then there is a feature about this covenant which, to my mind, is one of the greatest and most satisfactory advances that has been made. We are done with annexations of helpless peoples, meant in some instances by some powers to be used merely for exploitation. We recognize in the most solemn manner that the helpless and undeveloped peoples of the world, being in that condition, put an obligation upon us to look after their interests primarily before we use them for our interests, and that in all cases of this sort hereafter [Continued on page 307]

The Peace Conference in session. Presidents Wilson and Poincaré are at the farther end

its powers are unmistakable. It is not in contemplation that this should be merely a league to secure the peace of the world. It is a league which can be used for coöperation in any international matter. That is the significance of the provision introduced concerning labor. There are many ameliorations of labor conditions which can be effected by conference and discussion. I anticipate that there will be a very great usefulness in the Bureau of Labor which it is contemplated shall be set up by the League. Men and women and children who work have been in the background thru long ages, and sometimes seemed to be forgotten, while governments have had their watchful

# WHAT THE LEAGUE OF NATIONS MEANS

BY HAMILTON HOLT

The Editor of The Independent sends this cablegram from Paris, where he has attended the Peace Conference as Vice-President of the League to Enforce Peace

NOT since our forefathers met in Philadelphia on July 4, 1776, to sign the Declaration of Independence has there been a more memorable political event than that which took place at the Quai d'Orsay in Paris on February 14, 1919, for on that day the committee representing fourteen free nations presented to the third plenary session of the Peace Conference a draft of the constitution for a League of Nations which when passed will constitute the Declaration of Interdependence of the world.

It was my high privilege to be a spectator at this historic and epochal occasion. The famous clock room in which the conference was held was again thronged with the premiers and statesmen of all nations, all distinguished in position and ability, but here inconspicuous thru their very multitude. Exactly, at three-thirty President Wilson entered and walked thru the line of dignitaries, shaking hands right and left. It seemed to me that he looked pale and older than usual. Evidently the strain and stress of the past fortnight has weighed heavily upon him, but he smiled constantly, and when he rose to read the immortal document it was evident that he was conscious of the gravity of the moment in the history of the world and in his own career. He chose to assume a matter of fact tone of a corporation president reading his annual report to the stockholders, tho occasionally his voice struck a deeper vibrant note as he came to some special sentence whose meaning he wished to emphasize. When at last he laid down the printed draft upon the table in front of him, he smiled genially at the audience and then began the address in its support. I have never heard him speak better, altho he did not depart from his calm, almost casual delivery. His address was a marvel for coolness and simple earnestness. Many of its vivid phrases deserve to live in history. When he had concluded total silence reigned for a full half of a minute, more eloquent, I think, of the emotions of the delegates than the most prolonged applause. After half a dozen addresses expressive of concurrence by the representatives of the other nations, the draft was laid upon the table for final adoption later in the session and the Conference adjourned.

The draft itself is, I am confident, as strong as it could possibly be made under the circumstances. Naturally, it is the result of some compromises. If more had been attempted less would have been got.

As I have had many opportunities to discuss the draft with the various delegates during its progress thru the committee in the last two weeks, and as Colonel House did me the honor of appointing me liaison officer between the American Peace Commission at Paris and the League to Enforce Peace at home, I think I can best serve the readers of The Independent by giving very brief comments on each of the twenty-six articles of the covenant.

The term "covenant" is President Wilson's. Hitherto agreements between nations have invariably been called conventions, protocols or treaties. The word "covenant" is borrowed from the Old Testament and lifts the agreement to a higher plane than any previous contract between nations. The preamble was worded by President Wilson, and it will be noticed that he has given the place of honor among the aims of the League to the promotion of international coöperation and placed second the securing of international peace.

The Roman numerals in the following paragraphs refer to the articles of the draft as published in full upon another page of this issue.

I. In the original British and American proposals for this article the Executive Council was the executive committee of the body of delegates. Now both bodies may be distinct in personnel.

II. This article marks the beginning of the parliament of men. The original idea of the body of delegates was simply a committee of bargaining ambassadors, one from each nation. The provision restricting each party to three representatives was an afterthought adopted at the last session of the committee in response to outside pressure. It was urged that one delegate could not represent the different factions in a nation.

III. The proposal that the body of delegates should meet at stated intervals was due to President Wilson. The Executive Council is the most active and powerful organ of the League. The big powers naturally control it but as they must usually act unanimously, the rights of the small powers are thus protected. The last paragraph of Article III providing the "invitation shall be sent to any power to attend the meeting of the Council at which matters directly affecting its interests are to be discussed"

gives the broadest possible scope to the jurisdiction of the Executive Council.

IV-V. The provision for a permanent organization and for special investigating committees will enable the Council to keep thoroly informed upon any circumstances likely to disturb the world's peace.

VI. This article providing for diplomatic privileges and immunities for the officials of the League and extra territoriality for its buildings may be the germ from which will develop the future capital of the world.

VII. The provision that "no state shall be admitted to the League unless it is able to give effective guarantees of its sincere intention to observe its international obligations" would exclude an unregenerate and militaristic Germany and would provide opportunity later for the admission of such countries as Canada, India, etc.

VIII. France would like to go much farther in the restrictions of international armament. She proposes that the League should have power to inspect armaments so that no nation can secretly overstep the limits agreed upon. She also desires an international staff and an international army in time of peace to guard the Rhine which she claims is the boundary of civilization. The complications over this article nearly split the committee. As it stands it simply pledges the nations to the principle of limitation of armaments, leaving the plans to be worked out by the League. But the question is now made permanent and its consideration mandatory on the Executive Council. All delegates with whom I talked thought that armaments will be reduced by virtue of this article, altho all saw many difficulties ahead.

IX. This article was suggested as a compromise by the British delegates to soothe the French who were disappointed in not getting all they wished in the preceding article.

X. Altho this article aims to preserve the "territorial integrity and existing political independence of all states members of the League" it contains nothing to prevent a peaceable change of territory or form of government. In this respect the League differs from the old Holy Alliance which attempted to maintain the *status quo* and to preserve autocratic dynasties.

XI. This adopts for the purposes of the League and in an improved form Article III of the Convention for the pacific settlement of international disputes of the Second Hague Conference.

XII. This means that no war can take place without a delay for hearing the case. When the discussion is taken to the arbitration court it can take its time as courts are accustomed to do. But if it comes before the Executive Council that body must make a recommendation within six months. Cases that will come before the Council will need a quick decision as they are generally political in their nature and therefore most likely to lead to war.

XIII. The American plan originally proposed special arbitration by the arbitrators for all cases. If either litigant felt aggrieved he could appeal to another three arbitrators. Provided three-fourths of the body of delegates approved the decision of the appellate tribunal it became final. The present article is more elastic and more general.

XIV. This proposal is reduced from the British more elaborate scheme for the constitution of a permanent court of international justice.

XV. According to this the only case where it might be lawful for a nation to wage war under the Covenant would be when a dispute had been brought before the Executive Council by one party and the Council could not make a unanimous recommendation. Of course the votes of interested members of the Council would not count. If nations in dispute agree to go to arbitrators or the Executive Council decides unanimously against a nation that does not voluntarily go to the Executive Council then the decision of the court recommendations of the Council are binding. This article follows substantially the victory program of the League to Enforce Peace.

XVI. Economic pressure and non intercourse are the primary sanctions of the League. Force is not to be used synchronously with economic pressure as the League to Enforce Peace suggested, but only as a last resort and on the recommendation of the Executive Council. This should meet the sensibilities of our Congress which is given the whole right under the Constitution to declare war. The last paragraph of this article is intended to distribute among all the nations of the League the losses that one nation might unduly suffer in carrying out an economic boy-

coll. If for example in a boycott against Germany Poland should suffer much more from the severance of intercourse than China or America. Poland might be ruined if the other nations did not distribute among themselves the loss.

XVII. According to this article the League will attempt to insure the peace of the world. If attacked from the outside the League becomes a League of offense and defense.

XVIII. The supervision of the trade in arms and ammunitions relates only to African tribes and certain backward peoples concerning whom certain treaties are already in existence.

XIX. The article relating to colonies is the longest and one of the most difficult of all. It embodied President Wilson's proposal as modified by General Smuts's ingenious mandatory scheme. It means that there will be no more exploiting of defenseless peoples by predatory powers, of conscienceless commercial interests. Premier Hughes vigorously opposed this because it would prevent the ambition of Australia for absolute annexation of the German islands in the Pacific.

XX. This provision for securing "fair and humane conditions of labor" is due to those who thought that the League will better function and survive longer if founded more upon the humane and economic than upon the political basis. The permanent bureau of labor will doubtless be run by labor representatives and thus be kept in closest touch with great democratic currents of thought and action. The phrase "that all nations" evidently means that the League will aim to elevate human relations everywhere in the world.

XXI. The question regarding the "freedom of transit and equitable treatment for the commerce" contemplated in this article is now being considered by a special committee of the Conference on ports, waterways and railways.

XXII. The international bureaus which are to be placed under the control of the League are the International Institute of Agriculture, the International Postal Union, and other scientific and international bureaus in existence or to be established hereafter.

XXIII. This carries out President Wilson's opposition to secret treaties, at least as regards the future. The provision that "hereafter every treaty shall be published" was introduced because it was not thought wise to make the regulation retroactive for it might be embarrassing to publish all treaties now in existence.

XXIV. This article would weed out old outworn treaties which have often caused embarrassment or given rise to wars.

XXV. By this article the Covenant is made the supreme international law.

XXVI. The proposal for amending the Covenant came from England and is one of the most important of all its articles. Thus the League can be modified at any time to meet changing conditions. It was originally planned that the Executive Council and the majority of the body of delegates could amend the Covenant, but the small states feared they might thereby be bound to unforeseen conditions so the majority was raised first to two-thirds and finally to three-fourths. Another reason for this article was because the right of secession tho discussed was not provided for.

Until the very end I feared that the committee in charge of the plan for the League of Nations would provide little more than a bare machinery for settling disputes after they had arisen. That, of course, would have been vastly worth while but now that the committee has in addition to this provided for the coöperative development of international life thru a body of delegates, administrative committees and the power of amendments I realize that we shall not only have a League to Enforce Peace but a League to Enforce Progress.

There has been a sinister campaign of villification waged against Wilson here so powerful that many people think that the American people were not behind him in this crisis in the world's history.

Now is the time of all times that our people should show the President their loyalty. We have supported our boys on the battle front and they have won the war. Let us now support our President and he will win the peace.

## THIRTY MILLION MORE ACRES

### Prohibition's Contribution in Foodstuffs

BY ROLLIN E. SMITH

**A**MONG the many great economic changes resulting from the war, none touches the people as a whole more closely than the price of foodstuffs; and that the public has suffered and is still suffering because of inflated prices of almost every article of food, no one knows so well as the housewife who does the buying.

Even the close of the war has brought no relief, and tho stocks of almost all foodstuffs are enormous, retail prices continue excessive. Notwithstanding that wheat stocks in the United States are the greatest they have ever been, no relief from high-priced flour seems possible for more than another year, because of the Government price guarantee to the farmer.

Looking further ahead, however, the consumer may see not only encouragement, but seemingly the positive assurance of materially lower and even cheap prices for all foodstuffs. The expectation of this is seen in the enormous new acreage in the United States brought under cultivation to meet war's demands for increased supplies.

This increased acreage amounts to 35,800,000 acres. That is, the area sown to grain, potato and tame hay crops in 1918 was 35,800,000 acres greater than the annual average for the five year period just before the war—1910-14, inclusive (basis of winter wheat and rye sown the previous fall in all instances).

In addition to the 35,800,000 acres

**National Prohibition alone will release, directly and indirectly, 5,000,000 acres of highly cultivated land, which will annually produce enough to feed 4,000,000 people. It will grow enough wheat, corn, oats, vegetables and hay to supply 4,000,000 people with bread, beef, mutton, pork, poultry, butter, eggs and milk. Formerly, this land supplied the nation with beer.**

of new land brought under cultivation, there will be available for food or feed crops 3,600,000 acres, the area annually devoted to growing corn, barley and rye for the manufacture of liquor; a total of 39,400,000 acres for crops never available to the nation before.

Thirty-nine million acres is an area too great to be grasped readily. It would produce three-quarters as much wheat as was annually grown in the country before the war. It is more than a third as great as the entire corn acreage of the country, equal to the entire area of land sown to oats, and ten times the area devoted to the potato crop of the nation, or equal to 75 per cent of all the land cropped to tame hay.

Therefore the promise of cheap bread and meat to the consumer contained in

this 39,400,000 acres of land is exceedingly encouraging.

This promise is in part based upon national prohibition, for none of the grain grown on the newly cultivated, land nor on the older-cultivated, either, will be used in the manufacture of liquor, unless exported.

The annual average amount of corn, barley and rye used in the manufacture of liquor in the United States for the ten year period, 1907-16 inclusive, fiscal year ending June 30, was: Corn, 35,533,000 bushels; barley, 44,900,000 bushels; rye, 4,710,000 bushels.

The amount of corn used in the manufacture of liquor represented approximately 1,500,000 acres annually (on a basis of yields in the important corn states east of the Missouri River), barley 1,800,000 acres, and rye 315,000 acres; a total of 3,615,000 acres. But it seems safe to say that another 1,200,000 acres devoted to barley and 185,000 (to make round numbers, for it is only an estimate at best) to rye will be lost to these grains as an indirect result of national prohibition, because of lack of competitive buying by the maltsters and distillers. This means that 3,000,000 acres of land which was before the war devoted to barley will be changed to other crops, and 500,000 from rye to other crops. It is not probable that the before-the-war corn acreage will decrease because of prohibition; the change will be that the 1,500,000 acres of corn used in the manufacture of liquors will now be used for cattle and

hog feed. Thus it will be that national prohibition will release for the production of crops for feed or human food the 1,500,000 acres on which corn for liquor was grown; 3,000,000 on which barley was grown, and 500,000 on which rye was grown; a total of 5,000,000 acres for the production of crops for feed or human food.

Five million acres of land, if distributed among useful crops, will produce 35,000,000 bushels of corn, 20,000,000

bushels of wheat, 35,000,000 bushels of oats, and 1,600,000 tons of tame hay. This is enough wheat to feed 4,000,000 people for a year, while the other crops would supply them with beef, pork, poultry, milk and butter, with land enough left for vegetables.

This is what the nation is promised annually, in concrete products, as a net gain in food and feed crops as a result of prohibition.

Now let us return to the enormous increase of 35,800,000 acres of new land under cultivation. This increase is based on the acreage sown for the 1918 crop and the annual average acreage sown to wheat, corn, oats, barley, rye, potatoes and tame hay in the five year period just before the war, 1910-14, inclusive (winter wheat and rye sown the previous autumn).

The following table shows the area devoted to each crop in the two periods under comparison, and the increase for each crop. It appears that in 1918 the wheat acreage gained 12,300,000 acres, corn 2,500,000, oats 6,000,000, barley 1,700,000, rye 4,140,000, potatoes, white and sweet, 860,000, and tame hay 2,300,000. These figures, like all others in this article, were gathered by the writer from reports of the Bureau of Crop Estimates of the United States Department of Agriculture.

	Acres sown five-year average 1910-1914	Acres sown for crop of 1918	Acres Increase
Wheat— winter	22,800,000	42,200,000	
Wheat— spring	12,800,000	22,400,000	
Total	52,400,000	64,600,000	12,300,000
Corn	10,500,000	15,500,000	2,500,000
Oats	22,000,000	31,000,000	6,000,000
Barley	7,000,000	9,000,000	1,700,000
Rye	2,500,000	6,640,000	4,140,000
Potatoes— white	3,700,000	4,300,000	600,000
Potatoes— sweet	600,000	920,000	260,000
Hay—tame	47,200,000	55,500,000	2,300,000
Acres Total Increase			35,800,000

Two thoughts arise when these figures are considered. First, where did the new acreage come from; and what

© Underwood & Underwood

*This increased acreage under production will mean more foodstuffs at lower prices*

will be done with it now that war's demands are past? The answer to the first hardly belongs in this article; in any event, it is complicated. The answer to the second is found, in part, in the fact that a considerable part of this new acreage, just 25 per cent of it, to be exact, is already "spoken for," that is, by the increase in wheat and rye acreage in 1919. The sowing of rye, which is done in the fall, was slightly increased last autumn over the large acreage of the previous season. Winter wheat seeding last autumn was enormously increased; the estimate is 6,000,000 acres in excess of the area sown in the fall of 1917. Next spring there will be a big increase in the area sown to spring wheat. In Minnesota it is estimated that the increase will be between 10 and 20 per cent. The spring wheat area may therefore be 3,000,000 acres greater than in 1918. The total increase in winter and spring wheat and rye will probably amount to 9,000,000 acres.

But as this increase in wheat is directly due to the Government's price guarantee for the crop to be harvested in 1919, it is certain that all of the land will not again be sown to wheat in 1920.

The disposition of the remaining 30,000,000 or more acres in 1919 is largely a matter of speculation, but who can doubt but that a very large part of that new acreage will remain under cultivation. Which means permanently lower prices for breadstuffs and feed, and therefore for meats and produce.

The proposition of cheaper foodstuffs by the way of an increased acreage is two sided: the consumer's side and the producer's. From the consumer's viewpoint it is simple. The great new acreage brought under cultivation as a result of the war, augmented by the saving of grain—corn, barley and rye that previously went into the manufacture of liquor, can mean but one thing, namely, greater production of grain and cattle and hogs. Supply

and demand will assert themselves, and when the retailer has been cured of his war-acquired habit of demanding enormous profits, the consumer will have his food supplies at reasonable prices.

From the farmer's point of view, the proposition is vastly different. The first thought that arises is: will the farmer continue to cultivate this vast new acreage when prices are declining? Some of it will, for obvious reasons, be abandoned—as

where small tracts, with low prices for commodities, cannot be cultivated profitably.

But that there will be somewhat more than this abandoned, with the incentive of war prices gone, cannot be doubted. This is already indicated by some decrease in 1918 as compared with that of 1917. There was a decrease of 9,200,000 acres in the corn acreage of 1918 as compared with 1917, mainly in five states, Kansas, Nebraska, Illinois, Iowa and Oklahoma, in the order given, tho there were important decreases in eleven states; but in the other six the decrease in corn was offset by increases in other crops. The reason for the great decrease in corn acreage in Kansas and Nebraska was that, owing to a large loss in winter wheat in the winter of 1916-17, this wheat land was planted to corn in 1917, which resulted in an abnormal corn acreage that year; but it was brought back to normal in 1918.

But the farmer will harvest a billion bushels or more of wheat in 1919, barring crop calamity, and sell it on a basis of \$2.26, Chicago, for No. 1 northern spring, hard winter and red winter wheat, with a premium of two cents for "fancy" grades, and \$2.23 to \$2.35 for No. 2; and, furthermore, as prices for corn, cattle and hogs, poultry and produce during the winter of 1918-19 were phenomenally high, he may not be alarmed by the outlook for lower prices in the future.

Generally speaking, however, the farmer appears to have placed himself in a position where he cannot go back, and so must go forward—cannot abandon but a small part of the new acreage, and so must grow crops of some kind on it. Doubtless some of it will be devoted to pastures, as it was before the war, but that means more feed for more cattle.

The day of the food profiteer therefore seems to be a short one; the farmer is having his turn now; the day of the housewife appears to be just ahead.

# WHAT WOULD JESUS DO?

BY CHARLES M. SHELDON

**T**HIS is not a new question. It has been asked a good many times since Jesus lived and gave us an example. More than fifty years ago the Bishop of Exeter, England, asked it in a noble hymn which he wrote for his parish.

It is not a theoretical question. The answer to it contains the solution to all necessary questions of human happiness and power. For all men are agreed that if every one tried to live as Jesus lived there would be no problems except those of affirmative human development on this earth.

It is not an absurd question. Nothing is absurd which has in it the possible answer to final human happiness. And this question honestly asked and honestly answered is the most necessary question for the world to ask today.

It is not an impossible question. We know what Jesus did do. Why should it be impossible to get an approximate estimate of what he would do now. The age is different, but the heart of man is eternally the same. Jesus himself is the same, yesterday, today and forever. His creed is unchanging. It is the same now as when he lived on earth. It is the only creed that will finally redeem the world. Love to God supremely: Love to brother man as to oneself—this is the only creed that will put an end to human selfishness and establish universal righteousness.

We have as a possible basis, therefore, on which to attempt an answer to the question "What Would Jesus Do?" these facts in his life which would be the same now as when he was here in the flesh.

(1) Jesus made all his human conduct fit in with his creed of love to God and man.

(2) He calmly taught an ideal in conduct far in advance of his time.

(3) He did not compromise in matters of principle, even when the loss of life itself was the penalty.

(4) He put the right and the truth in the first place. "Seek ye first the Kingdom of God" was his passion.

(5) He lived a normal life in the age in which he was born, and so far as we know did not take advantage of his own divinity to get a divine help to do things in the matter of conduct which we are unable to get.

On the basis of these facts in Jesus' life, it is not an impertinence nor an irreverence to ask what he would do at the present time in the history of the world. If we concede that the teaching of Jesus and the conduct of Jesus are of the utmost consequence to the welfare of the world, surely this question is one that we must ask. And if, in addition to that, we agree that a Christian is one who is trying to be Christlike, in what other way can he be Christlike except by following His example and doing as nearly as possible the things that He would do. Christianity is a mockery if it does not mean the doing of Christlike things and the living of the Christlike life. The nominal Christianity of the world is

*Mr. Sheldon is pastor of the Central Congregational Church, Topeka, Kansas, and the author of many religious books. A volume entitled "What Would Jesus Do?" published a few years ago, is one of his most important works*

no more Christlikeness than paganism. It is worse. For it pretends to be something it is not.

We are continually talking about the adjustment of world matters in terms of economics. Whereas no real adjustment is possible except on the basis of conduct. Political science divorced from ethics has damned the world with false philosophy and devilish diplomacy. Why, after all these years of failure to ensure world peace and happiness by means of these childish methods, do we not accept and begin to put into practice those methods which we know will bring peace and happiness?

There is a very curious attitude displayed by minds that would resent the imputation that they are not Christian, in the assertion that the Christlike conduct is the only conduct that is best, but that it is so ideal that it cannot be made to work in the everyday affairs of men. In other words, it is not practical. It is all right for prayer meeting but will not do for the market place or the legislature. It is good enough for the pulpit, but won't fit the pew. This is the everlasting and contemptuous whine of the man who wants Christianity to protect his property and his civilization but does not want to be a real Christian himself because he knows he will stand a chance to lose some of his property if he really does the Christlike thing.

But in heaven's name, if doing as Jesus would do is not practical, what is practical? The things that hard-headed business men call practical have all failed to make a better world. The commerce of the world did not prevent

the war. The diplomacy of the world did not prevent the war.

The science of the world did not prevent the war. The art and the music and the architecture and the literature and the oratory and the money of the world did not prevent the greatest destruction of men and matter we have ever known. The statesmanship of the world was powerless. All the ecclesiastical forms and rituals of the world were of no value to stop the tragedy. What could have prevented it? We do not have to hesitate for an answer. The principles of Jesus in the lives of men would have prevented the war. We know absolutely that they would. Nothing else on earth could have done it. If that is true, the imitation of the life of Jesus is the most stupendously practical thing known to men. For any force that could prevent a thing like the greatest war in history, where the "practical" things of men failed, must be the greatest "practical" force in the universe.

The answer to the question "What Would Jesus Do?" ought not to be hard to find if any one really wants to find it. The easiest thing in the world for a human being to do is the right, if he wants to do it. If he is considering his own interest, if he is constantly asking "What can I get?" instead of "What can I give?" he will not find an answer to this Jesus question. If the nations now in conference over the details of the peace treaty are going to deal in economic jugglery, and ignore the causes that plunged the world into misery, nothing will be gained. No adjustment of the affairs of men or nations will be worth anything that does not have for its foundation the creed of Jesus. Why do we not have the courage and the common sense to say it and act on it? Why wait longer for the remedy when we have one that we know will cure the disease of the world? The thing that makes wars is the sinful heart of man. Why don't the statesmen and the presidents and the premiers and the world adjusters around the peace table look at one another and frankly acknowledge that the only promise of real and lasting and universal peace is to be found in the answer to the question, "What Would Jesus Do?" How much longer must we wait for legislatures and congresses and labor conventions and the councils of the high and mighty to announce as the basic source of all human happiness the following of Jesus' teaching? Our souls are sick of the childish remedies offered by the quack statesmen and political economists and labor leaders and puerile orators and newspaper world makers. Civilization has stumbled over the Cross for two thousand years. Only when it is ready to kneel in tears of repentance for its sin, and then rise to carry that Cross on its repentant heart, will the world know the peace and happiness it is now losing because it has never yet accepted the Christ of God, but only the Christianity of man.

## THE BUILDING TRIANGLE

### Architect, Owner and Builder

IT is but recently that the belief that a house could be designed as "easily as rolling off a log" has been dispelled. But even now there are those who feel competent to create a masterpiece of building without the advice of a trained architect. And yet, if they would but observe the domestic buildings of two or three centuries ago, they would see that these dwellings were erected under the direction of trained minds, who conceived them, not only to fulfill certain practical requirements, but also with the deliberate intention of creating something beautiful. It is to these old houses that most present-day builders turn for their inspiration, so it seems odd to find a house whose prototype was planned and proportioned with great thought and skill, known as the "clever design of Mrs. So-and-So, the wife of the owner," rather than as the work of an architect.

Furthermore, it seems as if the need of architects were going to be greater than ever before. So many home-builders, who until they went to France, England or Italy as soldiers and sailors would have thought of their home, when they were ready to build it, as more or less like the ones which they have seen already, have seen, admired and now want to copy the homes of our allies. They feel that they have lived near and in many cases actually in these houses, and that they are, therefore, more competent to plan one to be erected for their own habitation than an architect. They forget that it is his busi-

BY RUSSELL F. WHITEHEAD

ness to know and understand not only the Colonial and Georgian houses we have come to consider typically American homes, but also the French and English and Italian homes, that they very probably studied them at first hand before they even thought of calling themselves "architects." A house may look simple, its simplicity is often its greatest charm, but that very simplicity is due to fine proportions, which the layman may feel are just right, but which he is almost certain to be unable to attain by himself. And then, too, the location of a house should largely determine its style, and that determination requires the trained eye and imagination of the architect.

If then, it be granted that the employment of an architect is a necessary first step in the building of a house, it may be interesting to consider just what is an architect, and what are his functions; what his relationship should be to the owner, where the responsibility for the various branches of the work should rest. There are many definitions of the term "architect," but the one which most concisely states the architect's status is offered by the American Institute of Architects: "An architect is a professional person, whose occupation consists in originating and supplying artistic and scientific data preliminary to and in connection with the construction of buildings, their appurtenances and decorations; in supervising the opera-

tions of contractors therefore; in preparing contracts between the proprietor and contractors thereof."

The first step, then, in building should be a careful selection of the architect. Once decided upon, his judgment in matters architectural should in all instances be deferred to. It is wise, if possible, to consult him about the site, and with an open mind. One may have determined that such-and-such is the site for the house, and ask the architect's advice as a matter of courtesy, but unless the owner is ready to accept the architect's decision even tho adverse, he only complicates matters by asking advice he does not really want.

The site being chosen, the style of house best fitted to it is the next consideration. In this the owner and the architect meet on equally important ground. The architect appreciates what will be most pleasing to the eye and the owner knows what best embodies his idea of his home. The architect, with a little ingenuity and tact, can honestly attempt to meet the owner's requirements without doing much violence to his idea of what the solution should be.

These two points being settled, the architect makes drawings, showing his solution. The architect has, of course, before the selection of the site or the type of house, learned positively the requirements of space and the *outside* limit of cost from the owner. The plans have, therefore, been formed with these facts in mind. The architect's solution is presented for the owner's consideration in the form of pre-

A home that shows it was planned by a trained mind with the deliberate intention of creating something beautiful

liminary sketches, showing the floor plans at a small scale, and, perhaps, a perspective drawing rendered in color or in pen and ink, showing the proposed house. At this stage of the work all refinements and changes should be incorporated. When the whole scheme has been determined upon definitely, the architect proceeds with the preparations of the working drawings and the specifications. These should be sufficiently complete to include all work to be executed. Reproductions of these drawings and specifications are presented to a selected list of contractors, whose business it is to estimate the cost and present bids for the erection of the building. Altho there are several methods of procedure in contract work, the most common practise is to construct the building under a general contract, where the responsibility for the house complete is vested in the contractor. It is the architect's duty to prepare these contracts in behalf of the owner, his legal knowledge must be sufficient to safeguard the owner's interests, without making the contract unfair to the builder, for, unless fair to all parties concerned it will not be upheld in law.

By the terms of the agreement the contractor has guaranteed to provide all material and to perform all the work shown

on the drawings and described in the specifications as prepared by the architect. The architect has included the arrangement of all sanitary equipment, and the selection thereof, the heating and ventilating systems, the engineering of artificial lighting and arranging bell and telephone wiring and the layout of all special equipment. The architect or his superintendent make frequent visits to the building to see that the work is being carried out according to drawings and specifications. If, during these visits, it is found that bad work or materials are being employed, it is the architect's duty to order the work done over again in a proper manner. In short, the duties of the architect are, first, to design the building, make the necessary drawings and write the specifications; second, to superintend the buildings, i. e., to see that materials called for in the specifications are furnished and placed in the position shown on the drawings.

The owner, on his part, should, as has already been said, state clearly all his requirements and the *outside* limit of cost to the architect at their first interview. His confidence in his architect should be such that he will in no way hamper the architect in the execution of what the architect thinks the manner in which a given thing should be done. An owner whose education has not gone forward commensurately with that of the architect has it in his power to defeat all that the most highly trained man can devise.

The owner agrees to pay the contractor for the performance of the contract. If the work should be stopped for a period of three months, thru no fault of the contractor, or if the owner should fail to pay the contractor within seven days any sum certified by the architect, the contractor may serve notice to the owner and architect to stop work and receive from the owner payment for all work executed to that time and any loss sustained upon plant or material and any reasonable profit and damage.

The contractor, it would seem, is an absolute necessity in building operations. In the terms of the definition of an architect given above, there is the expression "supervising the operations of the contractor" instead of "supervising the construction." The owner, the architect and their representatives have access to the work at all times, and the contractor is bound to provide proper facilities for inspection. During the construction of a house, the contractor submits to the architect an application for each payment that is to be made and the architect issues to the contractor a certi-

ficate for such an amount as he decides to be properly due at that time. The making and acceptance of the final payment constitutes a waiver of all claims by both owner and contractor.

To the readers who are about to build, it may not be impertinent to suggest that the real and momentous question of success or failure of the new home rests wholly upon the wise choice of an architect. The powers conferred upon him by the terms of the ordinary contract enable him to insist on good materials and workmanship, even if by any chance an incompetent contractor should be allowed to secure the work, by reason of his low bid. Clients subject themselves to no small embarrassment and financial loss if they fail to summon to their councils the architect of their choice immediately they have decided to build. His experience is of the greatest value, not only in the designing of the house itself, but in pointing out the many factors to be taken into consideration which it is unlikely that the prospective builder seeking his first experience will remember.

The contractor who carries out the architect's designs is also an important factor, and unless he is an honest and experienced man, the architect will have trouble in obtaining good, sound work.

The Siles House, Lower Woodbury, Connecticut, is an example of the two-story motif with pedimented entrance, employed in Connecticut in prerevolutionary houses. In the photograph at the bottom note the finely proportioned facade, the simple fence with its delicate urns and the balusters of the fence placed diagonally to catch the continual play of sunlight and shadow.

This is the Jewett Home, South Berwick, Maine, which was built in the old days when the country was not disfigured and dishonored by "speculative builders." All these houses were designed by successful architects to be pleasing to the eye and at the same time to fulfill all practical requirements. They show that satisfying combination of the owner's idea of a home and the architect's sense of beauty.

# THE RIGHT GARAGE FOR YOUR PLACE

**METAL FOR THE CITY**

*Not so costly as some, the embossed metal walls in imitation of rock-faced brick have a substantial, business-like appearance*

**A PROSPEROUS APPEARANCE**

*Rock-faced concrete blocks, with trim of white-faced plain blocks, of appropriate color with shingle roof (wood, metal or asbestos)*

**THE MODERN COUNTRY SHED**

*This shed roof portable garage is made of red cedar matched siding, painted outside and stained within. It looks well and is suitable for suburban locations which have a small fire risk*

**PORTABLE AND FIREPROOF**

*Portable metal construction has the merits of convenience, carefully considered compactness, and a sense of exterior fire resisting qualities all obtainable for a comparatively small outlay*

**IF YOU HAVE TWO CARS**

*All inflammable materials are omitted in this type of sheet metal work, with brick-faced siding and metal Spanish tile roof*

**THIS GROWS TO MEET YOUR NEEDS**

*This metal garage can be extended—as your cars increase, or as your neighbors combine to keep a "community garage"*

# INSIDE INFORMATION ON GARDENING

ONE of the limiting factors in all gardening operations is time. To the beginner it may seem that with the whole summer ahead there should be no particular need to hurry, but each particular vegetable grows best only under certain weather conditions, and if it can not be brought to maturity during a given period it is more than likely to fail.

Furthermore, many vegetables take so long to reach maturity that it is desirable to save the several weeks which can be saved by getting them well started before they are actually put into the garden. In addition to this is the fact that the time saved on these crops frequently enables the gardener to make use of the space they occupy for a second planting of something else, which would be impossible had not the first crop been given a start before garden planting time.

For all these reasons, therefore, it pays to begin one's gardening long before planting in the open can be done. Of course, it is usually possible to buy vegetable plants, but not infrequently the particular varieties one would like to have cannot be obtained, and very often it is not possible to get really first-class plants. Competition has kept the prices of commercially grown vegetable plants so low that the man who produces them by the thousand to sell, cannot afford to give them as much room as they should have to make specimens of really extra-fine quality. Where it is possible to do it, therefore, by far the more satisfactory way is to grow one's own plants. No elaborate equipment is needed, but, of course, a certain amount of time and, especially, regular attention will be required. Unless one is pretty certain that this can be given, it will be better not to attempt the task at all. Under these circumstances the best thing to do is to get one's own seeds of the particular variety wanted, take them to some florist or market gardener and have him start the quantities required, paying him enough above the regular market price to make it possible for him to give you plants of the very finest quality. The slight difference in first costs will be much more than made up in the results. Take, for instance, tomato plants. Strong, stocky plants from four inch pots, well hardened and with the first cluster of fruit set by the time they can be put out of doors, represent greater value to the home gardener at \$1 a dozen than the tall, spindly, soft wooded things that are usually retailed at 25 cents or 30 cents a dozen.

There are two ways of growing one's own plants: they may be started in the house, and transferred later to a cold frame out

BY F. F. ROCKWELL

of doors, or started in a regular hotbed supplied with heat from fermenting manure or hot water or steam pipes. Of course, if you have a hotbed available, or have the opportunity to make one up, that is the most satisfactory, but just as good plants may be grown by starting them in the house if conditions are right, and one does not mind the slight "mussing things up" which is likely to accompany the job.

The conditions which are needed for the successful growing of plants in the house are first of all a light, sunny window in a room which can be kept moderately warm—50 to 60 degrees at night—and in which the air can be kept from getting abnormal-

be sufficient for starting several hundred—all the average home gardener is at all likely to require. If transplanting is to be attempted in the house, much more space will be needed. Usually, however, by the time the seedlings are large enough for transplanting, it will be warm enough outside to put them in a cold-frame without artificial heat, or even in a carefully prepared, sheltered corner where they can be protected on frosty nights. Plants set outside in this way usually make much better specimens than those grown indoors, altho they may not develop as rapidly for a week or two after transplanted.

With a hotbed out of doors it is, of course, necessary, if manure is used as a source of heat, to see to it that it is in just the right condition to go into the frame, and not old stuff that has already fermented, or so rough and full of straw that the proper amount of heat will not be developed.

Either in the house or in the frame out of doors the proper kind of soil is one of the most important factors. Good soil from your own garden, if it is not too heavy, may be used as the basis, but to this should be added a third or so of its bulk of "humus," leaf mold, or thoroly decayed, very old manure.

The seeds may be sown either in a "flat," like those shown in the photographs on this page, or in "seed pans" made especially for the purpose, which can be procured from almost any hardware store. A "flat" may be made from a wooden cracker box or any similar material that is not too heavy, and which can be readily sawed up into sections about two inches deep. There should be a number of small holes in the bottom for drainage, or the boards that form the bottom may be left a half-inch apart.

Another method, where one has the space, is to use the small paper pots or "dirt bands" which can now be obtained at a very low price. The bands differ from the pots in that these have no bottoms. Either the pots or bands may be packed into flats and filled full of soil, and a few seeds sown in each pot or band.

These are thinned out, after the seedlings are well started, to a single plant, thus saving transplanting. The pot or band restricts root growth so that the roots are disturbed as little as possible when the plants are set out. The only trouble with this method, for house culture, is that it requires so much more room than starting the plants rather thickly and transplanting afterward when they are a few weeks old.

There are two classes of plants to be started, the harder things, which can be set out practically as soon as the ground can be worked, and [Continued on page 310]

Mark each row in the flat before planting, then sow thinly and evenly

so that when the young plants grow they will not be crowded

The next step is careful transplanting with a knife blade

ly dry. An overdry atmosphere is probably more often the cause of failure with starting plants in the house than any other one thing. With a close, abnormally dry atmosphere no amount of water at the roots will produce wholly satisfactory results. The air in any room can be kept at somewhere near its normal moisture content by frequent ventilation and by the evaporation of water in a pan or dish over the radiator register, or stove. If the plants are merely to be started in the house, and when large enough for transplanting, transferred to a cold frame outside, a single window will

# PAINTED FURNITURE IS HERE AGAIN

BY MARY HARROD NORTHEND

*These chairs are light green with bright decorations, and the table with its old-fashioned top is finished in brown and gold*

**S**LOWLY we are realizing that the furniture used in our winter homes is not appropriate for the warm summer season, for when nature is gay with bloom, we naturally turn to light cheerful furniture, in sympathy with our moods.

As a decorative motif in home furnishing nothing adds a more distinctive note than the hand painted furniture of Colonial days. It not only acts as a foil for the more somber hues of the ancient mahogany, but lends character as well, to the most ordinary interior, and following out the traditional lines, has a crude simplicity that recommends it for modern usage.

The reason for the attractiveness of this old-time painted furniture is that it has a charm all its own, and there is a definite homely characteristic around its primitive beauty, that makes it appeal to the heart, as well as to the eye.

Never has there been a period when interior decoration received so much attention as today, and it is this interest that has caused us to turn also to the work of the Hungarian peasant, who has left to us designs of elementary vigor, that can be copied easily for our modern requirements.

The present revival of this "peasant furniture" has also brought into the limelight the delightful "cottage furniture" which has made great strides toward the artistic,

and direct lines we can transform interiors into charming, homelike rooms. The house need not be furnished expensively to pro-

duce this delightful atmosphere, for frequently the most artistic results are worked out at small cost. It is important, however, to have a slight knowledge of right coloring, bearing in mind that one vivid line of light, or piece of gay furniture, placed in a room, conveys more meaning than if the bright tone was used in all the pieces; and by brightening up a dark room, which would otherwise be neutral in tone, it conveys the impression that the place is flooded with sunshine.

The color selected for the background should be soft and subdued so as to produce a restful effect, and the paint should be well flattened, to produce a dead surface. It should then be rubbed well with glass paper, and dusted thoroly before the design is applied. The color of chalk used to draw the design depends upon the color of the background, and the painting is worked out much as you would design your canvas, using turpentine as the medium. Flowers lend themselves most attractively to this work, or delicately tinted wreaths in plain colors are exquisite.

An old bedroom set, after being sand-papered down and given several coats of flat white paint, might then be painted with gay colored flowers, and if you are unskilled in painting it might be stenciled successfully. It is necessary to apply a coating of enamel after the flower motifs are put on, to give it a permanent and lasting finish. A whole set treated in this manner is not difficult to do, and produces a daintiness that is so fascinating to a bedroom. This is further emphasized by selecting a block print or chintz covering for the bed, and using simple dotted muslin curtains at the windows.

Dark colors are usually preferable for the other rooms of the house, altho we frequently find attractive light pieces used

in the sun parlor or breakfast room. The decoration must blend with the color note of the furniture, and surely today, with so many charming shades to choose from, one cannot go far astray in their selection. Impulses toward color and decoration are instincts which the artistic person follows, but for those who know little about it, it is better to procure the services of a decorator, who realizes the effect of the unusual, all the more if it creates an effect of cheerfulness in any room in the house.

This is particularly true of the corner cabinet, which is such an important addition to our dining room furnishings. While it is impossible today to procure a genuine

*Bring the old set down from the attic and paint it black and gold, but be sure to get a covering that harmonizes as this one does*

antique, there are many reproductions on the market excellent both in style and proportion, and it is difficult, except for the connoisseur, to discover their authenticity. Light colors are admirable for decoration. Cerulean blue, or light green, creating pieces of great charm. This is further emphasized by the open shelves, which can be painted in contrasting shades of yellow and brown, while pink, blue and yellow may be introduced in the floral decorations. While to some this may seem too gaudy, it is by the rightful combining of colors that we are able to secure fascinating and unusual interiors.

Should you chance to have an old-fashioned bureau in your attic, or an old foot stool, you can work them successfully into your chamber furnishings. First rub down the bureau and paint the top, sides and front black, leaving a wide border around the front panel. This can be painted either green or yellow, according to the color scheme of your room, and by using a bright flower for ornamentation, you can secure a most unusual piece of furniture at no cost practically at all.

Many of us are fortunate in possessing a great grandmother's chair, done in the usual yellow and black, which has probably become scarred and worn with age. This can be made [Continued on page 313]

*Cabinet of light green bordered with yellow and brown, with pink and blue flowers*

# What to Do in March

A GARDEN GUIDE BY HUGH FINDLAY

## NORTH Flower Garden

**Mulch** If the spring is early, remove all mulch from hardy perennials and bulb beds. It is bad practise to leave the mulch on after the frost has gone out of the ground. The growth is weak and in danger.

**Sweet Peas** After making a deep trench, enrich the soil, fill in with fine loam, and plant the sweet peas. A little frost will not hurt them, providing they are planted after the soil is fairly dry. Never plant sweet peas in wet soil.

**Pruning** Prune back hydrangeas and other flowering shrubs. After the frost goes, cut back the hardy perpetual roses. Work into the soil a little of the mulch, and add considerable bone meal.

**Transplant** The last of the month, providing the weather is open, you may transplant hardy perennials, before the root or bud action begins. A few roots of dahlia may be successfully planted out the last of the month.

**Clean Up** Gather up all prunings, old stalks, leaves and other refuse, and burn, in this way destroying both diseases and insect pests which are carried over in this material.

**Civic League** Start a Civic Improvement League in your community. Get the children interested in the raising of flowers. Appoint a certain day for the children to send flowers to the sick in your community. Make your town and village the most beautiful in the county.

## Orchard and Small Fruit

**Apple** This is the month to spray with lime and sulfur to destroy San Jose scale. Apply a solution one part lime sulfur to eight parts of water, and cover every branch and twig.

If the pruning work is not already done, cut out all dead wood and then a few of the live branches, providing these are crowded. Cut close to limb or trunk, so that a stump will not be left to rot back and cause a hole. Burn all prunings. If the orchard is to be cultivated, do the plowing before the buds start.

This is a good month to plant out a new orchard with such standard trees as Baldwins and Northern Spy, planting them 40x40 feet. Nothing is gained by crowding apple trees. It is not too late to top-graft undesirable varieties.

**Black-knot** Prune out all black-knot from your plum and cherry trees. Cut down and burn all wild plum and cherry. Get every farmer, fruit grower and gardener in your community to cooperate in cleaning out this disease. The only safe remedy is to burn the disease.

**Pears** Do not mulch the pears heavily with manure. This practise causes a soft growth and encourages the dreaded fire blight. Prune very little from your pear trees. The same may be said of the plum and cherry.

**Strawberry** Remove all litter from the strawberry bed before the frost.

## Vegetables

**Fertilizers** Mix a little coarse bone meal with the decayed stable manure as you apply from two to three inches to the soil. It is good practise to apply this fertilizer two to three weeks before plowing or spading. Spread evenly. Order commercial fertilizers early and keep in a dry place.

**Soil** Do not plow or spade while the soil is wet. Be sure to incorporate all fertilizers evenly thru the soil.

**Seedage** As soon as the soil is easily worked, regardless of the frosts overhead, plant out onion sets and seed, smooth round peas, beets, spinach, turnips and radish.

**Roots** If the soil is made rich and deep, plant out asparagus, horse-radish and rhubarb roots.

## Greenhouse

**Seedage** Plant the seed of tomatoes, egg-plant, and peppers in flats. Put in a warm place and shade until seed germinates. If you have a cool house, start cabbage, beets, onions, celery, cauliflower, etc., and keep them growing slowly so that they may be transplanted into the garden in April.

**Transplant** Transplant all seedlings early. Never allow them to crowd. Transfer canna roots from the storage pit and plant in large pots. Transplant young cyclamens into three-inch pots.

**Strong Plants** Pinch back such plants as coleas and geraniums in order to make them branch. The top, when cut off, may be planted in the cutting bed and make a good plant before May.

**Space** With the Easter stock crowding, build narrow shelves supported by brackets. Remove all useless plants. Start such bulbs as narcissus in boxes under the bench. Lily-of-the-valley may also be started in this way.

**Hotbeds** Regulate the watering carefully and ventilate daily. Sow the seed of lettuce, cabbage, beets, radish, Brussels sprouts, etc. Protect the plants by covering the frames with straw

mats or sash during the night. Plan to build the cold frames the last of the month.

**Roses** Pot-roses for Easter should be sprayed early in the morning on bright days. This practise keeps in check the red spider, and also softens the wood so that the buds have a better chance to grow. Apply liquid manures frequently to bed-roses. Keep the mildew down by applying flowers of sulfur.

**Carnations** The carnation cuttings should be potted and kept in a cool house. Remove all rust-affected leaves. Ventilate freely, but do not allow a draft to strike the plants.

## SOUTH

**Upper South** Virginia, North Carolina, Northern Georgia, Northern Alabama, Tennessee.

**Middle South** Lower South Carolina, Southern Georgia, Middle and Southern Alabama, Mississippi.

**Far South** Southern Louisiana and Florida.

## Vegetables, Fruits and Berries

**Upper South** Plant in the open in beds, the seedlings to be transplanted later, the seed of cauliflower, early cabbage, celery and lettuce. Plant in the open, the seed in rows, seed of asparagus, carrots, leeks, parsley, parsnips, onions, peas and salsify. This is the month to sow the seed of eggplants, pepper and tomatoes in the hotbed. Fill a dozen strawberry baskets with very rich soil and plant four cucumber seeds in each one. If the seedlings are properly transplanted by cutting the bottom from the box and lifting off the sides without disturbing the roots, the gardener will have cucumbers four weeks earlier than his neighbor.

The last of the month, plant white potatoes, onion sets, asparagus and rhubarb roots. Transplant cauliflower, cabbages, lettuce, beets and seedling onions if they have been properly hardened off.

It is not too late to plant out apple, pear, plum, peach, cherry, quince, persimmon and fig trees. If you plan to put out grape vines, plant about one-half bushel of bones three feet below the surface and in a large hole, mix them with decayed sod and garden loam. Place from one to two feet of soil on the bones before planting the vine. Such small fruit as currants, gooseberries, raspberries and strawberries may be planted out as soon as the soil is in condition to work.

**Middle South** Shallots should be divided and planted in a rich loam. Sow the seed of cauliflower, cabbage, beets, kohlrabi, turnips, peas, parsnips, salsify, collards and spinach in the open. The latter part of the month, plant out cucumbers, squash and melons. Protect the hills with glass plant protectors, or boxes covered with glass. It is safe to risk a row of string beans and sugar corn.

Increase the ventilation on the hotbeds and decrease the water so that by April the tomatoes, peppers, etc., will be sufficiently hardened to be planted to the garden. Plant out chive, horse radish and kale.

**Far South** Before planting the seed of bush beans in the garden, draw the furrow and scatter in a little sheep manure. Cover the seed at least two inches deep. Get the poles out so that by the end of the month poles and lima beans may be planted. It is now safe to plant cucumbers, leeks, lettuce, celery and mustard. Parsley, melons and okra may also be planted in the open. After all danger of frost has passed set out tomatoes, eggplants and peppers.

## Points About Manures Worth Knowing

Never apply fresh manure to growing crops.

Never allow animal manures to be exposed to the open air. An appreciable amount of plant food is lost in the form of gas.

Manure from young animals is better than manure from old animals.

By applying coarse, fresh manure to the soil and plowing or spading under, leaving the soil in the rough, you can change the texture of the soil.

The rate of applying any manure depends on the texture of the soil, the need for plant food, the kind of food available in the soil, the age of the manure, and the requirements of the crop.

If stable manure is supplemented with commercial fertilizers, less stable manure is necessary.

Mix bone meal and a very little coarse salt to horse manure to make it more valuable as a plant food.

Never scatter nitrate of soda on the foliage.

There is less danger in applying too little commercial fertilizers than in applying too much.

Never try to substitute lime for any fertilizer. It is not a fertilizer.

Never leave the lid off the liquid manure barrel.

Frequent cultivation will make the plant food in the soil available.

Plants, like children, cannot stand over or under feeding.

Know the food value of manures and only apply them when needed.

# THE NEW BOOKS

## The Golden Mean in Government

THE lectures of Professor Giddings on the Gilder Foundation at Brown University for 1918 are now published under the title of *The Responsible State*, "a Re-examination of Fundamental Political Doctrines in the Light of the World War and the Menace of Anarchism."

The little volume is not to be classed among those war books that were hastily concocted and therefore will speedily be out of date. On the contrary it presents within its hundred pages the matured conclusions of a lifetime of study by the most distinguished of American socialists. It has a permanent value as a handbook of citizenship and a guide to the problems that are now pressing for solution.

With Professor Giddings's point of view the readers of *The Independent* are familiar since he has for the last fifteen years been a regular contributor to its editorial pages. He fairly considers and finally rejects the extreme views of the Socialist and the individualist.

His hope is for an adaptable democracy in which individual initiative and diversity shall have full scope under the guidance of a strong and responsible government composed of the most competent men of the community.

But rather than attempt to paraphrase his thought let us present it in his own words:

Civilization is fighting for its life today against foes without and foes within. Warned of impending doom in a world enlightened and free, absolutism and divine right, Junkerism and militarism, conceived the mad purpose to subjugate and rule the earth. Quick to take advantage of chaos and disaster, anarchistic democracy proclaims that the social revolution is at hand.

Happily, between these perils the organized commonsense of civilization is entrenched and armed. Between aristocracy bordering on absolutism and radical democracy bordering on anarchy exists a democratic republicanism which reasonably well exemplifies the principles and fulfils the functions of that mixt government which Aristotle extolled as being all in all the best practically attainable in a concrete historical world of finite men. . . .

Democratic republicanism at its best distributes political power with a close approximation to equality among adult citizens. It measurably succeeds in establishing even-handed justice in the courts of law. It distributes public burdens with a wise regard to ability to bear them. It provides equal educational opportunities for all. It strives to protect the health and to conserve the strength of the population. Slowly at first, but in the long run surely, it curbs and abolishes privilege. It may go far—how far, no one now can predict—to achieve approximate equality of economic conditions.

But the dogma that men are or can be subjectively equal, it does not and will not concede. It takes the commonsense position that biologists know what they are talking about when they declare that by heredity men are not only different, but also are unequal, anatomically, physiologically and psychologically. It no more believes that the citizens of a state are equal in resourcefulness, or in trustworthiness, or in constructive genius than that they are equal in muscular strength, or in swiftness to run, or in health, or in longevity. Acting on these commonsense convictions democratic republicanism looks about for men of exceptional and specialized ability to perform legislative, administrative and judicial tasks. It ungrudgingly acknowledges their superiority and listens to their counsel. It puts and keeps them in positions of authority and power. As the clear-seeing Harrington in "Oceana" demonstrated that it should, it establishes in the state the political rule of "a natural aristocracy," and under that rule it builds strongly and to endure the fabric of human freedom.

*The Responsible State*, by Franklin H. Giddings. Houghton, Mifflin Co. \$1.

Jacques Copeau, who is producing and playing the leading role in "Washington"

## A Ballad Play of Washington

TO Percy Mackaye, master of pageantry, has been reserved the honor of putting the father of his country on the stage in a fashion worthy of his renown. His "Ballad Play" of *Washington: The Man Who Made Us*, is intended for community acting like his "Caliban of the Yellow Sands" and "Jeanne d'Arc" but an abridged version has been arranged for the theater. Certain scenes of it, those dealing with the meeting of Lafayette and Washington and the Franco-American Alliance were put on for Washington's Birthday by the French players at the Theatre du Vieux Colombier, New York, with the director of the company, Jacques Copeau, in the role of Washington.

The play is ingeniously constructed of fifteen actions and twelve transitions, the various historic scenes being run together by a wandering minstrel, Quilloquon, who brings in old ballads as connecting links. There are a hundred speaking parts in the festival version, enough to satisfy the dramatic aspirants of any community—but these are reduced to twenty-nine on the stage. Among the familiar episodes are the crossing of the Delaware, Valley Forge, Bunker Hill, the intrigues against Washington, Howe and André in New York, Betsy Ross and her flag, Tom Paine and his Crisis, home scenes at Mt. Vernon and the like, ending in the future—or is it the present?—with the founding of the League of Nations.

In form and treatment it reminds one of Hardy's "Dynasts" and still more strikingly of Hauptmann's famous "Ballad Festival Play" of which we gave some account in *The Independent* of September 4, 1913, and February 8, 1915, and which has since been published in translation in Huebsch's editions of Hauptmann's dramatic works. In this the old ballad meter is used almost exclusively and the director or stage manager plays the part of Quilloquon. The ending is the same, the establishment of worldwide peace, tho in Hauptmann's play Germania leads the procession and in Mackaye's it is America. The former was a futile hope; the latter an accomplished fact. It was this pacific close and the denunciation of war that caused the Crown

Prince to leave the Breslau theater in indignation and to prohibit the play. Fortunately for Mr. Mackaye and the rest of us there is no Crown Prince in America tho there are certain prominent Americans who hate the idea of a League of Peace as heartily as he did.

*Washington: The Man Who Made Us*, by Percy Mackaye. Alfred A. Knopf. \$1.75.

## The Reckoning

MR. JAMES M. BECK needs no introduction as a champion of France and Great Britain. Within him there is undoubtedly the deepest feeling that those nations with ourselves form a Democratic triumvirate destined to bring a just peace to the world. In *The Reckoning* he puts forward our relative position to the other two in the following happy expression:

At a time when American soldiers are fighting side by side with those of Great Britain and France, it is an inspiring ideal that institutional America is the child of an English father and a French mother, and no nation could have a better parentage.

It is to be expected that Mr. Beck would sit as a relentless judge upon Prussia, tho for Germany otherwise he is inclined to find extenuating circumstances when the peace council meets to proportion the guilt. Liberation of a contrite German people, other than the Prussians, he deems possible. For them there is some hope of eventually being received into the fellowship of democratic nations, but the cry of Prussia's remorse: "Who will save me from the body of this death?" must go on from generation to generation. In reviewing the actions of President Wilson thruout the war, Mr. Beck concedes "he has borne with quiet dignity the heaviest burdens ever imposed upon an American President since Abraham Lincoln."

*The Reckoning*, by James M. Beck. George P. Putnam's Sons. \$1.50.

## Democracy Made Safe

IN *Democracy Made Safe*, Mr. Drake presents his idea of what the new social order soon to be established will be. All the members of the new society are to participate equally in productive labor; and, as there is to be no other kind of labor the results of their combined effort—each one working but a few hours, say five, a day—will be a common fund of goods sufficient superabundantly to meet the wants of all, plenty beyond the dreams of avarice. Hence, of course, there will be no more avarice. Poverty will be abolished. Yet there will be no private wealth, and presumably no desire for it.

There will be no elaborate machinery for the distribution of goods, no more purchases or sales, no more business accounts—in fact no more money or other medium of exchange. The entire revolution contemplated by the author rests upon two things—unlimited production and the total elimination of capitalism. The common fund is to be, so to speak, "on tap," at the demand of every one, "without money and without price."

No one believing in social evolution would even attempt to portray thus precisely any great movement of the future. We are not surprized at the author's designation of evolution as a "naïve theory." He evidently does not hesitate at

a complete break in that continuity of human development by which the living values of the past are preserved to the present and future.

Mr. Drake seems to rely upon universal confidence as the substitute for the old system of credit. If this optimistic presumption fails of realization, the only alternative would seem to be the establishment of state socialism, as arbitrary and despotic as Bolshevism.

*Democracy Made Safe*, by Paul Harris Drake. Le Roy Phillips. \$1.

## The Lesson of the War

THE celebrated Italian historian, Guglielmo Ferrero, has produced a deeply thoughtful work in *Europe's Fateful Hour*. He might have chosen for his motto the saying, "History repeats itself," as applied to the present world war, for it is in the human aspects of comparatively minor similar convulsions in the past that he searches for the fundamental cause of this cataclysm. From this source he reduces it to a conclusion of three words—"quantity versus quality."

The immense catastrophe has shown the world that it is not possible to want at one and the same time an unlimited increase of power and a continual moral progress, that sooner or later the moment comes when the choice must be made between justice, charity, loyalty, and power, riches, success.

The author ably contends that it is striving for the Latin ideal of the best and not the Germanic material colossal wherein lies the path of human happiness and true advancement. These two aims he holds to be at present in the most violent conflict the world has ever known. He predicts that if we do not take this lesson of history to heart, the human race will be swept on to an even more terrible cataclysm.

*Europe's Fateful Hour*, by Guglielmo Ferrero. Dodd, Mead & Co. \$2.

## Faith of France

THE wall of prejudice between the different creeds in France crumbled with the first German bombardment. Religion was never more vital; denominations were never less important. France is bound together now by a great creed of sacrifice and by sublime faith in her future.

An account of how the heroism of army chaplains has helped in the new religious understanding is given by Maurice Barres in *The Faith of France*:

From the dark shadows of our churches, the wax tapers burned the crowd priest forward to kneel beneath their light. The Protestant chapel resounded with exhortations, the ancient synagogue with psalms of sorrow, and he who passed by these holy places, he who entered not, stood without and whispered a benediction.

Our various spiritual families, indulge in dreams that are universal and possible to all, dreams which they defend while defending France. This catholicity, this preoccupation as regards the whole of humanity, is the stamp of our national spirit.

*The Faith of France*, by Maurice Barres. Houghton Mifflin Co. \$1.50.

## The Marne

A little book with a big purpose. *The Marne* pictures France in the two moments of her greatest danger and America in her hour of awakening. But in spite of the spiritual significance and the great magnitude of the theme, in spite of the grace and sanctity of the style, we do not think that Mrs. Wharton is at her best in this war novel. Sometimes it fails to touch the heart and stir the imagination as "Summer" did, for instance. Needless to say, it is flawlessly written with that degree of restraint characterizing Mrs. Wharton's style.

*The Marne*, by Edith Wharton. D. Appleton & Co. \$1.25.

## DU PONT AMERICAN INDUSTRIES

## Better Roads!

Good roads mean good markets to the farmer. They mean increased trade between the farm and the city home. They mean higher profit to the farmer; they mean farm to home sales for eggs, poultry, pork products, vegetables and all farm produce.

The war is over. The millions of dollars that we have been spending on engines of destruction can now be expended on civic improvements, and if there is any one thing above all others the war has taught us the need of, it is good roads.

Now is the time! Thousands of returning soldiers and thousands of ex-munition workers are now available to furnish the necessary labor.

## Back the Better Roads Movement!

You know what it means to you. You know who has the power to make good roads appropriations in your locality. See that this body acts.

The day of the heavy motor truck is at hand. Its economical use spells good roads. Good roads in turn spell prosperity for the farmer, lower cost of living for the city dweller. Everybody benefits. The laborer is employed; the farmer comes in direct contact with his market; the consumer deals direct with the producer of his food.

If interested in this idea, write us for our road Construction and Maintenance Booklet No. 292. It's free. It will give you a lot of valuable information on this timely subject.

# HOW TO STUDY THIS NUMBER

## The Independent Lesson Plans

### ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

#### I. The League of Nations By President Wilson.

1. What is the purpose of the President's speech?
2. In what ways is the speech ideal for its purpose?
3. Make a brief that will show the principal divisions of the speech.
4. Show in what respects the introduction fulfills the requirements of a good introduction.
5. Show how the President emphasizes the importance of his subject.
6. What parts of the speech are based upon sympathy?
7. What parts of the speech indicate a feeling of responsibility?
8. What parts of the speech represent a modern carrying out of the old principles of knighthood?
9. Prove that the speech is thoroly American in spirit.
10. Compare the ideals of Burke's Speech on Conciliation, with the ideals of the President's speech.
11. Show that the spirit of Lincoln's speeches and the spirit of the President's address are much the same.
12. Prove that the conclusion is emphatic and effective.
13. Point out and explain at least five metaphors that occur in the speech.
14. What does the speech reveal concerning the character of President Wilson?
15. In what respects is the President's address greater than Washington's Farewell Address, and in what respects is it inferior to Washington's Farewell Address?
16. Read aloud the paragraph that you consider most noteworthy.
17. Your teacher has asked you to give part of the President's speech as an assembly declamation. What part will you choose? Explain.

#### II. Covenant of International Friendship.

1. Explain the meaning of every one of the following words: introduction, preamble, preface, prelude, proem, prolog, exordium.
2. Write a single, well-constructed sentence for every article of the Covenant. Write every sentence in such a way that it will express the principal thought of the article it concerns.
3. Compare or contrast the Covenant of International Friendship, and the Declaration of Independence.
4. Write a narrative of events that might have occurred if the Covenant had been in force in 1914.

#### III. What the League of Nations Means. By Hamilton Holt.

1. Write a short descriptive article on President Wilson's presentation to the Peace Conference of the Covenant of the League of Nations.
2. Prepare a four minute speech for a public assembly based on the last paragraph of Mr. Holt's article.

#### IV. Thirty Million More Acres. By Rollin E. Smith.

1. Show how the writer relates his subject to the interests of ordinary people.
2. What is the value of forming a point of contact in the beginning of an article?
3. Show how the author makes his statistics interesting and emphatic.
4. What is the writer's purpose?

#### V. Painted Furniture Is Here Again. By Mary Harrod Northend.

1. Explain, as if to your mother, how old furniture may be made highly attractive.
2. Give the syntax of every word in the first sentence.

#### VI. The New Books.

1. Define the following words: ballad, pageantry, abridged, version, role, actions, transitions, episodes, intrigues, ballad, meter.

#### VII. The Story of the Week.

1. Give a talk concerning the most recent work of the Peace Congress.
2. Explain how Shakespeare would have treated such events as the extension of the armistice and the various defiant acts and speeches of the Germans, if he had wished to weave them into a play. How many of Shakespeare's plays are founded upon actual history?
3. Give a talk summing up the most important recent events in Europe.
4. Give a talk summarizing the most important recent events in America.

### HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

#### I. The League of Nations—"League of Nations," "What the League of Nations Means."

1. Study each of the questions under this topic by reference to the "Covenant" and to Mr. Holt's explanations of the meaning of the document.
  2. Mention some of the men in this country who have announced themselves as opposed to the adoption of the constitution of the League of Peace. Summarize, as far as you can, the reasons for their opposition to the League.
  3. Note the fourteen nations mentioned by the President in the first paragraph of his address. Why is Czechoslovakia among these nations? Why are Poland, the Jugo-Slav people and Ukraina not among them?
  4. What does the President mean by the statement: "... the world cannot rest satisfied with mere official guidance"?
  5. Explain the President's statement: "A living thing is born and we must see to it what clothes we put on it."
  6. Quote the section of the Covenant which justifies the President's statements: (a) "Armed force is in the background in this program," etc. (Articles XVI-XVII.) (b) "Henceforth no member ... can claim any agreement valid which it has not registered," etc. (Articles XXIII-XXV.) (c) "We are done with annexations of helpless peoples," etc. (Article XIX.)
  7. Give a brief summary of the proposed structure of the League of Nations and the general method of procedure which the constitution proposes. (Articles I-VI.)
  8. What provision is made for the future admission of present enemy nations and of neutral nations to the League? (Article VII.)
  9. What provisions are made for the reduction of armaments and the supervision of the trade in munitions of war? (Articles VIII, IX, XVIII.)
  10. Describe the method proposed for the future settlement of international disputes. (Articles XI-XVI.) How does this method differ from that agreed upon in the Hague Conferences?
  11. How are the "colonies and territories which ... have ceased to be under the sovereignty of states which formerly governed them" to be taken care of by the League? (Article XIX.)
  12. What are some of the problems which will probably be considered by the Bureau of Labor mentioned in Article XX?
- #### II. Germany and the Allies—"The Armistice Extension," "Germany Defiant," "Interests of Germany," "Austrian Elections."
1. What new provisions appear in the armistice agreed upon on February 17? What is the reason for each of these new provisions?
  2. Is Germany justified in regarding the terms of the new armistice as especially harsh?
  3. Do the financial and economic conditions in Germany give you a key to the present unrest in the empire?
  4. On what grounds will France possibly object to the annexation of the Austrian provinces by Germany?
- #### III. Russia and the Allies—"What Happened at Archangel," "Affairs in Russia."
1. Why has the Allied and American expedition into northern Russia failed? What, according to the President, was the original purpose of this expedition? Should the expedition be reinforced or withdrawn?
  2. "In short, intervention has taken just the form that President Wilson opposed," etc. Do the facts justify this statement?
  3. What course of action does the editorial writer suggest?
- #### IV. The Food Situation—"Thirty Million More Acres."
1. What is the attitude of the people whom you know toward the recently adopted Prohibition Amendment?
  2. How do you explain the condition indicated in the first sentence of the second paragraph?
  3. What is the basis of the assertion in the first sentence of the third paragraph?
  4. How will the ultimate relief of the present food situation be brought about?

# THE LEAGUE OF NATIONS

(Continued from page 290.)

it shall be the duty of the League to see that the nations who are assigned as the tutors and advisers and directors of these peoples shall look to their interests and their development before they look to the interests and desires of the mandatory nation itself.

There has been no greater advance than this, gentlemen. If you look back upon the history of the world you will see how helpless peoples have too often been a prey to powers that had no conscience in the matter. It has been one of the many distressing revelations of recent years that the great power which has just been, happily, defeated, put intolerable burdens and injustices upon the helpless people of some of the colonies which it annexed to itself, that its interest was rather their extermination than their development; that the desire was to possess their land for European purposes and not to enjoy their confidence in order that mankind might be lifted in these places to the next higher level.

Now, the world, expressing its conscience in law, says there is an end of that, that our consciences shall be settled to this thing. States will be picked out which have already shown that they can exercise a conscience in this matter, and under their tutelage the helpless peoples of the world will come into a new light and hope.

## THE CONSCIENCE OF THE WORLD

So I think I can say of this document that it is at one and the same time a practical document and a human document. There is a pulse of sympathy in it. There is a compulsion of conscience thruout it. It is practical, and yet it is intended to purify, to rectify, to elevate. And I want to say that so far as my observation instructs me, this is in one sense a belated document. I believe that the conscience of the world has long been prepared to express itself in some such way. We are not just now discovering our sympathy for these people and our interest in them. We are simply expressing it, for it has long been felt, and in the administration of the affairs of more than one of the great states represented here—so far as I know, all of the great states that are represented here—that humane impulse has already expressed itself in their dealings with their colonies, whose peoples were yet at a low stage of civilization.

We have had many instances of colonies lifted into the sphere of complete self-government. This is not the discovery of a principle. It is the universal application of a principle. It is the agreement of the great nations which have tried to live by these standards in their separate administrations to unite in seeing that their common force and their common thought and intelligence are lent to this great and humane enterprise. I think it is an occasion, therefore, for the most profound satisfaction that this humane decision should have been reached in a matter for which the world has long been waiting and until a very recent period thought that it was still too early to hope.

Many terrible things have come out of this war, gentlemen, but some very beautiful things have come out of it. Wrong has been defeated, but the rest of the world has been more conscious than it ever was before of the majority of right. People that were suspicious of one another can now live as friends and comrades in a single family, and desire to do so. The miasma of distrust, of intrigue, is cleared away. Men are looking eye to eye and saying "We are brothers and have a common purpose. We did not realize it before, but now we do realize it, and this is our covenant of friendship."

## Stops Your Cleaning Troubles!

From the day you order an ARCO WAND Vacuum Cleaner installed in the home, your house cleaning troubles will be over. The installation is easily and quickly made in any building, new or old, and the cost is a splendid investment, not alone because of the increased value it adds to your property, but because of the elimination of the drudgery of dusting, beating, and sweeping.

## ARCO WAND VACUUM CLEANER

Simplifies and cuts cost of living; makes help easier to get and easier to keep.

The ARCO WAND Vacuum Cleaner is a permanent, valuable improvement to any property. It is always and instantly ready for cleaning carpets, rugs, mattresses, curtains, upholstery, clothes, etc. Costs about a penny a day for current. The dust and dirt are piped away into the sealed dust bucket of the machine.

### Easily put in any building, Old or new

The ARCO WAND Vacuum Cleaner is sold by dealers everywhere. Terms of partial payments may be arranged at your convenience.

Send today for an illustrated catalog, "The ARCO WAND," which fully illustrates and describes its many labor-saving uses

Department C-9 **AMERICAN RADIATOR COMPANY** 816-822 S. Michigan Ave. Chicago

Makers of the world-famous IDEAL Boilers and AMERICAN Radiators

Machine is set in basement or side room. A suction pipe runs to each floor. ARCO WAND Vacuum Cleaners, hose, and tools are sold by all Heating and Plumbing Trade.

## America's Greatest War Invention

In the March issue of ELECTRICAL EXPERIMENTER is fully described and treated editorially America's Marvellous Invention—the Rogers Underground Wireless (dooming all aerial wires). Now that peace has almost come this revolutionary invention will have a more far-reaching influence than possible even during the war.

In this same gripping issue is also described one of the greatest War Engineering Feats accomplished by any nation—

### 33 Assembled Locomotives Shipped on One Vessel

Locomotives were formerly shipped Over-Seas in parts. The enterprise of American Engineers enabled thirty-three assembled steel monsters to be delivered Cross-Seas in a single ship.

#### SEARCHLIGHTS OF THE DEEP

(In colors) a fascinating story of deep sea fish that carry their own lights.

#### FIVE CONVERSATIONS OVER ONE WIRE

Multiplex Telephony and how it works.

#### GOLD AND SILVER LOCATED BY SOUND WAVES

#### "MY INVENTIONS," By Nikola Tesla POPULAR ASTRONOMY EXPERIMENTAL CHEMISTRY

And over 100 other special features, fully illustrated in this big March number.

## THE POULTRY YARD IN MARCH

BY E. L. FARRINGTON

**T**HIS is the most important hatching month. Incubators should be started so as to have the chickens come off either late in March or early in April, unless the smaller breeds are being kept, in which case late April hatching will be satisfactory. The important thing is to have the pullets lay before very cold weather comes next fall. That means that six or seven months should be allowed for the American breeds, and five or six months for the smaller breeds.

Duck eggs usually run very fertile this month, and even the amateur will be wise to hatch out a few ducks if he has any place for raising them. It will not be necessary to grow them to maturity. If they are kept until they are ten or twelve weeks old, they will be just right for the table. Few kinds of poultry are more palatable, and the growing of ducklings is not difficult. It is best to use Pekins when they are to be raised simply for their flesh. While highly popular for egg production, the Indian Runners are much smaller even when mature. The meat of the Runner ducks, tho, is remarkably tender and sweet.

When hatching duck eggs remember that a week longer is required than for hen eggs. Indeed, if you should happen to be hatching the eggs of Muscovy ducks you will need to allow five weeks. Duck eggs are as easily hatched in incubators as are those of hens, but they require much moisture. It is advisable to sprinkle the eggs toward the end of the hatch every day. If only a few are being hatched it is feasible to dip them in water heated to a temperature of 100 or 103. Sprinkling the eggs is a good plan even when they are being hatched under hens.

It is difficult to get broody hens early in the spring, but they are usually available this month. Later there will be a good many of them and some means must be taken to break them up. This applies, of course, to breeds such as the Rhode Island Reds, Plymouth Rocks and Wyandottes. Hens of the smaller breeds, like the Leghorns and Anconas, are considered non-sitters, altho an occasional hen of these breeds will become persistently broody.

The writer once owned a white Leghorn which raised a brood of her own, and when they were large enough to look out for themselves adopted a bunch of Indian Runner ducklings, and finally left them to take a late brood of orphan chickens under her wing. This, however, is unusual.

It is advisable to set two or three hens at the same time if possible, in order that the chickens may be doubled up and given to one or more hens. It is foolish to have

a hen running with only half a dozen chicks, perhaps with only one.

It is advisable to test the eggs under hens as well as those in incubators. If any are tested out, two clutches may be united and one hen released. The best ration for sitting hens is cracked corn. The hens should be allowed to come off the nest, or, if necessary, compelled to come off at least once a day for feed and water and to dust themselves.

If the society with the long name should visit some of the poultry houses where sitting hens are being confined, it would find many opportunities for drastic action, because thousands of hens are allowed to suffer torments from vermin. Broody hens sometimes die on the nests, simply from the attacks of lice. It is both a matter of humanity and good judgment, therefore, to keep the hens well dusted with lice powder, or to apply a lump of blue ointment about the size of a pea to the skin just under the vent, rubbing it in to cover a space the size of half a dollar.

Not a few poultry keepers like to raise their chickens in brooders even tho they hatch them with hens. If incubators are used, of course brooders are indispensable. They should be ready for the chickens as soon as the latter are dry after coming out of the shells. When only a few chickens are being raised, no better kind of brooder can be found than the metal, portable hover which can be set down in any colony house or even in a shed or other building. They are easy to care for, and very satisfactory except in extremely cold weather when it is difficult to keep up the heat. Amateurs are advised to fight shy of the out-of-doors brooders which may keep the chicks comfortable, but which are difficult to manage, especially when there is snow on the ground or when high winds are blowing. Indoor brooders are by all means to be preferred. When several hundred chickens are to be raised, there is nothing better than the coal burning brooder which has a big hover and is much easier to care for than a series of lamp brooders. This year oil heated brooders of the same design are being put on the market, and seem to have some advantages over the stove brooders. They will make a particularly strong appeal to women poultry keepers, as there are no ashes to carry away and no coal to handle.

Spade up the poultry yard as soon as the ground can be worked, and if it has been neglected, scrape up and remove an inch or more of the surface dirt, which is sure to be very foul.

Sprout oats if no other green stuff is available, because the poultry particularly need something of the kind at this season.

## Remarkable Remarks

REV. W. T. McELVEEN—The soul of all improvement is the improvement of the soul.

MAYOR JOHN F. HYLAN—I would like to be the best mayor that New York has ever had.

DR. BURGHARDT DU BOIS—The chief effort to modernize Africa should be thru the schools.

REV. B. C. PRESTON—A woman is as old as she looks. A man is old when he stops looking.

DR. WALTER LAIDLAW—The war had moral elements and aims years before America entered it.

WILLIAM H. TAFT—The English Constitution is a small house with a lot of ells and bay windows.

PROF. HORACE MEYER KALLEN—Founding a colony is "passing the buck" to the government by the trader.

REV. NEHEMIAH BOYNTON—A victory is always empty except it is filled to overflowing with an ethical content.

LENORE ULRIC—You've got to be satisfied that you can do anything, but never satisfied with anything you do.

E. W. HOWE—I think I have never known a country town soprano who was not pained when Melba was mentioned.

TALCOTT WILLIAMS—Whenever the Church has governed it has lost as a Church and it has failed as a government.

CHARLIE CHAPLIN—I would a thousand times rather get a laugh thru something clever and original than thru slapstick and horse-play.

SENATOR FRELINGHUYSEN—Our soldiers are returning to civil life absolutely penniless and in many cases with back pay due them.

SERBIAN CONSUL MICHAEL PUPIN—For five hundred years it was the Turk who was the arch-enemy of the Serb; today it is the Teuton.

VISCOUNT BRYCE—Providence has ordained the British to be the race to do more for the welfare of mankind than any other people.

HENRY MORGENTHAU—The Germans have deliberately smashed the Mosaic laws; they haven't obeyed a single one of the Ten Commandments.

RIGHT HON. RUPERT GUINNESS—Since the days of Mahomet no prophet has been listened to with more superstitious respect than President Wilson.

JAMES WELDON JOHNSON—If loyalty to a nation and fighting its battles could give the American negro his full rights he would have had them long ago.

SECRETARY WILSON—Any foreigner who comes to this country and advocates the overthrow of our form of Government by force is an invading enemy.

ALBA B. JOHNSON—Just as surely as Congress put one government representative on a railroad board we shall see the beginning of the end of regulation.

JOHN D. ROCKEFELLER, JR.—I believe that the community is an essential party to industry and that it should have adequate representation with the other parties.

SAUEL GOMPERS—The war came upon us just as suddenly as peace, and we have been just as unprepared to meet the problems of peace as we were to meet the problems of war.

GEORGE W. KIRCHWY—Many a man who was contented to be a soda water clerk before the war now aspires to become a real business man. The ambition is laudable but it complicates the employment problem.

DR. FELICE FERRERO—The curious thing is that the Jugoslavs and their friends, when they accuse Italy of imperialism for its intention to incorporate 12,000 Slavs, apparently think nothing of the fact that the Jugoslavs would like to include 113,000 Italians in their own territory.

*It Makes  
No Noise*

*Silent SI-WEL-CLO*

**A**LL the taste expended in the bathroom is useless unless the water closet is quiet of operation. A noisy closet is an annoyance to you, an embarrassment to your guests.

The Silent Si-wel-clo Closet incorporates special features to make its operation quiet and thorough. Its sanitary features overcome the danger of clogging and subsequent damage. No effort has been spared to make the Si-wel-clo and its component parts the very best.

### The Trenton Potteries Company "Tepeco" All-Clay Plumbing

is most sanitary, beautiful, practical and permanent. Permanency is not denoted by a white surface, but by what material is beneath that surface. With time, inferior materials will lose their sanitary value, dirt will adhere, the appearance become uninviting—the piece lose its usefulness.

"Tepeco" Plumbing is china or porcelain, solid and substantial. Dirt does not readily cling to its glistening white surface, nor will that surface be worn away by scouring. A wise investment—a beautiful one.

## BAR DUST, WINDS, soot, noise, dampness, etc. with Chamberlin Strips

Detroit residence of  
Mrs. T. D. Bahl  
is Chamberlin equipped.

**P**REVENT FILTHY street dust and smudgy coal soot from sitting in through those crevices around your windows; lighten house-cleaning and lessen laundry bills thereby. Shut out sickness-breeding dampness, draught-creating winds or summer heat. Deadens outside noises. Have windows that always glide easily, that never rattle. For these all-season conveniences equip now with Chamberlin.

In four winters, or less, you can save the cost in fuel-savings alone! More widely used than all others—this proves it best. Simplest, most weather-tight and trouble-free. Outlasts the building. Installed and guaranteed 10 years by world's oldest, largest, most experienced weatherstrip makers—with a quarter-century reputation for reliance.

### The Chamberlin'd Window

Keeps in heat, bars out cold, drafts, dust, soot, rain, snow, damp; deadens noise; prevents rattling and "sticking"—for the life of the building. There's nothing to wear out.

### Famous Chamberlin Users include

J. P. Morgan, Elihu Root, Thos. A. Edison, E. H. Gary, Wm. G. McAdoo, W. K. Vanderbilt, Henry Ford, Charles Dana Gibson, Chas. M. Schwab, Chauncey M. Depew and hosts of others.

## INSIDE INFORMATION ON GARDENING

(Continued from page 301)

the tenderer ones which should not be set out until really warm weather has arrived and all danger of light frosts has passed. The former group includes cabbage, cauliflower, beets, lettuce, kohlrabi, parsley and celery. Onions transplant very readily, and the large Spanish varieties started now and set out about the first of May will grow to amazing size, weighing in the fall, if conditions have been favorable, several pounds apiece. Swiss chard also is easily started ahead of planting time, and will give a first cutting of "greens" several weeks earlier than if planted in the open.

The tenderer group includes such things as tomatoes, peppers, egg-plants, okra (if you care enough about it to want it extra early), melons, lima beans and sweet corn. These last three are not readily transplanted, but by the use of the paper pots or dirt bands mentioned before may be started very readily, and if carefully handled can be transferred to the open with little or no setback. Melons, lima beans and corn grow rapidly where there is plenty of warmth, and care should be taken not to start them more than three or four weeks before it will be safe to transplant them to the open.

The chief knack in starting plants either indoors or in the frame is to handle them so that the soil in which they are sown will not cake or form a crust, thus preventing the tender little shoots struggling thru to the surface after the seeds have germinated. The first step in this direction is to secure a light, spongy, porous soil by the method already described. Then put a layer of drainage material—sphagnum moss, leaf mold screenings, crushed oyster shells, or something similar—a half inch or so in depth in the bottom of the flat or seed pan before putting in the soil, after which fill in the soil to within a quarter of an inch or so of the top of the flat or pan, pressing it down evenly and firmly, particularly in the corners, and give a thoro watering. This may be done with a fine spray on a watering can, but a much better method is to place the flat or seed pan in a tub or sink where the soil can be saturated with water by letting it gradually soak up thru the bottom. Apply the water slowly, and take the flat or seed pan out as soon as the moisture begins to show on the surface—don't let it get flooded and muddy.

Mark off little furrows two to three inches apart with the point of a lead pencil or an orange stick, making them just deep enough so that the seed when covered will be barely below the surface. A light watering may be given carefully to settle the soil firmly about the seeds, and then the flat or pan should be covered with a pane of glass, leaving a slight air space at one edge. This is to prevent the too rapid evaporation of moisture, and to keep the surface of the soil from becoming dry and hard. After a flat or pan is put in a warm place (light is not necessary until after the seed has begun to sprout) germination will take place in from four to ten days, according to the kind of seed and other conditions. After planting no further watering should be given until the surface of the soil begins to get dry, which in many cases will not be until after the little seedlings are up. Use only a fine spray, and apply the water gradually—or, better still, water in the same way as suggested when preparing the flat for planting.

Plenty of sunlight, fresh air, and sufficient water are the chief requirements of the little plants for the next few weeks. The nearer the glass they can be kept the

**MISS JESSIE M. GOOD Box 206 SPRINGFIELD, OHIO**

better, and if there is any tendency for them to "draw toward the light" the flat should be changed about occasionally. If the little seedlings have come up too thickly, they should be thinned before they begin to crowd. Watering should be done only on bright days, and early in the morning so that the seedlings and the surface of the soil will have dried off by night. Don't get impatient and attempt to force the growth of the plants by keeping them where the temperature is high and where the air is close. Sturdiness and vigor are much more desirable than size.

When the seedlings are a few weeks old—about the time the second true leaf is appearing—they will be beginning to crowd and should be transplanted without further delay.

While the plants may be set directly in the soil in the cold-frame or hotbed, the work can be done more conveniently and with much better results, by transplanting into other flats, or even better, into small paper pots. The soil to be used should be similar to that prepared for sowing the seed, except that more manure can be used, and a little fine bone dust should be added.

In taking up the seedlings, do not pull them out of the flat, but lift a bunch of a dozen out with an old knife blade, and then carefully separate them, retaining as many of the tiny, fibrous roots as possible. They should be set several inches apart each way in transplanting (or in two or three inch paper pots or bands) and set well down into the soil so that the seed leaves will be just above it. Water carefully after transplanting and then do not water again for several days and keep the little plants shaded during the middle of the day from direct sunlight—this to enable them the more quickly to reestablish themselves and commence new growth. With plants in a frame outside, the matter of ventilation must be watched most carefully, as the temperature will run up under the glass during the middle of a bright sunny day, and an abundance of fresh air is absolutely essential to grow sturdy, hardy plants that will not be checked when set out in the open.

When the soil is dry enough to dig or plow, have the entire garden plot worked up the first thing. The practise of digging up a strip at a time, as it may be needed for planting, is wrong. When it is dry enough to work properly, the sooner the whole garden can be turned up and raked off so that the surface will dry out and form a mulch over the moist soil beneath, the better. The garden is then in a condition to absorb the greatest possible amount of water from the spring rains, and to store it up for summer use. Furthermore, this early preparation of the garden gives all the weed seeds near the surface a chance to sprout, and they can be destroyed rapidly by raking the ground over every week or ten days.

Such manure or compost as may be available for use on the garden should be spread evenly over the entire surface before digging or plowing. A layer three or four inches deep, if you can get that much, will be none too heavy. Lime, fertilizers, humus, sheep manure and materials of that nature should not be put on until after the ground is plowed or spaded up. They should then be broadcast and thoroughly harrowed or raked in. If you are going to use lime, it should be put on at the earliest possible moment. "Humus" can be applied at the same time. Fertilizer, bone meal, nitrate of soda, etc. should not be applied until a few days before planting.

With this work done, and out of the way, you will be able to proceed rapidly with the actual planting of the garden as fast as weather conditions permit.

# My 10 years with a Corn

## By a woman who typifies millions

How Blue-jay Acts

A is a thin, soft, protecting ring which stops the pain by relieving the pressure.

B is the B.&B wax, centered on the corn to gently undermine it.

C is rubber adhesive. It wraps around the toe and makes the plaster snug and comfortable.

I had, like most women, two or three pet corns, which remained with me year after year.

I suppose that one was ten years old. It had spoiled thousands of hours for me.

Of course I pared and padded them, but the corns remained.

### Then Somebody Told Me

Then somebody told me of Blue-jay. I promised to get it, and did.

I applied it to my oldest corn, and it never pained again. In two days I removed it, and the whole corn disappeared.

It was amazing—two days of utter comfort, then the corn was gone.

That day I joined the millions who keep free from corns in this way. If a corn appears I apply a Blue-jay promptly and it goes.

I've forgotten what corn aches were.

I have told these facts so often that not a woman I know has corns. Now I gladly write them for this wider publication.

Certainly corns are unnecessary. Paring and padding are needless. Harsh, mussy treatments are folly.

When a corn can be ended by applying a Blue-jay, surely everyone should end them. And anyone who will can prove the facts tonight.

## Horsford's

Cold Weather Plants

The best plants for cold climates are those which have been tried in the North. Many kinds which will do in Southern N. Y. or N. J. will not always winter in Northern New England. My 25th anniversary annual offers about all the really hardy shrubs, trees, vines, herbaceous plants, lilies, wild flowers, hardy ferns, &c., suitable to Northern New England. Ask for catalog X.

F. H. HORSFORD, CHARLOTTE, VT.

## DINGEE ROSES

Sturdy as Oaks. Dingee roses are always grown on their own roots—and are absolutely the best for the amateur planter. Send today for our "New Guide to Rose Culture" for 1919—it's free. It isn't a catalog—it's a practical work on rose growing. Profusely illustrated. Offers 500 varieties Roses, other plants, bulbs and seeds, and tells how to grow them. Safe delivery guaranteed. Est. 1850. 70 greenhouses. The Dingee & Conard Co., Box 331, West Grove, Pa.

## 1200 TO 1 BEAN.

A Gigantic Wonder—over 200 pods have been grown on a single plant—all well filled, producing over 1200 beans from 1 bean planted. Plants grow strong and erect, branching out in all directions, being pure white and of best quality.

Plant in your garden or any good soil, after danger of frost, any time up to June 15 only 1 Bean in a hill, and it will mature a crop in about 80 days, ripening very evenly, and the growth and yield will simply surprise you. My supply is limited and I can offer only in sealed packets, each containing over 60 Beans with growing directions. Order early to be sure of them.

Sealed packets 10c each; 3 pkts. 25c; 7 pkts. 50c; 15 pkts. \$1 postpaid. My New Seed Book is filled with High Grade Garden Seeds at lowest prices. It's mailed free. F. B. MILLS, Seed Grower, Dept. 35, ROSE HILL, N.Y.

## Dodson Purple Martin House

(Cottage Style)

28 Compartments, Price \$12

Bird Houses should be erected now in order to be sure of success as they should be ready for the birds when they return. Dodson Bird Houses are the best because they are built by a bird lover, who lives in a bird sanctuary and has spent a lifetime in studying the song birds, their habits, and how to attract them around beautiful "Bird Lodges", his home on the Kankakee River. Our song birds (our insectivorous birds) destroy billions of insect pests, protect our crops, shrubs and gardens and repay you a thousand fold with their beauty and song.

**Order Now Don't Wait** Free book on request, telling how to attract the song birds around your home, illustrating Dodson line, giving prices. Also beautiful colored bird picture free.

Joseph H. Dodson, Free American Audubon Association, 762 Harrison Ave., Kankakee, Ill. Dodson Sparrow Trap guaranteed to rid your community of these noisy quarrelsome pests. Price \$7.00.

## FLORIDA

Buy a Commercial Grapefruit Grove

AT

## LAKELAND HIGHLANDS

A Florida grapefruit grove will provide an income equivalent to 5% ON \$50,000. The cost of a grove is only ONE-EIGHTH OF A HIB SUM. Our Company conservatively estimates the first profits on a basis of only \$5 PER TREE or \$240 PER ACRE, which is only one fourth of the normal return on good groves. Even \$5 per tree will NET 40% on the investment. The income on a grapefruit grove begins after the fifth year.

Our illustrated booklet answers all questions. Write for a copy and read it. Then, if you are in a position to finance a grove, visit the property and spend a week at the Country Club as our guest.

W. I. HALLAM & CO., 225 5th Ave., N. Y.

## THE LENOX and THE BRUNSWICK

A Richer luxury, a greater comfort has been added to the quiet stately dignity of this charming hostelry through remodelling and new furnishings of rare beauty.

## The Brunswick

In Copley Square, Boston

Two Boston Hotels run by a single thought SERVICE

L. C. PRIOR, President

COMBINING the convenience of nearness to the best shops, the theatre and the train is found that correctness in appointment and service that makes dining here a real joy.

**PAINTED FURNITURE IS HERE AGAIN**

(Continued from page 302)

most effective by painting with black, and decorating with vivid touches of red and green, and it will lend an interesting note to any room.

For the living room, many of the old-time chairs that are probably tucked away in your attic are admissible for this purpose, and in their graceful outlines they have decorative qualities that make them desirable for summer furnishings. All that they need is a coat of paint properly applied, and singularly enough, two people, working side by side, with the same material, will arrive at very different results in painted surfaces, for the application of color and design has to be worked out to show one's originality.

There are innumerable ways of utilizing this painted furniture to give the necessary note of brightness and cheer to the home, and today the home decorator has an infinite variety to choose from, as well as a wealth of material to inspire her. A few pieces, carefully chosen, and rightly decorated, will often brighten up the most dismal room, and while there are no set rules to govern the furnishings, yet there are so many countries' ideas to draw from that it is not a difficult matter to express ourselves artistically, when desiring to work out cheerful cottage furniture at a reasonable price. If the decorating is well done, it is not only interesting but suitable for both the summer and winter homes, and there is about it a gay vivacity that no other furniture possesses.

## Pebbles

Even a realistic writer sometimes realizes that he can not realize on his realism.  
—*Boston Transcript.*

Mrs. A—Your husband told my husband that his word was law at home.

Mrs. B—Yes, it's one of those laws that are never enforced.—*Linotype.*

Diner—What do you call this stuff?

Waiter—Mock turtle soup, sir.

Diner—Well, tell the chef he has carried his mockery too far.—*Tit-Bits.*

"When I get a car I want one which will suit me."

"Then, my dear, you had better get a runabout."—*Baltimore American.*

"It says here that a Missouri man boasts that he has an umbrella that has been in his possession twenty years."

"Well, that's long enough. He ought to return it."—*Cincinnati Enquirer.*

Papa—Bobby, if you had a little more spunk, you would stand better in your class. Now, do you know what spunk it?

Bobby—Yes, sir. It's the past participle of spunk.—*Chicago News.*

The cases are quite numerous,

As well as quite mysterious,

When men appeared most humorous

When trying to be serious.

—*Washington Star.*

Butcher—This pound of butter you sent me is three ounces short.

Grocer—Well, I mistaid the pound weight so I weighed it by the pound of chops you sent me yesterday.—*Boston Transcript.*

"Look here, now, Harold," said father to his little son, who was naughty, "if you don't say your prayers you won't go to heaven."

"I don't want to go to heaven," sobbed the boy. "I want to go with you and mother."—*Pearson's.*

He—See that man over there? He's a bombastic ass, a wind-jamming nonentity, a conceited humbug, a parasite, and an encumbrance to the earth.

She—Would you mind writing all that down for me?

He—Why in the world—

She—He's my husband, and I should like to use it on him some time.—*Tit-Bits.*

"Say," said the new young assistant editor of the big magazine, breezing in with a basket full of poems, "I don't know what in thunder half of 'em mean!"

"Eureka!" shouted the big chief, embracing him. "Pick out the ones you don't understand, have the artists illuminate 'em in page frames that ain't artistic, and advertise the new school of literature! We've got 'em going!"—*Richmond Times-Dispatch.*

Having made his payments for Liberty Bonds, war chest, rent, coal, gas, and groceries, the poor man was broke. But he needed winter clothes, so he compromised by digging thru a closet and unearthing a heavy vest that belonged to a winter suit he had worn some years ago. He brushed the vest off and felt in the pockets.

Eureka! A discovery!

In the inside pocket of the vest was a roll of bills amounting to \$123.

And not one of them was receipted.—*Cincinnati Enquirer.*

Janet, aged nine, was taken by her mother to lunch at the house of a friend.

The hostess was of the talkative variety, and, in her enjoyment of certain interesting little incidents she was relating, quite forgot to give Janet anything in the shape of food.

After a lapse of several minutes Janet could endure this situation no longer. So, raising her plate as high as she could, she demanded in a shrill voice:

"Anybody here want a clean plate?"—*Everybody's Magazine.*

This remarkable bean will make your garden a source of profit. By intensive cultivation and care in selections we have developed a better quality of white navy bean seeds, giving extra large yield and early ripening features. See a package.

As we have a small supply on hand, we will limit the order to no packages to any one customer. Order at once.

# Little Signs That Reveal Character at a Glance

The Simple Knack of Knowing All About a Person at Sight

EVERY one knows that a high forehead indicates the intellectual type—that a receding chin denotes weakness while a pronounced chin means determination—these things and a few other signs are understood by all. But often these signs are counterbalanced by others which are just as apparent but which the average person doesn't know how to diagnose.

As a consequence we often jump to conclusions about people, which prove incorrect because we don't carry our observations far enough. It's like trying to read a sentence by looking at the first one or two words. We might guess the sense but more likely than not we'd go wrong. Yet once you have the secret, you can understand what *all* the little signs mean and get at a glance a complete picture of the characteristics of every person you meet, as easily as you read this page.

I know this to be true for I used to be about the poorest judge of character that I know. I was always making friends only to find that they were the wrong kind, or saying the wrong thing to my customers because I had failed to "size them up" correctly, or lending money to people who never intended to pay me back. I even made a costly mistake by giving up a good job to go into partnership with a man who turned out to be little short of a thief.

I was pretty much discouraged by this time and I determined that the thing for me to do was to learn to read character, if such a thing as that was possible, for I felt that unless I did know whom I could trust and whom I couldn't, I never would get very far.

It was about this time that I read an article about Dr. Katherine M. H. Blackford, who is recognized as the foremost character analyst in this country, and who was employed by a big company at an enormous salary to select their employees. I thought then that if hard headed business men paid such a record fee as this in order to insure their getting the right kind of workers that there surely must be something in character reading for me.

One day while in Pittsburg my eye was attracted to an announcement of a lecture on Character Analysis by Dr. Blackford and I decided to go and see if I could learn anything.

That lecture was an eye opener! Not only did Dr. Blackford show how easy it is to read at a glance the little signs that reveal a person's character, but after the lecture she gave a remarkable demonstration of character reading that amazed the audience.

She asked the audience to select two people in the hall to come up and be analyzed. Several men all of them entirely unknown to Dr. Blackford, were suggested and finally two were chosen. As they came upon the platform Dr. Blackford looked them over keenly and, after a moment's thought, began to analyze both of them at once. As she mentioned the characteristics of one she described the corresponding characteristics in the other.

Beginning with generalities, she told the audience, every one of whom seemed to know both men, that one was a good natured, aggressive, bold and determined, while the other was more or less of a recluse, very self-contained, quiet and gentle.

The first, she said, was brilliant, clever, quick-witted and resourceful; the second a stout man, slow and deliberate when

he spoke, and relied upon calm, mature judgment rather than brilliant strokes of ingenuity and wit.

The first man according to Dr. Blackford was active, restless, always on the go, impatient, and able to express himself only in some active, aggressive manner. The second man was studious, plodding and constant, and expressed himself after prolonged concentration and careful thought. The first man, the doctor said, was therefore especially equipped to execute plans, to carry to success any course of action, but was not particularly qualified to make plans or to map out a course of action—he could make practical use of many different kinds of knowledge but did not have the patience or the power

was the brilliant trial lawyer; the other the student and counselor, and as a team they were remarkably successful.

\* \* \* \* \*

When the lecture was over it didn't take me long to get up to the platform and inquire as to how I could learn more about character reading, and I found that Dr. Blackford had just completed a popular Course that explained the whole thing and which would be sent on approval, without charge, for examination. I immediately wrote the publishers and received the Course by return mail.

And when it came I was never so amazed in my life—for here was the whole secret in seven fascinating lessons. No hard study—no tiresome drudgery, just interesting pictures and simple directions that I couldn't go wrong on.

Why, the very first lesson taught me pointers I could use right away and it was only a matter of a few weeks before I was able at one quick but careful survey to tell just what a man was like by what he looked like.

And what a revelation it was! For the first time I really *knew* people whom I *thought* I had known for years. It was all so simple now that it hardly seemed possible that I could have made such mistakes as I did before I heard of Dr. Blackford.

People took on a new interest. Instead of just "blanks" each one became a definite personality with qualities, tastes and traits which I was always able to "spot." Why, the very act of meeting people became the most fascinating pastime in the world. And how much more clearly my own character loomed up to me. I knew as never before my limitations and my capabilities.

But it has been my contact with people in business that my new faculty has helped me most—to say that it has been worth thousands of dollars to me is to put it mildly. It has enabled me to select a new partner who has proved the best help a man ever had—it has made it possible for us to build up probably the most efficient "frictionless" organization in our line of business with every man in the right job—it has been the means of my securing thousands of dollars' worth of business from men I had never been able to sell before because I hadn't judged them correctly, for after all salesmanship is more in knowing the man you're dealing with than in any other one thing—and what I've learned from Dr. Blackford's lessons enables me to know as much about a man the first time I meet him as his best friend—sometimes more.

Is it any wonder that such concerns as the Scott Paper Company, the Baker-Vawter Company, the Westinghouse Electric and Manufacturing Company and others have sought Dr. Blackford as counselor; or that thousands of heads of large corporations, salesmen, engineers, physicians, bankers and educators have studied her Course and say that the benefit derived is worth thousands of dollars to them?

## Send No Money

The biggest surprise about Dr. Blackford's Course you haven't read yet and that is the price. If after examining the seven lessons in your own home you decide to keep the Course you need only send \$5 in full payment. If you are not entirely satisfied with the Course, send it back and you will owe nothing.

Merely send the coupon for it now without money—or write a letter and it will be sent to you charges prepaid.

You take no risk and you have everything to gain, so mail the coupon, before this remarkable offer is withdrawn.

"What I've learned enables me to know as much about a man the first time I meet him as his best friend—sometimes more."

of concentration to search out and classify the knowledge so that it could be used. While he was a brilliant speaker, a resourceful and effective debater, he lacked the power to dig out and assemble the material for orations and debates. The second man, she continued, being shy and self-conscious, could not speak in public, but was a master of study and research and strong in his ability to classify and correlate all kind of knowledge.

"Indeed," said Dr. Blackford, "this gentleman would be a remarkable success as a lawyer especially in court practice. The other gentleman would be a remarkable success as a lawyer, but his particular field would be the preparation of cases and the giving of counsel to clients. Therefore" she went on, "they would be particularly fitted to work together as partners, not only because they complement each other professionally but because their dispositions are such that they would naturally admire and respect each other."

As she said this the audience broke into a storm of applause and upon inquiry I learned that the two men were indeed lawyers and partners that they had been partners for twenty years and were well known in Pittsburg for their intense affection for each other and for the fact that during their twenty years' partnership they had never had a disagreement. One

# The answer to your questions about the cost of meat!

*Send for Swift & Company's 1919 Year Book. Gives facts and figures about America's meat supply that every home should understand. Write for it now--sent free*

Why is the price of meat so high?

Do the packers control it?

What has the war had to do with it?

How was the American army fed?

Why are the prices of butter and eggs so high?

Are the packers responsible for the high price of shoes?

What are the real facts revealed by the Federal Trade Commission's investigation of the packing industry?

\* \* \*

Swift & Company's Year Book shown above, will give the answers to these and many other interest-

ing questions about your greatest food problem. Write for it now.

There is no mystery in the meat packing business. It operates under conditions of intense competition and, like every other industry, is controlled by fundamental business principles.

This Year Book presents a review of Swift & Company's operations during 1918 and shows that the profits earned (about 2 cents on each dollar of meat sales) were too small to have any noticeable effect on live stock and meat prices.

Send us your name for this valuable book now—sent free—a postal will do.

## REMARKABLE REMARKS

**ARTHUR GLEASON**—Europe is in ruins and cannot be tinkered.

**DON MARQUIS**—Some persons are likable in spite of their unswerving integrity.

**HERBERT N. CASSON**—Ignorance of the law excuses no one—except the judges.

**THE EX-KAISER**—All that is happening in Germany goes to my heart. I did not will it.

**EDWARD W. BEATTY**—Today it is not the length of your life, but the intensity that counts.

**ED. HOWE**—I am of the opinion that every quiet person finally concludes he is a great philosopher.

**ARTHUR JAMES BALFOUR**—Democracy is not a suit of clothes that can be put on at any stage of development.

**FRANK DILNOT**—One of the fascinating things about a typical American woman is her truly romantic temperament.

**REV. W. T. McELVEEN**—A soft answer may turn away much wrath, but a little sarcasm may stir up much more.

**NICOLAI LENINE**—The Russian Government would be inclined to pay its debts if by that means the war against it could be stopped.

**JAMES WELDON JOHNSON**—It is a wonder that somebody didn't try to prove, after he licked Jim Jeffries, that Jack Johnson was a white man.

**SAMUEL GOMPERS**—It is only fair and just to say that to American labor is due a credit and an obligation for their wholehearted support of the war.

**PROF. HORACE MEYER KALLEN**—In the League of Nations is the hope and security of the black man of Africa no less than of the white man of Europe.

**NORMAN HAPGOOD**—It is very difficult for an American who has not been abroad a good deal during the war to realize the enormous power of the President in Europe.

**PRESIDENT WILSON**—National purposes have fallen more and more into the background and the common purpose of enlightened mankind has taken their place.

**PREMIER CLEMENCEAU**—The Maharaja of Bhikane invited me to hunt the tiger in his country. Well, it is the Anarchists who have hunted "the Tiger" but they missed him.

**DR. C. FISHER**—Any American economist who hereafter lends his talents to move and inflame a hoggyish chauvinism, is betraying the high ideals and purposes of America in this war.

**WILLIAM HOWARD TAFT**—Nationalism is just as consistent with an effort to organize the world internationally to maintain peace as love of family is consistent with love of country.

**C. KENNEDY**—It is the work of the Socialists to put concrete content into the empty phrase of the passing civilization. "All men are free and equal," by contradicting the facts of social inequality.

**JOHN D. BURNETT JR.**—In the days when kings and queens reigned over their subjects, the gratification of the desires of those in high places was regarded as of supreme moment, but in those days the

selfish pursuit of personal ends, at the expense of the group can and will no longer be tolerated.

**DR. GEORGE W. KIRCHWEY**—There is a great deal of talk about prosperous times that are coming but it is plain to any one in touch with the industrial situation that they are not with us yet.

## THE NEW PLAYS

Now that the war is over Goethe will go if given in French to the music of Massenet. The sorrows of *Werther* consist of four sad acts—three partings and one suicide; admirably sung and very tastefully staged by the Chicago Opera Company. (Lexington Theater.)

Another monarchy falls—this time the imaginary kingdom so dear to musical comedy—when the *Royal Vagabond* founds a republic. The play has "go," good songs, beautiful costumes, and is thoroly Cohanesque. (Cohan and Harris Theater.)

*La Nuit des Rois*. In this disguise Shakespeare's "Twelfth Night" is given in the French language and French fashion at the Theatre du Vieux Colombier. Copeau and his company are always at their best in seventeenth century horse-play.

In our issue of February 15 we said that Mr. Eberlein, author of "Italy's Claims to the Adriatic," had been requested by United States representatives to prepare for use at the Peace Conference a pamphlet on the Italian question. Mr. Eberlein asks us to say that a brief report, not a pamphlet, was submitted and that it was not for general circulation. The request for such a report was made by Government officials, but it was made unofficially.

## BALLADE OF FREE VERSE

Up to the end of the great Queen's reign  
Pegasus proved a tractable steed;  
Verse was metrical, mostly sane;  
"Fleshly" singers who wished to exceed  
Seldom, however great was their need,  
Held that prosody was a crime.  
Critics were one and all agreed:  
"Poets will never abandon rhyme."

Now, inspired by a high disdain,  
Grudging the past its rightful meed,  
Georgian minstrels, might and main,  
Urge that verse must be wholly freed  
Now and forever from rules that lead  
Singers in chains to a jingling chime,  
Slaves of the obscurantist screed:  
"Poets will never abandon rhyme."

Milton and Tennyson gave them pain;  
Marinetti's the man they heed  
Grim apostle of stress and strain,  
Noise, machinery, smell, and speed  
Yet the best of the British breed,  
Fighters who sing mid blood and grime,  
Lend new force to the ancient rede:  
"Poets will never abandon rhyme."

### ENVOY

Prince, *vers libre* is a noxious weed  
Verse that is blank *may* be sublime,  
Still, in spite of the Georgian creed  
Poets will never abandon rhyme

## INDUSTRIAL DEMOCRACY

CERTAINLY the most novel and possibly the most important clause in the Covenant for a League of Nations is Article XX providing for a permanent bureau "to secure and maintain fair and humane conditions of labor for men, women and children." This is the first time in the history of the world that the nations have joined together in a common effort to alleviate the conditions of the masses and exercise such control over commerce and industry as shall prevent these being the means of oppression and the cause of wars and revolutions.

The same shift from political to industrial questions is observable within each nation. Every government is beginning to realize that its duty is not merely to maintain the commonwealth but to increase the common wealth. Employers and employees are counseling together as never before how so to manage their mutual business for the benefit of both. The war has shown that more can be accomplished thru coöperation than by competition. It is at length being perceived that the effort of the employer to get the utmost work for the least money and the effort of the employee to get the utmost money for the least work were jointly injurious to their common interests whichever side may have gained the temporary advantage. Under the pressure of patriotism both parties have in large part abandoned their former attitudes and both have benefited. Unprecedentedly high wages have been paid and on the other hand the labor unions have relaxed their opposition to the use of labor-saving devices, speeding up methods and economical processes. In England this suspension of union rules and practices was agreed to under the explicit understanding that they would be restored at the end of the war. It was an armistice between labor and capital, not a treaty of peace. But now that the foreign war is over both sides are doubtful whether they had better resume the internal conflict. Doubtless during this emergency some men have worked harder and longer than they should and some women and children have worked who should not. These things will have to be changed. But the war has proved to men that they can by proper means accomplish more without overworking than they thought they could, it has given to women a taste of economic independence that they will not forget and it has shown that even children may under certain conditions take part with benefit to themselves in the productive activities of the society in which they live.

At any rate industrial relations will not go back altogether to their pre-war state. In England a new labor official, the shop steward, seems likely to take the place of the old walking delegate, and the Whitley Committee recommends to Parliament the formation of joint councils of employers and employees for the supervision of every trade and factory. The new ideals of industry have found their best expression in the Reconstruction Program of the Brit-

ish Labor party, which has been republished in America in various pamphlets under such titles as "Labor and the New Social Order" or "Towards a New World," and may be purchased thru any newsdealer for a few cents. This manifesto is remarkable in that it demands the democratic control of industry, not merely to get higher wages for the workingman—the aim of the old unionism—but primarily "to increase the nation's aggregate annual production, not of profits and dividends, but of useful commodities and services." The means by which it is proposed to accomplish this are:

- (a) the elimination of every kind of inefficiency and waste;
- (b) the application both of more honest determination to produce the very best, and of more science and intelligence to every branch of the nation's work; together with
- (c) an improvement in social, political, and industrial organization; and
- (d) the indispensable marshaling of the nation's resources so that each need is met in the order of, and in proportion to, its real national importance.

So, it seems, labor demands democratic control of industry for the very same reason that capital insists upon retaining control of it, that is, the necessity of maintaining efficiency of production. This indeed is the crucial point and unless it can be demonstrated by actual trials that popular management of manufacture is at least as productive as management by an individual or corporation there is no use talking about it. Every system of industry must ultimately be tested by this: Will it work? Is it efficient? Does it pay? Does it get results? Does it produce more wealth than it costs in labor and material? If it does not meet this requirement it will go into bankruptcy no matter how democratic it may be.

The decisive factor is the same as in the choice of political systems. The Czar's regime worked badly—but it worked. It maintained a certain degree of law and order; fostered a certain degree of prosperity. The Kaiser's regime worked badly—but it worked, much better anyhow than the Czar's. Now if the present Russian and German socialistic republics do not work at least as well, do not attain the aims of good government to as great an extent, then the people will call back the Czar and the Kaiser and we cannot blame them. So, too, in industry. Capitalism works badly in some respects—but it works. Any proposed substitute must at least equal it in productive efficiency or it will go under.

For the whole question hinges, as is now being recognized, on the matter of production. The three factors involved, (1) production, (2) distribution, and (3) consumption, have each in turn unduly monopolized attention, beginning with the last. When social reform began to be considered, criticism was concentrated upon consumption. Thrift, economy, saving, the simple life, the gospel of Samuel

smiles, these were the lessons taught. This was good so far as it went, but it could not go far. If we kept all our millionaires on bread and water and made them wear out their old clothes, the rest of us would not be much the richer and we might be much the poorer. We do not want curtailment, but expansion; not less luxury but more wealth for everybody.

The thrift crusade died down in time and little was heard of it till the Great War. For a long time the second factor, distribution, absorbed public attention. The inequalities of wealth shocked the public conscience as the extravagance of the wealthy had shocked the previous generation. The demand was for the division of wealth, some said equally, some said according to ability, some said according to need. The workingmen were determined to get a larger share of the profits for themselves at whatever cost to the industry. They opposed the introduction of labor saving machinery, they precipitated strikes to prove their power; they cultivated inefficiency; they deliberately slowed up their work in order to make more; they practised sabotage. This policy has by no means disappeared. In fact it has lately taken a most virulent form in the I. W. W. But at the same time attention is being directed toward the only one of the three factors that can afford us real relief, that is, increase of production. We are not condemning thrift or defending the present unfair distribution of wealth. We are merely pointing the undeniable fact that if an ideal standard of consumption could be universally imposed and a perfect system of distribution established, the people would still be far from getting as much wealth as they want and ought to have and might have. As a matter of economy extravagant personal expenditure should be checked. As a matter of justice the inequitable distribution of wealth should be rectified. But we must not be deluded into thinking that we can reach our goal by these routes. The problem can never be solved by subtraction from our present way of living or by division of such wealth as there is. It can only be solved by the third rule of arithmetic, that is, multiplication of the means of production. In this direction alone is their unlimited opportunity for expansion. The introduction of steam-run machinery has multiplied the producing power of man a hundredfold, and if this were again multiplied as it might, then in time we should have something worth quarreling about.

Hitherto labor and capital in fighting each other have in large part lost what they were fighting for. They have both been bleeding the goose that lays the golden egg. The question is now whether a better way can be found, whether it is possible to combine democratic control with expert management. The question, we must confess, has not been solved altogether satisfactorily in the political field, and it will be still more difficult in the industrial, because that is more vital. We can live under a very corrupt and inefficient administration of government if we can get enough to eat. We cannot live under a very corrupt and inefficient administration of business because we cannot get enough to eat. If our meals were as unpunctual as our mails and our wages as unreliable as our pensions, we would be in a sad state.

In Russia the Bolsheviks democratized industry by simply seizing the shops and electing a committee of workingmen to run them. But this did not work. It resulted in the demoralization of industry, and wholesale starvation. But there is one nice thing about the Bolsheviks, they are always willing to sacrifice their principles to practicality. They are beginning to call back the hated bourgeoisie, and are hiring engineers, financiers, managers, experts of all kinds, and paying them as big salaries as they have to. Lenine's advice to the Bolsheviks in the pamphlet "Soviets at Work," might be published in any of our efficiency magazines with some changes of phraseology, for it is devoted

to urging increase of production, speeding up processes, "iron discipline during work," careful accounting, business devices, the Taylor system of scientific management, and the like. Probably he cannot get the Bolsheviks to carry out this program, but he shows more sense than the I. W. W. who preaches sabotage or the unionist who believes his duty to his class requires him to do as little work as possible.

Mazzini, the Italian patriot, defined democracy as "progress of all thru all under the leadership of the best and wisest." Plato in describing his socialistic republic said it must be ruled by philosophers. He did not mean professors of metaphysics, but rather what we should call efficiency experts or men of science. If such definitions of democracy are adhered to we may view the advent of industrial democracy with great hopefulness.

## THE AMERICAN WAR AIMS

IT is easier to determine the causes of a war than its aims. A man generally knows why he is fighting but not always what he is fighting for. The question of the real objects of both belligerents in the Franco-Prussian War and in the American Civil War is still hotly disputed after half a century.

At the beginning of the Great War there was the same doubt as in other wars about its purposes. Even those on the same side or in the same country had different ideals and purposes in mind. But thanks to President Wilson's insistence this dubiety was cleared up. The Allies were induced to make an official statement of their war aims. The President followed this with a statement of the American aims. These were in general closely consonant with those of the Allies but introduced two new and very different ideals, first, the overthrow of the Prussian autocracy and, second, the establishment of a League of Nations. Under this sign we have conquered. Our enemies surrendered on conditions including those and our friends adopted them as their own. The first has already been accomplished by the German revolution and the only obstacle to the second is the reluctance of certain Americans to carry out the project to which their country is pledged.

The reason why these are the American aims is not because Mr. Wilson said they were. He said so because they were. As an historian and statesman he could not have said otherwise. The overthrow of autocracy was the fundamental principle of this nation from its natal day. The union of several states into one federation "to establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare and secure the blessings of liberty" is an American idea, and we have proved how it can be done. The preamble to the draft of the covenant of the League of Nations is our echo of this tho in less eloquent language. The Monroe Doctrine was an extension of our idea of mutual aid and protection to weaker countries. The proposed League of Nations is an extension of the Monroe Doctrine to all countries. Nowhere else on earth has there been so much talk of the federation of the world and nowhere has the subject been more thoroly studied than in the United States. It is America's great contribution to the science of international relations.

In war and in peace these two principles have always been the aims of America, and we trust that America will have the honor of bringing them finally into effect.

## THE SIXTY-FIFTH CONGRESS

OF the sixty-five Congresses that have lived their little day in the world of political affairs and died, none has been less lamented than the Sixty-fifth is now, or will be after the funeral bunting has been put away. The Mexican War Congresses and the Congresses that allowed the Southern States to become a confederacy in rebellion were pretty bad, but they included in their per-
